# The Wheat Producer Pays the Bill

## *Should Law of Supply and Demand Be Allowed to Govern?*

When he was in Spokane recently J. W. Shorthill, a director of the federal grain-buying corporation, and also a member of the food administration's price-fixing committee, said that—

"If the government had not taken over the control of the wheat market the people in cities would today be breaking in the doors of the stores and taking over the control of the flour market themselves."

By implication, at least, that is equivalent to saying that the government, to appease the demand of city populations for cheaper bread, deemed it necessary to repeal the laws of supply and demand and make the American wheat growers pay for it.

Undoubtedly the government's action has given the consumers cheaper bread than they would have had if prices had been left to the law of supply and demand. But whether that action will bring the increased production that is wanted is a question that can be better answered after the next harvest.

Many thoughtful and well informed observers believe that it was an economic mistake. They point out that wheat is wanted above all other products and contend that it is illogical to cut down wheat prices while leaving the prices of other products to the law of supply and demand. The effect, they think, will be just the opposite of what is wanted.

In a recent address before the American Farm Management association G. F. Warren discussed this question with considerable insight. In part he said:

"Patriotism helps a farmer to raise crops, but he needs other things also. Too much dependence is being placed on patriotism, exhortation and scolding," he said. "Farmers are responding to the patriotic appeal as far as they can with the family labor, but in order to hold hired labor they must be able to pay wages that will compete with the factories that make talking machines, moving pictures, candy, gum and beer.

"One-third of the farmers are tenants and have little to give their country except children and labor. They can not sell crops grown with hired labor for less than they cost, because they have no capital to lose. In 1910 only 36 per cent of the farmers owned all the land that they operated and were free from mortgage.

"One of the important problems of the war is whether to attempt to arbitrarily keep down prices and wages in spite of an inflated currency, or let the cheaper dollar do part service by letting prices and wages rise. Thus far the public agitation has been in the direction of price control. The public seems to have decided to repeal the law of supply and demand.

"Unfortunately, the repeal applies to supply as well as to demand. Some persons believe that since we are at war, the law of supply and demand fails to operate. It would be as logical to say that a heavy weight repeals the law of gravitation. We should not make the mistake of assuming that man can repeal either law.

"When the consumer is in power the goose that lays the golden egg is in danger.

"The ordinary consumer thinks of price control as a chance to have more. It makes a shortage look like plenty. For ages cheapness and abundance have been synonymous. The public has not worried itself about which was the cause and which effect. It has, therefore, been all too easy to fall into the error of assuming that control of price will make food cheap, and therefore abundant. When asked why low prices will be a benefit, nearly every one replies, 'so that we can have more to eat.' To a very considerable extent the agitation for low prices is a protest against having to economize.

"Many of the food plans advanced are copies of what was done in Europe—plans that resulted in a food shortage there. Europe was justified in its procedure, since it could call on America for food. If we pattern our work after Europe we, too, will as surely have a food shortage, but where will we go to get food? If we keep up our production we will have to study America rather than Europe.

"Not only do low prices tend to reduce production but they tend to reduce the present supply. If prices of corn and feed are fixed the horses will be fed more liberally and there will be less feed for other classes of live stock.

"We are eating our present wheat crop too fast. Had prices been allowed to take their own course, the farmer would be getting much more for his wheat, and the higher price of flour would have limited consumption. The high price of wheat would have caused a very large planting. Having upset the natural course of events, two more regulations were necessary, one to encourage planting and one to prevent consumption.

"To encourage planting, a minimum price was promised to the farmers. It is probable that this resulted in planting a smaller area than would have been planted had no regulation been attempted. To discourage the large consumption that naturally follows a low price, we are depending on voluntary action by the consumer. Much has been accomplished, but it is very doubtful whether this alone will lead us to save enough wheat for next summer's use.

"It is difficult to convince the public of the necessity of saving when prices do not indicate such a necessity. The fixing of the price of wheat at less than it was worth made it cheaper than corn. This not only tended to increase human consumption, but resulted in having more than the usual amount of wheat fed to live stock.

"Prices fixed on the average cost are below the cost for about half of the farms. Such prices will decrease production. If greater production is to be obtained, the marginal land must be used and the marginal last bushel obtained at average cost but at very high cost.

"There is no solution of the food problem except more food, and the only way to get more food is either to get out of the way and let it be produced, or else do the things that will cause it to be produced. We can not get it by wishing, or by editorials, or by reducing prices."

To return to Mr. Shorthill's observations, we find him reporting conditions "thoroughly encouraging." He is confident the wheat crop will be increased. The Farmer cordially hopes that his prediction will be verified, but can not entirely close its eyes against contrary expectations voiced by others.

Investigation by the New York Tribune among country bankers and agricultural experts indicates a shortage of farm labor this year of from 20 per cent in the central and southern states to 40 per cent in the western states, this shortage being attributable to the draft and higher wages by war industries. Farmers are afraid to plant all they can because of a probable shortage of harvest hands. In some sections farm wages have advanced to $75 and $100 a month, with board and other inducements, while the average for the country is $48 a month against $28 normally.

The Washington correspondent of the New York Journal of Commerce reports that notwithstanding the opti-

# Will Go Over the Top in War Savings

The people of Washington are realizing the double value of the war stamp, first to Uncle Sam and second to themselves, and as a result they are going to go over the top in the matter of stamp purchases.

Probably no other plan in the nation's history has afforded the people such perfect opportunity to make safe investment of small capital. Through the thrift stamp plan investment of even 25 cents can be made. Through the war savings stamp plan anything from $4.14 to $1000 can be made, and a stamp of this kind draws interest at 4 per cent compounded quarterly. Not only are these advantages true, but if a person later needs to have his money back he does not have to wait until the date of maturity of the stamps, which are nothing more or less than "baby bonds," but he can get his money practically upon demand.

Any one desiring to make use of this paper in securing these stamps can do so by enclosing the amount required and mailing with the accompanying coupon.

# PUP MUST HAVE NINE LIVES OR MORE

# Russia Ratifies Peace

## *Germany's Shameful Terms Accepted*

The so-called all-Russian congress ratified the terms of peace recently dictated to the Russian delegates by the kaiser's military power. Dissension and revolt characterized the consideration of the resolution of ratification, and when the vote was taken, showing a large majority for the acceptance of the terms, the opposition were strong in their declarations that Russia would not for long submit to the oppression of Germany, even though she did at this time, by force of circumstances, bow to the disgraceful peace.

### Get Ships From Holland

The seizure of Dutch vessels totaling approximately 1,000,000 tons shipping capacity now in the harbors of the United States and England has been made by those two countries in behalf of the allies. The taking over of the vessels is not in the form of an act against Holland, but is done in accordance with provisions of international law, just compensation to be made for them by the allied governments.

### I. W. W. Start Riot.

The first notable activity of the I. W. W. in the northwest this year was that which took place at St. Maries, Idaho, last week when some 200 members took exception to the removal of one of their crowd to Coeur d'Alene for trial upon charges previously preferred against him. They attacked the sheriff, seriously beating him. As a result military forces have been put in charge at St. Maries. Governor Alexander of the state of Idaho has issued a statement promising drastic action against the I. W. W. if they disturb the peaceful operation of the industries of the state.

### Another Peace Offer.

English officials will not openly confirm, but neither will they deny rumors that Germany has made a peace offer to England. They do, however, state emphatically that England will consider no peace offers until all the allies can make peace together on terms dictated by humanity and not by German militarism.

### Build Concrete Ships.

A concrete ship was launched at a Pacific coast port of the United States last week and may mark the beginning of a class of shipbuilding that will turn the tides of war more and more in favor of the allies. The government has authorized the construction of four concrete ships as an experiment and orders are given for the one just launched to be given a thorough trial at once. One serious question is the effect of the salt water on the concrete and the iron used in construction.

### Sending Too Many Gifts.

The postoffice department has announced that the packages being sent to the soldiers abroad are becoming so numerous that curtailment of the parcel post privileges will result unless the people use better judgment in sending gifts. Many of the things that are being sent are obtainable from the canteen department of the American army in France at prices that do not warrant their being sent by mail.

### Preparing Air Protection.

The war department has announced that there will be sufficient airplanes of American manufacture in France by July to guarantee protection to the American forces.

### Germany Starves Neutrals.

Evidence is in the hands of the allied governments tending to show that Germany has been and still is using her submarines in the destruction of neutral shipping, with a view to starving the northern neutrals, such as Sweden and Norway, into a state of dependence upon the war lords of the Teutonic nations.

### No Statement From Japan.

Exactly what Japan's plans are relative to the entrance into Siberia for the purpose of protecting herself and also the interests of the allies has not been officially learned at this writing. That she will move troops to prevent the encroachment of Germany upon the supplies in Siberia is apparently decided upon, though to what extent her action may involve battling with German and Austrian forces, if at all, is problematical. The result of the ratification last week of the German peace terms by Russia apparently places squarely before Japan the duty of being in instant readiness to defend allied interests in the east.

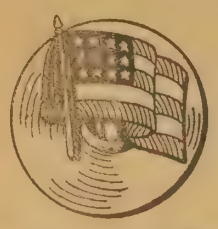
### American Forces Active.

Reports of raiding activities on the part of the Americans along the French front come daily, with evidence that the Americans are proving equal to the tasks before them. The raiding activities are considered largely for the purpose of securing information concerning German positions and defenses.

### Charges Reckless Spending.

Senator Reed of Missouri, a democrat, is charging before the senate that the national food administration is spending its money recklessly. He said that about $5,500,000 had been appropriated for the food administration, and that more than $4,000,000 of it had already been spent or arranged for spending. Senator Hitchcock of Nebraska, also a democrat, defended the administration, pointing out the stupendous accomplishments of Administrator Hoover and his force of workers.

### Pass Deficiency Bill.



Both the senate and the house have passed the deficiency appropriation bill, totaling $1,800,000,000. It is now being considered by a conference of both houses for the purpose of agreeing upon amendments. One feature of it is an appropriation of $10,000,000 for the purchase of nitrate of soda for fertilizer purposes. As fertilizer purchased with this money is sold, the money received for it will be reinvested in fertilizer, the fund being a revolving one.

### Will Save Daylight.

Congress has passed the bill requiring that all clocks of the country be turned one hour ahead on March 31 and remain the one hour fast until September 29. The idea is to save daylight, which in turn will save the country hundreds of thousands of dollars that would otherwise be expended for lights and fuel to make them. The changes of the clocks will take place in both instances on Sunday, thereby eliminating much confusion that might otherwise result. Work will continue exactly as now so far as the face of the clock is concerned, though in fact it will begin and end an hour earlier than the clock shows.

## Ask Questions

### Information Bureau Will Answer

This paper maintains its information bureau at the national capital, Washington, D. C., for no other purpose than to serve its readers, and it is glad to receive report from Washington that they are availing themselves in large numbers of the opportunities offered.

Just now there is a matter of special importance that the bureau can do for you—send you its war garden book. It is of special value in helping to plan the kind of garden most appropriate for these war times when maximum food production is so essential. This book, the knitting book, the "soldiers of the sea" book or the cook book can be had by addressing the bureau, enclosing a 2-cent stamp and saying which one you want. Two cents will bring any one of them.

And remember, any question that you wish answered, fire it at the information bureau. If it is a reasonable question it will be answered by a personal letter as nearly by return mail as possible.

Address your inquiries direct to The Washington Farmer Information Bureau, Washington, D. C.

# Plans State Production Schedule

## *State College Works Out System for Producers of Food*

With a view to systematizing the effort of the farmers of this state in the production of increased food crops this year, the extension department of the state college has prepared a bulletin of advice on the various staple crops suitable for this territory. The bulletin is prepared by Professor George Severance, vice dean of the college of agriculture, and W. A. Linklater, superintendent of the western Washington experiment station, aided by other members of the college and station faculties.

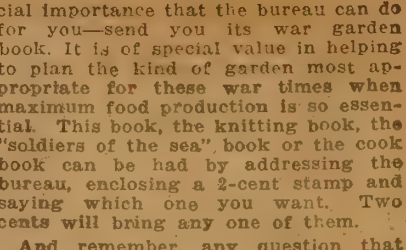
The plan as outlined covers such subjects as better soil tillage, better seed, the utilization of fertilizers, production of vegetables and fruits, the control of pests and plant diseases, the production of pork, the production of poultry, the meeting of the labor situation, the growing of wheat, the solution of dairy problems, the irrigation of crops and a large number of other allied agricultural subjects.

The bulletin issued on the subject is prepared with the special object in view of assisting county agricultural agents, club leaders, farm organizations and the like to carry to the individual farmers of the districts specific and detailed advice on the phases of agriculture particularly applicable to them.

In addition the college is furnishing to the members of its staff throughout the states and to individual farmers and organizations that desire help a time table covering farm operations for the spring and early summer. The subject matter of the time table includes all principal farm and garden crops of Washington. Special prominence is given to wheat, corn, peas and beans, with advice as to the selection of seed, the preparation of seed beds and the choice of soil in which the planting of these crops is advisable.

One prominent idea on the part of the college authorities in preparing these advices is to prevent losses on the part of farmers through the planting of the wrong crop in a given locality or in a given field, it frequently being the case that failure is due to the lack of some particular essential in the soil or climate for the crop planted, while some other crop probably would yield satisfactorily in that particular location.

The general propaganda covers not only the production of foods, but their marketing and conservation.



One of the important things emphasized by the writers of the bulletin is the necessity of sticking to those crops during the war time which have been demonstrated to be successful. Experimentation with new crops or crops not previously tried out in a given locality offers too much risk for a time such as the present.

The movement is designed to stimulate the production of the staple crops, both those for exportation to the allied armies and those that will enable the people of this country to conserve those that can be exported. Emphasis is placed on the possibilities of vegetable and poultry production as a means to aid in this conservation of wheat stuffs and the classes of meat that can readily be exported for use by the armies.

### Will Sell at Ontario.

Joe Turner of Meyers Falls, Wash., sales manager for the Northwest Shorthorn Breeders' sale at Ontario next month, announces that there will be from 60 to 80 head of purebred animals offered at that place. The sale occurs on April 25, the day following the convention of the Oregon Cattle and Horse Raisers' association at Ontario. Mr. Turner has been designated by the Shorthorn association as a committee of one to see every animal consigned to the sale before the consignment is accepted.

# Good Roads Will Pay for Themselves

## *Saving in Auto Tires, Time and Quality of Produce Will Pay the Cost*

By GRANVILLE LOWTHER

Some of the readers of this paper may remember that several years ago I championed the voting of bonds for good roads in my home state, that I was in favor of getting through the legislature whatever state aid we could have appropriated and then voting county bonds for the rest. There were two arguments that were urged on the other side of the question that have considerable force and that at that time mostly prevailed in the public mind. Those arguments were: First, that we do not desire to vote a mortgage for the next generation to pay. Second, we do not know the best methods of road building and we would, therefore, pay too much for inexperience and unsatisfactory work.

I acknowledge the force of these arguments, but I do not believe that they furnish sufficient reason why we should rumble, jolt, jiggle and bobble over rough, bumpy, rocky roads for a whole generation until the men who are doing things today have passed away and will get no benefit from the roads they might have enjoyed at least a part of their lives.

This generation is handing down a marvelous heritage to the future. In the three northwestern states, in particular, they are clearing land of sagebrush and heavy timber. They are building irrigating ditches and reservoirs, making farms, homes, building houses that will be comfortable for their children, building schoolhouses, courthouses, churches and various other improvements that will become the heritage of the next generation. As compared with the manner in which the pioneers of this country started, their children will have a paradise. Furthermore, it is evident to my mind that if bonds are voted and the roads are built, the benefits the next generation will derive from them will much more than pay the price of the bonds. I desire to give a statement made to me by Willis Eason of Pasadena, Cal., a calculation based on his own experience and observations. Mr. Eason said:

"Los Angeles county voted $3,000,000 for good roads. The first road was a rock macadam. Then the state voted $18,000,000, part of which Los Angeles county received, in addition to the $3,000,000 she had already voted upon herself. The state built mostly concrete or cement base.

"The difference between good roads and poor in auto travel is seen in my own car. I have tires which the auto manufacturers guarantee to run 3500 miles. Allowing that with good care they would run 2500 miles more that would be 6000 miles on ordinary roads. On our roads they will run more than 12,000 miles. Allowing that tires cost $100 per annum for each machine and that the value of the tires can be doubled by good roads, there is a saving in good roads on tires alone of $100 per annum for each and every machine. In California there are said to be 180,000 machines. If $100 is saved in one year on each and every machine, that would make $18,000,000, or the total cost appropriated by the state for the building of good roads. This does not take into the account the extra wear and tear or breakages of machines on bad roads as compared with good roads. It takes no account whatever of the time saved in travel, of the saving to farmers in the hauling and marketing of their crops. It takes no account of the pleasure derived from travel on good roads as compared with bad roads, but it simply shows that the saving on tires alone will build the roads. In bulletin No. 49, U. S. department of agriculture, Frank Andrews says:

| | Average cost. Per load. | 100 lbs. |
|---|---|---|
| Maine | $ 4.74 | $0.22 |
| New Hampshire | 2.02 | .08 |
| Vermont | 2.62 | .09 |
| Massachusetts | 2.63 | .08 |
| Connecticut | 2.80 | .14 |
| New York | 2.15 | .09 |
| New Jersey | 2.51 | .09 |
| Pennsylvania | 2.73 | .12 |
| Virginia | 2.88 | .10 |
| West Virginia | 4.00 | .17 |
| Ohio | 2.14 | .10 |
| Indiana | 4.20 | .18 |
| Illinois | 1.25 | .05 |
| Michigan | 2.06 | .08 |
| Missouri | 2.56 | .12 |
| Kentucky | 2.20 | .14 |
| Tennessee | 2.62 | .17 |
| Arkansas | 4.76 | .28 |
| Oregon | 6.02 | .23 |
| California | 10.40 | .23 |
| Geographic divisions— | | |
| North Atlantic | 2.53 | .10 |
| South Atlantic | 3.18 | .12 |
| North central | 2.26 | .10 |
| South central | 3.11 | .19 |
| Western | 8.36 | .23 |
| States represented | 2.79 | .12 |

These figures were compiled before the days of good roads in California. Now they claim this cost is reduced to 50 per cent of the former cost.

The subject of good roads is one that is of special importance to the fruit grower. The general farmer can haul his product to market without any considerable damage on account of rough roads; his loss in hauling over bad roads is mainly in the fact that it takes more power to transport a given amount of the farm produce to the market than it requires where the roads are good. But with the fruit grower there is the additional reason that in hauling over bad roads his fruit is damaged by jolting, bruising, disarranging the pack, etc., so that when it reaches the market it is of less value and brings a less price than if it reached the market in good shape.

Here are comparative costs of hauling on various grades: If the cost of a 15 per cent incline is $2.50 per load, the cost of a 10 per cent incline is $2 per load, the cost of a 6 per cent incline is $1.50 per load, the cost of a 4 per cent incline is $1 per load, the cost of a 2 per cent incline is 75c per load, the cost of a level grade is 50c per load, it will be seen here that a level grade is only one-fifth as expensive as a 15 per cent grade. An instance is given by a Wisconsin farmer who held 1000 bushels of potatoes in his cellar waiting for a good price. He was offered 92 cents in March, but they must be delivered in town and the roads were so bad he could not haul over them. When he finally got them to market his potatoes brought him 30 cents a bushel. Bad roads, therefore, cost him $620.

**Produce Coke in Sweden.**

An extensive plant will be built in Sweden for the production of coke and byproducts by a process invented years ago by German scientists.

# SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## Sunlight One of the Best Aids to Normal Well Being

Dr. Hirshberg

Praises are constantly heard about the virtues of fresh air. The plentitude and resources of open sunlight are only too often passed over lightly or not at all.

Ancient worship of the sun perhaps had more substance and reality in it than many of the claims made for fresh air. True enough, clean, active air full blown from blue hills and green fields, invigorates the tissues and whips up the blood to do its best, but the nebulous star we call the sun works more health magic than does the atmosphere. Indeed, it is the sunlight which refreshes and restores the stale, used-up, dirt-laden air to its proper health status.

You need more open sunlight in the summer and only a little less in the winter than you need fresh air. How many of earth's mortals are in the sun six or seven hours a day? Very few, indeed. Those, however, who work and play in the great sunlit out-of-doors several hours daily are more nearly normal in their physical and mental states than are those who bathe in the sun only an hour or so, or not at all.

**Many Windows Help.**

One of the modern abominations, a hand-me-down from the days when there were no such things as glass or mica, is the absence of many huge, wide windows and full glass doors in houses, homes, offices, factories and stores. There is even nowadays too often neglect on the part of building commissioners, architects and constructors of free admission for liberal amounts of sunshine. The roofs of houses are still made of opaque materials instead of being one gigantic skylight. Doors are made today almost as thick and impenetrable to the eyes as they were in King John's time.

So essential to the well being of man is sunlight that it should be made a penalty to build houses with roofs or doors that are not transparent to natural light.

In the winter the sunlight seems to be relatively stronger than at other seasons of the year. The days are darker and shorter, and Arctic temperatures and dampness drive many persons indoors. Artificial lights flare forth earlier in the afternoons and remain aglow later in the mornings. All of these things make the fleeting hours of sunlight appear all the more precious. Seize them and make them serve your health.

**What Sunlight Does.**

Tuberculosis is treated more successfully in open sunlight than by fresh air alone. As a matter of careful and frequent observation animals kept in perfectly fresh air, yet in gloomy, dark quarters, succumb to tuberculosis, while those which live in foul air, but in sunshine, recover fully. Sun baths help heal the ravages of tuberculosis, anemia, emaciation, gout, malnutrition and other states of deficient health.

The quality of your blood as well as the number of red corpuscles has been noted to increase 10 per cent within a week even in a Pittsburger or an East Side New Yorker who changes his dingy, smokey indoor life to one which includes one to five hours in the open sunshine.

Finally, to clinch the proofs of the practical value of sunlight, any public health official or bacteriologist can demonstrate to you that sunlight soon kills the bacilli of tuberculosis, diphtheria, poliomyelitis, tonsilitis and other maladies, while twilight, half-lights, gloom and Stygian blackness encourages them to breed and flourish like green bay trees.

## All as One Family

To the Editor: Well, I should say we do appreciate "memories of the sweet long ago in the Big Bend," by our Washington children, and enjoy reading them; but we can hardly realize how quickly the time has sped by, and it only seems a few years since Ida C. Young was a little girl, and one of the scholars in my Sunday school class, and one who was always so ready and willing to surmount every obstacle when we were ready for an entertainment at the old Union schoolhouse. The snow was never too deep, or weather too cold, or the wind blowing too hard (and it did howl sometimes) for my class to be ready to practice songs and help out in many ways; but Ida was one who never failed, and in after years as teacher in the school room, her success was due to her faithfulness in these small undertakings when a child. Had she been a man I think her occupation would have been that of a carpenter, as I well remember the set of furniture she whittled out with a jackknife. Wish she would give her address so we could write and talk over old times of the long ago, when we older ones, as parents, were endeavoring to keep the boys and girls in that new Big Bend from getting lonesome, and those entertainments seemed to fill the bill, and we all seemed as one family when gathered around the organ with Mrs. P. J. Young as leader and sang those old-time melodies and then sat down to rest and eat popcorn. Wonder if the old bachelor in that play has any recollections of how the girls powdered his hair white with flour from a pepper can, and how next morning he put water on his head, not thinking of the flour. He said after that it took a week to get all the sour dough out. MRS. A. L. DAVIS.

Twisp, Wash.

## Shows Sharp Contrast

Contrasted with the German proclamation threatening punishment upon the women and children of Udine, Italy, if they failed to work in the fields for 16 hours per day under German domination, the order issued by the British commander to the people of Jerusalem after the capture of that city shows the different manner in which the entente and the central powers wage war. The British order reads:

"It is my desire that every person should pursue his lawful business without fear of interruption. Furthermore, since your city is regarded with affection by three of the great religions of mankind and its soil has been consecrated by the prayers and pilgrimages of the devout for many centuries, therefore, be it known, that every sacred building, holy spot, shrine, pious bequest or customary place of prayer will be maintained and protected according to the existing customs and beliefs of those to whose faiths they are sacred."

## Advertised Goods or Makeshifts?

Advertised goods almost without exception are goods which have stood the test of time.

When you buy an advertised article you know that it is something which the manufacturer is willing to back to the limit. Otherwise he would not spend money to send out information about it.

It is usually far more economical to buy the standardized and advertised article than it is to get along with a makeshift or an inferior substitute. Perhaps you could knock together an incubator or silo of your own design; but the chances are that you would lose more money in a year from poor hatches and spoiled silage than the entire saving amounted to. On the other hand, by buying the advertised goods, you would have the printed statements of the manufacturer to refer to, and if your incubator, silo, or other article did not come up to specifications you would have a strong basis for satisfactory adjustment.

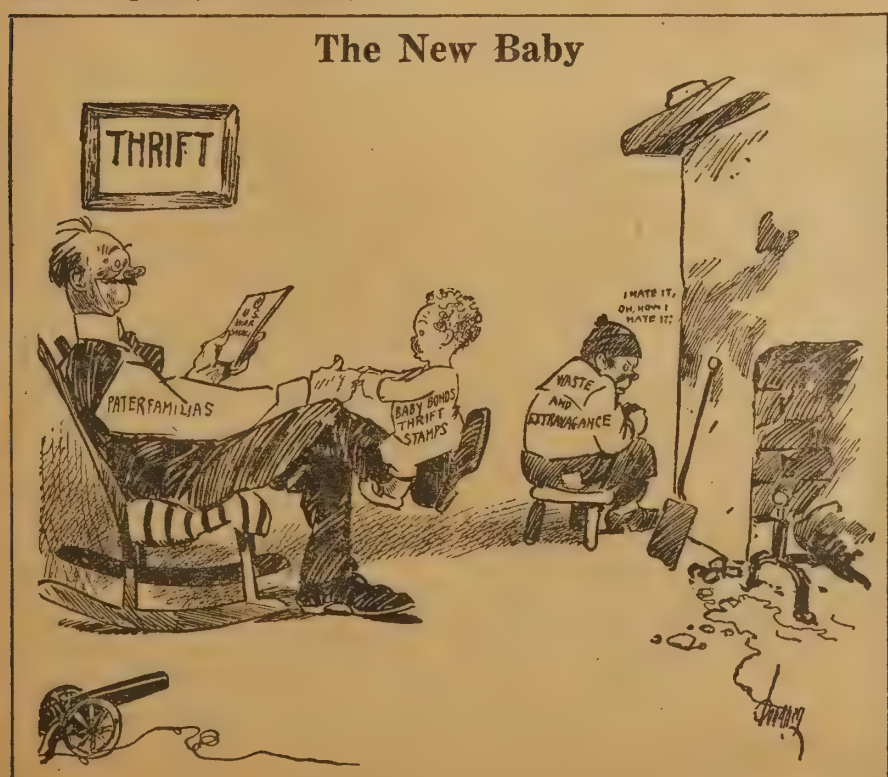
In addition to these advantages in buying advertised implements and merchandise you have the iron clad, water-tight guarantee printed on the editorial page in every issue of this paper.

# All the World's a Stage, and All the Men and Women Merely Players

## Make a Ceremony of Shooting

A German war lord pointing out a notable victim among the fallen lords of the forest. The etiquette is very strict at the court hunts, and no one not presented at court can attend, says James W. Gerard in a story on "German Junker Sports." There are no jumps on these hunts. When the boar has been brought to bay by the dogs, the right to dispatch him with a long hunting knife is reserved for the most distinguished man present. If a royalty is present he distributes small sprigs of oak leaves to those present, as a souvenir.

## Red Cross Canteen First Aid



The above picture, showing a bunch of Red Cross workers giving Polius on leave a good meal, isn't the only thing the American and French women in the Red Cross canteens of Paris are able to do. Each canteen has its little first aid room, where wounded French soldiers are made more comfortable with fresh dressings and friendly care. The Red Cross nurses in England and France have been greatly appreciated by both governments.

## Some One Thinks of Me

Mail time always brings a smile to the faces of our boys "over there" when they are fortunate enough to receive that long looked-for letter from the folks at home, or perhaps a package containing some of the necessities which to them seem the greatest of luxuries.

## The New Baby

—Cleveland Plaindealer.

## Enlist Bryan, Hart, Chaplin

William S. Hart, W. J. Bryan and Charlie Chaplin are all booked for Liberty loan speaking tours. The former secretary of state will speak first at Little Rock, Ark., and will spend two weeks in the west. The moving picture stars also expect to devote two weeks to the work, Chaplin going south and Hart west.

# Trappers of the Ozarks

## The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana, Now the State of Missouri.

By LEWIS B. MILLER

Copyright, 1914, 1915, by Lewis B. Miller.

### SUMMARY OF PRECEDING CHAPTERS.

In September, 1811, two young men who lived near St. Louis, Ben Armstrong and Jodo Henderson, taking with them their two dogs and donkey Spunky, started on an all-winter's hunt in what was at that time unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination — a salt spring close to the river Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their saltmaking and hunting. After exciting experiences with a buffalo herd and with a bear in a cave, they find their first fresh sign of Indians — moccasin tracks in the snow.

### CHAPTER VIII.

#### Visitors at the Dead of Night.

"That's just what they are—moccasin-tracks!" agreed Ben.

"When did they pass along here, do you think? While we were in the cave?"

Ben examined where two trails had crossed. "No, they passed before we did. Here you can see where one of the bear's tracks has nearly filled up a moccasin-track."

"Yes, I see. Lucky thing for us. If they'd come along after we did, they'd have trailed us and caught us in the cave. That is, if they were Indians. Of course plenty of white people wear moccasins in Upper Louisiana."

"It's pretty safe to say they were Indians. White men wouldn't be likely to step in one another's tracks, like those fellows did most of the time."

The party of red hunters, as appeared from the signs in the snow, had been trailing a little drove of elks. The white hunters had crossed this trail before; but having their eyes on the running bear, they had failed to notice it. Now they tied Spunky and followed the Indian trail a few hundred yards, to see what they could learn.

"Seven in the party," Ben announced, when he and his partner had halted on the trail. "And they passed either last night or early this morning."

"What tribe would you guess, Benoni?"

"Osages, I should say. But that's pure guessing."

"Well, they were traveling away from our cabin. That's something to be thankful for. The Osages are bad enough. But these may happen to be even worse. They may be Pottawatomies."

"That's all so. But it doesn't make much difference as far as I can see. Any of them are dangerous for us.

"Do you think there's much chance of their discovering our camp?"

"Yes, there is, especially just now. If they happened along here again, or anywhere that we've been since the last snow-fall, they couldn't help seeing our trail. And then all they'd have to do would be to follow it far enough, either backward or forward, and they'd find themselves at our cabin-door."

"And what had we better do, Benoni?"

"We can go back to camp and stay close about there for a few days, till we see what's going to happen. Or we might track the redskins and find out where they've gone."

"I don't see much good in tracking the Indians. Camp's the place for us."

"That's my opinion, too. And the sooner we get there the better."

With Jodo leading and Ben driving the bear-laden Spunky, the hunters moved on toward their little, cliff-walled valley. They longed for some way to wipe out their trail, but that was impossible. So they only hurried on as fast as they could.

After entering the valley, they approached their cabin anxiously, and looked everywhere for moccasin-tracks. They also watched the top of the cliff, lest an enemy should be lurking there, ready to shoot down at them, or to roll stones down upon them. But they discovered neither Indians nor moccasin-tracks, and entered their cabin to find everything just as they had left it.

"Now, after taking care of the bear-meat and the bear-skin, and feeding Spunky some hay under the cliff, they sat down on a bench before their fire to discuss what they should do next. Ben, it could be seen, was not a little worried over the situation. If a band of Indians was camped in the vicinity, hunting, it seemed scarcely possible that they could fail to discover the trappers' headquarters sooner or later.

"I'll tell you, Ben. If they come, why couldn't we retreat into the big cave, take to our canoe and paddle away on the underground sea? There we could keep out of their reach till they grow tired and leave the country."

"If we could take our furs and salt and meat with us, that plan would be all right. But if we went off and left everything, ten chances to one we'd come out and find nothing left but ashes."

"Of course there's danger of such a thing. But even that's better than losing everything and our lives to boot."

"Undoubtedly. But we could have done still better by staying at home. What I want is to save our possessions and our lives, too."

"How can we be sure of doing that, Benoni?"

"More than I can tell you yet, that is. What we need is some safe place to cache our things—our most valuable things. We can't hide the cabin. If it got burnt down, though, we could soon put up another. But if we lose our furs and our salt and our meat, we shall be just that much short when the time comes to start home."

"How would the Cave of the Bats do to hide our things in? We could find some little pocket, off to one side, and stowe them away there for a few days. Even if the redskins ventured into the cave, it's not likely that they'd find what we'd hid."

"That would be better than nothing, maybe. But with so much water and dampness in it, our furs and meat would soon spoil and our salt melt."

Just at sunset the trappers made their way by a round about course to the top of their cliff, and there climbed the steep hill that rose back of the cliff. From that elevation they could make out the smoke of a camp-fire, several miles up the river. And there was no reason to doubt that redskins had kindled the fire.

During the next few days Ben and Jodo visited their traps and deadfalls early every morning; but after that they remained near their cabin, doing such things as they could find to do there. Among other work, they made some clay mortar and daubed the cabin—filled the spaces between the logs both inside and out. That would not only make the cabin warmer, but would render it less easy for an enemy to shoot between the logs.

A day or two after this the weather turned still colder, and some more snow fell; not much, but enough to cover any tracks the trappers had tracked while tramping about the country. That made them feel much safer. But every night and morning they could see smoke rising not many miles away, and had no doubt that a band of red hunters was still in the vicinity.

"Pity we can't get into that little cave up there and take out some honey while we're hanging around camp," Jodo remarked one day. They were on their way to the salt spring for a trough of water for their pots.

"Don't know anything I'd like better, Jodo. I'm getting pretty hungry for something sweet. We'd better set our wits to work and devise some way to get up there. That cave might prove to be the very place to cache our furs and other things. But getting to it is not going to be as easy as rolling off a log."

"There are some trees right over the cave on top of the cliff. Couldn't we let a rope down from one of 'em, and then climb it from below?"

"We might. That's a long climb, though, for anybody not used to climbing with his hands. It's every inch of 40 feet up to the bottom of that cave. A sailor could go up, I've no doubt. But sailors practice that kind of thing and we don't."

"Couldn't we knot some sticks in the rope? That would make it easier holding for our hands; and if we got too tired, we coulld stop and rest our feet on a stick. With some sticks to help, I'd be willing to try to get up."

"That's not a bad suggestion, Jodo. If we've got rope enough to reach from the top of the cliff to the bottom, we might try that."

After carrying over the trough of water and filling their pots, they did try it. Tying all their ropes securely together, and knotting an occasional short stick in the lower 40 feet, they went round and up to the top of the cliff and let it down. It reached to within a yard of the ground. They tied it fast to a tree, so that it hung across the mouth of the cave. Now they went down and made ready to climb it.

"Guess maybe I'd better go up first, Benoni. I'm lots lighter than you are."

"Yes, but the rope will hold either of us—or both of us. And I've got a stronger grip."

"All right, then. No matter. If there's anything up there to climb for, I'll come up later."

So Ben grasped the rope and started up. It was a rather long climb, but sometimes he stood or sat on a stick to rest his arms. At last he was standing in the cave's mouth. It was but a little higher than his head.

After resting a few minutes, he disappeared back into the cave. Several minutes passed before he was seen again.

"How far back does that hole run?" Jodo now called up.

"About 40 feet. And there's some saltpeter in the back end."

"Have you found the bees?"

"No, I haven't. Fact is, I'd forgotten to look for them. I've been thinking what a fine place this will make to cache our things in, and especially our furs. And we can put our salt and meat up here, too, if we think it best. The whole place is as dry as powder, excepting a little snow here at the mouth. It's all of solid rock, too—roof, walls and floor. And I can't discover a bat in it. Too cold for bats, I suppose."

"Wait a minute or two. I want to see what's up there."

After a few minutes of climbing, Jodo, too, stood in the cave. Soon he and Ben explored the cave again. After convincing themselves that it would make a good hiding-place for whatever they chose to put here, they began to search for the bees. The weather was now far too cold for the insects to be flying in and out, and there was nothing to guide the search. But at length they were found in a hole in the rock wall, not far from the entrance. The cavity where they had their nest appeared large enough to hold two or three bushels.

Jodo now went down the rope, and soon Ben was drawing up the rope with a bundle of furs tied to the lower end. And on the bundle sat their little camp-pot. When he had put away the furs in the back part of the cave, Ben cut out honey enough with his knife to fill the pot, and sent it down.

When all their marketable stuff had been stored in this place of safety, and another pot of honey had been sent down, Ben descended the rope. For the present the rope would be left hanging.

"If the Indians came, we could climb up there, pull up the rope, and fight 'em off from that cave. It would take 'em a long time to get us out of there."

"Yes, it would, Jodo. With a water-supply up there, we could stand an indefinite siege."

"We could empty out one of our big pots, and pull it up full of fresh water."

"Yes, but that would take a good deal of time—something you don't have much of when redskins come. In fact, that's the most serious objection to that little cave as a place to fight from. It takes too long to get into it. The Indians would have us dead before we could hand-over-hand that forty feet of rope. The big cave has a great advantage in that respect. We can dash into it at a moment's notice, and keep running till we come to our canoe, then jump in and paddle away. Now that we've got our valuables out of reach, the big cave is the place for us if we have to abandon the cabin. But we won't abandon the cabin as long as we can stay with it."

Just before dark, the young trappers took a stroll up to the top of the wooded hill back of the cliff. To their relief, they could not make out the smoke of any camp-fire. Now they were hopeful that the Indian hunting-party had moved on. So they came down, fed Spunky some hay under the cliff, and then went indoors and began to prepare supper.

"Now that we've got plenty of honey, the one thing we need is about two skilletfuls of hot biscuits. Honey and biscuits always seem to me to go hand in hand."

"So they do to me, Ben. And let's be sure to have enough, for once."

Next morning, while Jodo was stirring off some salt and refilling their pots, Ben went up to the hill-top to look for smoke again. He soon discovered a smoke, but it was a few miles away, and in another direction from where the Indians had been camped heretofore.

The fact that redskins were still near made the young white men cautious. They went out to visit their traps and deadfalls, but remained near the cabin during the rest of the day. They even tried to keep their fire from making much smoke.

When night came, they shut themselves up inside, and cooked and ate their supper as usual. Afterwards they talked a

**Inside this cabin Ben and Jodo and their two dogs are wondering what the Redskins outside are planning to do. The boys are not to be laughed at for feeling cold chills playing up and down their backs. It is no fun to have savages plotting against you 'way out in the wilderness.**

while. Just as they were on the point of going to bed, Bose sprang up from before the fire, growling slightly. Moving over to the door, he stood listening.

Jodo stepped to the door and was about to let the dog out; but Ben told him, in cautious tones, to leave the door shut.

"If it's some wild animal, such as a bear or a panther, the dogs couldn't kill it by themselves. And if Indians are out there, they might kill the dogs. So we'd better bar up tightly till we find out for certain what's around."

The door and the window were soon made as secure as possible. By this time Bose and Tinker were at the door, where they kept growling and manifesting other signs of anger. So excited did they become that Ben took the wooden shovel and covered the fire with ashes, till the cabin was dark inside. Then he and Jodo stood by the door, listening intently.

More than once, the December night being still, they thought they could detect light footfalls near the cabin. That they did hear something could scarcely be doubted. For every time they seemed to hear movements, the dogs growled.

Suspecting that there might be Indians outside, the trappers did not think it prudent to open the door, even far enough to peep out. Every minute they expected an attack; and they stood near the door, with their rifles in their hands, their powder-horns and ammunition bags in place, and their other weapons belted on. More than once they tried to peep out between the door timbers; but it was very dark outside, and they failed to see anybody.

After an hour or longer, the dogs ceased to be excited, and went back and lay down by the fire. But Ben and Jodo, feeling sure that Indians had been near, and might return at any minute, decided that it would not be prudent for both to go to sleep at the same time. So Ben went to bed, and Jodo remained up to stand guard during the first half of the night. After that he waked Ben, and the two exchanged places till daylight.

Just as soon as there was light enough, the trappers unbarred their door and went out to look for signs.

Out from under the cliff they came upon a trail through the snow, where two pairs of moccasined feet had approached the cabin. And not far from the first trail they came to where the same two pairs of moccasined feet had passed back across the valley, going away. In the snow, at the outer edge of the cabin, as well as in the dust around the cliff-sheltered walls, moccasin tracks indicated that the two visitors had passed round the cabin more than once.

"Well, they've located our camp, and that in spite of all our precautions," Ben remarked, after he and his partner had trailed the Indians down to where they had crossed the creek on the ice.

"But they are afraid to attack us."

"Maybe so. Anyhow, they haven't attacked us yet.."

"Do you think they'll come back, Benoni?"

"There's not a doubt of that—not a doubt in the world. And there'll be more than two in the party when they visit us again."

"When do you think they'll some?"

"Hard telling, that. They may be on the way here this very minute. At the best their coming won't be delayed more than a day or two."

"And what shall we do when they come?"

"That we've got to decide. Pretty soon, too."

"Hadn't we better climb up into our cave, and pull a pot of water and the rope up after us?"

"And leave poor Spunky and the dogs to shift for themselves? I don't think so."

"I'd forgot Spunky and the dogs. Of course we could put a rope around Bose and Tinker and hoist them up to the little cave. But we couldn't hoise Spunky. And I don't see anything we can do with 'im if we stay down. We can't even take him inside of our cabin. The Indians can do what they please with 'im. Those Indians could have led 'im off last night, and we couldn't have helped ourselves."

"No. But Spunky might have helped himself. At any rate they'd have had trouble catching him. The cave of the bats is the place for us to run into when the running time comes. We can hustle all of our live stock in there. But I doubt if the running time has come yet. It took not a little work to chop the logs and put up our cabin. I don't want to leave it for the redskins to make a bonfire of, unless we just naturally have to. I'm for staying in our cabin and defending our cabin as long as we can."

(To be continued in the next issue.)

# A Woman's Decision

By Jean Henri Le Roy.

"All my girl chums are married. I do not think that I shall ever marry. I might as well make up my mind to that. But even if I am not going to marry I am not going to be an 'old maid,' not the sour kind. I have decided that, and I have also decided that the way to do is to keep in touch with young life. Since I am to have no children of my own, I am going to try to be as interested in and as much with my girl friends' children as is possible."

That is the decision that a young woman whom I know made a year ago.

And in that year it has actually so changed and sweetened her from the rather embittered and self-sufficient young person which she was then that her acquaintances are continually saying to each other:

"What has come over Florence? She has improved so."

And that decision is the secret.

Isn't it a splendid one?

Think of the people that have been affected by it. There are Florence's friends who today enjoy her bright, jolly presence, whereas a year ago they almost avoided her rather caustic, self-sufficient ways.

There are Florence's father and mother, who are delighted beyond words at having their daughter so much happier and more contented. There are half a dozen of her friends' children who have learned to call her "Aunt Florence," and to rush to the door to greet her whenever she comes to see them.

And best of all, there is Florence herself, who is replacing discontent and dreariness and unrest by contentment and peace and serenity.

I remember years ago, hearing a woman say, as she looked at another woman's baby:

"That is the hardest thing in my life to me. I don't mind so much not being a wife, but the terrible thing is to think that I shall never be a mother—that no little boy or girl will ever say that dear word 'mother' to me."

It seems to me as if deep down in her heart every unmarried woman must have the same feeling, and I can not think of anything finer than my friend's determination to be a mother by proxy, since she can not be a real one.

I wonder if there are not some unmarried women among my readers who might make their own and their friend's lives sweeter by adopting that resolution.

# Make Victory Bread

Try one of these breads the next time you bake. These recipes are from a bulletin issued by the U. S. food administration. Each recipe will make three good-sized loaves.

Handle and mold these bread doughs with greater care than white bread. If the doughs stick to the hands when kneading down, add more flour at this time.

Always keep the dough at an even warm temperature (about 75 degrees F.).

If you have a good rule for bread, use it, but in place of part of the white flour use one of these other grains—either all or part of the time.

If dry yeast is used, a sponge should be made at night with the liquid, the yeast, and a part of the white flour.

**Potato Yeast Bread.**

This bread is especially valuable because of the body-regulating substances which it contains.

One or two cakes compressed yeast, one cup lukewarm water, four teaspoons salt, three tablespoons corn syrup, three and one-half cups mashed potatoes, seven cups flour (more or less may be needed).

Mix as follows: Soften the yeast in the liquid and then add (1) salt, (2) syrup, (3) potato and (4) enough flour to make a stiff dough. Mix and knead thoroughly. Let rise three and one-half hours, or until double in bulk. Knead or cut down the dough, add the remaining flour, and let rise again until double in bulk (about one and one-half hours). Shape into loaves. Let rise in pans until double in bulk. Bake 50 minutes to one hour.

**Corn Meal Yeast Bread.**

One quart water, one or two cakes compressed yeast, three and one-half teaspoons salt, three tablespoons corn syrup, one and one-half cups corn meal and eight cups flour.

Mix as follows: Soften the yeast in one-half cup of the water (lukewarm.) Heat the rest to boiling, then stir in the cornmeal. Let it boil up once. Cool, add the salt and syrup, and when lukewarm, add the softened yeast. Then add the flour to make a stiff dough. Follow the directions for kneading, rising and baking, given for potato bread.

**Oatmeal Yeast Bread.**

One quart water, one or two cakes compressed yeast, four teaspoons salt, three tablespoons molasses, three cups rolled oats, eight cups flour.

Mix as follows: Soften the yeast in one-half cup of the water (lukewarm.) Heat the rest to boiling, then stir in the rolled oats. Let it boil up once. Cool, add the salt and syrup and when lukewarm, add the softened yeast. Then add the flour to make a stiff dough. Follow the directions for kneading, rising and baking given for potato bread.

**Rice Bread.**

One quart water, one cup rice, one or two cakes compressed yeast, one-half cup lukewarm water, four teaspoons salt, three tablespoons corn syrup, six cups flour.

Mix as follows: Cook rice until soft, in the one quart of water. Cool until lukewarm, then add (1) the yeast softened in the one-half cup of lukewarm water, (2) the salt, (3) syrup, and (4) the flour. Follow directions for kneading, rising and baking given for the potato bread.

**Barley Bread.**

One quart water, one cup pearl barley, one or two cakes compressed yeast, one-half cup lukewarm water, five teaspoons salt, two tablespoons corn syrup, seven cups flour.

Mix as follows: Soak the barley in the one quart of water over night. Boil in the same water until soft, mash fine, then cool until lukewarm. Add (1) the yeast softened in the one-half cup of water, (2) the salt, (3) syrup, and (4) flour to make a stiff dough. Follow the directions for kneading, rising and baking given for potato bread.

**Bean Bread.**

One quart water, one cup beans, one or two cakes compressed yeast, one-half cup lukewarm water, five spoons salt, two tablespoons molasses, eight cups flour.

Mix as follows: Soak the beans over night. Drain off the water in which they were soaked and cook until soft in the one quart of water. Put through a sieve or a potato ricer, cool and when lukewarm, add (1) the yeast softened in the half cup of water, (2) the salt, (3) the molasses and (4) the flour to make a stiff dough. Follow directions for kneading, rising and baking given for potato bread. The beans may be simply mashed and the hulls used in the bread if desired.

**Bread Crumb Bread.**

One quart lukewarm water, one or two cakes compressed yeast, four teaspoons salt, two tablespoons molasses, four cups fine bread crumbs and eight cups flour.

Mix as follows: Soften the yeast in one-fourth cup of water. Add to the rest of the liquid (1) the yeast mixture, (2) the salt, (3) the molasses, (4) the crumbs and (5) flour to make a stiff dough. Follow directions for kneading, rising and baking given for potato bread.

# Sidelights

**Hard to Stop.**

"I notice that a woman prominent in war activities got hurt in a motor car accident."

"Was she badly injured?"

"Evidently not. The car turned turtle. When it was raised she was found underneath it, still knitting away for dear life, but much flustered because she had dropped a stitch."—Birmingham Age-Herald.

**Well Answered.**

A British officer who was inspecting the line in Flanders came across a raw-looking yeoman.

"What are you here for?" asked the officer.

"To report anything unusual, sir."

"What would you call unusual? What would you do if you saw five battle cruisers steaming across the field?"

"Take the pledge, sir."

**Valuable Misinformation.**

Deer folks: Now I know why editors go mad. I ben trying to run this paper while the editor is on his vakashun. For three (3) days and nites I ben reading questions and trying to answer them, and if I don't quit I'll be going around talking to myself. I'm going to answer a few more then go to the ball game.—(Jimmie, the office boy.)

1. What is limberneck? (J. Jones.)

Limbernek in the country is a strange disease of fowls and chikens. In the city it is a disease of human persons caused by watching fouls—and chikens.

2. Do small cows give condensed milk? (Mabel B.)

'No, Mable. Condensed milk is made by trying to get a quart of milk into a "quart milk bottle."

3. Please tell me how hash is made. (W. M.)

Hash is not made. It akumulates.

4. Is it right to feed hogs corn-in-the-ear? (G. K.)

No. Put it in the trof and let them help themselves.

5. I am in love with a homely girl who works for us but she don't seem to care for me, while a pretty girl with lots of money wants to marry me. What shall I do? (Will M.)

Marry the one you love and send me the name and address of the other one.

6. My hair is beginning to fall out. What can I get to keep it in?

A sack.

7. Please tell me how to raise a nice fat hog of about 500 pounds.

Get a derrik.

8. How can I tell when the water is the right temperature for bathing baby? (Young Mother.)

If the kid gets red and hollers the water is too hot. If he gits blue and shivers it's too cold.

9. I am 40 years old, have a nice little farm and am thinking of taking a wife. What would you advise? (Old Batch.)

I would advise you to be kerful whose wife you take.

10. Our old red bull is chasing me round a 40-acre field. What shall I do? (Mike F.)

I don't know, but don't give up, Mike. The editor will be back in a week.—L. L. De Bra, in Successful Farming.

**THE SELF-OILING WINDMILL**

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load. We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

**Write AERMOTOR CO., 2500 Twelfth St., Chicago**

**90 Bushels Per Acre**

Mr. A. J. Woolen writes: "I arrived in Canada with practically nothing. Nevertheless I made good, and my first crop of oats went on an average 90 bushels to the acre."

Mr. Woolen is only one of thousands of farmers who have made good in Western Canada. Government statistics show the average yield of oats per acre is 53⅓ bushels; of wheat 30 bushels.

| | |
|---|---|
| Wheat | 30 bu. |
| Oats | 53⅓ bu. |
| Potatoes | 148 bu. |
| Barley | 37 bu. |
| Rye | 27¾ bu. |
| Flax | 13⅓ bu. |

This is the 1915 average per acre from Government statistics.

**128,000 FREE FARMS!**

Whether you have capital to buy land or not, there is a farm for you in Canada. You can get one of the recently surveyed 160-acre fertile homesteads along the Canadian Northern Railway. Here you have the same opportunity to succeed as did Mr. Woolen. First comers get choicest locations.

**Best Farm Lands $15 to $25 Per Acre**

Thousands of acres of specially selected centrally located land, *close to the railway*, can be purchased on easy cash payments, or part cash and part crop payments. Here are modern free schools, good transportation, telephones and automobile roads. Crops produced can only be equaled on farms costing $150 to $200 per acre in more densely settled communities.

**Special Low Fares**—The Canadian Northern Railway, which takes you to all parts of this territory, provides special low fares to home-seekers and settlers.

**Send for FREE Book**

Write today for your free copies of the "Home-Seekers' and Settlers' Guide" and government literature. The Guide is full of interesting and valuable information based on government returns and it tells you exactly how to make a home in Western Canada. Here is a home and wealth for you.

## Making Over Stockings.

To the Editor: I notice a good deal in the Farmer along the art of making over. Following is another way, one of the methods mother used in making over stockings for the little ones, and, indeed, it may be used for the grown-ups if the tops of the stockings are good and long. For light weight stockings a very neat and shapely stocking can be made, but for heavy ribbed kind, I like the method that has already been printed in your paper. In either case, the stocking should be cut so a deep seam may be taken, the seam flattened and the raw edges stitched down with an overcast stitch, so there will be no rolls or lumpy places to hurt the feet. To make these stockings the sole should be first stitched on with the sewing machine, the stocking then doubled together and stitched around the heel and up the back, and the seams flattened as per directions. The sole and heel are now joined by lapping and whipping the raw edge down on the inside, then turn and overcast on the outside, with close stitches. For grown-ups' stockings only the feet and ankle may or need be shaped. MRS. R. B. WOODY.
Lapwai, Idaho.

## An Excellent Corset for the Average Figure

A typically good value from our line of popular-priced Corsets, available for out-of-town patrons through our Mail Shopping Service.

This Corset is made from serviceable coutil, and is fitted with four hose supporters. It has extremely low bust with elastic insets, and long, flexibly-boned skirt, with free space over the hips. Sizes 19 to 29. Price $1.00.

## Win the War by Preparing the Land, Sowing the Seed and Producing Bigger Crops

**Work in Joint Effort the Soil of the U. S. and Canada—Cooperative Farming in Man Power Necessary to Win the Battle for Liberty.**

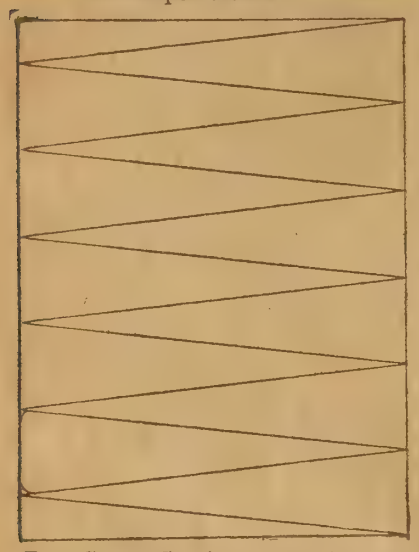
The Food Controllers of United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat can be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rest the burden of supply.

**Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist.**

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operations.

**Canada's Wheat Production Last Year Was 225,000,000 Bushels; the Demand From Canada Alone, for 1918, is 400,000,000 Bushels.**

To secure this she must have assistance. She has the land, but needs the men. The Government of the United States wants every man who can effectively help to do farm work this year. It wants the land in the United States developed first, of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there. Apply to our Employment service, and we will tell where you can best serve the combined interests.



**Western Canada's help will be required not later than April 5. Wages to competent help, $50 a month and up, board and lodging.**

Those who respond to this appeal will get a warm welcome, good wages, good board, and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.
For particulars as to routes and places where employment may be had, apply to

**U. S. Employment Service, Dept. of Labor**

Paper Beads.

Dear Corner Cousins: Some time ago one of our little cousins asked me to tell how paper beads were made and I am going to tell you. I wish I could have you all in a class around me and so I could talk and tell you better, but as I can not I will try to explain on paper. You will see by the accompanying drawing that the strips may be nine inches long and one and one-quarter inches wide, or as wide as you wish your beads. If you wish your beads small make the paper narrower, or if you wish them wider, make the paper wider and the length of the paper determines the thickness of the bead. They should taper to the point. Round the corners of the large end so that they will wind easily and use a small hatpin and wind tightly and use mucilage to stick the tiny end down. The backs of bright-colored magazines or bright-colored ads should be used and make the prettiest beads. After you have them made, string on a thread and shellac them several times so that they will be glossy and shine and when strung on a string with a small glass bead between they make pretty strands.

I hope that each one that tries to make them will have success and if you do write me and tell me. If you have trouble, please write me, too, and I will try to help you in any way that I can. With much love to you all until next time, AUNT NELLIE.

---

**Roy Joins the Corner.**

Dear Aunt Nellie: I am in the third grade. I am nine years old. Have I a twin? I have two cats and one dog. My cats' names are Tiddledy-Winks and Pussy. My dog's name is Rover. My mother has 15 old hens and eight young ones. They are Rhode Island Reds. I have one calf named Lady S. I like to see my letter in print. My mother has one cow. There are 42 pupils in my room.—Roy Seger, Yelm, Wash.

**Where Is Theodore's Twin?**

Dear Aunt Nellie: I am 10 years old. I will be 11 the 27th of June. Have I a twin? I am in the third grade. I have two sisters. Their names are Vernie and Irene. We have about four miles to go to school. We go in a car, but it is a Ford. We live on a 680-acre farm. We have about 100 head of cattle. We have six geese and about 40 hogs. My grandpa and grandma and Aunt Maud are staying here now, but will go home this spring. They live about one-half a mile away.—Theodore Kaufman, Riverside, Wash.

**A Surprise Party for Teacher.**

Dear Aunt Nellie: We live on a farm of 160 acres. I have five sisters and four brothers. My oldest brother is a soldier at Camp Lewis. I have blue eyes and light hair. I am 10 years old. My birthday is October 17. I am in the fourth grade. There are 18 pupils in our school. My teacher's name is Miss Della Barckely. I like her fine. We had a surprise party on her. We had it at the schoolhouse. We have lots of fun at school. My playmate is Stanton Walker. — Jack Kindall, Oakesdale, Wash.

**John Can Swim, Dive and Float.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. My birthday was the fifth of February. I am nine years old. I walk one and a half miles to school. I am in the fourth grade. I have a black dog. His name is Nig, and I have one cat and 17 turkeys, and 37 chickens. We have three horses, three registered Holstein cows, five calves. I have only lived on the ranch two summers. I like it fine. I go swimming in the Okanogan river in the summer. I can swim, dive and float on my back. I do not see any letters from boys in the Corner. Why don't some of them write? I would like to see some other boys' letters in the Corner. I will try and write again.—John F. O'Neil, Riverside, Wash.

**Agnes Is in the Fourth Grade.**

Dear Aunt Nellie: I have been reading the Children's Corner. I though I would write to the Children's Corner. I have two sisters and three brothers. We live on a farm. I go to schook. I am in the fourth grade. I am 11 years old. My birthday is April 26. I hope I see my letter in print.—Agnes Jensen, box 44, Kittitas, Wash.

**Robert Helps Papa Milk.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I have been reading the letters and like them very much. I am 11 years old the 28th of February. I am in the third grade. I haven't been tardy at school this term. I have a nice pony and saddle and like to take the cows to the pasture when I ride horseback. I help papa do the milking. I milk four cows. My brother Wilfred has a pony, too. I drove the stacker team for my papa last summer and will do the same this summer. I hope my letter will be printed.—Robert Edwards, Ellensburg, Wash.

**Brother Is a Sailor Boy.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old. My birthday was January 28. I have three sisters and two brothers. My big brother is in the United States navy. My sister and I are twins. I am in the fourth grade in school. I like to go to school. We have four cats and one dog. The dog's name is Sport. We have 44 sheep and six lambs. We have two horses. Their names are Jack and Topsy. I would like to see my letter in print.—Bertha Jonsen, box 33, Colby, Wash.

**Is in the Eighth Grade.**

Dear Aunt Nellie: This is the first time that I have written to the Corner. I would have written before but I didn't know your address. I think it would be a good plan to put your address in the paper and maybe you would be able to get more to write to you. I am 12 years old and my birthday is February 10. Have I a twin? If so I wish she would write to me. I am in the eighth grade. I have found one twin. Her name is Sally Garry. I wrote to her, but she has not answered my letter yet.—Elizabeth Van Trojen, Chimacum, Wash.

**Live Near the Beach.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old. For my birthday I got a string of beads, a doll, pencil and a handkerchief. I got some birthday cards, too. My teacher's name is Miss Row. There are 18 children in our school. I like spelling and reading the best. I have a cat named Pussy and a dog named Sport. We live near the beach. My sister and I are twins. I have two brothers and three sisters. I would like to see my letter in print.—Lena Jonsen, Colby, Wash.

**Doris Is Eight Years Old.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the letters very much. I go to school. I am in the second grade. I am 8 years old and my birthday is October 23. Have I a twin? I would like very much if she would write to me. I have three brothers. Their names are Harold, Willie and Lawrence. We have seven horses named Ballie, Jack, Nellie, Dolly, May, Dixie, King. We have two cows. My teacher's name is Miss Ethel Wright. We are having snow. I hope to see my letter in print.—Doris Yaeger, Box 24, Daisy, Wash.

**Clara Just Loves Snow.**

Dear Aunt Nellie: This is my fourth letter to the Children's Corner. It will not be my last. I saw my last letter in print so I am writing again. Alice Case, a Corner cousin wrote to me and I was very glad to hear from her. I answered her letter the very day I got it. I saw her last letter in the Corner and thought it was very interesting. I would like to hear from her again. It has been snowing here lately. I just love snow. I like to go coasting. I am knitting five-inch squares for the Red Cross. Then I am going to knit a pair of socks. I passed into the seventh grade.—Clara Haida, R. D. 3, Box 164, Puyallup, Wash.

**Best Wishes to the Corner Children.**

Dear Aunt Nellie: I am a farm girl, 12 years old and in the sixth grade. I read with the seventh grade. I have about a mile to walk to school. There are 21 children going to our school. My teacher's name is Miss McMeen. I like her very much. I live on a farm of 160 acres. We have 12 head of cattle, two horses and a pony. I have three brothers and two sisters. My brothers' names are Andrew, Robert and Ernest. My sisters' names are Helen and Ethel. Andrew is 10, Robert four, Ernest two, Helen eight and Ethel six. My birthday is the 28th of December. Have I a twin? For Christmas I got a little iron, a pretty pin and an apron. I got a ring on my birthday. I think I have written enough for the first time, so I will quit, with best wishes for Aunt Nellie and the Corner children.—Freda Boawn, Gerome, Wash.

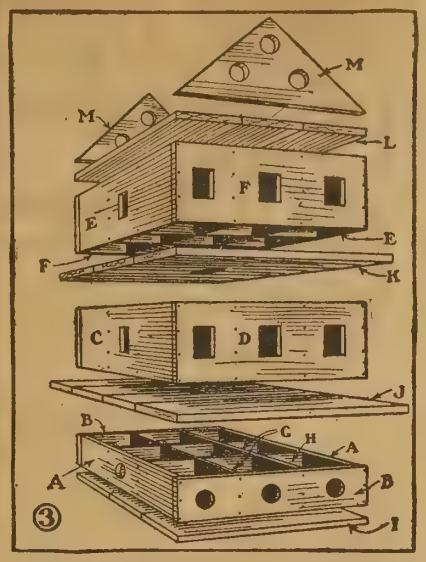
## A Martin House.

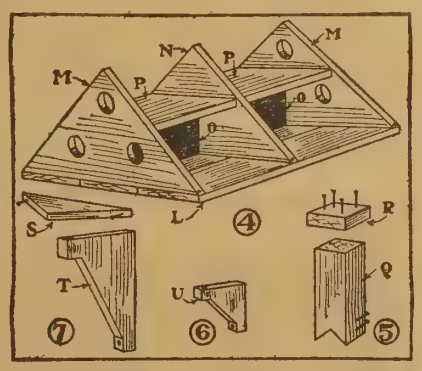
When providing quarters for purple martins build one large house of many rooms, rather than several small houses, because these interesting birds are very sociable and build their nests in colonies. They are not content with one-or-two compartment houses if more commodious quarters are obtainable.

A 30-room house like that in Fig. 1 is none too large. In designing this I have made the construction of the simplest possible form, with the walls and roof built in sections so they may be separated for cleaning out the compartments (Figs. 3 and 4). The house is 24 inches wide, 30 inches long and 35 inches high. First construct the frame which forms the first story walls, out of boards four inches wide (A, and B, Fig 3), then the second



story out of eight-inch boards (C and D, Fig. 3), and then the third-story frame out of eight-inch boards (E and F, Fig 3). Cut boards A, C and E 28 inches long, and boards B, D and F 24 inches long.

## Marking Off the Partitions.



Cut the doorways before nailing the frames together, but as these should come in the centers of the compartments first mark off the position of the partitions upon the boards. The first-story diagram shows how two long partitions (G) and six short partitions (H) are set. There will be one round doorway in boards A, and three in boards B. For martins these openings must be two and one-half inches in diameter. Bore several small holes and connect them into one large hole with a chisel. There is one square doorway in boards C and E, and three in boards D and F, two inches wide and three inches high. After marking them out bore holes in the corners and cut from one hole to another with a small saw.

After cutting the doorways and nailing together the frames, cut and

fasten the partitions in place. Then prepare floor board I to fit the first-story frame, floor boards J to form a three-inch projection upon all sides of the second-story frame, floor boards K to form a two-inch projection upon all sides of the thiru-story frame, and floor boards L to fit the third-story frame. A hole must be cut through the exact center of floors I, J and K for the post support V (Fig 2) which extends through the first and second stories. Nail floor boards I, J and K to the under side of the first, second and third-story frames. These sections need not be fastened to one another, because the support will tie them together when they are slipped over it.

Cut gable ends M and partition N (Fig. 3) out of 12-inch boards, making the angle at peak 45 degrees, and bore three two and one-half-inch doorways through ends M. Nail floor boards L

to the bottoms of these pieces (Fig. 4), then fasten partitions O (4 inches wide) between ends M and partition N, and fasten floors P on top. Screw floor L to the third-story walls E.

## Projecting Roof Boards.

Cut roof boards long enough to project six inches over the gable ends and side walls, fasten these together in two sections with battens, and screw to the gable ends. Nail the small shelf S (Fig. 4) to the top floor below the gable ends.

Fig. 5 shows the chimney (Q) and its cap (R), Fig. 6 the small brackets U which fasten below shelves S and floor K, and Fig. 7 the brackets T which fasten below floor J.

The bird-house support (V, Fig. 2) is a 2 by 4. Cut brackets W out of two-inch stuff and spike them to V. then nail the 1 by 2-inch strips X to the wide faces of V, below the brackets, so as to make the post of the same form on all sides. Set the support four feet into the ground, and brace it on all sides with diagonal braces.

Paint the martin house with two coats of oil paint.

## Hints for Pie-Bakers.

The next time you bake pies, especially juicy pies, try adding a little corn starch to the crust. One teaspoonful to a pie will prevent the under crust from being heavy.

Try mixing the sugar and flour and adding it to the fruit before putting your pie together. The pie will be more evenly sweetened and you will not bite into any lumps of flour.

Do not stretch the top crust tight. In pressing the edges together push the edge of the top crust toward the center of the pie. This allows plenty of room for the fruit to cook and prevents the crust from bursting open and the juice escaping. Save an ounce of juice or an ounce of meat or potato.

**The ECLIPSE for $1.65 a year**

That is the cost per year, figured on a basis of 38 years of service. Eclipse Windmills erected 38 years ago are still pumping water *today—with no repair bills!*

The Eclipse Wood Windmill has been used for 50 years, always giving wonderful service. Its strong, simple construction makes it the one mill to buy.

**Powerful—Weather-proof**

It's a mighty still day when the Eclipse doesn't pump some water into your tank. Automatically turns in and out of wind—requires but occasional oiling—direct stroke—no gears—but little friction—noiseless. Buy the Eclipse Windmill—it's the cheapest in the long run. Figure its cost by its service for years, without repairs—not the first investment. Now go to your dealer—who'll prove these claims.

# News for Breeders

W. G. Cordiner of Walla Walla, Wash., proved himself a true sport when, at the Portland Shorthorn sale, February 25, he not only purchased the champion bull and female, but put up a choice bull calf he had paid $500 for and, without cataloging or previous advertising, took a chance on getting his money back. Mr. Cordiner had purchased the calf, that was not quite a year old, together with four high-class registered Shorthorn cows, from Alex Chalmers, just a few days prior to the sale. But he liked the champion bull so well he decided to buy him and take the chance. He was rewarded by receiving $485 for the youngster, Mr. Bertrand of Olequa, Wash., being the buyer. And he, as well as Mr. Cordiner, was well satisfied with the deal.

Wapato Belzewere Fayne, one of the good Holstein heifers owned by Thomas Carmichael of Gaston, Ore., has recently completed a seven-day official test, with a production of almost exactly 13 pounds of butter. The cow is a junior two-year-old with first calf and was tested without any special preparation. She was increasing her milk flow when the test was finished. Mr. Carmichael has two more heifers that will soon be tested and will give his entire herd official records.

## A Flag on Every Farm.

President A. D. Dunn of the Northwest Shorthorn Breeders' association is urging every Shorthorn breeder in this territory to show his patriotism by planting a flag pole on his farm and flying the Stars and Stripes over his herd until kaiserism is driven from the face of the earth.

# BREEDERS' DEPARTMENT

## SHORTHORN CATTLE

### SHORTHORNS

A few young stock for sale by such noted sires as Precious Goods, a son of the great Golden Goods, and Scottish Sunrise 2d.

**R. E. BOYCE, Baker, Ore.**

**WEST SIDE AUGUSTUS (514271).**
heads my herd of registered Shorthorns and D. S. Poll Durhams. West Side Augustus by Count Augustus was first prize winner at Intermountain Stock show, Salt Lake, 1917. Stock for sale. Correspondence solicited.
**R. A. PARSONS. Blackfoot, Idaho.**

### H. H. Schildman

breeder of registered Shorthorn cattle. Hampshire sheep and big-type Poland China hogs.

**Filer, Idaho.**

### LELAND BROTHERS

Breeders of top registered Shorthorn cattle. Correspondence solicited.

**WENDELL, Idaho.**

**REGISTERED SHORTHORN COWS,**
Young bulls and heifers, sired by Scotch bulls; liberal terms.

**CALDWELL CATTLE CO., Caldwell, Idaho.**

## ABERDEEN ANGUS

### ANGUS CATTLE

In the famous valley of the Yakima there is located one of the best herds of Aberdeen Angus in America. Proof of this is evident by the many prizes won by this herd at all of the greatest shows of the northwest and central states, including the Chicago International.

Fifty extra good range bulls are now offered for sale. Also fancy herd headers and show cattle of both male and female. All prices very reasonable.

CONGDON & BATTLES.
**OTTO V. BATTLES, Manager.**

---

# 55--GREAT JERSEY SALE--55

## Tillamook, Oregon, April 2, 1918

## Richest Blood and Highest Records

**St. Mawes Golden Poppy,** the herd sire, 3½ years old, will be sold. He is a son of St. Mawes Poppy (1120.5 pounds butter in a year), and of Rosaire Olga Lad, sire of over 30 Register of Merit daughters.

Almost every cow has a high Register of Merit record, most of them made with first calf. These cows will increase their records when tested again. All the cows are young, only one having reached seven years.

Most of the cows and heifers, not daughters of St. Mawes Golden Poppy, are bred to him and include several daughters of **Rinda Lad of S. B.,** another great sire, with 21 R. of M. daughters.

It is positively the greatest opportunity ever offered in the northwest to get high producers with high record ancestors.

**H. H. CURTIS**
**Owner**
**Pullman, Washington.**

**J. W. HUGHES**
**Auctioneer**
**Forest Grove, Oregon.**

## Rogue Valley Holstein Association

**F. R. Steel, Sales Mgr.** **Winona Ranch, Grants Pass, Ore.**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, March 18.—Fresh measures to curb speculation led to general evening up of trades today in grain, especially on the part of shorts. After a number of lively price changes corn closed firm ½c to 1⅜c net higher, with March $1.27⅜ and May $1.25. Oats gained 2½c to 3⅛c. The outcome in provisions varied from 2½@5c decline to a rise of 12c.

Temporarily, a ruling by the exchange directors that no one interest could at any given time be long or short more than 200,000 bushels of future deliveries led to a good deal of flurried trading in the corn pit. At first sellers were greatly in the majority, owing to big receipts, but quick covering which shorts began brought about a sudden decided upward swing. All of the gains were afterward lost only to be replaced by new advances higher than before.

Gossip that exporters were buying oats at the best premium on the crop was largely responsible for the strength of oats.

Heavy receipts of hogs made provisions average lower.

**Chicago Futures.**

## Portland Wheat.

PORTLAND, Ore., March 18.—Coarse grain prices were revised downward very sharply at the close of the week in sympathy with the slumps at Chicago. At the merchants' exchange 400 tons of yellow bulk corn were sold at $68.50 and $69, prices $2@2.50 less than were bid on the preceding day, while offers for mixed corn were reduced $2.50@3 a ton.

Oats bids were lowered $2 and barley prices were cut 50c@$1.

With the more active members of the trade at Spokane attending the wheat standard hearing, not much business is expected in the grain market here for several days.

Activity has developed in the hop market after a lull of several weeks. A demand for contracts has sprung up and about 1000 bales have been contracted for at 16@17 cents. Dealers can not explain why the market for futures should revive with so many uncertainties facing the brewing industry, yet there is clearly a more optimistic feeling in the trade. Spots have likewise moved better, between 700 and 800 bales changing hands at 14@15 cents. In California there has been even more activity with prices a cent better than here. Several hundred acres of Oregon hop land were plowed up this winter, but with favorable spring and summer weather a crop equal to last year's is expected. Some growers report their roots rotted during the mild winter months, and the proportion of missing hills promises to be larger than normal.

## Seattle Wheat.

SEATTLE, March 16.—Prospects for one of the largest crops of wheat in the history of this state are flattering to date, according to most authentic advices obtainable by millers through country agents and the inspectors of grain in this city.

The outlook for a big crop of spring wheat is bright. Winter wheat is in good condition through ample moisture, but the difficulty was in getting seed. This obstacle it is expected will be overcome and a larger yield produced in 1918 through increase in the spring acreage.

There will be a greater acreage of early bart, the new hybrid member of the bluestem family of soft white wheats. This wheat brought 2c per bushel more money in 1916 than bluestem, due to its hardy nature. It withstood the ravages of hot winds and extremely high temperatures better than any other and at times seemed impervious to heat of any kind.

More corn than ever before will be planted in this state. With production of 1,500,000 bushels in Washington last year, this will be greatly increased. Three carloads of Washington seed corn was shipped to Madison, Wis., recently.

Announcements regarding new wheat standards have brough considerable satisfaction to grain dealers and millers here. It is felt that if the rules are relaxed farmers will get more money for their crop.

## Seattle Market.

SEATTLE, March 16.—The peak of the apple movement for early spring is expected to be reached next week on a strong to higher market. Seattle jobbers are advised today that Wenatchee holders demand $2.10 f. o. b. for 175's in Winesaps and larger. Fifty carloads held by eastern buyers are being quoted at $2.25.

Spuds are steady, but the movement is not what it should be in view of pressure exerted by the government in the effort to stimulate consumption. Extra fancy Yakima Gems for the week end, while quoted at $25@28, are being moved at $24, despite attempts of jobbers to support the higher levels.

Early Rose seed potatoes, of high qualtiy and selection, are rolling into market. Prices are $1.25 per hundred as against $4.50 and $5 this date a year ago. Jobbers point out the advantage of home gardening and the inducements to early and extensive planting in aid of the conservation program.

The onion market all along the coast has broken down and it has become a buyers' opportunity.

There is a brisk movement of Oregon eggs in this market at 40@41c, but careful buyers who demand weights produced by Puget sound eggs are buying carefully.

Butter is firm. Some stock is arriving from California. Sunshine and warmer nights are needed to develop grass feed.

**BUYING PRICES.**

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

**LINSEED.**

DULUTH, Minn., March 18.—Linseed, 4.06@4.17c; May, 4.10c bid; July, 4.08c; October, 3.60c asked.

## Portland Market.

PORTLAND, Ore., March 15.—A number of cars secured for delayed shipments have enabled egg handlers to reduce the surplus here, but the impression prevails that the market may go a cent or two lower this week, as receipts are increasing fast. General storing will not begin until the price is nearer the 30-cent mark.

Butter is holding firm at 50 cents for cube extras, with city creameries the main buyers. Prints were advanced a cent at the close of the week. Fair shipments of California butter have been received and a car of Utah butter is also on the market.

Very few potatoes are moving, as Oregon growers are not yet disposed to take the lower prices offered by dealers, which are around 75@80 cents. Jobbers quote Burbanks at 90c@$1.20 and are selling a few Yakima Netted Gems at $1.25@1.35. Onions drag with street sales at $1@1.50 a sack.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 2 white, $67.50@68 per ton.

Millstuffs—Bran, $30 per ton; shorts, $32.

Barley—No. 1 feed, $74; brewing, $82; rolled, $77@79.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $24.50; grain, $22.

Eggs—Oregon ranch, case count, 35c per dozen; candled, 36@38c.

Poultry — Ducks, 32@35c; turkeys, live, 26@27c; geese, 20@21c.

Butter—City creamery, prints, 52@54c per pound; cubes, extras, 50c.

Cheese — Tillamook triplets, 26c; Young Americas, 28c.

Dressed meats—Veal, 20@20 1-2c; pork, 21@21 1-2c.

Hops—1916, nominal; 1917 crop, 14@15c.

Potatoes—Oregon, buying price 75@80c per hundred.

Wool—Eastern Oregon, 44@65c; valley, 50@55c.

Beans—Buying prices; Oregon white navy and Lady Washington, 10¼@10½c; white kidney, 10c; colored, 9c.

## The Wool Market.

BOSTON, March 15.—The Commercial Bulletin will say tomorrow:

"There has been a fairly keen interest in the local market this week in all medium wools which are available and free of government control. Fine wools also are held more firmly, although relatively less strong than medium grades. The government terms for transferring foreign wools under its import options indicate that it will take the great bulk of the wool included under those options. Manufacturers report a very firm situation, with little effort on their part to sell goods. The new clip wools apparently have not begun to move in the west yet, owing to the lack of transportation. The government has stated that it has no intention to interfere with the marketing of this year's domestic clip."

Scoured basis:

Texas—Fine 12 months, $1.68@1.72; fine eight months, $1.55@1.60.

California—Northern, $1.70@1.75; middle county, $1.55@1.60; southern, $1.45@1.50.

Oregon—Eastern No. 1 staple, $1.80@1.82; eastern clothing, $1.50@1.60; valley No. 1, $1.65@1.70.

Territory—Fine staples, $1.82@1.85; halfblood combing, $1.70@1.75; three-eighths blood combing, $1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

Pulled—Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.45@1.50.

**Highest Market Prices Paid**

# Wade's Drag Saw More Than Pays for Itself in One Season

## —saws 25 cords in a day

HUNDREDS of WADE Gasoline Drag Saws are making light work of sawing logs into short lengths for farmers all over the West. It is the most popular farm machine that has ever been put on the market, because it is a big time, labor and money saver. The initial and upkeep costs are almost nothing when compared to the immense savings it makes for you in a single season.

**The New 1918 Model of the WADE DRAG SAW Is Now Ready**

All 1918 Model Wade Drag Saws are to be equipped with our new improved **4-H. P. ENGINE** — we have **INCREASED** the **HORSEPOWER** of the engine **WITHOUT INCREASING THE COST.** This 4-h. p. engine gives you an abundance of power, and, therefore, a greater output per day—be sure to get a **WADE**—accept no substitutes.

**Wade's Gasoline Wood Saw**
(Portable)
**$165 DELIVERED** Anywhere in the U. S. A.
**1918 Model With 4 H. P. Engine**

The WADE is made of the best materials throughout, and the whole machine is constructed for hard work in the woods—practically never gets out of order, and is always ready for use. The husky little 4-H. P. engine used on the Wade fairly hums the 6-foot saw through your toughest logs. (Larger saw blades on special order.)

One man can move the WADE along the log, while two men can easily move it from log to log. It weighs only 285 pounds complete. The WADE is especially low in upkeep cost and gasoline used—the tank holds 2 gallons (enough to cut 16 to 20 cords). It is the cheapest, easiest, fastest way for you to saw your logs.

**How Dan Ross Saws Forty Cords a Day**

COUPON

R. M. WADE & CO.
Portland, Ore., 322 Hawthorne Ave. (W. F.)
Spokane, Wash., N910 Howard St.

Gentlemen: Please send me the Booklet, "HOW DAN ROSS SAWS FORTY CORDS A DAY," also full information on the NEW 1918 MODEL WADE DRAG SAW.

Name .....

Address .....

.....

## Does 10 Times the Work of 2 Men!

Think of it! TEN TIMES as much as two men can do! The WADE will easily cut 25 cords of wood in one day.

Can you afford to pay for slow, expensive day labor when you clean up with a WADE the same amount of work in one-tenth the time?

Fuel and labor are higher than ever before—and present conditions indicate that they will continue so for a number of years—get a WADE Drag Saw and keep your labor costs down and sell your wood while it is high in price.

A good many WADE Drag Saw owners are making good money by helping their neighbors saw their wood.

Send today for this interesting booklet, "How Dan Ross Saws Forty Cords a Day." Dan Ross lives at Corbett, Oregon, and has used a WADE Drag Saw ever since they first came out. You will profit by reading his experience.

# Reduced Wheat Ration Is War Necessity

## *Food Administration Issues Vital Order; Congress May Increase Price of Wheat*

Two important actions relative to the wheat situation took place during the past week. One was the passage of a measure by the United States senate which would, if approved by the house of representatives and the president, increase the price of wheat for the 1918 crop to $2.50. The other was the action taken by the national food administration virtually rationing the people of this country so far as eating of wheat products is concerned.

Under the food administration's action it is required that hereafter, at least until the 1918 wheat crop begins to come in, the consumption of wheat products shall be limited to one and one-half pounds per person per week. This would be a reduction approximately of one-half in the amount of wheat stuffs ordinarily consumed. The action is taken by the food administration on the ground of being a "military necessity."

"If we are to furnish the allies with the necessary proportion of wheat to maintain their war bread from now until the next harvest—and this is a military necessity—we must reduce our consumption to 21,000,000 bushels a month as against our normal consumption of about 42,000,000, or 50 per cent of our normal consumption, reserving a margin for distributing to the army and for special cases," says the order. "This leaves about one and a half pounds weekly per person.

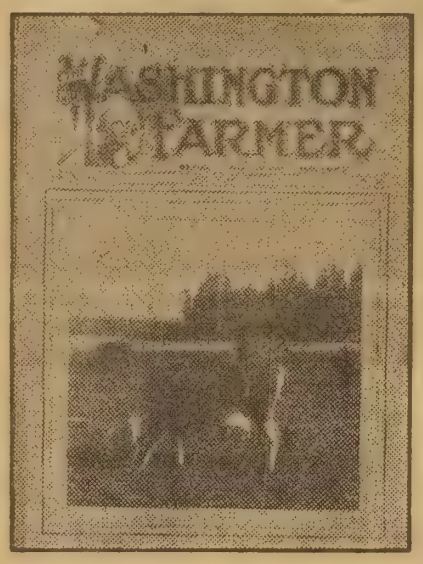
"With improved transportation conditions we now have available a surplus of potatoes. We also have in the spring months a surplus of milk, and we have ample corn and oats for human consumption. The drain on rye and barley as substitutes has already greatly exhausted the supply of these grains. To effect the needed saving of wheat we are wholly dependent upon the voluntary assistance of the American people, and we ask that the following general rules shall be observed:

"FIRST — Householders to use not to exceed a total of one and one-half pounds per week of wheat products per person.

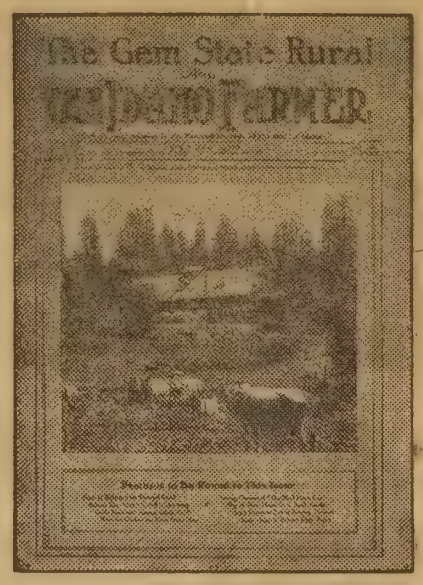
"This means not more than one and three-quarters pounds of Victory bread, containing the required percentage of substitutes, and about one-half pound of cooking flour, macaroni, crackers, pastry, pies, cakes and wheat breakfast cereals all combined.

"SECOND—Public eating places and clubs to observe two wheatless days per week (Monday and Wednesday), as at present.

"In addition thereto not to serve in the aggregate a total of more breadstuffs, macaroni, crackers, pastry, pies, cakes and wheat breakfast cereals containing a total of more than two ounces of wheat flour to any one guest at any one meal; no wheat products to be served unless specially ordered; public eating establishments not to buy more than six pounds of wheat products per month per guest, thus conforming with limitations requested of the householders.



"THIRD—Retailers to sell not more than one-



Senator Thomas Gore of Oklahoma, who introduced amendment that may increase wheat price.

# "Want" Ads in These Papers Are Economical and Effective

## Take Advantage of the Low Combination Rate for Insertion of "Want" Ads in These State Farm Papers

The "want" ad is a method of communication which will prove helpful at various times to all of our farm folks.

Do you desire to get in touch with a reliable, experienced hired man? The "want" ad brings your need to the attention of competent workers throughout three states.

Do you wish to turn used machinery into cash? The "want" ad reaches farmers in other districts who have use for your discarded implements, and who will probably be glad to make the saving you will be able to offer them.

Have you farm products to sell, such as live stock, poultry, seeds or dried fruits? Once more, the "want" ad in the three state farm papers offers a solution for the difficulty. It reaches the very class of homes where there is a constant demand for these things.

Have you a piece of land for which you are eager to find a buyer? The "want" ad in The Washington Farmer, The Oregon Farmer and The Idaho Farmer affords a splendid method for making a sale; inasmuch as these three papers are read by tens of thousands of farm owners and farm renters, a goodly proportion of whom are considering the purchase of farms or orchards in other sections.

To sum up, our "want" ads enable you to reach the people who have what you want or who want what you have. They are easy to insert. They are low in cost. Even if there is nothing you care to advertise at this time, you will always find interesting, profitable reading in our "want" ad columns.

Rates are printed at the top of these columns in every issue. Don't miss the "want" ad page today!

**Send Orders and Inquiries Regarding "Want" Ads to The Washington Farmer, 617 Central Bldg., Seattle, Wash.**

## Inoculate Peas

### Success Usually Depends on It

By J. R. SHINN.

In growing of peas early seeding of the crop is very important for successful results. The amount of seed usually required per acre depends upon the conditions under which the crop is grown and where the climate is as dry as it is in the Odessa section the best plan would be to put the peas in rows so that they may be cultivated to conserve the moisture. A double row system should be employed under such conditions. The method by which the seed is planted in this manner is to leave two holes of the grain drill open and stop three holes. This places the seed in double rows with 24 inches between each of the double rows where six-inch drill is used. Where an eight-inch drill is used the rows will be 32 inches apart.

With the Bangalia variety of peas 50 pounds of seed will be required per acre when the above method is employed. However, with the White Canadian variety 60 pounds of seed will be needed.

In case the peas are seeded with oats for either hay or silage it is necessary to use one bushel of peas and one bushel of oats. The White Canadian is the best hay and silage pea.

One of the needs is emphasized over and over again and that is that peas require inoculation if a successful crop is to be secured. Unless one has grown peas successfully in the garden where the soil is known to possess the bacteria which form the nodules on the roots of the peas it is well to send to the experiment station of the state college and buy the cultures for inoculating the seed. These cost 25 cents per acre and may be relied upon to give good results. Be sure to plant this seed deeply in the ground, whether the peas are grown for hay or for seed purposes.

### FOOD PROBLEMS

### Harrah and Hagenbarth Appointed.

W. W. Harrah, Pendleton, Ore., has been appointed by the secretary of agriculture and the food administrator as a member of the advisory committee of farmers and live stock growers to assist the government in working out food problems.

Frank J. Hagenbarth of Spencer, Idaho, has also been appointed on this committee, these two being the only representatives from the Pacific northwest. The committee has been called to meet in Washington March 28 to confer with the department of agriculture and the food administration on farm and live stock problems which will arise during the season of 1918.

#### Bank Has Agriculturist.

The Farmer's Savings bank of Walla Walla has employed C. L. Jamison to act as their bank agriculturist. It is planned to give such individual assistance to farmers and stockmen as is possible, and to aid in the development of the agricultural resources of the Walla Walla valley. Mr. Jamison was formerly agricultural agent in Wheeler county, Oregon, and in Johnson county, Wyoming.

### Save for War Purposes.

Elsewhere in this issue is a coupon enabling you to order thrift stamps or war saving stamps direct through this paper. Clip it out, enclose however much you wish to invest in these little "baby bonds," mail to us and your stamps will be sent by return mail. We are simply helping Uncle Sam help you and helping you help Uncle Sam.

## Urgent Pleas Are Made to President Wilson to Assume World Leadership in War Conduct

Two national magazines of great influence in their current issues call forcefully upon President Wilson to rise to the demands of this critical hour in the world's history and assume the leadership in the conduct of the war that destiny seems to have intended for him. The magazines are The World's Work and The North American Review, the former, under the heading, "An Open Letter to President Wilson," containing these significant paragraphs in an article urging the organization of a great war council in America that will coordinate all this country's war activities:

"Dear Mr. President: This letter contains a digest of opinion of a great number of men who have had an opportunity both from near to and from a distance to study the workings of our war machine.

"Very many who have been by long habit somewhat cynical of improving standards of international morality have been caught and invigorated by your enthusiasm for human freedom and the possibilities of improving civilization. And, as a nation, having subscribed to the high doctrines which you have formulated, our endeavor to attain them will bring us to a higher level than we should otherwise even have striven for. The standards you have set are held very preciously by the American public. Along with this feeling, and as universal among those who are where they can see the war machine, is the feeling that the vision which you have put into our war aims is lacking in our war conduct. Some blame you for this. Many others blame Mr. Baker. But those who have analyzed the situation most carefully blame the Council of National Defense. That body was created to make the comprehensive plan by which the whole strength of the nation could be turned toward the conduct of war.

"Mr. President, almost no one believes that the Council of National Defense has had this vision or has it now, or that it has a sufficiently comprehensive grasp of the raw material, labor, industry and transportation possibilities of this country to create and guide a plan to make use of them to their utmost.

"When the breakdowns in our war machinery came, you summoned new men to repair the damage and get the machine under way again, but in practically every case, Mr. President, the difficulty has been given to you to solve after it was in a serious condition, and not in time to prevent serious delay from arising.

"When, finally, these various problems are brought to you, you remedy them one by one, but you have not supplied the deficiency which has allowed them to occure and become acute. That deficiency is in the council of national defense. It has not functioned successfully as a war cabinet with vision, foresight and authority.

"The general belief is that the relief for this situation is in a body working directly under you and clothed with your authority, containing a combination of men acceptable to you who have knowledge of finance and government policy, and also men who, like Mr. Stettinius, for example, are familiar with the industrial processes of the country. Senator Chamberlain was pointing in this direction with his war council bill, but no one would haggle for any specific bill. If the council of national defense could be invigorated and relieved of other duties and perhaps reduced in numbers, it might serve. But its failure so far is against it."

The World's Work article and that of the North American Review are remarkable in these two particulars at least: They come simultaneously, and they express in different language the same ideas and the same purposeful appeals. After reviewing the grave position in which the United States and its allies find themselves as a result of varying fortunes and policies, Colonel Harvey, whose high rank among editors is known the world over, closes the North American Review's article with this gripping appeal:

"We can not, we will not believe it. Black as the outlook is and black as we should frankly recognize it to be, ultimate triumph is as certain as that there is a God in heaven if we will but clear our vision and press on and on, be it for one year or for 10. What the mighty forces of civilization need and all they need is a leader. Our war-worn but indomitable allies know this and admit it; and they recognize the man—Woodrow Wilson, whom above all others they would prefer to have in person at the head of the great council, and whom, even as merely but suitably represented, they stand ready and glad to heed and to follow. But the president himself holds back; he keeps aloof as a "cobelligerent"; he outlines programs without consultation with accredited representatives of the associate nations; he consults only one elderly and amiable, though estimable, gentleman; he is surrounded and supported almost exclusively by profes-

(Continued on page twenty-seven.)

### Children's Specialty Is Coming.

In the near future this paper will publish an issue with the children's department enlarged to contain a lot of things of interest to the young folks that we have been gathering for some time. Boys and girls, watch out for it. Be ready for some fun and entertaining reading. And have your wits well sharpened to solve some of the problems that will be put up to you in that issue.

## Economic Law

### Should Be Followed as to Prices

Farmers are patriotic; no class of American citizenship is more so. They want to help the government win this war, and they want the government to make the fewest possible mistakes in assembling its resources for the struggle.

If it could be demonstrated that the government's present plan of controlling wheat prices while allowing the law of supply and demand to have free play with corn, oats and other products will attain the desired object—the growing of more wheat—farmers generally would cheerfully accept that method. They will accept it loyally in any event. But a belief is growing that this plan runs counter to sound economic principles and that the government ought to take one horn or the other of the dilemma—either adopt a general policy of price-fixing or let wheat go free of government control.

A delegation of farm representatives presented this question with great force of reason recently before Food Administrator Hoover. They produced figures showing that the high prices of corn, barley, rye and oats now make it more profitable to raise those grains than wheat and that this will have a tendency to reduce the amount of spring wheat sown. It was further pointed out that wheat was now in many places the cheapest feed for stock, and was being used for feed purposes.

Congressman Steenerson of Minnesota accompanied the delegation and made this suggestion to Mr. Hoover:

"I propose that the food administration shall announce at the beginning of August, 1918, it will pay a price for wheat that will bear the same ratio to the prices of corn, rye, barley and oats as the price ratios to these grains were the three years before the war; that is to say, if the price ratio of these grains was as three to four for wheat, then the government will pay a price according to that ratio. This, in principle, is the same as is already being done by the food administration in regard to Pacific coast wheat prices. The president, in his last proclamation, fixed $2.05 per bushel as the Portland price for wheat, but the grain corporation, under date of March 1, 1918, announced that, in the event of certain conditions as to shipping are realized, it will pay $2.20, a raise of 15 cents per bushel This is 3 cents higher than the Minneapolis price. In like manner, if the grain corporation would announce that in event of abnormal rise in prices of coarse grains it will, to encourage the planting of a large area of wheat and the discontinuance of the use of wheat for food, pay a price which will bring the price of wheat relatively to the price of coarse grains as it was before the price regulation began, the area in the spring wheat regions of Minnesota and the Dakotas that woulid seed to wheat will be immensely increased."

### Boys and Girls Get Hogs.

Big medium Poland China gilts from the purebred herd of J. E. Straw of Wilbur, Wash., were distributed at Spokane Wednesday of last week. Twenty of these animals were sent into the Greenacres country, two to Deer Park, one to Elk, one to Orchard Prairie and two to Deep Creek. Seventeen of these hogs were sent to boys' and girls' pig clubs and 19 of them were financed by the Exchange National bank of Spokane. O. S. Fletcher, now assistant city agent for Spokane county, and Mr. Horne, the boys' and girls' club leader for the county, were instrumental in obtaining these Poland China hogs from Mr. Shaw and distributing them.

### Gardens and Parks.

All undeveloped park property in St. Paul, Minn., will be converted into gardens again this season. To raise 100,000 pounds of vegetables in home gardens and make St. Paul self-supporting in 1918 so far as garden productions are concerned, is the goal set.

# Should Grow Vegetables Needed

## *Don't Stop With Summer Supply; Dry or Can Them for Winter Uses*

A strip of ground 30x130 feet will, if properly fertilized and tended, furnish sufficient vegetables for the average family, excepting potatoes. The hoe, hand cultivator, and wheel cultivator are the principal tools for cultivation. I would not recommend a horse for cultivating a garden. There are usually odd times when one can attend to gardening and one hour a day will be sufficient to take good care of a garden of this size.

For fighting garden pests you will need a small spray pump, and a few of the prepared remedies sold by all seed dealers. For caterpillars, beetles and the like, use arsenic of lead, or paris green to kill them. Tobacco dust is merely a preventive. For aphis, use kerosene emulsion. For red spider, spray frequently with water containing a few drops of carbolic acid. For mildew, dust with sulphur. For leaf spot, rot, rust, or blight, remove affected parts, if possible burning them. and spray with bordeaux mixture. For cut worms use poison bran, composed of one part of wheat bran, one teaspoon white arsenic, one teaspoon molasses; place it around the young plants and the worms will eat it and die. To make kerosene emulsion dissolve 1-2 pound laundry soap in one quart of boiling water. Add two gallons water and two gallons coal oil, or (two cubic inches of soap, one quart of water, one quart kerosene).

Harvest the crop before injury by frost. The storing of vegetables in their natural state requires proper moisture, right temperature and ventilation. For this reason a cellar can not suit all. To keep onions and sweet potatoes, store in very dry and cool place. Make a lattice bottomed bin at least 4 inches from the floor for onions. Do not pile more than a foot deep, and protect from freezing. For carrots, parsnips, beets, turnips, etc., dig a trench 12 or 15 inches wide and deep, and as long as necessary to hold the crop. Fill the trench and cover only sufficiently to prevent from freezing. See that the trench is well drained. A short piece of one-inch pipe or very small tile will make a good ventilator. If parsnips are allowed to freeze it will add to their flavor, but all others must be protected.

Pull the cabbage up roots and all and pile in long narrow ricks, with the heads down, cover with straw and just enough dirt to prevent freezing. For celery, make box 12 feet by 12 feet by 12 inches, put three or four inches of sand and sawdust in the bottom and place in the cellar. Pull celery roots and all and reset them in the box, packing them in closely. Water occasionally by using a long necked funnel or from a hole in the side of the box. Do not wet the celery tops.

Peas, string beans and sweet corn are usually canned for winter use. The ordinary kitchen utensils will be all that is necessary for canning. Any of the vegetables may be dried and placed in the pantry for immediate use in winter.

To dry vegetables, prepare as for cooking, slice about 1-4 inch thick, spread on fruit tray and place near the stove or in the sun. Sweet corn must be cut from the cob before it gets too hard. Green peas should be scalded. String beans may be salted down the same as cucumbers, and they will make their own brine and keep indefinitely. An effective and economical home drier may be arranged by making six or more lattice bottomed trays about 2 1-2 inches deep and just the size of the top of stove. Place them on four bricks over the stove. Fill the top tray first, when you have prepared another tray full, place it on top of pile, moving first tray nearer the stove. Continue until all trays are full. Always place the newly filled tray on top, keeping the driest one nearest the stove. If the green fruit or vegetables are put nearest the stove they will burn. Do not use too much fire. Damp nights, rain, flies, yellow jackets, chickens and birds are to be dealt with when trying to dry anything in the sun.

A few notes on planting may not be out of order at this time. Put the tallest plants, corn, pole beans, and the like on the extreme north or east side of the garden. Do not plant anything but onion sets, rhubarb, horseradish and asparagus before March 15.

Don't walk on the damp ground while planting seeds or when gathering vegetables soon after a rain. It packs the ground, causing it to bake. Put down a few old 1x6 boards to walk on.

Plant all the earliest garden nearest the entrance gate, you can then get it without molesting the other plants. For

### Garden Contest.

This is the third instalment of the letters received in the Farmer's garden contest. We have many others, some of which will be published, but many of which can not be given because of lack of space and the passing of the early spring time. The decision on the contest will be announced at an early date.

best results use liquid manure during the growing season.

J. D. STEWART.

Multnomah, Ore.

### Take Plenty of Space.

A farmer should select about one acre and a half to two acres of good rich soil, which should be a south hill slope, quite steep and running down on a flat. As early as possible in the spring the garden should be plowed and worked until the soil is good and loose. As soon as the ground is prepared it is time to plant the early garden.

The early garden should consist of lettuce, onions, radishes, peas, turnips, carrots, beets, parsnips, spinach, cabbage seed for plants, and a couple of rows of six weeks potatoes. This should be planted near the bottom of the slope. All the garden should have rows long enough to be cultivated with a cultivator, and the rows far enough apart so they wouldn't get covered with dirt. Fine seed should not be covered too deep. A couple of packages of seeds of each kind of early vegetables is plenty to plant, with the exception of onions, which should be a few more, as the winter crop must be planted early in order to allow plenty of time for them to ripen.

As soon as the weather is warm enough to prevent frost by the time the seed would come up, is time to plant the remainder of the garden. A place at the highest part of the garden should be left for tomatoes and ground-cherry plants; next to that plant watermelons and cantaloups. Plant the hills six feet apart. Then plant two rows of Tom Thumb corn, putting the hills two feet apart; then a row of cucumbers, hills four or five feet apart; next, ten rows of sweet corn, putting a couple squash seed in every sixth hill of corn; then twelve rows of beans, selecting a good variety of string beans and the kinds that ripen early; next, a half row of grass peas, the remainder lentils. A third of a row each of beets, turnips, carrots, and parsnips for winter use. Plant the remainder of the garden to potatoes, which ought to raise a hundred sacks. Set the cabbage plants out where the early garden has been used and in the remainder of the lowland, mix in a few cauliflowers with the cabbage, and at the extreme bottom of the garden, plant a row of celery.

### Kill the Squirrels.

Either shoot, trap or poison the squirrels near the garden. If you find a gopher working in the garden, dig the dirt away until you find his den and put a couple of poisoned raisins in it. Use plenty of Parisgreen on the potato vines to keep the potato bugs away.

In storing the winter supply, don't let any go to waste. Can and dry the corn; can, dry and thresh the beans; can the tomatoes, and preserve the ground cherries. Dig the beets, turnips and carrots, top them and put them in the cellar. Leave most of the parsnips in the ground until spring. Put a little dirt over what you need in the cellar After the onions have ripened they should be toped and put in the cellar. Pull the cabbage, turn heads down in garden and put a little dirt around them. Bury the potatoes you don't need in a pit, until spring.

This garden was raised near Garfield, Wash., and I consider it an ideal war garden.

MRS. PAUL KILDE.

Spokane, Wash.

### Must Cultivate Well.

To economize in time and labor I would have the rows of sufficient length to permit of cultivation with the two-horse cultivator. For the average family one-half acre of good ground will produce an abundance. This plot should be given a good dressing of stable manure early in the fall and then plowed under, plowing about four inches deep. Then as early in the spring as the weather will permit, replow, this time from 8 to 10 inches deep. Follow this with the disk, smoothing harrow and plank leveler. Then the ground is ready to mark off in rows. This I do with a home-made three-row, two-horse marker. The rows are made three feet apart. After this is done I am ready to plant.

My first or early planting is made any time after March 15 that weather permits, the earlier the better. We will say our garden plot is 300 feet long. That would make 25 rows in the one-half acre. In row one I plant 3 pounds of onion sets, or little onions, which will take about 50 feet of drill. As the marker has already made a furrow of sufficient depth all I have to do is drop the bulbs in the furrow right end up about three inches apart, and then firm the loose dirt around with the hands. Then in succession I plant 25 feet of drill of each of the following: Lettuce, radishes, mustard, spinach, turnips and beets. The seed is dropped in the furrow made by the marker, and covered with the garden rake. The balance of row one I plant to good early peas. Skip rows two, three and four and at intervals of two or three weeks, until June, plant in the rows more lettuce, radishes, mustard, spinach, turnips, beets and peas. After each of these first four rows are planted take a handful of thousand-headed kale seed and drop a few seeds about three feet apart in the rows and thin to one plant in a hill, when six inches high. The kale will not interfere with the growth of the other vegetables and will produce a lot of good succulent feed for the cows in early fall.

Row five—Plant to carrots and parsnips.

Row six—Plant to early potatoes. This will finish the early planting.

The balance of the garden plot redisk and work down again about May 1. In row seven set out about 50 early cabbage, and 50 tomato plants. Row eight plant about half to early string beans. The balance of the row plant to late string beans about June 1. In row nine and 10 plant to shell beans, May 1 to 15. Rows 11, 12 and 13 plant to squash and pie pumpkins, May 1 to 15. Rows 14, 15, 16, 17 and 18 plant to sweet corn May 1 to 15. Rows 19, 20, 21, 22, 23 and 24 plant to late potatoes, May 25 to 30. In row 25 plant seed of late cabbage and cauliflower a few seeds every two feet. Thin to best plants when six inches high.

Begin cultivating as soon as vegetables are up, and first two times cultivate deep and close to plants, gradually giving more shallow cultivation on through the growing season. One hour a week with a two-horse, or two hours with a one-horse cultivator, should do the job, and do it well. One or two hoeings and perhaps a little hand weeding and thinning may be necessary, but this will be reduced to a minimum if early and thorough cultivation is given.

This is also one of the best methods of fighting plant diseases and garden pests. As a strong, vigorous plant will be the last to succumb to the attacks of disease and insect pects.

During the summer the surplus vegetables—and there should be a surplus—such as peas, string beans, tomatoes, sweet corn and any other vegetables that otherwise would be wasted, should be canned for winter use. In western Oregon carrots, beets and parsnips can be left in the ground all winter and dug as needed for the table. Late cabbage can also be left in the garden a good part of the winter and if a few of the thousand headed kale are also left they will furnish the family table with the best of greens during the entire winter. The suash and pumpkins should be gathered in before the first frost in the fall and stored in a dry and moderately warm place, and if protected from the freezing weather should keep until March or April. Potatoes should be dug when fully matured and stored in a cool, dry place.

LEONARD GILKEY.

Thomas, Ore.

### Raise What Is Necessary.

As a rule the garden should be plowed early in the fall, as it allows the ground to become settled before the crop is sown, thus making it less likely to become too dry during the summer. The ideal condition for soil in which common garden crops are to be grown are: First, a loose surface soil; second, a firm, moist, mellow seed bed below the loose surface; third, a subsoil which contains a considerable amount of moisture, that in time of drouth may be passed up to the seed bed to be used by the growing plants. The garden should be well harrowed and cultivated before planting. A person should raise things now that are necessary for home use. We should eat more potatoes and fruits instead of the meat and wheat necessary for the soldiers. Potatoes should be planted in April or early May, so they will have a chance to grow before the dry, hot weather comes, for potatoes grow better in rather cool weather, when the soil is reasonably moise.

Corn is another food that is necessary because everybody should have corn bread or any kind except white bread. Corn is, as a rule, planted in May. There is, however, no set day for planting, but it should be planted as early in the spring as the soil can be and is prepared, and is warm enough for the seed will germinate rapidly. It should be planted about one or two inches deep and about three feet apart.

Beets, carrots, cucumbers, watermelons, pumpkins and radishes and lettuce are also good vegetables. Cucumbers and watermelons are planted in May after the frost is gone. They are planted in hills about four feet apart and about three feet from each row, thus giving the vines plenty of room to spread, and during the summer when lack of rain makes it dry, they can be easily irrigated by means of small ditches and hoses.

Radishes and lettuce can be planted quite early so that they can be ready for table use in May or early June. They should be planted in rows about one inch deep, and the rows about two feet apart. Carrots, pumpkins and beets should be planted in rows. If too thick, they can be thinned out. Pumpkins are planted about the first of May. They are planted in hills and about three seeds in each hill, and the hills about four feet apart.

Strawberries and raspberries are also good foods. They are raised in the warm places and the strawberries are propagated by runners, the runners growing out from the old plants. If the plants purchased seem weak or wilted, or if the field at that time is exceedingly dry they should not be set immediately. It is much safer to shake them out well and put them close together in a row where they may be easily protected from the wind and kept well watered. Here they will freshen, perhaps start to grow and be ready for the field when conditions are more favorable. Strawberry plants may be set out at any time from early spring until as late as the first of June, providing the plants are strong and the ground moist. However, the earlier they are set the better, as they have a longer growing season and the roots seem to form more abundantly in the cooler weather of spring. In setting the plants, the roots should be shaken or spread out as naturally as possible, and the dirt firmly packed about them. Strawberries are either set in hills or in matted rows. When set in hills, they are usually three by three feet apart, or two feet in rows and rows four feet apart. When set in matted rows, the common practice is to set out single rows four feet apart, plants twelve inches apart in rows. The runners are then allowed to cover a space of from six to nine inches on either side of the plants, making a matted row from twelve to eighteen inches wide and leaving a space of from 30 to 36 inches between the rows for cultivation and convenience in harvesting.

In cultivation of potatoes, if potatoes are planted with a hand planter or by dropping into furrows, it is a good plan to go into the field with a cultivator after they have been planted a few days, and give the plot a good cultivation. Set the shovels so as to throw the dirt onto the row, thus making a ridge over each row. This should be followed every few days, by harrowing. Cultivation of potatoes should continue at frequent intervals from the time they are planted until the vines cover the ground to keep down weeds and to check the evaporation of moisture. Corn is cultivated in the same way, the cultivation destroying the weeds.

The best cultivation for beets, cucumbers, watermelons, pumpkins, radishes, and lettuce is hoeing. They are such tender vegetables they can not be cultivated with a cultivator, and the hoeing destroys weeds. Carrots can be cultivated with the cultivator.

The cultivation of strawberries should be shallow, yet deep enough to destroy weeds. To protect the plants from freezing and thawing, mulch is applied. The mulch is usually of coarse material as hay, cornstalks or straw and is applied late in autumn or early winter, and is removed in the spring. Raspberries are cultivated in about the same way, and they are covered with earth to protect them from freezing and thawing and removed in the spring.

WINIFRED MACKLICT,

Colfax, Wash.

# "Block System" in Purebred Sires

## *Raise Quality Value of Cattle in Each Block $4000 in Three Years*

In Klickitat county, County Agent B. W. Cooney, advised by the farmers of his county and acting in cooperation with them, is carrying on work relating to the control of crop pests and diseases, farm crops and soils, draining and diking, orchard and garden management, and farm management.

Those in his county who have studied the problem with him, estimate that the smut loss of the county runs as high as 96,000 bushels of wheat, or a money loss of about $192,000. This was for last year's crop and prices. They are working to put in force control measures throughout the county that will save at least a hundred thousand dollars of this loss next year.

Reporting in to the state college on the dairy and live stock work in Klickitat, Mr. Cooney tells of the recent organization of a Live Stock Breeders' association, which has in view the working out of a "block system" of bringing in and making use of purebred sires. Four purebred bulls were purchased last spring for use on the ranges in their respective blocks, and it is believed that these sires can raise the quality value of the cattle in their respective blocks $8000 in three years. In one district, 15 purebred cows of the Shorthorn breed were recently purchased to start a foundation herd for the improving of blood lines and a source of purebred bulls.

There will be in next year's wheat crop in Klickitat county a marked improvement due to the use of cleaner seed more closely selected as to variety. In years heretofore, it has been possible to go into many Klickitat wheat-fields and find five or six varieties of wheat, with one variety, perhaps, predominating to the extent of 50 per cent. This situation was taken up by the wheatmen of the county last year, and Mr. Cooney was asked to locate fields of wheat as nearly as possible free from disease, and unmixed. Three fields were selected on this basis, plus the general condition of the crop. Much of this wheat was held in the farmers' cooperative elevators, re-cleaned, and when seed requests came to the county agricultural office, they were referred to these elevators. The same practice has been followed in reference to alfalfa, sweet clover, peas, beans and red clover.

A "marketing project" is included in the work of the agricultural office in Klickitat county. Mr. Cooney states that the grain-growers have built two cooperative elevators in the last year, which do a cooperative marketing and purchasing business. The books of these elevators showed $241,000 worth of business done last year, with an estimated saving to their patrons of $12,000. The products sold include wheat, oats, barley and live stock. The goods purchased include farm machinery, lumber, wood, fertilizer, flour and mill feeds. A small, 10-barrel cooperative flour mill is already in operation, and two larger mills are expected next year. About 35 carloads of flour are shipped into the county annually, and it is to avoid this additional expense to the consumers that the local mills are being planned and built.

The farmers of the county have asked Mr. Cooney to help in a country-wide campaign for "the conservation of farm machinery," and the basis and reason for this movement is an estimate of $120,000 worth of farm machinery left out of doors in all kinds of weather, depreciating 12 to 15 per cent every year; that is, a money loss of $10,000 to $15,000, when an 8 per cent depreciation

By J. L. ASHLOCK

on $120,000 worth of farm machinery would be reasonable, if the machinery were properly housed.

Walla Walla county established its agricultural office on November 1, 1913. It now has two agriculturists, who are H. H. Boone and A. W. Holland, O. V. Patton, the former agent now being assistant state leader. The leading projects of the agriculturists during the last year pertain to live stock, marketing, the labor situation, the production of sugar beets, "pure seed," farm organization, the dairying indudstry, and the determining and announcing of codling moth spray dates.

Codling moth spray dates are those periods in the life of the insect when spraing will kill the maximum number of worms, and have since the establishing of the county agricultural office been determined by the agriculturist by means of moth cages, band records, temperature records, and orchard observations. About 90 per cent of the apple-growers of the Walla Walla valley now are following the spray dates secured in this way, many of whom report 1 per cent of culls, and less.

A cow-testing association has been organized, and 500 cows are signed up for the testing of next year. The board of directors of the association employs a tester who spends a day each month at each place, and the records he keeps include the date when the cow became fresh, when bred, pounds of milk for each month, pounds of butterfat for each month, amount and kind of feed consumed, cost of feed, cost of feed for each pound of butterfat, cost of feed for each 100 pounds of milk, and the statement of monthly profit or loss for each cow. This association was organized in the fall of 1915, and since that time the members of the association have been able to raise the average of their milk production by 627 pounds per cow, per year.

Negotiations now under way look to the planting of five or six hundred acres of beets next spring, and the building of a sugar factory in 1919, if 6000 acres of beets can be planted within reach of the factory that year. An increasing acreage of field peas and beans are occupying the summer-fallowed land of the county, which hitherto has been left uncropped during the off wheat-year. One hundred and forty farmers of the valley cooperated with the agricultural office in the production of beans last year, many of whom planted the crop experimentally. In the dryest year the valley has had in 15 years, this bean crop on summer-fallow, amounted to more than $25,000. Field peas on summerfallow made from 8 to 35 bushels per acre in a very unfavorable year. The net results of the work with peas, thus far, show that conditions in Walla Walla county at the foothills of the Blue mountains especially favor this crop.

J. N. Price, formerly extension specialist, in dairying for the State college, took charge of the agricultural office of Yakima county last May, succeeding L. W. Fluharty, who had been there but a few months when he resigned to accept another position. The beginning work of the Yakima agricultural office, according to Mr. Price's recent report, consisted of an agricultural production survey of the county. This survey, last fall, developed such items as 10,000 carloads of Yakima valley fruit, a half million tons of alfalfa, 600,000 bushels of wheat, 840,000 bushels of corn, 360,000 bushels of barley, 480,000 bushels of oats, 84,000 tons of potatoes, 96,000 tons of sugar beets, and 600 tons of beans.

Milk, cream, butter and cheese produced in the valley, for the year-period of the survey, amounted to $673,000. There were 117,000 sheep, 12,000 milch cows, 27,000 other cattle, and 15,000 horses.

Upon the entrance of the United States into the world war, a county committee on Food production was organized to help stimulate production. A total of 14,750 acres of new land was brought under cultivation and into production for such crops as corn, wheat, potatoes and beans. An important part of the food conservation work has been the increasing of storage facilities for fruit and potatoes. Cold storage has been increased from 1150 cars to 2300, and common storage from 1250 to 4000.

In the concluding part of his report, Mr. Price says:

"The chief agricultural problem for next year, as affected by the war, can be summed up in increased food production. The chief problems in connection with increased food production in Yakima county are the increasing of corn and live stock, and the labor problem. I feel that this county can aid more by increasing the corn than the wheat, since the former yields about 60 bushels per acre, wheat yielding only 30 bushels. The growing of wheat on new land will be urged. A campaign for early seeding and better irrigation of spring wheat will be carried on. But a large corn production supplementing our immense production of alfalfa will enable us to greatly increase our live stock."

# Grain Standards Are Discussed

## *Hearing at Spokane Develops Many Problems*

At the hearing held by the department of agriculture in Spokane last week on the matter of grain grades for the coming season, one of the big issues debated was whether or not 60 pounds or 58 pounds should be used as the minimum weight per bushel for No. 1 wheat. Over this question the 200 or more farmers and millers present showed considerablee disagreement, one element arguing for the maintenance of a high standard with a view to stimulating the production of a better quality of wheat and the other element favoring more liberal grading rules with a view to increasing the quantity of grain produced.

W. W. Harrah of Pendleton, who was present, representing many farmers in the eastern Oregon districts, argued strongly for the 60 pound provision as adopted by the department of agriculture. The Spokane delegation, headed by R. J. Stephens, expressed favor generally with the idea of a lighter test weight for No. 1 grain.

Another question that resulted in considerable debate between the mills and the producers was that of the cleaning and scouring of wheat. Representatives of the producing interests declared that the farmers were losers by the common custom of leaving all the cleaning to the millers. Almer McCurtain of Davenport, Wash., one of the most active men in the interests of the wheat producers of the Inland Empire, declared that farmers' organizations had prepared in some instances and could prepare in many others to clean their wheat as satisfactorily as the millers themselves coulid clean it. Representatives of the milling interests, however, declared that they could not purchase scoured wheat as sent to them from the farm. The new grading rules of the department define treated wheat as wheat, 20 per cent of which has been scoured, limed, washed or treated in any other manner. The former definition of treated wheat allowed only 10 per cent.

The regulations provide that wheat in grades No. 1, 2 and 3, shall be cool and sweet; wheat in grade No. 1 must be bright and No. 1 of the grade of hard red spring shall not include more than 10 per cent of wheat of the humpback variety. Grade No. 1 of the class Durum shall not include more than 10 per cent of wheat of the variety Red Durum. Wheat in grade No. 4 must be cool, but may be slightly musty or sour.

Any wheat which does not come within the requirements of any one of the grades 1 to 4, or which has an commercially objectionable foreign odor except that of smut, garlic or wild onion, or is musty, sour, hot, heating, infested with live weevil or other insects that injure stored grain, shall be classed as sample grade.

One of the interesting phases of the grain conference was the discussion of Red Russian wheat in relation to the 60-pound bushel standard. Red Russian is grown extensively in certain sections of the Inland Empire, and many of its friends feel that the fixing of the 60-pound standard is in the nature of a dimcrimination against this variety of wheat. President A. A. Elmore of the Farmers' union for eastern Washington and northern Idaho opposed the fixing of this standard to cover Red Russian, and in connection with his argument read the following communication from R. C. McCroskey of Oakesdale, in whose community much Red Russian wheat is grown:

"The quantity, quality and food value of flour produced by No. 1 Red Russian are equal to that produced by 60 pounds of Jones fife and the other varieties named in this class, as has been frequently demonstrated by the chamist of the state college.

"The fact that this variety is required to reach a minimum test of 60 pounds, which it never actually does, throws the No. 1 of this variety into grades 2 and 3, most generally in grade 3, thus imposing a penalty of from 3 to 6 cents, generally 6 cents per bushel, on the farmer for producing this variety, without any good reason for the same.

"There are produced in the northwestern states from 7,000,000 to 10,000,000 bushels per annum of Red Russian wheat, which would entitle it to the consideration asked.

"It produces from 4 to 7 bushels per acre, under given conditions in a large part of the Inland Empire, more than any other winter variety.

"Despite the increased yield, many farmers are induced to use other less profitable varieties because of the fact that the Red Russian is penalized from 3 to 6 cents per bushel.

"And last, but by no means least, is the fact that the farmer in the localities suited to the production of Red Russian contributes, with the same effort, a larger amount of foodstuff for the allied armies of Europe than he can by raising any other variety.

"We, therefore, believe that wisdom, justice to the wheat raiser and the policy of the government, in encouraging food production by every means possible, all point to the fact that the handicap or penalty should be removed from the production of Red Russian wheat."

# No Grain for Booze

To the Editor of The Washington Farmer: At a farmers' institute held at the Chamber of Commerce building, Spokane, Thursday, February 28, a resolution was unanimously adopted pledging all the farmers present to write a personal letter to Herbert Hoover, federal food administrator, asking him to prohibit the use of grain for malting purposes, or for the manufacture of spirituous liquors for the duration of the war. This is not to be construed as prohibition propaganda, but as a strictly war necessity. The motion also included a request that those present should induce as many farmers as possible to go and do likewise. The undersigned believes the pages of The Washington Farmer to be the best medium for reaching the greatest number of farmers and their wives, in the Inland Empire, and asks all who may read this to get busy.

HARRY JOLLEY.

Rockford, Wash.

# Growing Beans

## The Market Must Be Considered

To the Editor: You have helped so many by your paper that I am wondering if I also can get some help. What kind of beans should I plant this spring? The Farmer of February 14 said that the white navy bean and the Martha Washington were about the best. I want to plant the white navy but our neighbors say they do not get ripe quick enough. They have the Mexican tree bean, and I bought some seed from them. Should I plant them? Or what kind should I plant?

A. J. G.

Ridgefield, Wash.

The above question was referred to R. J. Barnett, pomologist at the Washington State college, who replies as follows:

In growing beans for the general market, we have to pay attention constantly to what is desired. It has been found that for a dry bean the most popular varieties are the navy beans and the Martha Washington. These can be sold, if of good quality, in any quantity that may be produced. Other varieties should not be produced except for home markets which one knows will take care of them.

The growing of beans requires a fairly high summer temperature, a long growing season, and perhaps, above all others, a harvest season which is free from rain. Unless these requirements and a fairly fertile and warm soil are available, bean culture for the general market should not be undertaken.

The rows of beans are planted 14 to 30 inches apart, depending on the type of cultivation that is to be used. For horse cultivation the wider spaces would, of course, be left. The dwarf beans, such as named above, are planted three to four inches apart in the rows. If pole beans are to be used, a very common system of planting is in hills about three feet apart each way. Four or five plants are grown in each hill, and must, of course, be supplied with support.

Small quantities of the Mexican bean might be grown for home use, but in general it would be difficult for a Washington grower to compete with the Mexican and California growers in the general market with this variety.

### Argan Nut Tree.

Is there anything stranger than the undisputed fact that in Morocco pigs climb trees in search of nuts? Not only pigs but goats. The puzzle is not in the pigs and goats, however, for they are of the common variety that we see here. It is the tree that is strange. It is called the argan nut tree and it grows near Agadir. Usually it shoots out from a steep hillside. The trunk is broad and flat and almost horizontal, and so are the main branches, forming ample and solid foothold for any animal that may be tempted by the olive-shaped nuts growing within easy reach of the main branches.

## *Must Fight It Out on Western Front.*

By signing a peace treaty with Rumania, Germany has opened a highway for her armies into the rich wheat-growing regions of southern Russia and apparently has solved its problem of bread supplies.

When Russia collapsed, the little kingdom of Rumania, which had fought gallantly on the side of our allies, found itself entirely cut off from its friends. On one side lay Austria-Hungary, on the other Russia, and the bolshevik government of Russia suddenly became hostile to our isolated ally. It had to make such terms as Germany and Austria would grant it. It has rich oil fields and is compelled to sell their yield to Germany. The victors further stipulated that Rumania must give transport facilities for the troops of the central powers to Odessa.

Germany followed up that advantage quickly by sending an army which is now in possession of Odessa, key to the vast resources of southern Russia. Odessa is on the Black sea. Into that great inland ocean, which has an outlet into the Mediterranean, flow the Dnieper and Danube rivers, both navigable for long distances. Grain and other cargoes can be brought down the Dnieper into the Black sea and be conveyed thence by way of the Danube into the heart of Austria-Hungary and from Austria into Germany by railroad.

It would do no good to underrate the advantage thus accruing to the enemy. These new developments seem to eliminate, at least for a while, the possibility of bringing Germany to terms through hunger. It looks now as if we must fight it out in hard battles on the western front.

## *Hoover Is Loyal and Patriotic.*

Senator Reed of Missouri attacked Mr. Hoover viciously in the senate recently, but other senators came to the defense of the food administrator, and the net result of the spirited debate was to increase public confidence in him and his labors.

Mr. Hoover takes these attacks in good spirit. He took up his work with no illusions. He understood from the beginning that his path would not be strewn with roses, and frankly said, when the president appointed him, that in all probability he would have to arouse many antagonisms. The job of a food controller is not enviable. As Lloyd-George, the English premier, said in the house of commons last week, "there has been only one successful food controller in the history of the world—the one who made five loaves and two small fishes feed a multitude."

But Mr. Hoover's shoulders are broad; his capacity to work and take abuse is stupendous, and, on the whole, while he may have made some minor mistakes, the public realizes that he is doing a great work, is loyal and patriotic, and that the president made no mistake when he called him to service at the gigantic salary of one dollar a year.

## *High Price Stimulates Production*

A belief is growing in the minds of many public men and economists that it would have been better national policy to have left wheat prices to the law of supply and demand. They reason that, since an increased production was the chief consideration, the prospect of high prices would have stimulated seeding on great areas of semi-dry lands and soil usually cropped to other produce, and that the present law has defeated its own ends, holding down the price of wheat and preventing increased production, while at the same time leading to the feeding of wheat to live stock in many districts because prices of corn and other cereals are free from government control and therefore high priced.

Seth J. T. Bush of Rochester, who has been active in the formation of the Farmers' league in New York state, declared in an address last week that if the laws of supply and demand were allowed to operate, or if farmers were guaranteed a profit of 10 per cent, there would be produced in this country this year enough food to feed ourselves and our allies without any wheatless or meatless days.

On first thought the suggested 10 per cent guarantee rather appeals to the mind, but reflection will show its impracticability. Since some farmers could make 10 per cent profit on prices that would mean losses for others, there could be no stabilizing of prices. Under this scheme the government would have to pay $3 a bushel or more to some growers and probably only $1.50 to others. And a gigantic organization would have to be constructed to investigate the claims of millions of producers.

Moreover, a guarantee of that kind would invite slipshod farming and careless financing, and would end in the payment of extravagant wage to farm labor. While undoubtedly most farmers would deal conscientiously with the government, a large number would cast off responsibility, take life easy, pay any wages that might be demanded, and fall back on the promise of 10 per cent profit.

Suggestions of this nature, however, are wide of the mark for when the government makes its decision it is our duty to adjust ourselves in good spirit to the plan that is adopted.

## *Fight the Kaiser on the Farm.*

Wheat, more wheat, is the cry from our European allies. Strive as our farmers may, they can not grow enough this year to supply home needs and meet the necessities of a hungry and war-worn world.

> We are on the closest rations at any time since the war. The food situation is as serious as it ever has been, but is being greatly relieved by the supplies you are sending us.

Thus spoke, the other day, Lord Reading, British high commissioner to the United States. Lord Reading was speaking in public and probably tempered his utterances. It is not improbable that he is speaking with greater gravity to the president. It is not improbable that his message prompted Mr. Hoover to call the recent conference in Washington of food administrators from nearly every state in the Union. At all events, Mr. Hoover impressed upon their minds the necessity for yet further conservation of wheat so that the allies may be supplied.

England is on bread rations. So is France. and if American production should fall down this year, whether from adverse weather or insufficient planting, the American people may also be put upon rations.

Let these facts inspire every farmer to put his best thought and effort into every detail of wheat-raising labor. Whether one is plowing or sowing, harrowing or discing, harvesting or threshing, his labor will take on a grandeur never before associated with farm industry. He will be serving the great cause of world freedom, of popular government, of future safety.

We can not win the war without food.

## *Washington Gleanings*

Forty acres will be released for cultivation near Castlerock, by the draining of Huntington lake.

At a recent meeting of the trustees of the Bellingham normal school, it was decided to hold the school open all year.

Every mill and logging camp of the Grays Harbor district now has a Loyal Legion of loggers and lumbermen organization.

At a recent meeting of the commissioners of Whitman county it was reported that contracts on roads and bridges amounting to nearly $275,000 have been allowed.

R. M. Leid of Waitsbury recently purchased 65 acres belonging to the G. W. Loundagin estate, and which adjoins his place on the Coppei. The consideration was $175 per acre.

The capacity of the Libby, McNeill & Libby cannery at Yakima will be doubled this season and the company will expend $150,000 for machinery and additional equipment.

Federal Expert Ward H. Foster is urging more bee culture for western Washington, reporting that this part of the state has many advantages for an exceptional bee raising country.

Twenty-nine vessels cleared from Grays Harbor in February, carrying 22,229,000 feet of lumber. The number of clearances was six under January, and 6,500,000 feet less of lumber were shipped.

A 45-horsepower caterpillar tractor and a train of six Troy dump cars have been added to the road building equipment of Cowlitz county through a recent purchase by the board of county commissioners.

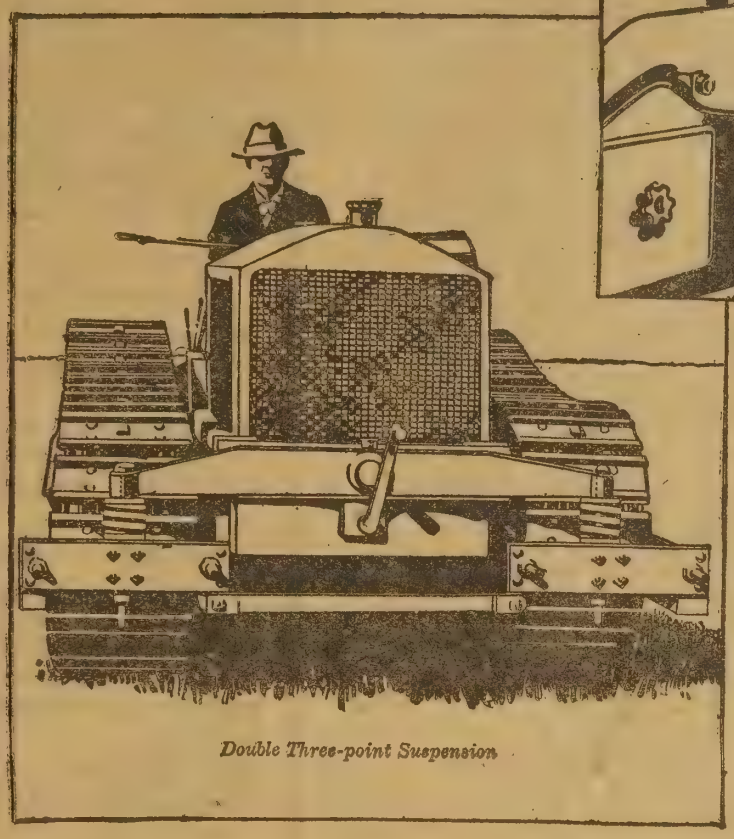
The Utah-Idaho Sugar company has been campaigning for 500 acres of sugar beets for experimental purposes this season, and as a result 400 acres has been pledged by the farmers of the Walla Walla valley.

E. F. Banker of Winthrop has been commissioned by the farmers of the Winthrop valley to select from the Kansas City territory, about 26 head of young bulls and heifers of Shorthorn and Hereford breeds for their herds.

Skagit county has decided not to hold the fair this year, owing to the "rightful undivided utilization of human activities everywhere in helping the country win the war." However, the farmers' picnic will be held on July 4.

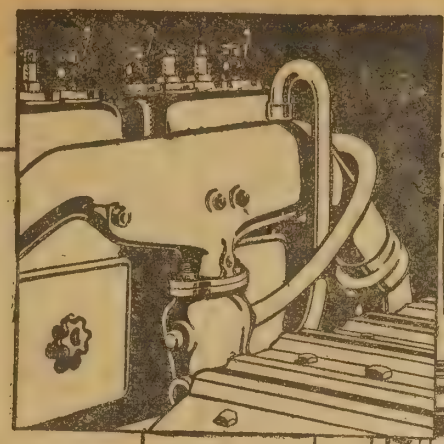
One of the oldest ranches in Garfield county changed hands, when Jerry Seely sold his Central Ferry place to J. N. Cardwell Sons, and Bob Young. The new owners are overhauling the ferry, and intend to operate it day and night.

A Potato Market association has been organized at Satsop, with W. J. Wharton, E. R. Brady, and Charles Mouncer as directors. The association has a membership of about 20 growers, and plans to have a total acreage of over 75 in standardized potatoes, all of which will be handled through the association.



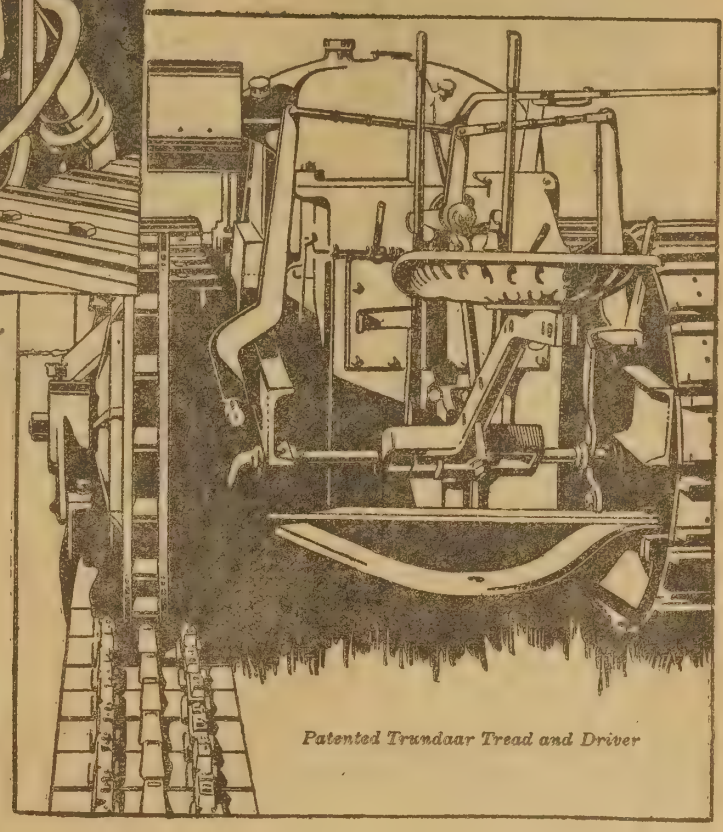
## *What Others Say*

Rural New Yorker: In the coming sweetless year a hive of bees will give you a little handle on the sugar trust.



Ohio Farmer: The world needs our products and present prices offer unusual opportunities if costs can be kept within bounds. It is particularly a time to study how to save time and labor.

Nebraska Farmer: The time is not far distant when the marketing question is going to be solved in part by good roads and transportation facilities that will enable hauling grain and live stock directly from the farmer's dooryard to the central markets. Every thoughtful farmer will do his share to hasten the coming of that day.



Denver Field and Farm: Every single handed worker on the ranches where stock is kept has had a tough time of it this winter, nor is the trouble half over at this time. The plowing comes next with all its grief. Ranching is no longer a long dream on horseback with nothing to do but ship the cattle and get the money. The golden day of the easy sledding has passed from us and it is scratch gravel or starve on short rations.

*Double Three-point Suspension*

*Buckeye-Deppe' Integrator*

*Patented Trundaar Tread and Driver*

# How to increase the yield of your farm

When you buy a Trundaar Tractor for your farm you are investing in a power plant that will pay big dividends, by increasing your income and lowering your operating cost.

Compact, but massive in construction, the Trundaar is a real power plant, built for all kinds of farm work.

Economy of operation was one of the prime considerations in designing each part of the Trundaar Tractor.

All the accumulated knowledge and experience of 23 years in the tractor industry have been built into the Trundaar Tractor.

The cost of operating a tractor comprises the necessary outlay for fuel, oil and repairs.

Trundaar owners are saving hundreds of dollars a year on these important items of farm operating cost.

### Makes low-grade fuel operate like high-grade gasoline

The Buckeye-Deppé Integrator is one of the exclusive features of the Trundaar Tractor.

Lowering the fuel and oil cost is not the only way in which the Integrator saves money for Trundaar owners. By insuring perfect and complete combustion, it practically eliminates three common difficulties in engines; dilution of the lubricating oil in the crankcase, accumulation of carbon in the cylinders, and spark plug troubles.

The Buckeye-Waukesha special tractor engine is remarkably free from mechanical troubles, being built to stand up under the severest strains imposed by tractor loads.

### Do you judge a tractor by its tread?

The patented Trundaar Tread more than meets every tread requirement. It is the endless belt type, built on the familiar log-chain principle, and requires no lubrication. The cost of making replacements is practically nothing as each link and grouser plate is quickly detachable.

A double three-point suspension protects every vital part of the Trundaar from shocks and strains.

*The Trundaar Tractor is strictly a one-man machine. The operator can easily control both the tractor and the plows*

All vital parts of the Trundaar Tractor run in oil and are perfectly protected from dust. Even the air intake of the carburetor is fitted with an air cleaner which prevents dust from getting into the cylinders.

The Trundaar is a one-man tractor so that labor cost is minimized. The ease and flexibility of control provided by the powerful multiple disc clutches, together with the spring-suspended, easy-riding seat, make the Trundaar as easy to operate as an automobile.

Years of service are built into the massive Trundaar transmission, which requires no differential and delivers the maximum amount of power at the drawbar.

As a business farmer you will want to know more about the Trundaar. Write today to our nearest distributor for our advance catalog, which illustrates and describes it in detail.

# Dairy Farms Are Best for Hogs

## By-Products on the Dairy Farm Enable Cheaper Production; Can Produce Pork for Twelve and One-Half Cents a Pound

TWISP, Okanogan County, Wash., March 11.—There is a sharp demand for some articles of farm produce such as live stock, dairy products and eggs; but grain, spuds and fruit have been slow. The price of live stock depends on the quality and condition. The average price for beef is about 8½ to 9 cents. Hogs are bringing about 14 cents delivered at our market railroad point. Butter fat has been 57 cents at our local creamery since early in the winter. Eggs are down to 30 cents per dozen. The farmer gets 3 cents a pound for his wheat and pays 6 cents per pound for his flour. Lard is 30 cents and bacon 60 cents a pound at the grocery stores, and sugar is about 12½ cents. Most of our live stock and dairy products are shipped out and some grain is shipped; but poultry, eggs and garden stuff are used here. Dairymen can produce pork cheaper than others. Even with the high price of grain and labor I believe pork can be produced at a small profit for 12½ cents, live weight. Crop conditions are about normal. The snow didn't get as deep as usual the past winter, but there seems to be more moisture than we have had for two or three years.

GEO. LA RUE.

### Expect Average Crop.

GARFIELD, Spokane County, Wash., March 18.—As spring approaches there seems to be plenty of farm labor, but there will be a shortage of farm power in the way of horses. This shortage is being met in a way by some of the most progressive farmer by buying farm tractors. There will be five or six of the crawler, tracklaying type tried out for spring plowing. It is always necessary to buy a certain amount of new farm machinery each year, so regardless of the high prices, new machines will be purchased whenever it is needed. Old machinery is being repaired, but not to any greater extent than in most normal times. With such high-priced labor it doesn't take much time with an old machine to pay, or partly pay, for a new machine. Meat animals were pretty well sold off last fall. Pasture will be utilized to its fullest extent in raising the farm stock this coming season, as grain is high and hard to get. The late-sown fall wheat seems to be coming through the winter in good condition. The acreage is small, however, with the contemplated spring grain an average crop will be grown for this season. ROY G. ADAMS.

### Labor Is Plentiful.

WILSON CREEK, Grant County, Wash., March 19.—There is no labor shortage at Wilson Creek, in fact we have a surplus of labor. Horses and tractor power is sufficiently provided for spring seeding. The horse market is fair, although there is a surplus of horses here. The caterpillar tractor is coming into prominence with the rancher farming on a large scale. Quite a number of small combine harvesters are being contracted for the next harvest, and old machinery is being repaired for farm use. Very little beef will be put on the market this spring; the demand for cattle is poor, and very little attention is paid to pasture. J. P. SCHROEDER.

### Spring Work Progressing.

RAINIER, Thurston County, Wash., March 16.—Weather conditions this last week have been fine for plowing and other spring work, with considerable frosty weather, and some seeding has been done. In regard to the labor problem, I do not think the farmers will try to hire to any extent this spring. What they can not do themselves will have to go undone, because most of them are not making enough money to justify the wage. The country is full of potatoes for which there is no sale, and many bushels are being fed to cows. Milk products, and feed, are high, and everything else is high. For instance a manure spreader of standard make, before the war would have cost $130, now it costs $200 to $230. The supply of work horses is ample. There are no tractors in this immediate vicinity, but a number of trucks and automobiles. Quite a number of manure or litter carriers have been installed, and there is a fair supply of farm machinery. Beef animals have been pretty well disposed of. A few dressed hogs are being shipped out. Most of our pasture under fence is burned over timber land, seeded to tame grass, and some prairie, while others turn their cattle out at large.

Seed costs about as follows, per hundred pounds: Rye, $4; oats, $3 to $4; wheat, $5; vetch, $4.50 to $5; peas, $6 to $8, and clover seed, $33. There will be a good sized acreage seeded this spring, which will mean many dollars in seed. L. F. DAVIS.

### Specialize in Wheat.

MEAD, Spokane County, Wash., March 18.—Speaking of labor shortage, the season is hardly advanced enough to tell just what that will be. There will be also some shortage of horse power. Prices are so high for good horses that few will be able to buy what they need. There are practically none for sale in this community. A few people are going to try out the tractor. There is also a light shortage of drills and binders, with prices out of sight for the small grain grower. There are very few meat animals to be put on the market this spring. Most of the people are paying little attention to stock; all their attention being put to the raising of wheat, as the most important thing to aid in the war. So much attention is given to wheat there may be a shortage of oats this fall. The question of why a limit is put to the price a farmer may get for the most important of his products, while the manufacturer and dealer in farm machinery may charge what they please, will not down, and is causing more discouragement, discontent and protest than any other one thing at this time. However, this is not going to cause them to halt in their efforts to do the very best they can to carry out the wishes of the government. The farmer is patriotic if he does not do as much shouting as some others.

GEORGE HINGSTON.

### Advance in Cattle Business.

EPHRATA, Grant County, Wash., March 16.—Grant county does not seem to be suffering from a shortage of labor at the present time. It has been well organized by the county agricultural agent and every town in the county has a local labor agent who is securing the help for the farmers. The price they are paying is $60. The Spokane federal labor agency has been able to furnish good men for work on the farms and so far the men have been very satisfactory. There are more than enough horses in this county to do the work as there is a considerable number of well-bred horses for sale. The farmers have been breeding Percherons for a number of years and nearly all the young stuff is Percheron, although there are some Shires. There has been no horse market in the county outside the local demands and there are many first-class horses for sale. The farmers have been anxious to sell their horses and they have a mighty good type for sale. Tractors are coming into prominence. There are a few wheel types that are being used on level land, but they do not work very well on the hilly land as the wheels do not hold in the loose soil. The farmers are well supplied with farm machinery, having enough to do their work. About the same amount of farm machinery is being purchased this year as usual though it is higher. They have been urged to repair their machinery earlier in the season and I believe are doing so. Farmers in this county have been purchasing pure-bred bulls for the last two or three years and there will be a better quality of cattle shipped out for killers this year than ever before. The cattle business is being increased for breeding purposes. Farmers are realizing the necessity of preparing for better feeding next year and are making their plans accordingly. Several have fed Russian thistle as hay with very good results. H. W. REAUGH.

### Tractor Is Favored.

PORT ANGELES, Clallam County, Wash., March 15.—In regard to the shortage of power on the farms of this county other than labor shortage, I believe there are enough work horses in the community to meet the requirements. Of course, there are short seasons when more horses could be used, but there have been a number of horses for sale. The horse market is not very lively just now. Tractors have a place on a goodly number of farms in the county and it is only a matter of time until a considerable number will be used. Quite a little farm machinery is being purchased this year, and of course, the thoughtful farmers are putting their old machinery in shape. There is entirely too much farm machinery left to winter in the fence corners. The output of meat animals is probably a little less than last year. There will be an increased number of hogs raised this year, however. Silos will be utilized this year to better advantage than ever before, and a considerable number of new silos will be constructed. M. R ALLEMAN.

### Horse Is Preferred.

LACROSSE, Whitman County, Wash., March 11.—Farm labor is about as scarce as it can get without greatly hindering farming operations. Work horses are about normal. Farm tractors are coming into use, but generally speaking, most farmers will rely on horses for some time to come as there are many difficulties yet to overcome in the tractor line. The same may also be said in regard to combnies, although more new makes of combines will be tried out in 1918 here than tractors.

Weather has been quite frosty and most field work was done in the afternoon. With warmer weather seeding will be general within a few days. Ground is in excellent condition.

M. E. SCHRECK.

### Horse Is Stand-By.

SHELTON, Mason County, Wash., March 8.—Willing labor is having its inning now. It always has, for willing labor finds work, at living wages, at any time, where thrift rules. But now high wages in the shipyards and logging camps drives the laborer away from the farm and many times puts the farmer to his wits end to contrive how he will get his land

# Pay Your War Bills

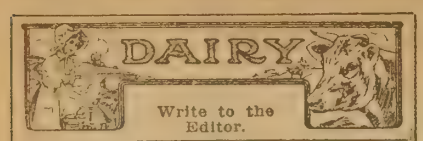
You have ordered the greatest war preparations this battle-scarred world has ever seen.

Hundreds of ships, thousands of cannon, hundreds of thousands of the flower of America's manhood—your own boys—millions of shot and shell, are already taking their part, at your orders, in the fight to save civilization from the heel of the Hun.

This takes more than hundreds, more than thousands, more than millions in money—it takes billions and billions of America's dollars. The first and second instalments of these billions you have paid in the first and second Liberty loans.

Now the third instalment is coming due—the **Third Liberty Loan.**

Men who till the rich acres, who gather the gold-laden harvests of Washington, men whose state bears the proud name of the Father of His Country, will gladly, enthusiastically pay their part of the nation's war bill, **their** war bill, to support **their** boys fighting **their** battles in Europe's bloody trenches.



Get ready to go down in your pocket—deep! Not just a few dollars, but all you can rake and scrape. Not your past savings and accumulations, necessarily, but your future prospects, the money you are going to make.

This Third Loan will take more money than the first and second Liberty Loans together. It's a big thing! The biggest financial job America ever tackled—and America is you, each and every one.

# Skimmilk for Calves

By R. A. LAMSON.

With butter quoted at 40 cents, how long can a dairyman afford to feed wholemilk to calves? One Holstein breeder claims that it pays him to feed $2 worth of butterfat to his calves daily. Another breeder finds that he gets just as good a calf by feeding wholemilk for two weeks and then by feeding skimmilk.

Although the rougher appearance of the coat of the calf for the first month on skimmilk will not be quite as satisfactory, just as good or even a better calf in size, quality, thrift and value, will be obtained at the end of seven or eight months.

The method of rearing calves employed on one of the best dairy farms is as follows: First, allow the calf to take the colostrum milk for the first three or four days, or until the milk is fit for human consumption. Colostrum milk is particularly fitted for the young, as its gentle laxative action cleans the digestive tract. Bucket feeding of whole milk for two or three weeks is next advisable, that the young animals may have a good start in life. As stated above, the use of skimmilk fed fresh and warm from the separator is as good a feed as you can get for calves from this time up to six or eight months of age. A full week, however, should be taken for the change from wholemilk to skimmilk to avoid any digestive difficulties due to a less gradual change. Substitute a pound or two of skimmilk for an equal quantity of wholemilk each day until the change is complete. Skimmilk may be fed two or three times daily; feed four pounds twice daily or three pounds thrice daily. In this way, the young calf gets eight or nine pounds in 24 hours. Increase the allowance, gradually, as the calf gets older and larger and demands more. At six to eight months it should be getting eight pounds twice daily to make good gains. During this period they should have liberal quantities of some good legume hay, such as clover or alfalfa. In the earlier stages the skimmilk may be supplemented by a mixture of equal parts of shelled corn, oats and bran. After three or four months the grain should be ground. Just enough of this grain mixture should be fed to keep them in good physical condition.

The early use of grain and plenty of roughage is most advisable. This starts the calf to "chewing the cud" at an early stage and this seems to help in getting all four stomachs to working and in preventing stomach disorder.

One of the conclusions reached at Purdue regarding the value of skimmilk was obtained through investigation with the feeding of skimmilk to chickens. "The feeding value of skimmilk was $2.04 per hundred and it may pay to feed skimmilk to the poultry instead of to the hogs on the farm," states Professor Phillips in Indiana bulletin 182, which records this investigation. When fed skimmilk, pullets laid slightly better in December and January. This is the time when eggs are scarce and high in price. The farmer can see the desirability of feeding skimmilk to chickens for this advantage alone. It costs 9.7 cents to produce a dozen eggs in the skimmilk pen and the birds in this pen were kept at a greater profit than in any of the other pens.

# Makes Dairying Pay

By RUDOLPH C. JOHNSON,
Tester Whitman-Spokane County Cow Testing Association.

The following report on the herd of E. J. Paulson of Palouse, Wash., for January should answer the question whether or not dairying pays and incidentally the value of cow testing associations.

The herd consisted of 15 grade cows, carefully selected, by association testing and were well cared for. The price of milk was based upon the Spokane market at which place the milk was sold.

The daily milk production was 423.9 pounds, which amounts to 13,141 pounds for the month. We find that 13,141 pounds of milk testing 4.38 per cent contains 575.3 pounds of butterfat. This amount of milk at $3.51 per hundred is worth $461.25. The express and war tax paid in shipping this milk cost $34, leaving the net returns of $427.25.

The feeds consumed for the month were as follows:

| | |
|---|---|
| 5270 pounds alfalfa | $ 52.00 |
| 13,485 pounds apple pomace | 16.86 |
| 3272 pounds bran | 56.42 |
| 860 pounds oil meal | 24.94 |
| Total feed cost | $150.92 |

By subtracting the cost of feeds from the net returns for the milk, a profit of $276.33 for the entire herd of 15 cows for the month is shown. This is an average of $18.42 per cow. The prices of feed were somewhat lower at the time Mr. Paulson bought his than they were during the month in which these calculations were made, due to the fact that he bought at an opportune time. By adding 33 1-3 per cent to the prices paid, so that it will more nearly equal the market prices, there is still a profit of $15.07 to the credit of each cow.

The returns for $1 spent for feed were $3.06.

Feed cost of one pound of butterfat was 26 cents.

Feed cost of 100 pounds of milk was $1.15.

Feed cost of producing one gallon of 4.38 per cent milk was 10 cents.

The profits as calculated above do not take into consideration the other factors of expense such as cost of labor and interest on capital invested in lands, buildings, cattle and equipment. Nevertheless, it can be seen that by careful management, which not only includes judicial buying and selling, but the elimination of "boarder" cows by testing, a herd can be made to yield the owner a good profit. It is needless to say that Mr. Paulson is a cow testing association enthusiast.

**Make More Dairy Profits With a Better Separator**

THE Viking Cream Separator costs you less but gives you more for your money. It has greater capacity than any other separator of equal rating. It skims to a mere trace. The Viking is easy running and simple to clean, strong and durable. Write today for the Free Separator Book.

# Milch Goats

## Problem Is in Finding the Goats

That little article you published in the Farmer over my name not long ago in which an argument was advanced on behalf of the much-neglected nannie goat as a profitable milk animal seems to have aroused something more than passing interest. The most appreciated fact about it was the seriousness with which it was received and which the writer intended for it. Several farm journals have copied or referred to it favorably, one chamber of commerce of a western city asked for aid in getting a goat propaganda started in its community and the only discordant note was an offer from a man down in the Palouse to sell me a billy goat with which to start my dairy.

From the interest shown I am convinced it would not be difficult to get the goat dairy business started in several different towns if one very important consideration could be met, the securing of foundation stock. It is true that there are goats scattered throughout the country in considerable numbers, that is, goats of the common short haired breeds as distinguished from the angoras.

These goats, however, are just common everyday goats. They are here, as the soldier boys would sing, simply because they are here.

They are goats because they are goats and few of them could give any good excuse for being here. They grow no fleece for the market as does the valuable Angora and their capacity to give milk is solely measured by the capacity of their kids to consume it. Everybody knows how soon a young goat becomes able to take care of itself.

The true milk breeds or strains of goats are not numerous in this country and they are almost an unknown factor in this part of the west. The efforts of the government through the department of agriculture to introduce from Switzerland and the island of Malta certain breeds of known excellence as milkers have not been crowned with great success, although considerable numbers have been placed near some of the eastern cities. The Maltese goats showed a lack of stamina when imported and developed not only weakness of constitution under changed climatic conditions, but they also brought over some serious animal diseases which the department found necessary to eradicate. This is not strange when the native home of these goats is recalled as having an almost sub-tropical character.

It is unusual for any living thing, plant or animal, to be successfully transplanted from an extremely warm to a colder and more rigorous climate. The goats secured from Switzerland were found to be much more hardy, as well as better milk producers. Their native home is in the Swiss Alps, where they have been bred carefully for one specific purpose, large milk production. The various breeds in that country, as well as those in the adjoining regions of Germany, are well established and defined as to breed characteristics.

A flock of Toggenburgs or Saanens, for instance, would all look as uniform in size and color markings as a herd of Holstein or Jersey cows. Their vigor and vitality are apparent in their upstanding, alert appearance, in contrast with the goats from warmer countries.

The limited number in this country is due to the difficulty met with in securing them for importation, the Swiss government being opposed to allowing any considerable number to leave the country.

I doubt if it would be possible at this time to import any, even if transportation could be secured across the water.

The goat problem in this country, therefore, is finding the goats. Common everyday goats such as are to be found in the suburbs of every considerable town, would be as serviceable for milking purposes as the average range bred cow would prove as a dairy animal. Probably even more so, for the range cow frequently keeps her calf at foot until it is well able to take care of itself unless the calf is taken away for weaning. Any effort to work up a profitable yield of milk from animals of this sort would be discouraging, although here and there will be found goats above the average supply. This is more likely to be the case with importations made from Italy by immigrants coming from that country. Whether any considerable number might be found or brought together is extremely doubtful.

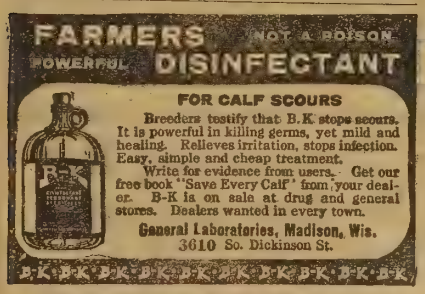
My idea as to the usefulness of goats for producing milk is based upon their adaptability to the small family living in small towns or the suburbs of our larger cities where they would be handled under tether or fed without much expense. This would be especially true where colonies of foreigners are gathered together and where the milk supply is likely to be sadly neglected or obtained in too limited supply. I do not figure that the American farmer will ever take up with the milk goat and the only place in which it would gain his approval would be in dairies undertaking to supply milk to the special trade demanded by hospitals and for supplying infants and children. The price paid for goat milk is always higher than for that produced by cows. It is conceded to be superior for these purposes.

If breeding stock could be procured of assured milking strains, many people whose families require only a limited amount of milk, but of a high quality, would doubtless find the goat even more satisfactory to handle than the cow. The half-gallon average yield which a good goat will produce is more than ample for the ordinary family, and there would be something in the satisfaction of having the family milk supply under personal control.

The real problem is in finding the goats.

E. E. ELLIOTT.

Colville, Wash.



# Tan Angora Skins

At Salem, Oregon, is what is claimed to be the largest Angora rug factory in America, tanning more Angora skins with the hair on than any other tannery in America. While many of these are finished for rugs, by far the greater number are sold to manufacturers of chaps. The Salem factory colors the skins as well as tanning them, leaving nothing but the shaping and sewing to be done. This season the Salem factory bought about 5000 skins in Chicago, most of which are supposed to have come from Texas and some from Nevada. They do not compare in quality with the Oregon pelts. The hair is generally shorter, and has no such lustre, either with or without dying, as the Oregon skins. Goat meat is becoming more and more staple on the market and the number of skins available is growing yearly.

H. A.

**You Needn't Pay Insurance.**

A house actually fireproof has finally been devised. It is made of steel and cement. The roof is of concrete, with a water proof film. Of if you wouldn't like that kind of a housee, you can have one built of concrete lumber. The boards, joists, rivets, etc., all are of concrete and the building has a concrete foundation. Another advantage of such a house is that it doesn't cost $100 or $200 every year to keep it up.

Breeders testify that B-K stops scours. It is powerful in killing germs, yet mild and healing. Relieves irritation, stops infection. Easy, simple and cheap treatment.

SPOKANE, WASH.

Some big advantages that you can obtain only in the

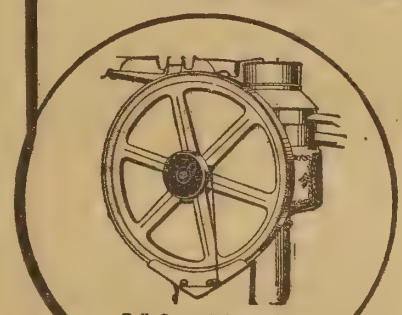
NEW DE LAVAL
CREAM SEPARATOR

GREATER CAPACITY: Without increasing the size or weight of the new bowl, its capacity has been increased.

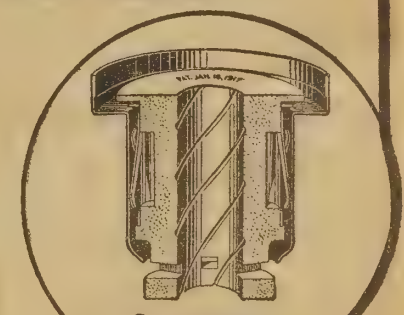
CLOSER SKIMMING: The improved bowl design, together with the patented milk distributor, gives greater skimming efficiency.

EASIER TO WASH: Simpler bowl construction and discs, caulked only on the upper side, make the bowl easier to wash.

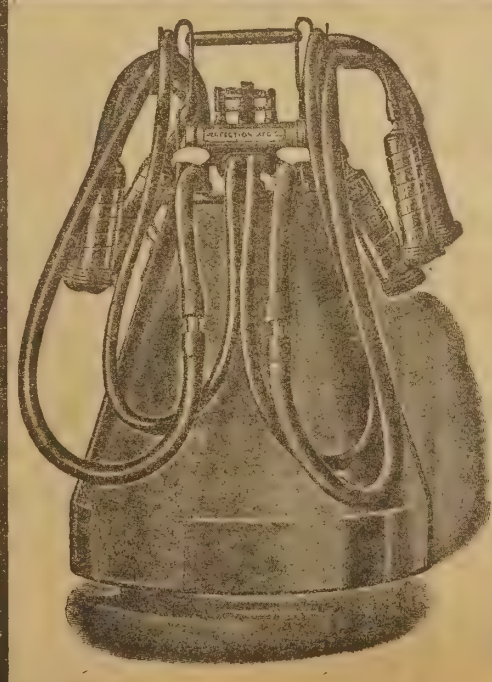
HAS SPEED-INDICATOR: Every New De Laval is equipped with a Bell Speed-Indicator, the "Warning Signal" which insures full capacity, thorough separation, proper speed and uniform cream.



EASIER TO TURN: The low speed of the De Laval bowl, the short crank, its unusually large capacity for the size and weight of the bowl, and its automatic oiling throughout, make it the easiest and least tiring to the operator.



WEARS LONGER: Due to its much lower bowl speed, high grade of materials used, and careful and exacting workmanship, the De Laval outlasts and outwears other makes by far.



ASSURED SERVICE: In almost every locality there is a De Laval representative, able and ready to serve De Laval users.

If you haven't the spare cash right now, that need not stand in the way of your getting a New De Laval at once. We have an arrangement with De Laval agents which makes it possible for any reputable farmer to secure a De Laval on the partial payment plan—a small payment at the time of purchase and the balance in several instalments—so that your De Laval will actually pay for itself while you are using it and getting the benefit from it.

# Poisons Coyotes

## Method Explained by Mr. Averill

The farmers and stockmen of the northwest should never miss an opportunity to slay a coyote, urges E. F. Averill, predatory animal inspector for the northwestern region. This animal is acknowledged to be the most active spreader of rabies known, not only inoculating cattle and sheep with the disease but inoculating dogs which in turn inoculate the domestic animals.

Mr. Averill gives the following directions for poisoning the animals and recommends that every farmer in a district where there are coyotes known to exist, make an effort to get them by this method:

Mix lard and sugar in the proportion of one cup of each, take a bit of this mixture when cool the size of a walnut and insert into it a small capsule containing two grains (about one 480th of an ounce) of strychnine.. Be sure that this poisoned bait is touched at no time by the hand. Mix it and handle it at all times with sticks or paper. The poison balls can be carried about loosely in paper for distribution so that they can be dropped without having been touched by the hand. They should be placed from horseback when possible, being dropped along trails where the coyotes are known to pass.

When asked whether or not there was danger of live stock getting the poison when put out in this form, Mr. Averill said that he had never known an instance of stock poisoning in this way though he had known thousands of instances where the poison had been placed freely on the cattle ranges. It is apparent, however, that it would not do to place this poison where hogs could get at it, for they undoubtedly would eat the sugar and lard bait.

### Doddies in Queensland.

Much progress has been made in the breeding of pedigree Aberdeen-Angus cattle in Queensland during the last two years. J. Moir, writing to the Queenslander, tells a story of a big volume of trade that has passed between lovers of the doddie in Queensland and firmly established breeders in New Zealand.

### New 16-Inch Guns.

The new giant 16-inch guns of the United States, defending the Panama canal and New York at Sandy Hook, shoot projectiles weighing 2370 pounds, which is more than a ton.

# Raise the Runt

## He Will Make a Good Hog in Time

It is a seriously mistaken idea to allow the runt pig of the litter to make his own way or die, as is so often done on the farms of the country. Not only should the runt be cared for the same as the other pigs, but owing to the fact that he is a runt he should be given better treatment than his stronger brothers and sisters.

Dr. S. B. Nelson, dean of the College of Veterinary Science of the State College of Washington, recommends strongly that a little calcium chloride and a little lime be placed where the pigs can get it, especially the pig that needs some special stimulus. The calcium chloride and lime should be mixed in about the proportion of 11 grams of the former to 15 grams of the latter. A mixture of salt, slacked lime, sulphur and charcoal should be kept before the pigs and growing shoats at all times. This should be in the proportion of one part lime, two parts sulphur, three parts salt and perhaps five parts of charcoal in one form or another.

Dr. Nelson says that shorts and milk will frequently play havoc with small pigs because they form too rich a combination of feed. Pigs need roots and roughage feeds, not only to balance the ration, but to dilate the stomach and help form a basis for large body development. Ground oats with the hulls still on, roots such as carrots, potatoes, turnips and alfalfa leaves and plenty of exercise are among the things that every young pig should have. Regarding the exercise of little pigs Dr. Nelson recommends a simple method. Merely take a piece of old newspaper, he says, wad it into a little ball, throw it into the pig pen and watch a minute. The first thing you know a little pig will go up to the paper ball, smell of it, push it a little bit with his nose and presently with a twist of his body will jump about it and the first thing you know the whole litter are playing, running and bucking about all over the pen. C. M Talmadge of Newport, Wash., a successful swine breeder, follows this practice regularly with his pigs, seldom going to the pens without throwing a paper ball to inspire a little frolic on the part of the piggies.

# Veterinary

## Dr. S. B. Nelson

**Lice on Cows.**—One of my cows has lice and I would like to know some simple remedy for it, and a friend of mine has a cow and she would like to know what is the matter with her. She was in good condition until about a month ago and she seemed to fall away and seems as though she gets the hay in her mouth and can't swallow it and sometimes she can spit it out and other times she has to be thrown and it has to be taken out of her mouth. It is as large as a person's arm around and eight or ten inches long. She doesn't seem to slobber much when eating, but is getting so poor that she is nothing but skin and bones. Do you think this cow has lost her cud? How does a cow act when they lose their cud? D. W.
Pilot Rock, Ore.

For your cow, which is affected with lice, try the following: Oil of staves-acre, one part; olive oil, 12 parts. Mix thoroughly and apply. This is a very effective remedy for lice.

Regarding your friend's cow, it would be very necessary to make an examination of the jaws, mouth and the throat to determine the trouble. Naturally, there is some trouble in that region. What the specific remedy is only a personal examination will determine.

If you have a number of chickens ailing, send a specimen to the veterinary department at the state college of Washington and the professor of pathology will be glad to make a microscopic examination for you and advise you what he finds and, if possible, give you a remedy for same.

**Stomach Clogged.**—I lost a good cow a short time ago with the first stomach choked right up with dry straw. We gave her salts, but they did not move it and we did not know what did kill her until I opened her to try and find out what it was. Am writing to know what to do in case this happens to any of the other cows.
MRS. M. K.
Grass Valley, Ore.

Of course, the principal thing for you to do is not to feed one feed alone so as to prevent the particular feed from clogging the first stomach or rumen. You gave her salts, you say. The trouble was that there was not

This Concrete Feeding Floor

Prevents waste of high-priced corn—it delivers the bacon.

In these days you can't afford to feed grain to mud-holes. It's pork we need.

Concrete feeding floors mean permanent floors—no filth, no disease, no place for rats to nest.

You can build one by following the directions in our Bulletin 137.

CONCRETE for PERMANENCE

Win the War by Preparing the Land, Sowing the Seeds and Producing Bigger Crops

**Work in Joint Effort the Soil of the U. S. and Canada—Cooperative Farming in Man Power Necessary to Win the Battle for Liberty.**

The Food Controllers of United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat can be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rest the burden of supply.

**Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist.**

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operations.

**Canada's Wheat Production Last Year Was 225,000,000 Bushels; the Demand From Canada Alone, for 1918, is 400,000,000 Bushels.**

To secure this she must have assistance. She has the land, but needs the men. The Government of the United States wants every man who can effectively help to do farm work this year. It wants the land in the United States developed first, of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there. Apply to our Employment service, and we will tell where you can best serve the combined interests.

**Western Canada's help will be required not later than April 5. Wages to competent help, $50 a month and up, board and lodging.**

Those who respond to this appeal will get a warm welcome, good wages, good board, and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had, apply to

U. S. Employment Service, Dept. of Labor
Seattle, Tacoma, Bellingham or North Yakima, Wash.

sufficient water and salts given to your cow. In these very severe cases of impaction there is generally one thing, and one thing only, that will save the cow, and that is an operation to the flank through which a large quantity of the contents of the stomach or rumen is removed, after which the cow is given sufficient water and a purgative, including salts and linseed oil raw, in order to remove the offending material. You might try giving from a pound to a pound and a half of Epsom salts in the morning, a quart of raw linseed oil in the evening and repeat for two or three or four days if necessary.

**Colt Has Crippled Hoof:** I have a 2-year-old colt with crippled hoof which I think is contracted hoof. I cut his hoof and found dry blood which I think are corns. He seems to have considerable pain in his foot because he is lame. R. Y.

Trim the corn off completely until you get to the diseased portions. Then wash out carefully with a four per cent solution of lysol. Afterwards apply some of the following liniments to the wounded parts: Zinc sulphate one part, lead acetate one part, water eight parts. Around the hair line at the foot apply the following: Pine tar, one part; lard, one part. Melt the lard and mix the tar in. Apply once daily.

**Lame in Front Leg:** Have a horse 10 years old that is lame in the front leg. He has gradually grown worse in the last two years until he is quite lame now. The hoof has contracted until now it is between two-thirds and three-fourths the size of the other hoof, which is normal size. He points with that foot continually and favors it at all times. However, when he is warmed up in the harness he is not quite so lame. Kindly advise as to the ailment and its possible treatment. G. A.

Roberts, Idaho.

I would rather suspect that your horse is suffering from navicular trouble, and that he small navicular or coffin bone of the foot is diseased. I do not believe any simple remedy will avail. It is quite likely that it is not susceptible to treatment at all. Inject the wounded portion with tincture of iodine, one part; water, one part. Do this daily.

**Lumpy Jaw**—I have a heifer that has a lump on the left side of her jaw. Is there anything that I can do for it, and is it catching with other stock and is the milk good to use?

Davenport, Wash. I. W.

Your heifer is probably suffering from lumpy jaw, which is an infectious disease and dangerous to your other cattle. You ought to report the case to the commissioner of agriculture at Olympia, Wash. If the lump is loose in the skin the animal should be cast and the lump removed surgically and the wound treated daily with tincture of iodine. Also, the heifer should be given one drachm of potassium iodide in a pint of water morning and night for approximately 10 days. Then rest 10 days, and then repeat the potassium iodide treatment.

**Feet Are Cracked**—I have two cows whose feet are cracked between the toes clear to the bone. One has it on a hind foot about seven weeks. Another both front feet about a month. When the first one started our veterinary was in and advised us to keep her in the barn on plenty of clean bedding, bathe and disinfect the foot twice a day in creolin water. Then put some preparation which he said was the best healing he knew of between the toes and pine tar on the bottom and sides of the hoofs which has been done faithfully, but I see no betterment. One neighbor told me his were cured once by putting the affected feet in boiled tallow and then cure the blisters. Another one burnt his with hot irons and then cured the burns and they were all right. Can you advise me what will heal up the cows feet? The sores have been kept clean and healthy and what is the cause of it? A SUBSCRIBER.

Chehalis, Wash.

The infection which you describe affecting your cow's feet is probably infectious cellulitis, and is a very aggravating trouble, and is hard to treat because the disease extends to the cellulose tissues up around the foot even as far as the ankle. I think that your veterinarian has given you fine advice regarding the trouble, but you might try the injection of a one per cent solution of formalin into the tissues or one to five-hundredths solution of copper sulphate. This latter solution may be fixed so that the cow can step in it and soak the foot for some time in it. It is absolutely necessary to destroy the invading organism, which is causing the trouble. The actual calking, which you say that one of your neighbors use is sometimes necersary and gives good results.

## Urges Keeping of Sheep

More sheep are needed on the farms, says Judge Grant B. Dimick of Oregon City, Ore., and the farmers who raise them will be benefited as well as the whole country that badly needs them. Judge Dimick has greatly increased his sheep holdings in the last two years, and now has over 900 ewes, including a few registered Oxfords and Hampshires and a flock of 57 registered Shropshires. Mr. Dimick says the number of sheep in Clackamas county has multiplied in the last few years in the region south of Oregon City, especially in the Molalla valley and on into the foothills. There is now a fairly strong sheep and goat protective association in the county.

Judge Dimick quotes government statistics to show the decrease in the actual number of sheep in America and in Europe and Australia. Because the range is used up and much of it homesteaded we can not expect an increase there, hence it is up to the farms to supply the deficit, and there was never a time when a farmer could so profitably keep a small flock. Besides their direct profit they are the one animal that evenly fertilizes the ground over which they graze.

Judge Dimick admits the dog menace and says there must be fewer dogs. He says many farmers do not know they have the remedy in their own hands, and calls attention to chapter 22 of general Oregon laws, passed in 1917, which gives the right "to put out poison upon enclosed premises between sunset and sunrise of any day."

Judge Dimick also says all sheep and goats should be dipped when sheared, to destroy ticks and other parasites and in the case of sheep it is much better that they be dipped again in the fall. H. A.

**Newspapers in China.**

In all China there are about 440 newspapers, and of these only about 50 have good circulation. The average is not more than 3000 copies an issue. One newspaper in Shinghai claims a daily circulation of 30,000.

## California Cattle Need Feed.

Owing to the unprecedented drouth in California during the last year, pasture and cattle feed in that state is so short that stockmen are in many cases seeking to place their cattle in other states where feed is more plentiful. Persons in the northwest who have pasture or feed for sale could do themselves and the cattle men of California a favor by getting in touch with L. A. Nares, president of the California Live Stock association, San Francisco.

**Importance of Farm Machinery.**

The government has recognized the importance of farm machinery by giving the raw materials from which it is made a rating of B-1, second only to munitions of war. Implements have been given priority in shipping, so the farmers need not be delayed any longer than necessary in receiving new machinery. Before the time for use comes it is wise to look over a machine and order any parts needed as far in advance as possible.

# Which? Profit or Loss

Today the dairy industry of the West faces a crisis. Many men are losing money—are figuring on selling their dairy herds at a time when all possible production is needed.

In the same neighborhood where these men are losing money others are **adding to their bank accounts** almost daily. They're **increasing their herds,** because they find the business **profitable.** What is the difference?

# INDIANA SILO

These Indiana Silo owners are the most progressive dairymen of Oregon, Washington, California and Idaho. They preserve all their feed-crop, while the silo-less man goes to the expense of a crop and then allows 40% of its feeding value to dry up, evaporate and go to waste.

These silo-less men have to replace 40% of their crop with other feed—mostly grain, needed now to win the war. Experts claim that the average use of a silo conserves enough foodstuffs to feed 80 soldiers 30 days.

Even with our great facilities—our own standing timber, our logging camps and factories—we don't believe we can build enough Indiana Silos to supply the West this year.

So don't delay—mail the coupon today for complete Indiana Silo facts, and prices. Do it now.

# Hogan Test

## Results at Pullman Contest

By James Dryden.

The Hogan system of selecting layers is pretty generally understood among poultrymen. The claim made for the system is that the egg-laying capacity of the hen may be determined by making certain measurements of the hen. In other words, that there are external anatomical differences in good and poor layers that indicate their worth, according to Hogan.

The system has been the subject of more or less investigation by poultry experimenters and others without arriving at a decision that would be accepted as conclusive. The experiments did not encourage the Hogan idea. At the Pullman egg-laying contest Mr. Hogan was given his first opportunity to demonstrate publicly and officially the merits of his system.

At the opening of the contest in October, 1916, Mr. Hogan examined and "scored" all the pullets entered in the contest, about 1200 in number. Every pullet was given her number before the contest began; that is, Mr. Hogan gave the number she would lay during the year based on a physical examination of the pullet. The depth of abdomen from the pelvic bones to the keel bone and the thickness of the pelvic bones form the basis of his system.

A report has just been received giving the comparisons between the predictions and the actual trapnest records. This report does not seem to show any very decided correlation between the Hogan predictions and the trapnest records.

It might be said in explanation of Mr. Hogan's apparent failure in this test that on account of an epidemic of disease that ran through the flock and affected the records, the conditions were not fair to him. The records secured were low and probably did not represent the true egg-laying ability of the fowls. Taking the average of the flocks, Hogan's figures or predictions were invariably higher than the trapnest records, but the question can not be decided by the averages of flocks. It might happen that the average of the predictions was the same as the actual trapnest records though the predictions and trapnest records of individual hens were widely apart. The individual records must be studied, not the averages, to get at the truth. If the individual predictions were characteristically higher than the trapnest records, the system could not be condemned because the conditions of the contest were not such as to bring out the full laying capacity of the fowls. Hogan's predictions are not based upon what the fowls actually do, but upon what they are capable of doing under proper conditions.

But so far as the individual records are given, there appears to be no such agreement. This will be seen in the following table giving the records of all hens laying 200 eggs or more with Mr. Hogan's prediction. The first figure in parenthesis gives the number of eggs laid in the year as shown by trapnest records; the second figure gives Mr. Hogan's scores: (237-160), (232-130), (230-160), 224-175), (221-145), (217-145), (217-338), (213-82), (212-205), (210-220), (208-115), (207-220), (207-160), (206-175), (200-24).

In two cases only were Hogan's scores higher than the trapnest records. If the conditions had been good for high egg records and the trapnest records much higher there would have been a greater disparity between the the predictions and the actual records. On the other hand, as already stated, the predictions as to flock averages were considerably higher than the actual records, showing no agreement between the averages and the individual records of the best hens.

But the report gives other tabulations a study of which shows disparity. The results for different breeds are given separately. In the case of 335 white Leghorns which finished the year in good condition the prediction was 144.51 eggs a hen average, while the trapnest records showed an actual average of 124.94. The report says: "Of the 335 birds, the egg records of 49 differed from Mr. Hogan's prediction by 10 or less eggs; 31 differed by from 11 to 20 eggs; 36 differed by 21 to 30 eggs; 37 differed by from 31 to to 40 eggs; 21 differed by from 41 to 50, and 161 differed by more than 50 eggs."

The same thing is true of all the breeds; there seems to be no uniformity in the difference. In the case of one breed the prediction was an average of 191 eggs a hen, while the actual average shown by record was 84.6.

The Hogan system has failed in this test. I believe it possible to make from the book, without ever seeing the hens, a more accurate prediction than was shown in this test. A close study of the pedigree of a pullet showing the egg record of its ancestors for several generations is surer than measurements of bones. There is no royal road to high egg-producing strain.

# Use Sodium Fluorid

To the Editor: Can you please tell me what will help my chickens? They are kept clean and have the right kind of feed, but they are bothered with lice. They also pick feathers from one another until they kill some of the chickens. MRS. W. H. P.
Idaho Falls, Idaho.

For body lice, use sodium fluorid, which may be purchased in the city drug stores. In applying it, the following method is recommended (Farmers' Bulletin 801): One pinch on the head, one on the neck, two on the back, one on the breast, one below the vent, one on the tail, one on either thigh, and one scattered on the underside of each wing when spread. Push the thumb and fingers through the feathers and release the powder. Hold the fowl over a shallow pan so as to ctach the powder that may fall. A pound of the powder is sufficient for about 100 fowls.

There are various commercial powders that are more or less effective. Dust is nature's remedy for lice; the fowls therefore should have access to a dust bath at all times.

Feather eating is usually due to a lack of animal food in the ration. If the fows have plenty of meat scrap or milk they seldom learn this vice.

AJAX TIRES
GUARANTEED IN WRITING 5000 MILES
Dirt Track Champion of America

Special Patented Feature
Ajax Shoulders of Strength

Nation-wide victories won for Ajax Tires the *Dirt Track Championship of America.* State Fair crowds from Texas to Massachusetts witnessed these Ajax triumphs.

*These dirt tracks are country roads with a fence around them.* Ajax victories on them mean Ajax service for you. On proved performance Ajax Tires become your natural selection—the sure service, money-saving tire for the farmer.

SHOULDERS of STRENGTH

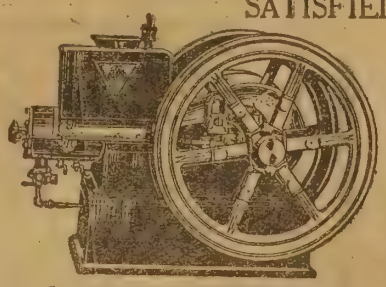
The picture shows you Ajax Shoulders of Strength—a special patented feature found only on Ajax Tires.

These Shoulders of Strength give more tread on the road—more rubber where it should be—mean added wear—more miles. Because of them road friction is evenly distributed over the entire width of the tread instead of centering in one spot and wearing through to the fabric.

AJAX ROAD KING
*"More Tread on the Road"*

In competition ON THE ROAD, Ajax Road King will prove its superiority. Built for city streets or farm highways. Note triangle barb tread—an added safety factor.

97% Owners' Choice



This huge percentage of Ajax total factory output goes to car owners as their individual choice over other tires that came with their cars.

Ajax Tires—Ajax Inner Tubes give real service. Booklet on Ajax Shoulders of Strength mailed free on request.

# Test Your Corn

## Will Greatly Increase Production

It is absolutely necessary that a widespread campaign of ear testing be begun at once, in order to obtain a sufficient supply of seed corn of strong germination, says the United States department of agriculture. Some preliminary work can be done by culling out ears which upon inspection are obviously unfit for seed, but individual ear tests are for the most part necessary.

The rag doll method of testing individal ears is one of the simplest and economical, and is efficient. The tester consists of a strip of cloth, preferably bleached muslin, 16 inches wide and from three to five feet long. The cloth should be marked off into squared sections and the squares all numbered. The ears to be tested should also be given corresponding numbers. Six or more kernels should be selected from different parts of each ear, and placed in the proper section. When the tester is filled, fold over each side so that the edges meet in the center, roll up and soak the tester for a few hours in lukewarm water. Drain the excess water off, and place the dolls in a warm place to germinate. They should be sufficiently well germinated to show their fitness for seed.

Farmers' Bulletin 948, "The Rag Doll Seed Tester," describes fully this method of testing seed corn.

# Battle With Germans

By FRED SCHWENDIMAN,
Sugar City, Idaho.

Last summer a farmer in eastern Idaho had a field of wheat in which there were also growing, throughout the entire field, a few thrifty but scattering weeds. One day he looked the situation over and decided that these weeds were very detrimental to the crop, and that they would be a great hindrance in harvesting, as he wished to cut the wheat with a combined harvester. Labor being very scarce, he wondered how he could get those weeds taken out, but that night he met two young boys on the street in town and asked them if they would cut weeds for him the next day. They replied that they would be glad to, and would get as many more boys as he wanted, all of whom were in the habit of merely roaming the streets. The farmer went to the hardware store and bought a dozen grass hooks, and had them sharpened to a keen edge. Arriving on the scene the farmer said: "Boys, you see the weeds standing in this wheat? We will take the field strip by strip and will destroy every weed. We are the American army. The weeds are the Germans."

He had intended to give an order to fire, but before he could finish his instructions the boys were all whacking down Germans at a terrific rate. All went smoothly, and thousands of weeds were soon cut down to wither in the hot sun. After a few hours of steady work, however, one brave little fellow rushed a distance ahead of the rest, chopped down one monstrous big weed, and tramped it completely in the earth with his feet. The farmer watched the proceeding closely, and when the boy returned to the crowd he was warned never to leave the army, as it was against the rules, and extremely dangerous, to which the little soldier replied with a broad smile on his face, "Well I have killed the kaiser."

## Learn of Labor Saving Machinery

If we still used the scythe or the cradle to reap our harvests of grain it would be impossible to meet the demand of the hungry nations of the world for bread.

Modern ingenuity has replaced man power with machine power to a very great extent. In the production of food, mankind has the tremendous help afforded by such inventions as the combine, the tractor, the automobile, the silo, the cream separator and almost countless other articles.

Today the food problem is more pressing than ever, while the labor problem grows increasingly perplexing.

Not unlikely some machine or implement will help you with your labor troubles.

Advertising has played a very large part in the introduction of the combine, the tractor, the automobile, the silo, the cream separator and other inventions. It is through the advertising columns that you are almost sure to learn of improved implements of all kinds. By spreading the knowledge about farm machinery advertising has played a big part in feeding the world. It is still on the job. Read the advertisements in this paper and you will agree.

# Must Grow Legumes

"Let's grow peas on summerfallow to help increase production."

This is the appeal of County Agriculturalist J. H. Shinn of Spokane county, Washington, who is a strong advocate of peas and sweet clover as crops that should be grown on thousands of farms in the northwest. Mr. Shinn says that if we are going to make a permanent success of farming in the northwest we must grow a legume crop of some kind to keep the soil in proper condition.

Although last year was an unusually poor year for pea growers in the northwest, Mr. Shinn reports that in a number of cases pea crops produced excellent profit either through selling the threshed peas or through hogging them off. He recommends the Bengalian variety of field peas and the Alaska variety of garden peas for the ordinary farm of the northwest.

Not only are the peas an excellent grain crop, but the straw has real feeding value, says Mr. Shinn, though he recommends that care be used in feeding it to horses. There is danger of them gorging themselves and it should, therefore, be fed with some other roughage.

Mr. Shinn considers sweet clover valuable on the drier and lighter soils of the northwest. He had induced a number of farmers to experiment with it and in a majority of cases it appears that they have found it successful, not only as to yield, but as to actual feeding and pasture value. Mr. Shinn recommends the planting of about 10 pounds of sweet clover to the acre and emphasizes the point that the seed must be kept moist until it has thoroughly germinated. It should be covered from one to one and one-half inches.

## Free Labor Agents.

Grant county is well organized to handle the labor problem. Every town has a man who has offered his services as free local labor agent and we believe that this will not only be a help to the people who are looking for laborers, but will also be a great help to the people who are hunting places to work. The local agency will cooperate with the Spokane federal agency. The local free labor agents are as follows: Trimidad, Frank Kelble, merchant; Quincy, J. L. Fields, postmaster; Ephrata, county agricultural agent; Wilson Creek, F. D. Mordhorst, Wilson Creek State bank; Krupp, H. W. Hull, Farmers' union; Wheeler, C. G. Henderson, Farmers' union; Warden, Edward G. Bowker, real estate; Coulee City, J. W. Jones, implements; Hartline, W. J. Armstrong, Hartline State bank.

## Is Heavy Milker.

What is reported unofficially as a world's record for milk production is that made by Raphaells Johanna Aaggie 3d, a registered Holstein owned by the Napa State hospital of California. This cow is credited with a reported production of 918.6 pounds of milk in seven days.

## More Boys' and Girls' Clubs.

Boys' and girls' poultry club leader, County Agent McWhorter of Jefferson county, has just completed organizing the committees of Quilcene, Brinnon, Chimacum and Dabob, for boys' and girls' club work this season.

QUICK AND ECONOMICAL TRANSPORTATION

# Replace Teams With Nash Trucks

If horses were not so scarce and so high in price, Nash trucks would still be an economy hauling your loads of wheat.

Of much greater capacity and speed than the team and wagon, Nash trucks in your service not only cut down the number of trips to town in busy harvest time but release valuable harvest hands for more important work. For one Nash two-ton capacity truck will do the work of several teams and wagons, do it better and do it at less cost.

You can leave home later and get back earlier. Measured by the clock, the distance to town and back is less by hours. And the Nash truck does not have to rest, but can haul as far and as often as necessary.

The Nash two-ton capacity rear driven truck is particularly adapted to long and heavy hauls because it, like all Nash trucks, is equipped with an automatic locking differential. When, for any reason, one driving wheel loses traction momentarily, its mate gets practically all the power and drives the truck ahead out of difficulty.

This lets Nash trucks get through where other trucks without this important feature cannot go.

Let a Nash transportation expert tell you the many ways a Nash truck can save you money hauling your loads.

# Berry Culture

## Loganberry Juice in Demand

A letter has been received by B. McKellep, Mukilteo, Snohomish county, Washington. The letter reads as follows:

I am after information as to which is the best berry to raise for the market—the Phenomenal or the loganberry? I see in the papers prices quoted for loganberries, but no mention of the others. Some people say one is the best, and some say the other. How long after being set out before they come into full bearing? Which is your choice of blackberries for the market? I have the Giant Himalaya, which are great producers, but some people don't like them. What variety of red raspberry do you prefer?

Mr. McKellep's letter was addressed to me at Spokane, forwarded to Yakima, my home, and from there to Pasadena, Cal. The answer has therefore been delayed. There are four questions of importance in this letter.

First—Which is the better berry to raise for the market, the loganberry or the Phenomenal?

Second—How long after being set out before they are in full bearing?

Third—Which is your choice of blackberry for the market?

Fourth—Which variety of red raspberry do you prefer?

To attempt a satisfactory answer to the first question I would have to know more about local conditions in Snohomish county and the fluctuations of the berry market than I know at present. So much depends on climate, soil and other conditions that without experience under those conditions or expert knowledge from observation an answer might be misleading. I have most of my life known something of berry culture, but have never specialized in that as I have on apples, peaches, pears or some other fruits. However, I am judging by what I have observed in my travels in different states that the loganberry would be the more desirable of the two. My reason for that is that it is used for the manufacture of juice that is placed on the market and sold at the drink stands with grape juice, cider and other soft drinks. The demand for these drinks increases as the states pass prohibitory liquor laws. In some towns loganberry juice seems to be in as great demand as grape juice. The human system requires a certain amount of acids, and the fruit juices will supply that demand in the absence of alcoholic liquors. Since the state of Washington passed the prohibitory liquor law the breweries and distilleries have mostly been employed in preparation of fruit juices for the markets. Cider and loganberry juice are among their principal preparations. One firm in the state of Washington claims to have put onto the market last year more than a million gallons of "soft drinks." I am concluding, therefore, that there will be an increasing demand for loganberries. I have no information that any other variety will meet this demand, although the Phenomenal is recognized as one of the good market berries and, similar in some respects to the loganberries.

Then, too, the selling prices of things do not always indicate their real merit. For instance, we have a variety of apple called the "Arkansas Black." It is not the best apple for eating, but it brings as good prices on the average as any of the best varieties because of its beautiful deep red color, its good shipping qualities, its shape and excellent keeping qualities. I would say that if I were going to set an orchard of berries on the west side of the mountain range I would write to Professor M. L. Dean, state horticulturist, Olympia, Wash; W. H. Paulhamus, Puyallup, Wash.; Professor O. M. Morris, Pullman, Wash., and Professor C. I. Lewis, Corvallis, Ore. These men might possibly disagree on some points, but all of them would give valuable information and form a basis for a reasonable conclusion.

The second question, how long before they will come into full bearing after setting? I would say they ought to bear a very fair crop the third year.

The third question is answered in my remarks on the first.

The fourth question, which variety of red raspberry do you prefer? Personally, I prefer the Cuthbert, but that also is a question largely of local conditions.

G. L.

# Raise White Beans

The United States food administration is urging wholesale and retail grocers to push the sale of colored beans, both dried and canned. The food administration declares that in food value the colored bean is equal, if not superior, to the white bean.

"In response to a request for patriotic production the farmers of the west produced the largest crop of colored beans the country has ever known," says Charles Hebberd, state food commissioner for Washington. "They can be put on the market, however, at a price which is considerably lower than for white beans."

Federal Food Administrator Hebberd urges Washington farmers to increase their white bean acreage, although the only argument for greater consumption of the white bean, with consequent neglect of the colored varieties, is based on an unreasoning preference. Admiral McCowan, paymaster general of the United States navy, has caused scientific experiments to be made which show that the pinto and pink bean have many advantages not possessed by the white bean. He is anxious, however, for the boys on the fighting line and the boys on our war ships to have the white bean because they are accustomed to them.

"The food administration is urging the public to eat beans. Their greater use will help to decrease the consumption of meat. And in urging the greater use of beans, the food administration is asking that preference be given to the colored varieties."

## Long Keeping Apples.

The Post Falls Advance of March 1 says:

"A. W. Gordon and S. W. Berry have each brought into this office good apples which have been kept from the 1916 crop. The first were Black Ben's and the latter York Imperial."

### Women Deputy Sheriffs.

The war department commission on training camp activities now has 55 women deputy sheriffs working in vicinities of camps in all parts of the country.

## Big-Scale Harvesting

ONE of our customers, who realized that his opportunity had come for cutting out a lot of the old delays, worries, and high costs of his yearly harvesting, invested in a **Deering Harvester-Thresher.** This letter of his describes the good average experience:

American Falls, Idaho, Aug. 23.

"The Deering Harvester-Thresher, purchased from the International Harvester Company, has proved very satisfactory, having cut about 150 acres, averaging about 15 acres per day, with but one man, cleaning and saving the grain better than any thresher I have operated. The machine is very economical, being the cheapest way of harvesting I know; the same is true of the cost of help. The saving in my thresher bill for this year will more than pay for the cost of the machine; in addition, a great saving of work in the house has been made, and in the feeding and help that is required for the old-time way of harvesting. Yours truly,

Martin Garn."

**Do your harvesting and threshing in one operation, turning the old unnecessary threshing expense into clear profit, saving time, doing away with the risks of long-drawn-out harvest. Own a Deering Harvester-Thresher for this year's harvest. Let your threshing-bill saving pay for it. Write for folders.**

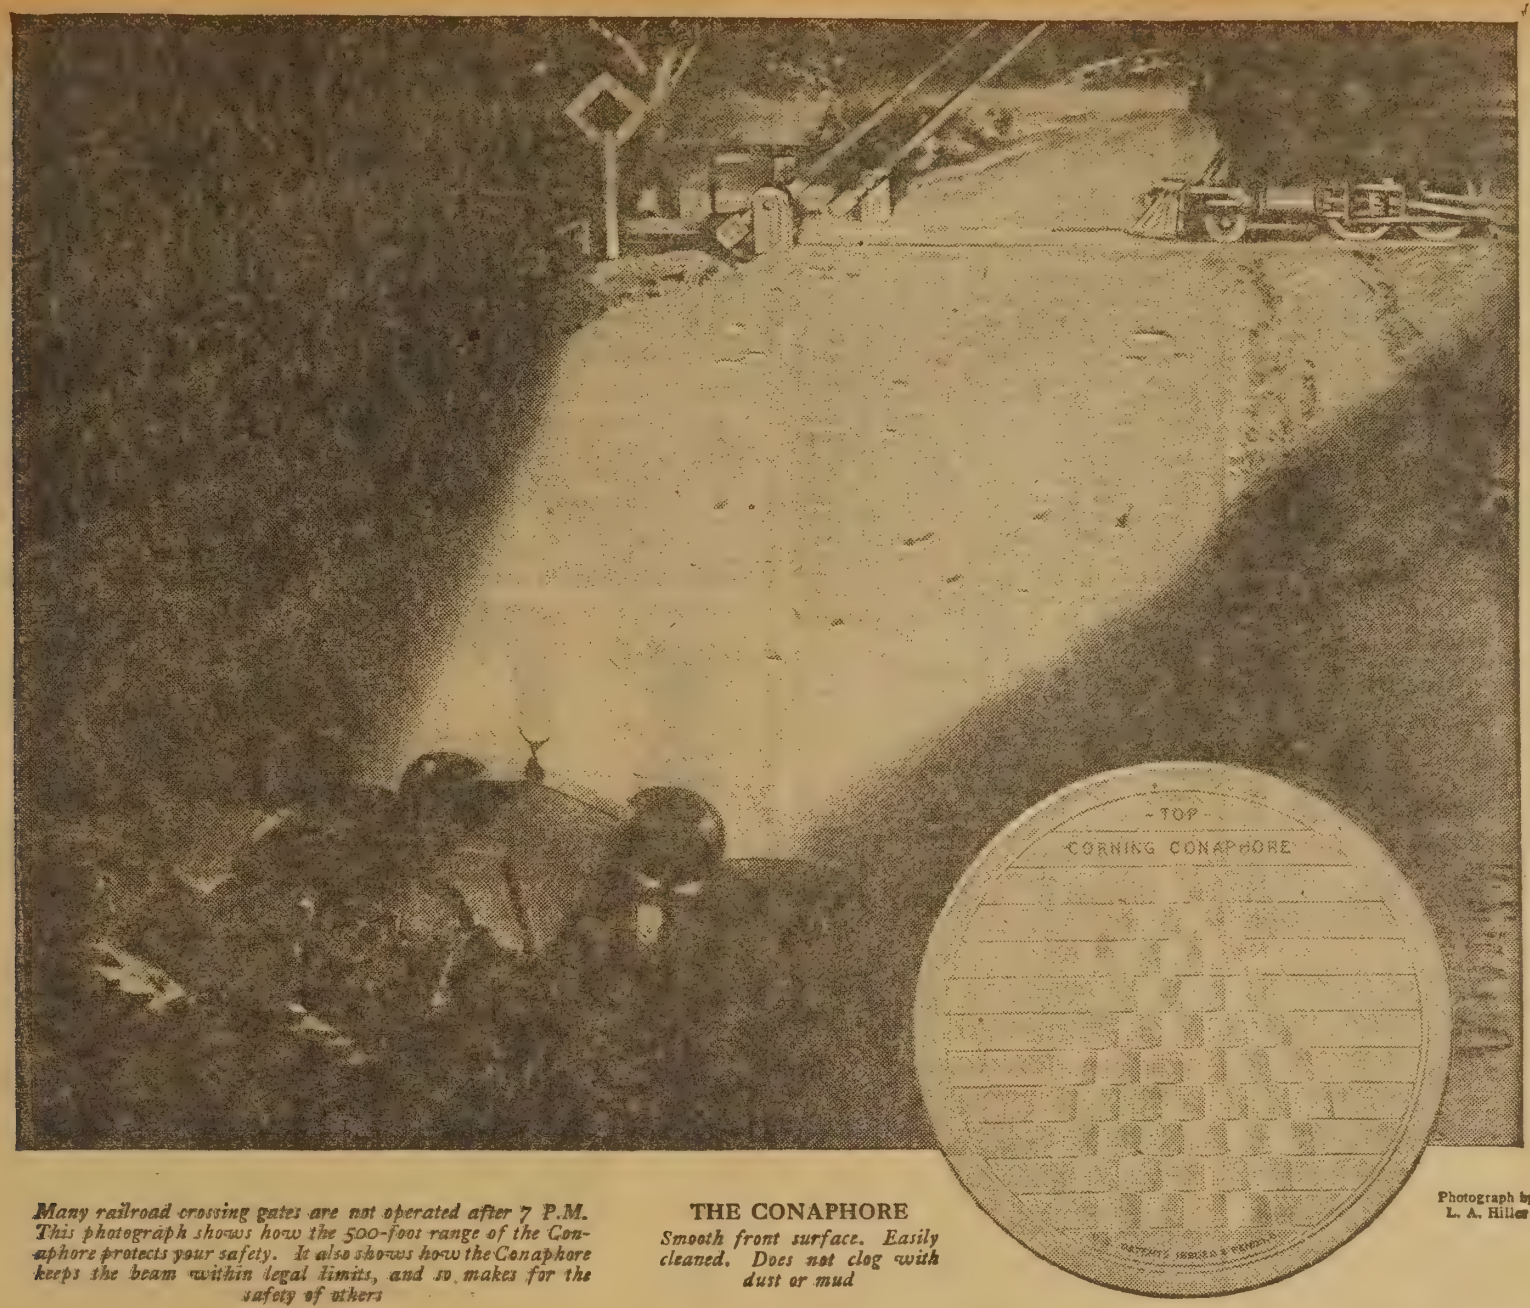
## 15% Nitrogen

is immediately available in

## Nitrate of Soda

Do you know that 100 pounds off Nitrate will furnish more nitrogen to sugar beets early in the spring than you can get from 10 tons of well-rotted manure?



Manure will help later crops, but for an early start YOU MUST use Nitrate.

Nitrate is the cheapest and best fertilizer because it supplies most available nitrogen quickest and at least cost, also it is clean, odorless, easy to handle. The increase of sugar beets through its use will run from 2500 to 4500 pounds per acre.

Write us today for complete information.

**NITRATE AGENCIES CO.**
210 Leary building, Seattle

*Many railroad crossing gates are not operated after 7 P.M. This photograph shows how the 500-foot range of the Conaphore protects your safety. It also shows how the Conaphore keeps the beam within legal limits, and so makes for the safety of others*

**THE CONAPHORE**
*Smooth front surface. Easily cleaned. Does not clog with dust or mud*

Photograph by L. A. Hiller

# Country roads demand long range

## *Safety demands no glare*

NOTICE how brightly the Conaphore beam lights up the railroad crossing and the engine in the photograph above. Then see how far beyond the crossing it illuminates the road.

The Conaphore does not diffuse and scatter the light in all directions. Neither does it dump the light directly in front of your car. Instead it shoots a long, broad beam ahead for 500 feet and more.

Notice, also, that where the Conaphore beam strikes the engine, the light is not more than 42 inches above the road. If a motorist were approaching from the other direction, the Conaphore rays could not dazzle or confuse him even to the slightest extent.

### Conaphore design patented

Conaphores give you the range you need and to which your own safety entitles you. Yet they eliminate all glare and so make for the safety of others.

The Conaphore permits the bulb to be focused for maximum range. Its efficiency is due to scientific design.

A series of patented corrugations on the inner surface of the Conaphore bends down the beam, while cylinders in the center fan ample light sidewise.

These corrugations also limit the height of the beam to 42 inches. There is no chance of blinding the other fellow, and you are within the requirements of any state or local headlight law.

### Pierces fog and dust

The Conaphore is made of Noviol Glass *patented*—invented by Conaphore designers and used in no other headlight device. This unique yellow-tint glass causes the light to pierce fog and dust, without "back-glare."

Blue and violet rays present in all white light are the chief cause of "back-glare," because they are easily diffused by the fog or dust particles. Noviol Glass absorbs these blue and violet rays, but projects all the rest of the light. Thus the Conaphore eliminates "back-glare" and gives you perfect road vision even when the night is thick. *The Noviol beam makes the easiest light for your eye to follow.*

Conaphores are also made in clear glass, but we strongly recommend the Noviol.

### Help fight the glare evil

On dark country roads the glaring headlight danger is found at its worst. Put Conaphores on your car at once, and do your share to stamp out the glare evil. They give you the long range you want, yet take all glare out of your headlights.

Easy to install. Sizes made to fit all cars. If your dealer has not yet received his supply, write us and we will see that you are promptly supplied.

| Retail Price List (per pair) | Noviol Glass | Clear Glass |
|---|---|---|
| 5 to 6⅞ inches inclusive | $2.40 | $1.60 |

# Great Drive Is On

## *Germany Launches Terrific Battle*

At about 5 o'clock last Thursday morning the expected assault on the allied lines of the western battle front was launched by the Germans over a 50-mile front in the region of Cambrai and northward. Since that hour to the present time it has raged violently, the most terrific battle in the world's history. It is evident that it is the desperate effort of Germany, without regard to the loss of life on her own or her enemies' side, to win the war by a gigantic thrust. So great has been the battle that so far no estimates of casualties have been attempted, though it is believed that they already run into the hundreds of thousands. Reports show that Germany has massed between 500,000 and 1,000,000 men, thoroughly equipped with guns and ammunition, along this 50-mile front with a view to maintaining the withering fire with such power and for such time that no human resistance will be possible to endure it.

Up to this writing, while the British armies under the command of General Haig have retreated at points along a 20-mile front near Cambrai from one to nine miles, this retreat is reported to be of a strategic nature, made in an orderly fashion and with a much less loss of life than that suffered by the Germans. It is clearly the aim of General Haig and his allied advisers to allow his lines to bend, thereby avoiding the terrible losses of life that a rigid defense would make inevitable, and at the same time returning the enemy fire with a view to the maximum destruction of life and munitions on the side of the enemy.

The outcome of this stupendous engagement is wholly problematical. One day may reverse the situation one way or another. No one but the military experts of the contending forces know the extent of the equipment and supplies of the two sides. No estimate can be made of how long the Germans can keep up the unprecedented bombardment, nor of how long the British can return the fire. The struggle is so desperate that only two elements enter into the solution of the questions that arise: The number of men on each side and the quantity of guns, ammunition and food stocks available for the armies.

Kaiser William is himself in personal command of the German army, apparently in the hope of winning the victory and going down in history as the victor in the world's greatest conflict.

From the allied military headquarters come assurances to the people of all the allied countries that the situation is "serious but not alarming." Exactly what is happening was to be expected, say the official reports. The organization of the British defense is not destroyed up to this time, and it is believed that the German onslaught will necessarily slacken soon, leaving the British in a position to strike counter blows with effect against the enemy lines.

Little fighting has been done along the French frontier or where the American soldiers are situated, though minor engagements have been taking place at many points.

An unexplained declaration is made from Paris that that city has been bombarded by shells that must come from at least 62 miles. This is the nearest point of the German lines to Paris. Up to the present time no gun has been known to fire a shot more than 22 miles, and the world is waiting to learn if Germany has invented a gun of the undreamed-of range of over 60 miles.

### Germany Threatens Holland.

As the result of Holland's action in granting the request of the United States and England that she turn over to them approximately a million tons of her vessels for carrying allied commerce Germany has threatened to make war on Holland. Under the terms of international law the United States and England appropriated Holland's idle vessels for use in carrying foodstuffs and munitions for the allied armies. International law is understood to grant the privilege to warring nations of pressing into service any neutral shipping vessels that are withdrawn from their usual course of trade as were the vessels of Holland.

### Continue to Overrun Russia.

Notwithstanding the ratification of Germany's peace terms by the Russian congress 10 days ago German armies continue to advance into that country, establishing authority over enormous areas and many cities and industrial districts. The Russian government has been removed from Petrograd to Moscow, since which removal the German armies have evidenced their intentions to proceed on to the capture of Moscow. The situation in eastern Russia remains in doubt, no definite information regarding Japan's intentions having been made public. The continued invasion by the German forces, however, seem practically to insure the intervention by Japan in the territory adjoining the orient.

### Restrict Railroad Building.

Director General McAdoo, in charge of the railroads of this country since they were taken over, has announced that only those railroad extensions and improvements considered absolutely essential to the adequate conduct of the business of this country will be considered during the period of the war.

President Wilson last week signed the bill which formally gives the government control of the railroads until 21 months after the close of the war, at which time, unless further legislation is enacted, they will return to private ownership. The bill as signed appropriates $500,000,000 as revolving fund out of which the government will conduct the affairs of the roads.

### Take Over Alien Property.

Under a proclamation by the president this country is now making an exhaustive survey of the property owned in the United States by German citizens or corporations with a view to the legal confiscation of such property. It is probable that German property in America has a common value of a few million dollars. A considerable less valuation of property is held in Germany by American citizens or corporations and it is expected that that government will take similar action regarding it.

### La Follette's Man Loses.

Irvine L. Lenroot, republican candidate for nomination for United States senator from Wisconsin defeated his opponent, James Thompson, at the primaries of that state last week. Interest in the contest was strong, due to the fact that Thompson was recognized as the representative of the La Follette pacifist sentiment. The election of United States senator in Wisconsin takes place next Tuesday, April 2, when Lenroot will contest with the democratic candidate.

### Submarines Can't Win.

The British government has given out figures heretofore withheld in secrecy showing the effect of the submarine program against allied shipping. The figures show that up to January 1 of this year, allied and neutral shipping had lost vessels with 11,827,000 tons shipping capacity. Up to that time shipyards had constructed vessels with a shipping capacity of 6,606,000 tons. German and Austrian ships totaling 2,589,000 tons carrying capacity had been appropriated one way or another by the allied governments up to January 1. This means that during the submarine warfare the ships available for carrying on the commerce of the allies was reduced by the net amount of approximately 2,632,000 tons carrying capacity. These figures were given out for the double purpose of showing the people of the allied nations the absolute necessity of constructing ships as rapidly as possible and at the same time showing that if this construction is carried out as it should be, the German submarine policy will continue to be largely a failure.

### Settle Labor Disputes.

With a view to avoiding labor troubles in railroad operations during the war, Director General McAdoo of the railroads has approved a system whereby committees representing the government, the railroad executives and brotherhoods will attempt to settle any disputes that may arise over wage scales and hours of employment. There will be one committee dealing with the questions that may arise through the four leading railroad brotherhoods, one for those affecting shop men and probably another for those affecting clerks and other classes of employes.

### Pope Wants Peace.

Pope Benedict has issued an Easter message to the people of the United States in which he expresses a hope for the establishment in the near future of a just and lasting peace which he urges should be based upon the fear of God and love of humanity, giving to the world a new organization of peoples and nations united under the aegis of true religion and inspiring to a nobler, purer, kinder civilization.

### Anti-Tipping Laws.

Six states now have anti-tipping laws. Illinois, Iowa, South Carolina, Tennessee, Missippi and Arkansas, and in last fall's sessions of the state legislatures bills were introduced with the object of ending the practice of tipping in seven other states, New York, West Virginia, Kentucky, Minnesota, Missouri, Colorado and California. Iowa has recently refused to repeal its anti-tippig law.

### The Garden Book.

Don't forget to write to the Farmer information bureau at Washington, D. C., enclosing a two-cent stamp for the book on war gardens.

Founded 1842

CASE

Famous the World Over

Case 9-18 Kerosene Tractor

A Tested Tractor
Is Best and Cheapest

Most farmers know that. Most farmers know how costly it is to experiment.

Case has an experience of 76 years in the power-farming field, and this experience has taught us that our policy of selling only tried and true products is right.

Case Kerosene Tractors have been in the process of development for 26 years, and when you buy one you become the owner of a tried and proven tractor. You do not have to experiment.

From official tests, and from records kept by thousands of farmers owning Case Tractors, it is now an established fact that Case Tractors are most economical in the long run. The cost of fuel per acre is low and upkeep at a minimum. We will be glad to furnish you the evidence to prove these facts.

Case Kerosene Tractors come in four sizes: 9–18, 10–20, 12–25 and 20–40. So there is a size for every farm.

We have a very interesting catalog regarding Case Kerosene Tractors which will be sent free upon request. It contains a lot of valuable data in addition to giving you an opportunity to know the leading tractors.

## Farm Council Gives Crop Advice

Following the organization recently of the Spokane County Agricultural council that organization issued in condensed form a mass of advice to farmers on the subject of food crop production this season. The new organization is headed by George Cannon of Buckeye, president; A. H. Poston of Spokane, vice-president; and J. R. Shinn, who is county agriculturist, secretary. The following is the advice in brief as issued to the farmers of that county and indicates points of value to food producers in any locality of the northwest.

Wheat production:

We must rely largely upon spring wheat.

Land in peas in 1917 furnishes excellent conditions for spring wheat after disking and harrowing.

Stubble land, if put to spring wheat, should be disked early and then plowed.

Varieties recommended: Early Blart for lighter lands, Marquis for heavier lands.

Seed wheat for these varieties to be held by warehouses for farmers.

Pork production:

Use alfalfa, clover and similar pastures where available. Where these are not available plant, winter wheat, winter rye or sweet clover.

Glean waste products from grain and pea fields.

Provide proper housing.

Save all pigs farrowed, by special care at farrowing time.

Allow no hogs to be slaughtered, that are not finished, when peas and other feeds are going to waste in the fields.

Induce each family to keep at least enough hogs to produce its own meat supply and beef.

**Build More Silos.**

Dairy and beef cattle:

Build silos on all dairy and beef cattle farms.

Plant sweet clover for pastures on all cattle farms.

Utilize pea straw, sweet clover for hay.

Cow testing association work should be organized.

Keep all heifer calves from high-producing stock.

Use home-prepared calf meals as substitute for skim milk for feeding calves.

Have food administrator undertake at once the determination of cost of production and distribution of market milk.

Poultry:

Grow such crops as peas, clover and sweet clover to furnish cheap feed.

Keep the usual number of poultry on each farm.

Swat the roosters after breeding season.

Sheep:

Keep sheep on farms as weed destroyers and wool and mutton producers.

Save lambs by proper housing of ewes at lambing time.

Eliminate scrubs and replace them with well-bred stock.

Encourage the destruction of curs and worthless dogs.

**Increase Fruit Yield.**

Fruit production:

Determine spray dates by trapping moths.

Fertilize orchards for continued production.

Intercrop orchards with legumes, such as peas, vetch.

Pasture hogs and sheep on peas grown between trees.

Farm labor:

Transfer teams, tools and men from timber sections to help in harvests in large grain area.

Organize local labor bureaus to cooperate with federal labor bureau in Spokane to facilitate getting an ample labor supply.

Recommend to board of education that men teachers working on farms this summer be given same credit as those taking course in summer school.

Farmers' vegetable garden:

Each farm shall have its half acre for garden and truck to provide an ample supply of vegetables for summer and winter use.

Squirrel poisoning:

Work out a plan for county-wide squirrel poisoning day for each community.

Organize for purchasing alkaloid of strychnine and saccahrine in large quantities.

### Ask Anything.

Anything that you want to know you can find out by addressing the information bureau of this paper at Washington, D. C. It is that bureau's business to answer any reasonable question that readers of the Farmer ask. Don't write to the state office of the Farmer, but address the information bureau at Washington.

# OUR FIRE INSURANCE IS LIKE LIFE INSURANCE

## Your Property *Must* Be in a *Healthy Condition* to Obtain Northwestern Mutual *Benefits*

NO medical examiner will pass you for Life Insurance unless you are physically sound.

The Northwestern Mutual Fire Association applies that principle to Fire Insurance. It studies your property in the light of modern fire safety.

Unless your warehouse, elevator, dairy barn, stock barn, house, garage, can pass the safety test of our inspectors we can not take your Fire Insurance risk; it would not be fair to our present members.

If your property is right we want you to participate in the splendid benefits of Northwestern Mutual insurance. We want you to have your share of the hundreds of thousands of dollars—running into millions—that we distribute to Northwestern Mutual policyholders in the form of dividends and other savings.

If your property does not pass this inspection test we will show you how to meet the safety requirements of our association. Then you will be among the favored who are getting their insurance at the lowest possible cost.

Here is the result of our policy in the State of Washington, where we write more insurance than any other company:

Every year for the last 9 years the Northwestern Mutual Fire Association has had a far lower loss ratio than the average loss ratio of the nine other leading fire insurance companies doing business in Washington.

For 1917 those other nine companies averaged 32% in losses; the Northwestern Mutual's ratio was only 16%.

Does it pay to be careful with fire? Ask any of our close to 50,000 policyholders; they are the beneficiaries!

Insist that your next Fire Insurance Policy be a Northwestern Mutual Policy. We are only as far away as the telephone or mail box.

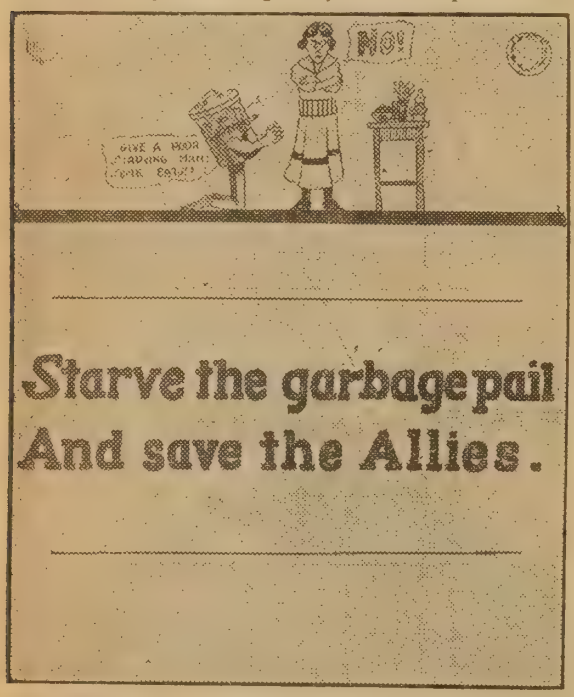
**SAYS:** Enclosed you will find copy for change of ad. I have decided that I want to take twice the space which we are now using in your paper and want this ad run in the new space. Please fire ad in immediately and get it going. We have been getting good results from our advertising, so will continue to advertise with you. Of course, I want this new contract for ad to run in the three publications every other week, same as the old contract.

MANY SUCCESSFUL BREEDERS FIND THEIR ADVERTISING WITH US A SOURCE OF GOOD PROFIT.



By J. L. ASHLOCK

A school boy of Washington recently wrote an essay on how to save sugar. He advised everybody to eat fruit instead of candy, bread instead of cake, more vegetables, and only one "block"—one lump—of sugar in tea or coffee. He urged that the girls be given flowers instead of candy, pointing out the fact that this would keep down dental bills as well as save sugar. He said that housewives waste a lot of sugar in the fruit-canning season. They use more than they need, spill it, burn the sirup, and throw away bits of sweetened fruit or juice.

Girls, he said, should study domestic science, and practice what they learn at home—which would save lots of things besides sugar.

Another boy, a fifth grader, made the point in his

sugar-saving essay thus: Three boys had a fight. The boy that licked the others was named Sam. We are having a big war now. The old boy that is going to win this big war is named Sam, too. Sam is saving his sugar for his soldiers across the sea; and, say, fellows, let's all get in and help Sam save sugar. He's our uncle.

The thousands of sugar-saving essays which have been written by the school children of Washington state and mailed to Librarian W. W. Foote of the Washington State college, collectively contain 1001 ways of saving sugar, and indict the sugar-tooth of childhood for lack of patriotism.

Mr. Foote is library director for the Washington state branch of the United States food administration. Following the suggestion of Miss Edith Guerrier, head of the library division of the food administration, he reached the school children of the state through their superintendents, principals and teachers, and asked them to write and send to him sugar-saving essays and sugar-saving posters and cartoons of their own contriving.

In the deluge that followed, no conceivable way of saving sugar for the sugar-hungry world overseas from Uncle Sammyland was overlooked.

Here is what a high-school girl has to say:

"Use less candy. Use less sweet drinks, and use less sugar in tea and coffee. Coffee really tastes better without sugar, unless you have cultivated your taste for sweetened coffee. If you have, you probably will think:

"'Sugar is sweet, but Oh, how bitter,
To ask for "sug." and not to git 'er.'

"But isn't it a pleasure to know of some brother in France who has the bit of sugar he craves, through our saving for him? All of us can surely do without sweets for a while. So don't be 'bitter' if you don't get all the sugar you want.

"Do not frost or ice your cakes, and in making your cakes, use brown sugar instead of white. Use honey, maple sirup and dark sirups for hot-cakes and waffles. Do not stint your sugar in putting up fruits and jams, for these take the place of butter, which is also running short."

A little girl in an orphans' home writes:

"I have learned that I can make a substantial meal without sugar. Beverages such as tea, coffee and cocoa, can be used without sugar, or with much less than lots of people use. Milk and water can be used as a substitute for these sweetened drinks. Cereals can be used with much less sugar than most people want. Dry or milk toast can be substituted for the cereals that require sugar. Pastries, as pies, tarts, puddings, cakes and cookies can be substituted with baked apples, fresh fruits, and sauces. Nuts cut fine, or sliced ripe bananas, are a good substitute for the frosting on cakes.

"Confectionery, candies, creams, and 'specials' can be substituted with fresh fruits, as apples, oranges, pears, bananas, grapes, cherries and watermelons, according to the season. If I use one ounce less of sugar a day it will not mean much to me, but it may mean a great deal to some soldier boy in France."

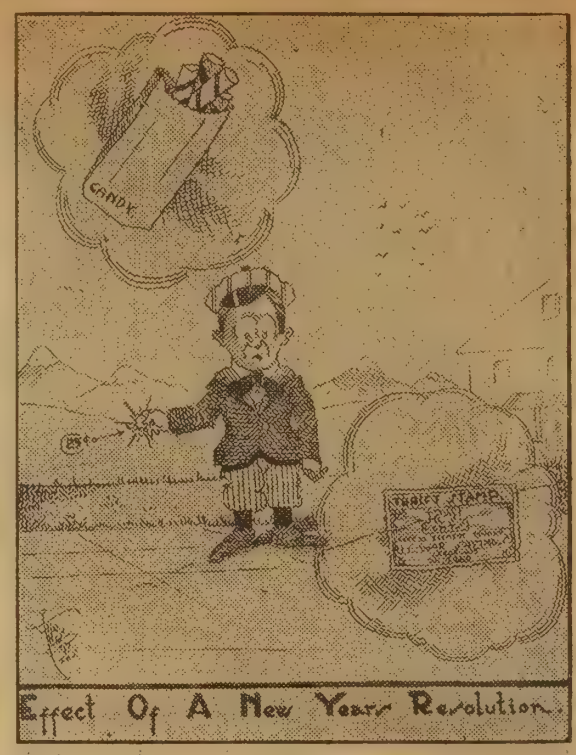
A sixth grade boy says that we must save sugar and give it to our men in France because they can't raise it in the trenches. Like hundreds of others, he scores those who use too much sugar in tea, coffee, cocoa, and postum; and says we should satisfy our sweet tooth with corn sirup and maple sugar.

A little girl says

"We need to save sugar for our boys in France. Sometimes when they are fighting they have to walk in mud up to their knees, and that takes lots of energy. Don't put three teaspoonfuls of sugar in coffee and not stir it up."

A boy remarks that soldiers in France have to fight, which takes lots of energy. So we ought to send them all the sugar they need, for sugar produces energy.

"Dip lighter in the sugar-bowl—that's the way to save sugar," says a big high school boy. He proceeds by saying:



"In some of the more extravagant homes and places they think they must have a lot of cakes, pies, cookies, puddings, and candies which are richly sweetened, and for which they are willing to pay a high price every meal. Unless they get what they want they grumble at the cook. They might as well quit grumbling. It is not a good idea to form the sugar-habit, but if you've got it, break away as soon as possible, and save sugar for those that need it more than you do, in order to keep their bodies in healthy condition.

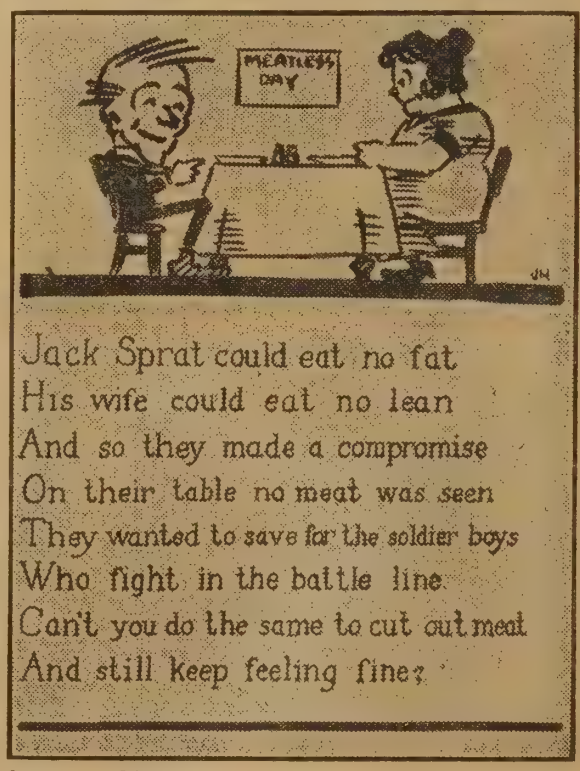
"People who are in bee-raising districts should substitute honey for sugar. Honey is just as healthful as sugar, and tastes fine. Others can substitute molasses, dates, raisins, figs and a lot of things like that, for white sugar.

"Most people think that on holidays of all kinds they ought to eat a lot of candy and sweet things. Why not eat fruits and other things we like as well as candy, and maybe save a doctor bill. There are a lot of soft drinks that contain much sugar, and do absolutely no good, except to the one who sells them to us. All these unnecessary things should be done away with in time of war."

A little boy whose home is in the prairie district of central Washington, where wild rabbits abound, mixed sugar and meat in his economy essay. He wrote:

"We must save sugar for the soldiers. It gives them energy. We can save sugar by eating less candy, more

honey and corn sirup, more vegetables, by not using frosting on cakes, by not eating pies, by leaving sweet drinks alone, by eating more fish and not spillingg any (sugar?); and by eating more jackrabbits, which are thick around here."



This shot at those who sweeten their coffee excessively came from a girl:

"Remember this in your coffee:
"One lump is patriotism.
"Two lumps is slackerism.
"Three lumps is desertion.
"Four lumps is treason."

And this from a boy in the fourth grade:

"Once there was two nations fighting. Their names were England and Germany. They got into a big war and fought for a long time. People thought it would be over in about a year. But it wasn't.

"After while, England began to starve. Russia and France had helped her out. But in about a year they began to starve too. Germany began to whip them, Uncle Sam heard about them starving to death. And

began to ship sugar over there, and things to supply them.

"That made German mad. Germany declared war on Uncle Sam. And we will have to save our sugar, eat honey, dates, corn sirup, and figs, and eat less cakes and pies.

"If we don't, Germany will win the war."

## ORGANIZE FAIR.

### Walla Walla Men Finance Move.

The organization of the Walla Walla Agricultural & Live Stock fair has been perfected at Walla Walla with subscriptions for stock totaling more than $35,000, nearly all of which has been paid in. The association has grounds covering 32 acres and buildings and grandstands practically adequate for a big season. The association, it is understood, starts off debt free. Oscar Drumheller, one of the prominent farmers of the Walla Walla valley, is president and F. S. Dement, a miller of Walla Walla, is vice president. The board of directors is composed of these two officers and the following farmers and businessmen of the valley: Matt Ennis, J. A. McLean, Wess Lloyd of Waitsburg, F. J. Aldrich and H. H. Hanson of Touchet.

## City Growth in Australia.

A large percentage of the people of Australia live in the principal cities of the different states. Sydney, with a population of 763,000, represents over 40 per cent of the people of New South Wales; Perth, with a population of 122,000, represents 38 per cent of the inhabitants of Western Australia; Brisbane, with 162,000, represents nearly 24 per cent of the people of Queensland; Hobart, with 40,000, has under 20 per cent of the people of Tasmania; Melbourne, with a population of 684,000, contains 48 per cent of the total population of Victoria, and Adelaide, with 205,000, has over 46 per cent of the people of South Australia.

## Adopts War-Time Slogan.

The state council of defense of Washington has announced the adoption of a slogan to be used during the farming season of 1918. "Everybody busy" is the watchword. This sentiment, it is hoped by the council, will permeate every class of people in the state and result in the elimination of idleness on the part of everybody who might lend a hand in increasing food production this year.

## CHICKS ARE PARCELS.

### May Be Shipped by Parcel Post.

The postal authorities have issued a statement announcing that chicks can be legally shipped by parcel post hereafter. It is understood that the regulation is made in order to stimulate the production of poultry this season, enabling hatchers of chickens to distribute their young birds, and likewise enabling the man who doesn't wish to hatch his own to more readily obtain some to grow to maturity.

Under the new regulation, the chicks can not be sent collect on delivery, and they must not be shipped a distance that requires more than 72 hours.

# The Farm Should Have Its Bee Hive

## *Bees Will Find Sugar Substitute and Bring It to You*

By GEORGE W. YORK, Sandpoint, Idaho.

The importance of beekeeping for the average farmer is not sufficiently appreciated. Especially is this true in these latter days when there is a ban upon the accustomed free use of sugar. There is no good reason why nearly every farmer should not have two or three hives of bees for the production of honey for his own family use. With ordinary care and attention, in almost any locality, a few hives of bees should average from 50 to 100 pounds of surplus honey during the season.

Perhaps only a few people will believe that the keeping of bees for the production of honey is really a business. But it is, in many localities. A beekeeper in California produced 112,000 pounds of honey in one season; another, in New York state, had 70,000 pounds, and this latter amount was all secured from 700 hives of bees in just one beeyard. Of course, this was very unusual, as only 50 to 100 hives of bees are ordinarily kept in one place.

But I started out to tell how a farmer might easily begin with bees.

Spring is the best time of the year in which to get the bees. But in order to make the greatest progress it would be better to begin the fall before, by subscribing for one or more of the three or four excellent bee papers published in the United States; also get at least one of the standard bee books, of which there are several. A good bee paper and a copy of one of the best bee books can be had for from $2 to $2.50 for the two. Then read both carefully, so as to become familiar with the technical terms used in the business, and also learn the habits of bees. It is a most fascinating study and at the same time fairly profitable when one succeeds in the production of honey.

If it is necessary to send very far away for a start in bees, then I would suggests getting say a 3-frame nucleus with a queen, or two or three such combinations. They will be shipped by express, and upon arrival each 3-frame with queen should be placed in a hive previously provided. The hive will contain room for either eight or 10 frames, so after the three frames are put in fill the other five or seven frames with comb foundation, which will aid the bees much on their way to a populous hive or colony. A good bee-book will give all details of procedure, which would take too much space to describe in the narrow limits of this article.

I may say that some years ago when I lived in the city of Chicago I had a backyard apiary. One spring I got five three-frame nuclei with queens, about May 1, and from them that season I secured 300 pounds of choice comb honey, besides increasing them to six colonies with ample honey stores to carry them through the succeeding winter. I have no doubt many others could do as well, or better, as in the country bees should do much better than in a back yard in a crowded city.

Just to show further what can be done in city beekeeping, how is this: A friend beekeeper of mine in Chicago had 20 hives of bees on the flat roof of his two-story residence. From them he secured 3000 pounds of extracted (liquid) honey in one season. I visited his roof apiary, and afterward purchased his honey, so I know this to be a fact. But this is no news to the experienced beekeepers of the country.

A beekeeper in Cincinnati had 50 colonies of bees on the roof of his store, right in the heart of the city, and they produced good crops of honey from year to year.

But I am not urging city beekeeping. I want the farmers to get busy and produce their own honey. But don't go at it in a haphazard manner. Get the bee literature as suggested, also the bees, and follow it in an intelligent and careful way. You will succeed if you are determined.

There need be no "honeyless" days on any farm when once the keeping of bees becomes a regular part of the diversification that should be followed. For the amount of financial investment I dare say there is not another line that can be followed that will prove as profitable as the bees.

Yes, I know they have stings, but you'll get used to them! I did. But I soon learned how to handle them with a minimum of stings and a maximum of pleasure. So don't get discouraged, but "dip right in," and soon be producing all the honey you want for your table, and sell the rest to your neighbors who are not so enterprising as to have a "honey factory" in connection with their other farm operations.

**A backyard apiary in Chicago, where bees gathered a valuable product from the ways and byways.**

# Horse Market Strong

"The future for horse breeders has never been as bright as at present and every farmer ought to raise as many horses as he can. He should keep brood mares and breed them every year. Europe is entirely out of horses and after the war American horse owners can set their own price for good horses and they will get it. We will not have to ship to Europe, for buyers from Europe will come here and buy our horses. The demand will be far in excess of the supply. The heavy loss of ships by submarine warfare has entirely stopped the exportation of horses to Europe, but as soon as the war ends this will be renewed and every horse we can spare will be bought for use in the countries where the war has taken all of the horses and left the farming districts entirely denuded of work stock."

This is the statement of M. E. Metz of Colfax, who is showing his faith in his own statements by breeding horses for the future market.

Mr. Metz has a letter from Alexander Mowat, a horseman of international reputation, who attended a sale of Clydesdale draft horses at Lanmark, Scotland, in December. The sale lasted four days and Mr. Mowat wrote: "It would appear from the result of this sale that draft horses were never in such demand as now. The first day of the sale 80 geldings ranging in age from 3 years upward sold for an average of $571, as compared with an average of $336 paid for geldings at the Lanmark sale in 1916, which was the previous high record. On the first day 53 mares were also sold. They ranged upward from 3 years and brought an average of $495. On the second day 147 colts sold for an average of $211 per head. On the third day of the sale 94 yearling fillies brought an average of $369 and 274 2-year-old fillies averaged $475. The offerings on the fourth day consisted of 110 yearling geldings that averaged $247 each and 325 2-year-old geldings that averaged $378. When you remember that these high prices were paid for geldings you can form some idea of the demand there is now for horses in Europe and that this demand will be greatly increased when the war and rebuilding of the war-stricken districts begins."

The annual horse show, which was a great feature in Colfax for many years, but was abandoned a few years ago when the price of horses declined and people began to fear that tractors were to succeed horses, is to be revived if present plans are carried out, and an effort will be made to revive the old-time interest that made the annual horse show a great event in Colfax and in Whitman county.

J. E. N.

## Little Wheat on Hand.

A statement issued by E. T. Marchetti of the federal bureau of crop estimates at Spokane, shows the amount of wheat on hand in this state March 1 to be much lower than that of the same date either last year or the previous year. The following table compares the amounts of corn, wheat, oats and barley in the state on March 1 of the last three years respectively:

| | 1918. | 1917. | 1916. |
|---|---|---|---|
| Corn | 182,000 | 183,000 | 158,000 |
| Wheat | 3,506,000 | 4,516,000 | 7,713,000 |
| Oats | 2,810,000 | 3,978,000 | 3,654,000 |
| Barley | 937,000 | 1,022,000 | 1,453,000 |

The amount of wheat retained on the farms March 1 is substantially below the amount usually retained at that time of year. The fixed price of wheat, with no prospect of future increase, the patriotic response of the growers to market their crop early in the season, and their efforts to feed less wheat on account of the abnormal demand for export, have influenced the marketing early in the season of what percentage of wheat succeeding planting season in the spring. Practically the only wheat remaining on the farms is feed and seed and a small percentage that was not utilized for seeding in the fall, due to unfavorable climatic conditions.

The estimates of oats and barley represent practically only the feed and seed requirements of the individual farms.

# Many Attend Meets

Agricultural week in Clarke county brought out a large number of interested farmers. The meetings, instead of being held at one point throughout the week, were divided among the communities of La Center, Ridgefield, Mill Plain, Washougal, Battle Ground and Vancouver. The speakers were moved about from place to place. The attendance was greastest at the small centers.

A. B. Nystrom, late of Washington State college and now agriculturist for Lewis county, had charge of the dairy instruction; H. W. Sparks, formerly with the state experimental station and now a practical farmer of Clarke county, led in the discussions and demonstrations on crops and soils; Professor Morris of the state college lectured on prune culture; Asher Hobson, director of farm markets for Washington, discussed marketing problems and Lou S. Smith, assistant agriculturist for the O.-W. R. & N. company, urged the necessity of building silos.

Miss Elizabeth Jackson of the extension department of the state college, had charge of the home economics work. The women of the various communities displayed marked interest in the practical suggestions she offered and in the demonstrations of labor and money-saving methods which can be employed at home.

Milton J. Newhouse, agriculturist for Clarke county, planned the meetings with the aid of his county agricultural council. Mr. Newhouse is doing splendid work and his efforts are meeting with hearty response on the part of Clarke county farmers.

## Plan St. Joe Grazing.

The St. Joe Forest Users' association met recently at Colfax, Wash., to transact general business and lay plans for the grazing of cattle and sheep in the forest reserve this season. The arrangements will permit the grazing of perhaps 1000 head of cattle and 50,000 head of sheep.

"Coffee costs less when you buy it direct. Read my offer and be convinced."
JOHN F. JANSSEN.

# HOW JANSSEN CUTS the AVERAGE COST of Foods

Just as you save time and effort when you cut cross-lots through the pasture, so you save money when you buy your coffee **direct** from the **importer.**

Now, you know as well as I do that you are paying more than is necessary for your coffee. And, remember, coffee and tea play an important part in your total food costs because you use them so regularly and so often.

Here's a sensible question to ask yourself; answering it has solved the problem for hundreds of thinking people. It is simply this: "If my coffee came to me direct from the man who imports it, would it cost as much as I am now paying?"

Well, such a system has been perfected; you **can** buy direct from the importer, and you **do** save. My method has already proven a power in cutting the average cost of foods. I import my own high-grade coffee, pack it in a way that eliminates the usual expensive container, and send it directly to you through Uncle Sam's delivery system—paying the postage myself. This saves you a third on your coffee and helps reduce the cost of your foods.

**A COMPLETE STOCK OF TEAS AND COFFEES**

No matter what your preference in the line of tea or coffee, I am sure I can satisfy you. Write for free price list showing our complete line.

**Note the heavy cloth bag in which the coffee is packed. The material may be used for toweling—another saving, even if a small one.**

## *Read My Offer on Coffee*

**Direct Dealing Makes It Possible:**

**10** pounds "extra choice," a perfectly delicious blend of high grown coffees — better than the most—and as good as the best 45-cent coffee on the market ..... **$3.30**

For two years I have unreservedly guaranteed the quality and safe delivery of this coffee, and have never received a single order back.

## I PAY THE POSTAGE

The price includes parcel post to any place within 300 miles of Seattle.

**Guarantee**—Your money will be quickly returned if you are not satisfied with the coffee. The goods are securely packed, and safe delivery is guaranteed.

# Wheat Rationing Is Now War Necessity

(Continued from page one.)

eighth of a barrel of flour to any town customer at any one time, and not more than one-quarter of a barrel to any country customer at any one time, and in no case to sell wheat products without the sale of an equal weight of other cereals.

FOURTH—We ask the bakers and grocers to reduce the volume of victory bread sold by delivery of the three-quarter-pound loaf where one pound was sold before, and corresponding proportions in other weights.

We also ask bakers not to increase the amount of their wheat flour purchases beyond 70 per cent of the average monthly amount purchased in the four months prior to March 1.

FIFTH—Manufacturers using wheat products for nonfood purposes should cease such use entirely.

SIXTH—There is no limit upon the use of other cereals, flours and meals, corn, barley, buckwheat, potato flour, etc.

"Many families throughout the land are now using no wheat products whatever except a very small amount for cooking purposes and are doing so in perfect health and satisfaction. There is no reason why all of the American people who are able to cook in their own households can not subsist perfectly well with the use of less wheat products than one and one-half pounds a week, and we specially ask the well-to-do households in the country to follow this additional program in order that we may provide the necessary marginal supplies for those parts of the community less able to adapt themselves to so large a proportion of substitutes in order that we shall be able to make the wheat exports that are absolutely demanded of us to maintain the civil population and soldiers of the allies and our own army.

"We propose to supplement the voluntary cooperation of the public by a further limitation of distribution, and we shall place at once restrictions on distribution, which will be adjusted from time to time to secure as nearly equitable distribution as possible. With the arrival of harvest we should be able to relax such restrictions. Until then we ask the necessary patience, sacrifice and cooperation of the distributing trades."

The measure to increase the price of wheat from the $2.20 price fixed some time ago by President Wilson was in the form of an amendment to a bill appropriating money for the use of the United States department of agriculture. The main bill had already passed the house of representatives and had reached the senate for its action. The amendment was proposed by Senator Gore of Oklahoma, and was finally adopted by the senate by the vote of 49 to 18, practically all the western senators voting for the increased price. All six of the senators from Washington, Oregon and Idaho (Senators Poindexter and Jones of Washington, Chamberlain and McNary of Oregon and Borah and Nugent of Idaho) voted for the increased price.

What will be the final outcome of the measure is still problematical. The bill carrying the amendment must go to a conference committee composed of members of both the senate and the lower house before the $2.50 price provision can become law, and must be approved by the lower house and signed, as a part of the agricultural department appropriation bill, by the president. Should the house approve the increase and the president veto it, it would have to be repassed by both senate and house by a two-thirds majority of each before it could become a law. While the senate passed the amendment originally by more than a two-thirds majority, it is considered highly doubtful that it would vote as largely to pass the measure over a presidential veto.

The action taken by the senators voting for the increased price was on the ground that although farmers might make a reasonable profit on wheat at the price previously fixed by the president, the unprecedented need for wheat now requires a price guarantee that will insure the planting of every possible acre this season.

A vital feature of the increase as voted by the senate is that it would apply not at the primary markets, as does the price previously fixed by the president, but would be a freight guarantee at the railroad shipping point in every farm community.

Few people realize the seriousness of France's appeal for wheat, and the seeming impossibility of America fully meeting the call. In a speech at Baltimore last week, Andre Tardieu, French high commissioner to the United States, said the American people must send over more wheat.

"You must do it because it is a necessity," he declared, "because it must be done. For these last three months shipments of cereals from America to Europe have been short one-third of the supply recognized as indispensable to strictly compressed needs."

It is not easily done when the wheat account stands like this:

The March report of the United States department of agriculture estimated the quantity of wheat in farmers' hands at 112,270,000 bushels. The "visible supply," that is, the quantity of wheat in mills and elevators, was only 9,739,000 bushels.

Taking, therefore, the known supply, both farm and visible, the total is but 121,000,000 bushels, compared with 145,000,000 last year and 307,000,000 the year before.

From this 121,000,000 bushels about 30,000,000 bushels must be taken for spring seeding, leaving 91,000,000 bushels for home consumption, reserves and exports until July 1, when the new crop will begin to come on the market from the southern states.

It is not enough for home consumption unless the American people still further reduce their eating of wheat. Our pre-war consumption was about five bushels per capita, but if between now and July 1 we ate every bushel of the present supply it would be at the average rate of three and a half bushels.

Yet Europe is calling frantically for 100,000,000 bushels, 9,000,000 more than we could supply if we did not eat another kernel of wheat until July.

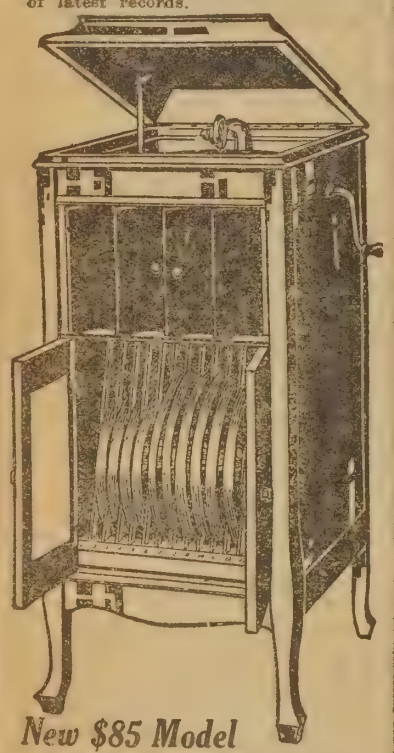
We must send wheat to the last bushel that can be spared, and fortunately the problem is not as impossible of solution as it might appear from the foregoing figures. They deal in wheat and omit the flour stocks already ground. Flour in mills, in dealers' hands and in home stocks will help us to tide over the shortage until July.

Send corn, someone will say. But it is doubtful if we shall have the corn. The first corn crop returns sounded big—a crop of 3,159,000,000 bushels, but a great part of it was caught by frost and only about 2,000,000,000 bushels was marketable. To make use of the soft corn, farmers fed large quantities to stock, and that increased the supply of meat. Hence, the food administration's action in lifting the ban on the eating of mutton and beef and its insistent appeal to the people to save more wheat.

Meanwhile no effort should be omitted that will contribute to the production of a great crop of wheat this year. The nation is looking to the west for heavy seeding this spring and the west must not disappoint that expectation.

This further fundamental fact the American people must realize, and come to a realization of it at once. The issue of the war depends solely upon the power of the allies to keep their armies supplied with food, powder, guns and other munitions. The allied armies are invincible if adequately equipped, but will inevitably fail if the time comes when they go hungry or lack ammunition to return the withering fire of the enemy.

## Sheep Shearing Under Way.



The sheep producing sections of the northwest are now experiencing their annual rush of shearing. In general the weather has been favorable and operations have been rushed by many producers. Reports of the wool market indicate that approximately the same price as ruled last season will goven this year's clip.

# 19 places where sediment damages your engine

WHEN your engine loses power, knocks, bucks and overheats, nine times out of ten it is sediment in the oil that is to blame.

Just look at the long list of vital parts that will quickly show serious wear when sediment is present in any considerable amount.

Ordinary oil cannot resist the intense heat of the engine—200° to 1000°F. It breaks down quickly. The resulting sediment crowds out the oil with true lubricating qualities from points where it is needed most. Moving metal surfaces, which should always be separated by a protecting film of lubricant, are thus thrown into direct contact.

## Why sediment causes wear

A strong magnifying glass reveals millions of microscopic teeth covering the apparently smooth surface of a bearing or other working part.

When the cushioning oil film between these surfaces is destroyed or excluded by sediment these tiny metal teeth grind together, thus causing friction and wear.

Ordinary oil after Use — Veedol after Use

*Showing sediment formed after 500 miles of running*

When this happens in any important part of an engine, costly *replacements* soon become necessary. Damage due to sediment in ordinary oil *can never be repaired.*

That is why you cannot afford to buy ordinary oil at any price. The cost of using it is appalling, because of its injurious effects on your engine.

A. Ludlow Clayden, Engineering Editor of Automotive Industries, and one of the most prominent engineers in the automobile field, says:

*"In the past, too little attention has been paid to lubrication. Oil needs to be chosen for an engine almost more carefully than food for a child."*

P. M. Heldt, recognized authority on internal combustion engines, and author of "The Gasoline Automobile," declares:

*"The proper selection of oil for the lubrication of an automobile engine is a very important matter. The grade of lubricant used affects not only the efficiency of the engine but also its life."*

Chas. A. Duryea, consulting engineer and a pioneer in automobile construction, states:

*"Buying inferior oil is the poorest economy a motorist can practice. Inferior oils must be used in greater quantities and, even then, they increase friction, loss of power, fuel consumption, heat and repair bills.*

*"Good oil costs a little more per gallon, but far less per mile."*

## How the problem was solved

As a result of exhaustive research and comprehensive practical tests the formation of sediment in dangerous quantities has been successfully overcome.

Today over a million motorists avoid the sediment menace, with its accompanying troubles and repair expense, and keep their cars running like new, at reduced operating cost, by using Veedol — the lubricant that resists heat.

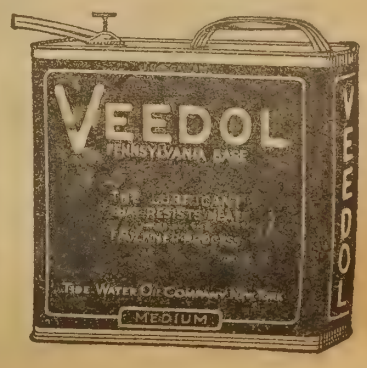
How Veedol reduces sediment 86% is made plain by the two bottles, showing the famous Sediment Test, at the left of the page.

When figured by miles of service, and not by cost per gallon, Veedol proves much more economical than ordinary oils.

The average motor oil acts like water in a kettle. When water is subjected to intense heat it evaporates as steam. Under the terrific heat of the engine ordinary oil evaporates very rapidly through the oil-filler in the form of vapor.

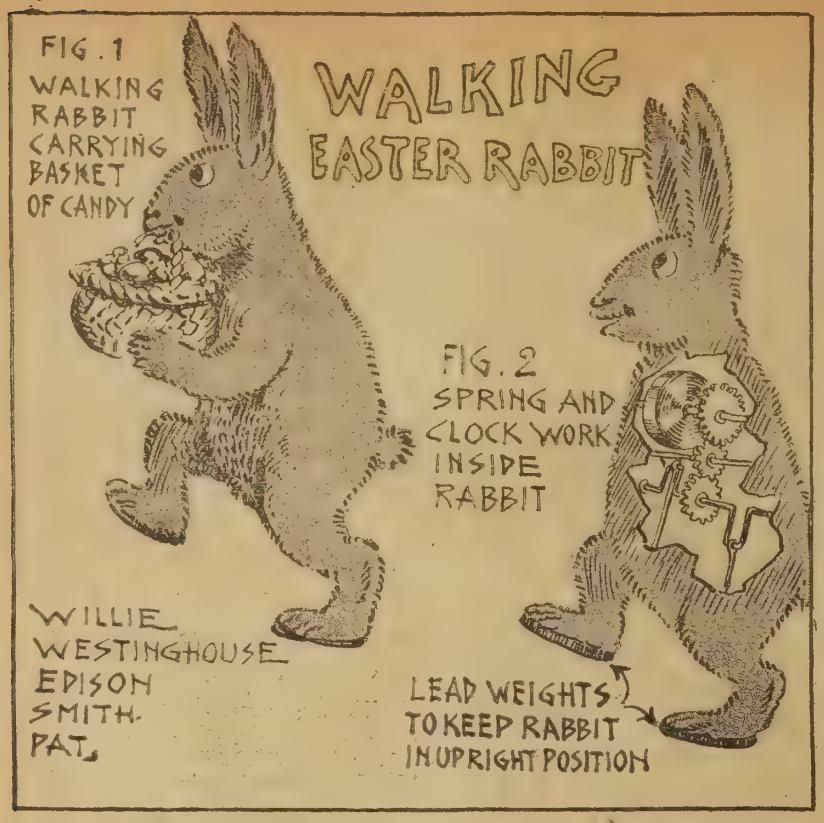
Veedol not only resists destruction by heat and the consequent formation of sediment, but also reduces evaporation in your engine to a minimum. You will get from 25% to 50% more mileage per gallon with Veedol for this reason.

## Buy Veedol today



Your dealer has Veedol in stock, or can get it for you. If he does not, write us for the name of the nearest dealer who can supply you.

## An 80-page book on lubrication for 10c



The most complete book ever published on automobile lubrication, written by a prominent engineer, and used as text book by many schools and colleges. Describes and illustrates all types of lubrication systems; tells how to keep your car running like new at minimum expense. Also contains Veedol Lubrication Chart, showing correct grade of Veedol for every car, winter or summer. Send 10c for a copy. It may save you many dollars.

# Applying Water to Furrows in Orchards

In 1908 an orchardist of Hood River, Ore., irrigated three acres of apple trees in furrows 350 feet long, spaced three feet apart, says Samuel Fortier in Farmers' Bulletin 882 on "Irrigation of Orchards." About a miner's inch of water was turned into each alternate furrow from a wooden head flume and kept on for about 48 hours. After the soil had become sufficiently dry it was cultivated and in eight or 10 days thereafter water was turned into the alternate rows, which were left dry during the first irrigation.

For the most part, the furrows are made parallel to the rows of trees. An arrangement of this kind is satisfactory in young orchards, but as the trees reach maturity their branches occupy more of the open space between the rows and prevent the making of furrows near the trees. This is shown in the illustration given here, where a space of six to 12 feet square, according to the size of the trees, is not furrowed. This space usually becomes so dry that it is worthless as a feeding ground for roots. In order to moisten these dry spots a larger stream often is carried in the two furrows next to each row of trees and the surplus is led across in short furrows in the manner shown in the accompanying illustration. Instead of continuing straight and cross furrows, as is done here, use is frequently made of diagonal furrows to moisten the dry space between the trees. This last method is best adapted to grades of five inches to 100 feet or more.

Cross-furrowing the dry places.

Furrow irrigation, showing dry spaces.

## Says Farmer Must Live.

To the Editor: We must have food, as well as men, to win this war; and I hope the farmer will have the same show as manufacturers, wholesale people and retailers have to show what they can do. The farmer is as patriotic as any other man or woman. Just give him a chance and he will do his bit. My father voluntered in the Canadian overseas forces and gave his life for a good cause, and if I was a man I would enlist for service in some branch.

There should be different laws to control the price of the foodstuff the farmer raises. Dairying and poultry raising are the chief products of this section of the country, and all the feed we buy to produce our milk is so high that there is nothing made in dairying in this part of the country; and on the other hand the poultrymen are in a tight place, because the chicken feed is so high and one-fourth of the feed we are forced to buy for our poultry is feed that the chicken won't eat. If we could buy our chicken feed separate, and sprout our oats, they would answer as a green food and so be eaten up, and there would be no waste. There won't be many chickens raised in this country, as there is no profit in it, and we must have some profit if we live, as everything we must buy is so high.

I raised a large garden last year, and the result was that I could not sell it, and what we could not use wasted; and it was the same way with potatoes. You can go to the store and ask if they can handle any potatoes, and they reply that they can't sell them so can't take any. The farmer must live, as well as the rest of the world, and if he can't make something farming then he must leave the farm and go to town and seek other occupations for a livelihood.

MRS. MAE PUGH

Ferndale, Wash.

# What Is a Farm?

The federal farm loan board has issued the following rules for the guidance of the land banks in determining what area constitutes a farm for loaning purposes:

"First. Generally—The farm must be of sufficient area to yield at the hands of an ordinarily capable farmer, putting it to the use to which it is generally adapted and using average methods, an income sufficient to maintain the family of the applicant and discharge the interest and amortization payments.

"Second. Specifically—Where through intensive farming or the practice of a specialty a sufficient income has been regularly derived from a tract deficient in area for ordinary farming, or where the application of the prospective borrower shows that he is by experience capable of producing such an income from such a tract, such area may be accepted as sufficient, provided the land has a stable and permanent market value sufficient to warrant the loan applied for. This ruling does not apply to fruit and orchard lands which have already been the subjects of definite rulings by this board."

Under the first paragraph of this ruling loans may be made to the ordinary farmer on the basis of average skill and efficiency, and no tract of land will be accepted as a farm eligible for a loan under the federal farm loan act unless it is large enough to support the family and take care of the loan under the average farm conditions of the neighborhood.

But under the second paragraph of the ruling the intensive farmer or the man who practices a profitable specialty, or who shows himself able to do so, will be given financial support by the federal farm loan system, even though his farm may be too small for ordinary farming purposes, provided that the land quite apart from its use has a stable and permanent land value which will make the loan safe whether it is well operated, or badly operated, or not operated at all.

The national Shorthorn congress has been placed on a permanent basis and will occur again at Chicago the third week in February, 1919.

# Jim Hill Mustard

To the Editor: Please give the many readers of the Farmer an opinion on the value of the Jim Hill mustard as a commercial forage plant.

A. M. NEWSON.

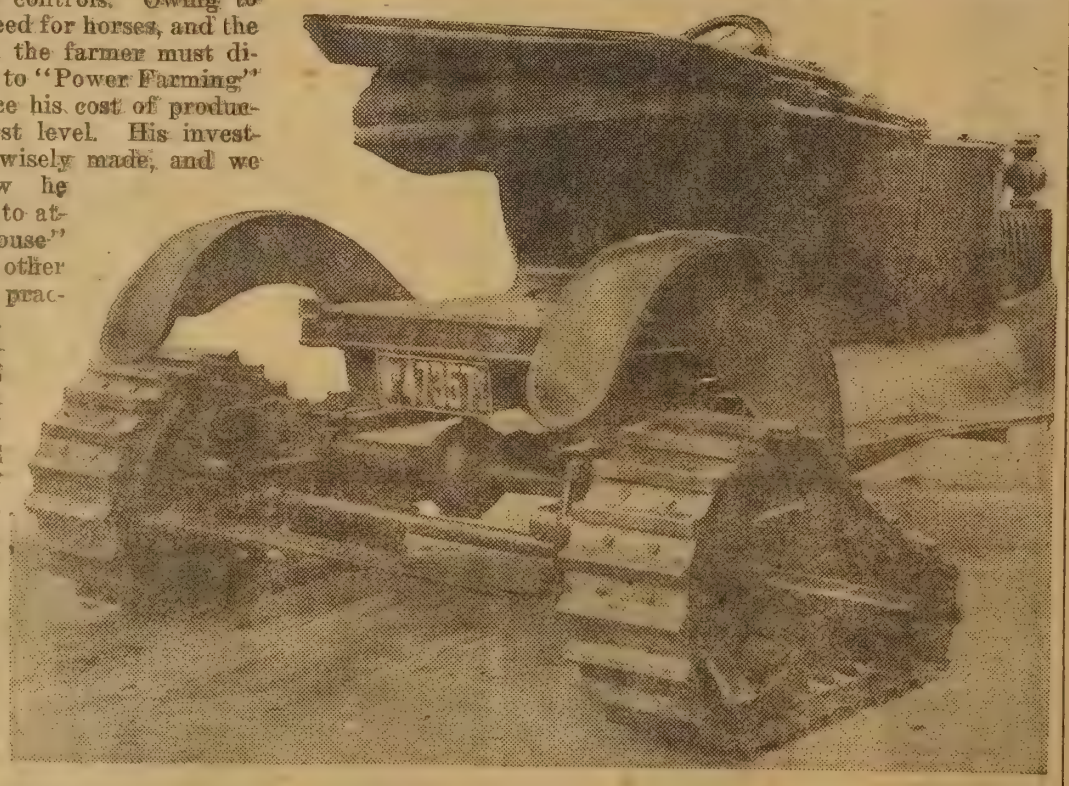
Spokane, Wash.

The above question was referred to E. G. Schafer, professor of farm crops, State College of Washington, and the following is his reply:

We have found that there is not a uniformity of opinion as to the suitability of tumble mustard for forage purposes. I may say, however, that it is not in general use for this purpose. We placed a quantity of mustard in a silo with barley, and from this experiment we did not obtain wholly satisfactory results.

## Will Export More Meat.

Arrangements are being made by the food administration to increase the exportation of meat from this country to the allies approximately 50 per cent. The object in view is the building up of the meat supply of the allies from the surplus that has accumulated on the markets in this country. Inadequate shipping facilities, however, are a considerable handicap to carrying out the proposal. The food administration reports that the cold storage houses of this country are practically full at the present time and that room must be made for additional supplies that are destined to come from the slaughter pens during the next few weeks or months.



### The Harvest Moon.

The circumstance which has made the full moon noticeable and has given rise to its name, at or near the autumnal equinox, September 20, is the fact that for several evenings the moon rises at about the same hour and is of unusual brilliancy, thus favoring the farmers' work during the harvest. At this time the moon is moving over that part of its orbit where the angle with the ecliptic is very slight, and the earth, moon and sun are in such relative positions that the moon is full. This phenomenon occurse in March in the southern hemisphere.

# CATTERLOUSE

## This Attachment Is a Success and Before Deciding the Tractor Problem, Investigate and See How It Pulls on High Gear

The conditions right now demand that every farmer put under cultivation every available piece of land he owns or controls. Owing to the high cost of feed for horses, and the scarcity of labor, the farmer must direct his attention to "Power Farming" in order to reduce his cost of production to the lowest level. His investment should be wisely made, and we do not know how he can do as well as to attach a "Catterlouse" to his Ford or other car and make a practical tractor of it. THE NEIGHBORS OF THOSE WHO PURCHASED LAST YEAR ARE PLACING THEIR ORDERS WITH US NOW FOR SPRING DELIVERY.

For Fords $265

For Most Other Cars $365

# Make Substitutes

## State's Capacity Is Calculated

Mills of the state are capable of turning out 30,135 barrels of wheat flour substitutes every 30 days, according to returns made by county food administrators to the office of Charles Hebberd, food administrator for Washington. In addition, it is possible, by converting wheat mills, to add at least 5250 barrels of other cereals, making the grand total 35,435 barrels.

This information was asked by the national food administration to ascertain if this state could go on a straight 50-50 basis as to wheat flour and substitutes. It is believed that this can be done with the help of the corn meal importations recently arranged for.

The administration asked for a report on mills having a capacity of more than 75 barrels a day, also those under 75 barrels capacity. The tabulation shows those over 75 barrels as follows:

| | |
|---|---|
| Barley flour | 15,850 |
| Corn meal | 7,100 |
| Rolled oats | 3,200 |
| Rice flour | 1,650 |
| Corn flour | 685 |
| Oat flour | 370 |
| Buckwheat | 250 |
| Total | 29,505 |

The figures for those having a capacity of less than 75 barrels a day are:

| | |
|---|---|
| Corn meal | 250 |
| Rice flour | 200 |
| Buckwheat | 175 |
| Barley flour | 90 |
| Total | 680 |

These figures will be sent at once to Washington and will be used by the national administration in its food survey of the entire country.

The largest milling centers in the state are Seattle, Tacoma and Spokane. The figures from H. S. Griggs show that Tacoma can turn out 3400 barrels of corn meal and 1850 barrels of barley flour, and of all substitutes approximately 9000 barrels in 30 days. The Seattle figures are almost as much. The Spokane contribution of substitutes amounts to 2275 barrels of rolled oats every 30 days.

The reports indicate that if the raw materials were available many mills in the state could grind substitutes. The car situation also precludes production in some localities.

Yakima and Whitman counties are among the places where substitutes may be produced if necessary. Dayton, Wash., is grinding 160 barrels of barley flour daily. Vancouver, Wash., reports that 10 to 15 barrels of corn meal are being turned out and more could be produced.

Dr. S. B. L. Penrose, administrator for Walla Walla county, says that they are short on substitute materials there and that barley flour is not considered by the millers as profitable. The milling company at Waitsburg is grinding 225 barrels of barley flour daily. Everett reports that considerable rice flour could be produced if the rice were available. Pasco says that only oats are being rolled for stock feed. At Prosser the mill is preparing to grind corn meal.

# Should Plant Trees

With the opening of spring will be inaugurated a statewide experiment in the planting of trees and ornamental shrubs by the forest department of the state college, in which trees and shrubs of all commonly used varieties will be sent at small cost to persons desiring to try them in an experimental way.

The work is directly supervised by A. D. Decker, head of the forestry department, who announces the following lists for selection:

Black locust, honey locust, Norway maple, sycamore, sugar maple, silver maple, black walnut, white ash, red oak, eastern white pine, Engelman spruce, jack pine, western yellow pine, western white pine, Austrian pine, blue spruce, Norway spruce, Douglas fir, concolor fir, Scotch pine, Russian olive and box elder. The trees are limited as person, ranging from 100 of the black person, ranging from 100 of the black locust to 10 of the black walnut. Not more than 300 trees of all varieties will be sent to any one person. The costs cover merely the expense of production and shipping, being no more than 5 cents and no less than 1 cent each for any of the trees named.

"Transplant" trees will be furnished from the following variety list:

Norway maple, red oak, sycamore maple, sugar maple, silver maple, white ash, Austrian pine, blue spruce, Norway spruce, red spruce, Douglas fir (Coast form), Scotch pine, western white pine, eastern white pine, concolor fir, balsam fir, Douglas fir (Rocky mountain form), cypress, western yellow pine and Russian olive.

A limited number of extra large and fancy trees, the number of which ranges from two to 25 for any one person, will be distributed in different parts of the state:

Norway maple, sycamore maple, silver maple, sugar maple, Japanese maple, white ash, mountain ash, Douglas fir, arborvitae, Scotch pine, jack pine and Norway spruce.

Small trees in length 4 to 18 inches, according to variety, will be distributed in lots of 1000 or more, the following being available for distribution: White ash, western white pine, Douglas fir and Scotch pine.

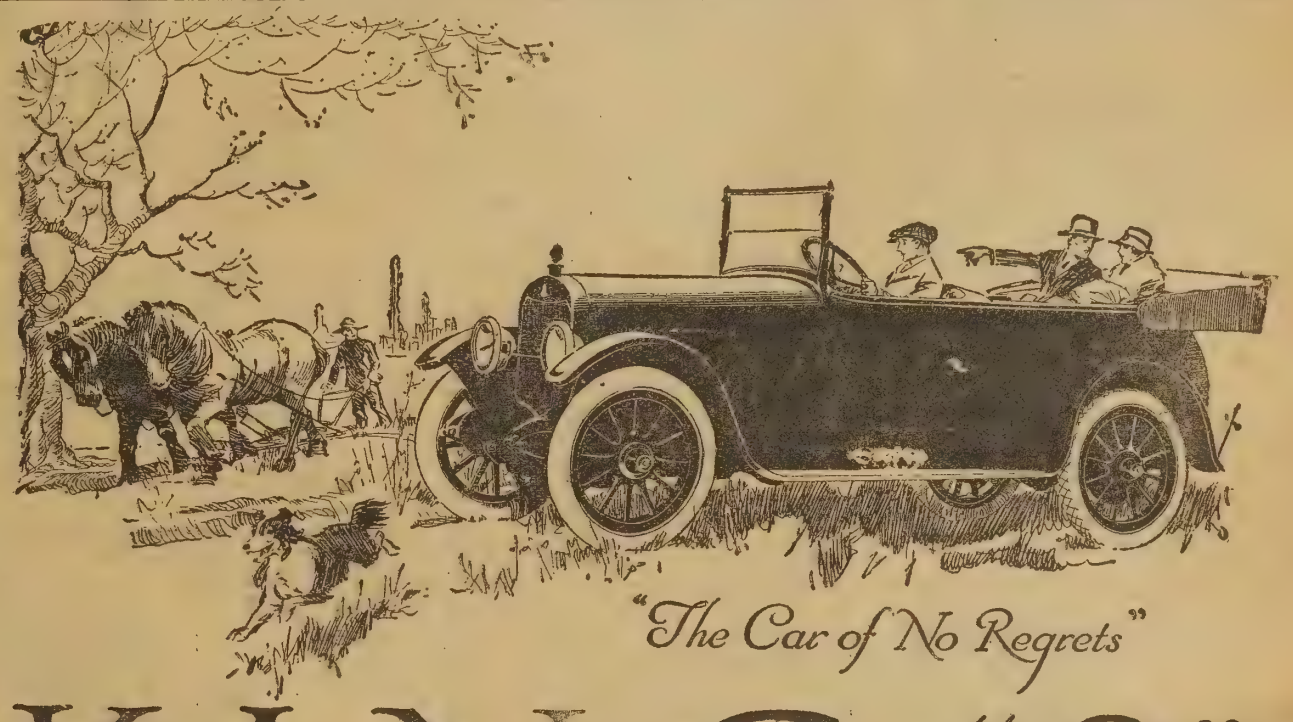
Cuttings will be offered from the following: American willow, purple willow, golden willow and silver poplar.

### Save the Pennies.

"Save the pennies and the dollars will take care of themselves." The way to save pennies is to invest them, 25 at a time, in U. S. thrift stamps. You will not only be saving pennies, but you will be saving the lives of American soldiers. Clip the coupon printed elsewhere in this paper and order your stamps by using it.

# Urgent Pleas Are Made to President

(Continued from page three.)



sional pacifists; he addresses the congress, the country and the world, not as the leader of God's children, fighting, bleeding and dying by the million in the great cause of human freedom, but as a judge between all nations, powers of darkness and evil no less than peoples of light and good.

"This can not go on. We must win. Our allies are drifting, drifting from lack of direction, aggression and inspiration, which Woodrow Wilson alone can give. We beseech him to sever the bonds which now hold him fast, to delegate to others, better trained for the purpose than himself, the work of organizations and reorganizations, to slough off the infinitely distracting details of management, to charge responsible political leaders with the shaping of domestic legislation and the execution of the laws, to rid himself of pandering, palavering pacifists, to call to his aid and counsel the fighting souls of America; in a word, to take a fresh perspective and then apply the full power of that remarkable intellectual force and indomitable will which have constituted him the natural, inevitable and universally recognized spokesman of civilization and leader of the world in the greatest crisis the world has ever known.

"God grant that he, this son of destiny, may see the light and fail not!"

### Gets Rich Legacy.

By the will of Whittier Keeser the Odd Fellows' lodge of Fort Davis, Texas, is to receive $100,000.

"The Car of No Regrets"

KING "8"

*The KNOWN car will have a "waiting list" this year*

UTILITY is now the national buying reason. The public wants only cars of proved reliability built by established companies. With output reduced because of war manufacture there will be a shortage of preferred cars. If you expect to buy a KING this year, ORDER EARLY.

Following a successful but smaller "Eight" and a popular "Four", this sixty horse power King is beginning its third year of world-wide operation, with practically no mechanical change except a general refinement which continues at all times. The chassis has proved its power, stamina and economy in every climate the world over and its recent use for armored cars and war ambulances is final evidence of its reliability under all conditions.

The King "Foursome"—a body type originated by this Company, and now widely followed—was declared by many to be the handsomest at the New York Automobile Show. You are urged to examine and drive this remarkable car.

A 7-passenger Touring Car and a 7-passenger Sedan are two other popular King models.

# Some "Good Times" Were Recorded in the Early Days

By IDA C. YOUNG.

It seems to me as I look back that I could write a whole book just about the good times we had in the early days of Douglas county. After the first Christmas tree there followed the first Fourth of July celebration at Burk's grove—a big clump of willows about nine miles north and east of us. Here was opportunity for the creative ability of the mothers at least; such contriving and planning to make whole families presentable at the first public social function that any of us had experienced in two, three and maybe four years. I remember more or less discussion went on about it between mother and Mrs. Anthony Rusheau or Rusho—(strange that I've forgotten exactly how they spelled their name). However, only my own clothes and those of Sister Frances remain clear in my mind. I had a little buff chambray dress which was purchased somewhere along the route of our travel as we made our way by team to the golden west. This dress was trimmed with white feather edge braid, and lace edging and had a wide bow sash, tied behind. It was washed, starched and ironed for the occasion and was pretty enough for anybody. The hat that went with it was also made by mother's hands, of scraps of lawn and lace. These days it would pass as a lingerie hat; at that time, I had seen none like it—it was an entirely original conception of mother's—and I was somewhat doubtful and critical as to its suitability. However, it was dainty and pretty and I made no mention of my doubts, for it was a choice between the hat and my gingham sunbonnet unless I chose to go bareheaded. I wore the hat and was happy.

The question of shoes was more difficult. My only pair had been worn steadily since the preceding October until the weather was warm enough in the spring to go barefooted. They were heavy, coarse and clumsy at their very best, and after the snows and slush, mud and scabland hardships, they were not improved any. However, we had shoe polish and we used it lavishly and splendidly, and the shoes certainly did shine. I felt very fine and happy when I was all arrayed and ready to start.

Frances' shoes were entirely worn out so mother made some little cloth moccasins of black broadcloth, a remnant of father's wedding suit. They had soft leather soles from old uppers of shoes and little satin bows. Her dress was an old white one of mine made over, and her hat like mine. Brother Ed announced proudly after it was all over that some of the boys with whom he had played, pointed Frances out on the picnic grounds and wondered who that little city girl was. Praise could reach no higher than that.

Then there was the preparation of a suitable lunch. There was a wonderful lemon pie, made from lemons saved from the spring trip to town, or maybe some neighbor chanced to make a summer trip, for that sometimes did happen. There was also a frosted cake, the first since we had come to the country. One or two dollars worth of sugar in the spring and as much in the fall does not encourage the making of icings or candy. Hooverism presents no difficulties to some of these old timers who economized so closely on everything but fresh air, sunshine, bunchgrass and water. We children hung about the house all day that third of July, almost fearful of losing any of the fragrance of that wonderful cooking. It was a perfect marvel to me; I hadn't known that such things could be, and here was our own mother creating enchanted food in a most matter-of-fact and casual way.

Things got themselves done finally that day and the next morning at daylight father got up to hunt the horses out on the bunch grass. He was gone until nearly breakfast and when we were just beginning to get anxious; here he came. I remember nothing more until we were on our way. Our conveyance was the old lumber wagon that took us from Iowa to Greely, Colo., and from Ogden, Utah, to our bunchgrass homestead by the spring, the intervening distance being covered by train. Hitched to the wagon was the cream colored mare, Mag, and our good black mule, Queen. We were perhaps a mile on our way when Anthony Rusho with his family hove in view to the rear. They had the bows and canvas over on their wagon and were doing things in style. They also had a matched team; at least they were both mules, old white Kate, and black Jenny. There was no time to lose, the outfit bore swiftly down upon us and clattered by at a swinging lope and with a joyful shout disappeared in the distance.

It was almost noon when we arrived and there were more cakes and icings and pink and green and blue sugar trimmings, gold and white pies and red, juicy pies, picnic biscuits and fried and baked chicken and pink slices of ham. But the excitement had been too much for me, my appetite was quite gone, I could only gaze at the quantities of luscious food and nibble a little here and there in an effort to get some little flavor from the display.

After dinner there was dancing on the rough board platform that was roofed over with willow boughs, then father was called upon for an extemporaneous speech and after that we went home.

After this first celebration there was more effort made to prepare programs of which music was a most important part. They came to our place to practice because we had the organ. There were Mrs. Alice Jones and Anne Williams, who rode in from nine miles south. Mrs. Jones sang a lovely soprano, while Miss Williams furnished the alto. Then there was George Roberts with his really unusual tenor, and John R. Lewis on the base; Mr and Mrs. Davis, Mr. and Mrs. Sherman Emmerson and father added their voices and mother was organist. Mr. Lewis had the longest distance to come, some 12 or 15 miles, but they always came and seemed to enjoy it, and I know these occasions of meeting to practice gave our family great pleasure.

But for regular, everyday enjoyment there was nothing that surpassed the companionship of the Rusho children. Anthony Rusho, with his four girls, lived only a mile away, and there was always something to bring us together. Their cows ranged over the same scab land and sagebrush and bunch grass, so it was a very common occurrence for us to ride together, sometimes all of us, often two on a horse, down the trail through the little canyon to the break where it sheered off steeply into the Grand coulee. Then we tied our horses, took a long drink and slipped, slid and scrambled on down to the very bottom of the Grand coulee. From here we could look back up and quite a distance to the left, where the edge of the talus reached the sheer wall. There was a trickle of water and we must drink, and up we struggled over the rough and rugged shell rock, drank thirstily of the warm water—this exploit always took place on the very hottest days—then plunged down again and took the trail for the top. There was never a special reason for going down. It just seemed that every so often in summer time all of us needed to go to the bottom of the coulee, and so we did.

Since I've grown up I've often thought about how fortunate we really were never to get hurt in any way, with all the chances we took. There was the matter of rattlesnakes, as an instance. Of course, no one thinks of being afraid of a rattler any time except August, when they are blind and sluggish. In all the nine years of our travels among those rocky recesses and scab lands I saw only six rattlesnakes. The other girls and boys had better luck and displayed their strings of rattles with more or less pride. Any rattlesnake that made its escape after being seen by any of us was considered a distinct loss. At one time when Ella, one of the Rusho girls, was on a hot chase after a snake it started down a squirrel hole. It was almost gone when Ella grasped it by the rattles and snatched it out, flinging it backward on the ground, where she promptly dispatched it, adding the rattles to her store. The Rusho's were not quite fortunate in choosing their building site, for they killed over 20 rattlesnakes about the home during the first year or two of their residence there.

I will not say that the snakes especially added to the joy of life among us, but they did provide a little flavor of excitement and there were so many things to give us pleasure that we were not really conscious of any unpleasantness regarding these pests. We never, for instance, outgrew the raptures of springtime, with the haunting calls of the killdeer, the curlew and the crane through the day and cheerful melody of the frogs and the ground owl at evening. Then there were the wild flowers that drew us on and on over miles of bunch grass and scab land with the irresistible power of color and smell; many were entirely odorless, but there were the wild roses, the birdbills and wild pansies that were equal to all the perfumes of Arabia. These wild flowers are of the created things that have lost nothing since the day God looked and saw all the things that he had made, and behold they were very good.

I sometimes wonder could it be possible for every particle of explosive and every engine of destruction to vanish in the twinkling of an eye; then instead of the instrument of death, if every warring hand found itself filled with fragrant lilies of the valley and heaven-scented stars of Bethlehem would humanity understand the significance of it all? Certainly, it is a strangely gracious God that permits the miracle of springtime, with its music and its beauty and perfume to occur and reoccur with absolute regularity through all the confusion and clamor of this sin-mad world.

Another joy of springtime to us children was the water that came with the melting of the snow. There was

(Continued on page forty-four.)

On account of the great variation in local climatic conditions, moisture, soil, etc., it is up to the readers of The Washington Farmer always to remember that methods which prove successful in one locality may not work out in others. It is our aim to gather the experiences of farmers in every section of this state and pass these experiences on to our readers, that they may try out or adopt such as may be applicable to their locality and conditions.

PLANT

99% Seeds

Remember, you can't tell good seed from bad by looking at it. Lack of vitality and productiveness don't show on the outside. You owe it to yourself and to the government, this year of all years, to select only pure, vigorous seeds, such as those listed in our catalogue.

FERTILIZERS.

Even the best of seeds won't grow without feeding. Our fertilizers make up for any lack of plant food in your soil.

# Sugar Beet Syrup

## Farmers Can Make It Themselves

Rowland Moore, of New Philadelphia, Ohio, and Mrs. Richard D. Reeves, of Moscow, Idaho, have written to The Farmer, asking how to grow sugar beets and make syrup and sugar from them. The following has been summarized from Farmers' bulletin 823, of the United States department of agriculture.

Sugar beets may be grown in any locality which has tillable soil that is capable of producing good crops of vegetables. A few rows of beets are sufficient to furnish a whole family with syrup, and a spade, a hoe, and a rake are about the only tools necessary.

After being grown, the beets are thoroughly cleaned, cut in thin slices—a kraut cutter is good—and soaked in hot water. This extracts the sugar. The liquid is then boiled down to the required consistency, and bottled while hot, and tightly sealed or corked to prevent molding.

In raising sugar beets and producing sugar or syrup from them there are some details to which heed should be given.

Well drained, fairly fertile soil is best, and extremely poor, shallow, sandy or hard soil is undesirable. Richly fertilized ground is not best, since this produces large beets poor in sugar. Beet roots when mature should weigh one to two pounds each. Thirty to 40 beets will make a bushel, and a bushel of beets should yield three to five quarts of syrup.

Sugar beets, either raw or cooked, are excellent feed for chickens, hogs, and other live stock.

Sugar-beet seed should be planted in rows about 20 inches apart, and may be dropped either in continuous rows, or in hills. If in hills, the hills should contain three to six seed balls, and the hills should be about 10 inches apart. A half-inch is sufficiently deep to cover the seed. During the growing season, the beets should be well cultivated, kept free from weeds, and thinned so that the plants do not crowd one another.

The plants mature in four to six months, depending upon differences of season and region. When ready to pull the foliage is beginning to yellow up, and the roots will come up almost free from soil.

In storing, either in pits, mounds, or in the cellar, two points should be kept in mind: First, to keep the roots cool without permitting them to freeze; second, to keep them from wilting.

**Making the Syrup.**

Thoroughly clean and top the beets. To top them, cut them at the point of the lowest leaf scar. The reason for this low topping is that the upper part of the beets contains a large part of the salts taken from the soil in process of growth, and it is desirable to have the syrup as free as possible from these mineral salts, which, if present in too large quantities, would render the syrup unpalatable.

In cleaning the roots they may be placed in a tub or other suitable receptacle and covered with cool water, to loosen the soil and to make the roots more crisp. For scrubbing them off, a coarse brush with stiff bristles or wire is useful. A three-bladed kraut cutter securely fastened on top of a barrel offers a satisfactory way of cutting them in thin slices, which, later, are immersed in boiling water and soaked about 60 minutes, agitating the barrel or other container meanwhile. No pressing is required. Strain the water off through several thicknesses of cheesecloth. The resulting liquid, in which most of the sugar of the thin beet slices is contained is of a light brown color and a sweetish-bitter taste. The refuse beet slices are valuable feed for chickens, hogs and other live stock. No more water than is necessary to cover the sliced beets should be used, since an excess of water increases the amount of evaporation required to reduce the liquid to syrup.

Some people like a thin syrup. Others like it thick. Care not to burn the juice should be exercised, and while boiling is progressing, the skum that rises to the top should be carefully skimmed off. This operation removes the strong beet-like flavor and leaves a wholesome, palatable product.

The syrup thus produced is of a dark color, and serves well for table use on buckwheat cakes, for example; and in the making of dark colored cakes. It contains nothing but the pure juice of the beet root, and is wholesome, nutritious, and of a pleasant flavor. Its dark color would be an obstacle to placing it on the market, but makes the product rone the less valuable in reducing the home sugar bill.

Any method of bleaching or otherwise removing the color would require considerable skill and some outlay of money, and likely be impracticable for home use. If the evaporation is carried far enough and the syrup is allowed to stand, a dark sugar will settle out. This sugar will be found satisfactory for home uses in cases where refined sugar is not necessary, such as in the making of home-made candies, pies and dark colored cakes. Reducing this sugar to the white granulated form, would, as in the case of whitening the syrup, require rather more skill and outlay of funds for scientific equipment than would be feasible in most homes.

# Rye for Silage

To the Editor: I would like to hear from some one in regard to rye for silage. At what time is it best to cut it and is it absolutely necessary to chop it when put in the silo? And does the stock like it? E. T. KETTERER.

Zillar, Wash.

This question was referred to E. G. Schafer, professor of farm crops, State College of Washington, who replies as follows:

"In general it is desirable to leave a grain crop until the grain is well formed and just starting to harden—when it is in the dough stage—before it is cut for silage. If the crop is cut before this time you will lose in total weight on the crop, as it should be increasing in the amount of food material up to this time.

"On the other hand, if you leave it until later, the crop will become coarser and will be less digestible. Also it will contain a larger amount of crude fiber. After this stage it also begins to dry out and packs less well in the silo.

"I believe it is very important that rye or any crop be cut before placing in the silo. It should not only be cut, but tramped well. One of the chief purposes of this is to force all air out of the mass of silage. As the stems of rye are hollow they contain a certain amount of air, which it would be difficult to remove if the rye were left whole or placed in the silo just as it comes from the field.

"I would not say that it is absolutely essential in all cases to have it cut fine, but I believe too great a risk would be taken by placing it in the silo uncut."

# Kaiser Hits the Dairy Business

## *Submarine Menace Destroys Shipping; Prices Tumble*

Dairymen of the Inland Empire are far from the sounding sea, but the ocean touches their interests as powerfully and directly as if they lived on the shore. Every ship sunk by a German submarine means a loss to the dairy industry of the United States, for it increases the scarcity of ocean vessels and to the extent of that loss cuts off exports of condensed milk, butter, cheese and other products to our allies across the Atlantic.

Curtailment of three-fourths of the export milk business of the United States has been brought about by government regulation, which has reduced the available shipping from 24,000 tons monthly to 6000 tons. Under these conditions, canners say, there will be an over-production of 6,000,000 cases of condensed and evaporated milk in 1918. All of this milk is badly wanted abroad, but lack of ships prevents its shipment across the Atlantic.

It is developments of this nature that compel the food administration to make frequent changes in its program. A few weeks ago it was urging the American people to save milk. Now it has issued a bulletin advising freer consumption in the United States and calling attention to the food value of milk and milk products.

Already there has been a decline of 50 cents a case in the United States and further reductions are not impossible. Under existing conditions it is pointed out that milk is the one unrestricted food fat available to the public. During the last three years the production of milk has been tremendously stimulated throughout the United States and has been equal even to the extraordinary export demand up to the present moment.

This production of milk can not be stopped by any governmental order. The demand for this milk has existed, and does exist, and the tremendous supply of milk gathered to meet the demand must now find other markets. The supply of raw milk must continue, and if the farmers do not have a market for it they must sustain a big loss. Momentarily, this may result in reduced prices to consumers of raw milk. In general, however, milk authorities do not believe that this will solve the situation, because the cost of producing milk at the present time is high as a result of price of mill feeds, labor, etc., and if the farmer is forced to sell at a materially lower figure for any length of time he will be tempted to sell off his dairy herds.

This is a condition which the government has steadily sought to avoid, as it makes certain a milk famine at such time as it is possible to supply the demand already existing abroad. A farmer may kill off his dairy herd in three hours, but he can not replace it in three years.

There is but one remedy for this evil—to build more ships. But the government's ship-building program is hampered by strikes, and more serious yet, held back by workers who are slacking on their job, demanding and receiving increasing pay, but themselves delivering, as shown by government investigations, less than half the labor they could leasily perform and what they were performing before the war.

## WANT MORE POULTRY.

### Administration Urges Increase.

Following up its recent ruling that hens should not be marketed during the hatching season the national food administration has now sent out a slogan urging the production of more poultry on the farm. "One hundred hens on every farm," is the watchword. The report of the United States department of agriculture that 40 carloads of hens averaging some 4000 per car, were shipped from the state of Texas alone betwen January 1 and February 11, indicates the government's reason for placing the recent embargo on hen sales.

This means that 160,000 birds that were laying or about ready to lay were prevented from turning into eggs the food they had consumed without return during the winter. Had these birds been kept until April 30, as urged by the department of agriculture and as required by the food administration for those remaining on the farms on February 11, it would have meant at an estimate an addition of 400,000 dozen eggs to the food supply of the nation, with little added expense for food, and would merely have postponed use of the birds themselves as food until after May 1.

# Don't Hold Wheat

## Early Marketing Urged by Hoover

Federal Food Administrator Herbert C. Hoover has issued a statement to the wheat raisers calling upon them not only to produce as much wheat as possible this season, but also to place their present holdings upon the market during the next few weeks. Except for necessary seed supplies the administration urges that all wheat be marketed by May 15. The following from Mr. Hoover's appeal explains the purpose of the early marketing request.

"In order that we may comply with the urgent demands of the allies for wheat and at the same time take care of our own domestic supplies, we urgently need this year an earlier and more complete marketing of the wheat in the farmers' hands than usual. The allies are taking from us 50 per cent of cereals other than wheat to mix in their bread. Inasmuch as the people in the allied countries and the soldiers must be fed with bread baked in bakeries it is impossible for them to prepare bread made wholly out of other cereals and we must furnish them with sufficient wheat to maintain their bakery loaf. I therefore appeal to the farmers that they shall bring all of their wheat crop except their necessary reserves for seed to market before May 15.

"This is a war call and a service for Uncle Sam, who is fighting for his life. If your local miller is unable to buy all the wheat that is offered, market it in other customary trade channels, through which it will reach the food administration grain corporation."

# Dairy Farms Are Best for Hogs

(Continued from page eight.)

cleared and his crops in and harvested. His faithful horse stays by him while his hired man is a variable and not always a satisfactory quantity. There are in the county plenty of horses to take care of the farm work and a goodly lot of our farm women have assumed the part of the driver, while the farmers good son has taken up his march to France.

Farming in this county has not reached a volume to cause the farmer to substitute the tractor for the horse. He considers the horse too much of a friend and all-round helper to discard him for any tractor he is willing to risk or has the means to pay for. Besides the tractor still has the cranky spells of a "tin Lizzie" or a motor boat and then he may have neither the "Lizzie" or the boat, he hears the laugh go around. Meat animals for spring market are few and far apart. Even chickens are on the retired list. The farmer's need is pasture but he realizes it is an expensive thing to get and maintain. Many have concluded it is better to quit the pasture and raise feed to sustain stock the year around. They believe they can get better results in milk and meat by feeding the year through, instead of relying on pasture. This seems to be generally conceded but the old habit is hard to quit.

SCOTT HAYES.

## Machinery Not Needed.

GIG HARBOR, Pierce County, Wash., March 7.—This section of the state is not sufficiently agricultural in its nature to warrant the use of any great amount of agricultural machinery. The farm tractor would hardly pay its way here. Our fields are too small and too scattered—only here and there a few acres fit for use through lack of water and fertility. We can hardly afford the most common implements that are absolutely essential to farming anywhere. Here and there a farmer with a place rather above the average is adding the disk and other pulverizers, a manure spreader, or the tools necessary to silo filling. Such farmers keep a horse team. Some of the smaller ranchers also keep a good team and use them a part of the year on the roads and also do days work with them for their less well-equipped neighbors. Probably eight out of ten of our ranchers keep but one horse—many none at all. The cost of keeping horses is very high here. Horses are not particularly high in price here. They are easily obtained in these Coast towns where the auto delivery and auto truck are constantly displacing them.

Quite a few fattened pigs are going onto the market this season. Not many cattle. They were tremendously thinned out by the unprecedented slaughter of last fall. With the grazing season opening up, there will not be very heavy slaughtering until next fall. Springy hillsides and creek bottoms only can be depended upon for all summer grazing.

W. B. BOYNTON.

## Tractor to Be Tried Out.

PORT ANGELES, Clallam County, Wash., March 4.—Referring to your inquiry regarding labor shortage on the farm, this problem is causing some difficulty here in Clallam county and no doubt will be instrumental in introducing the tractor. Lincoln Sand of Quillayute prairie will have the first tractor shipped to the county within a week, and if it proves its value and comes up to the expectations, others will follow. There is no lack of good horses, but good, practical farm labor is not to be had, consequently the farmer turns to mechanical means as a substitute. There is not enough machinery, but the interest is awakened and it is very noticeable.

Our county will be short of meat animals, as compared with normal years, and we find the reason for this in the previous two winters, which were severe on stock. The farmers disposed of their stock last fall and took no chances in wintering them.

J. P. CHRISTENSEN.

## Markets Vary.

CENTERVILLE, Klickitat County, Wash., March 6.—The market conditions here are quite changeable with regard to different stores or trading places, some stores wanting a profit of more than five cents per dozen eggs. Prices vary up to about seven cents per dozen, some paying trade at a rate within two cents of the Portland price. Butter is not so plentiful now, consequently is steadier here in the local market, receiving here at the present 90 cents per two-pound roll; and those buying the same getting it for nearly 10 cents more on the roll. In the line of plow supplies, some dealers are asking nearly a profit of 100 per cent. Our community market is quite local as regards potatoes, but eggs, butter and cream and the like have quite a shipping trade. I do not know the cost here to make a 100-pound hog product, but guess that it is near the 15-cent line now, as our main crop is wheat to feed all kinds of stock. Some barley is raised here, but has been used mostly as feed locally, as well as the oats raised. It is a little early yet to decide about the wheat prospect. Some looks good and some does not, but the prevailing comments seem to be that the present wheat condition is nearly average with last year. Our snow has gone, leaving us clear nights with a good deal of freezing and thawing. The fruit looks good at the present, as there has been no severe freezing at any time during the winter season.

C. A. LESTER.

## Still Have Lots of Hay.

PROSSER, Benton County, Wash., Feb. 27.—This has been a fine winter, not more than two inches of snow all told has fallen this winter, and there were only a few days that a man could not plow during the winter. We have lots of hay in this valley yet. A local man is paying $20 per ton baled; we also have about 75 or 100 tons of beans and about 400 tons of potatoes that we can't get rid of at any price. We can not buy wheat for chicken feed, so we buy oats at $5 per sack; eggs 42 cents; butter, 40 cents; flour, $2.70 for 48 pounds; hogs, 15 cents per pound; cattle, 4 and 4 1-2 cents at the dealer's; pork, 25 cents, and beef, 16 cents and up. The most of our products have to be shipped to distant points. I think it costs all of $15 for 100 pounds of pork at the price of grain today. What wheat there was sown last fall looks good, but not growing at this time.

## CATTLE SELL WELL.

### Milking Shorthorns Are Dispersed

More than 40 head of Shorthorn cattle, most of which were purebred milking Shorthorns, averaged $315 each when placed on sale at Spokane last week by Alex. Morrison of Valley, Wash. The highest price of the sale was paid by D. A. Gunning of Reardan, Wash., when he paid $625 for Olive V. 2d. A pair of twin calves by her side were included in the purchase. Another cow, well known to the Shorthorn breeders of the northwest from her show ring record, Princess Louise, 10 years old, sold to J. E. Trimble of Garfield, Wash., for $335. The herd sire, Western Star 2d, was bought by P. S. Carmichael of Chewelah, Wash., for $500. Other sales deserving special mention were: Bonnie Less, $530; Augusta Hopper, $390; Olive V.'s Jewel, $410; Reddy, 450; Duchess, $300; Princess, $300; White Lady, $350; Violet of Valley, $340; Bonnie Violet, $330; May Belle, $375; Louise Folsom, $425; Helen Gould, $355.

Harry C. Cranke and George Gue were the auctioneers.

## HOLSTEIN BANQUET.

### On the Day of the Sale at Kent.

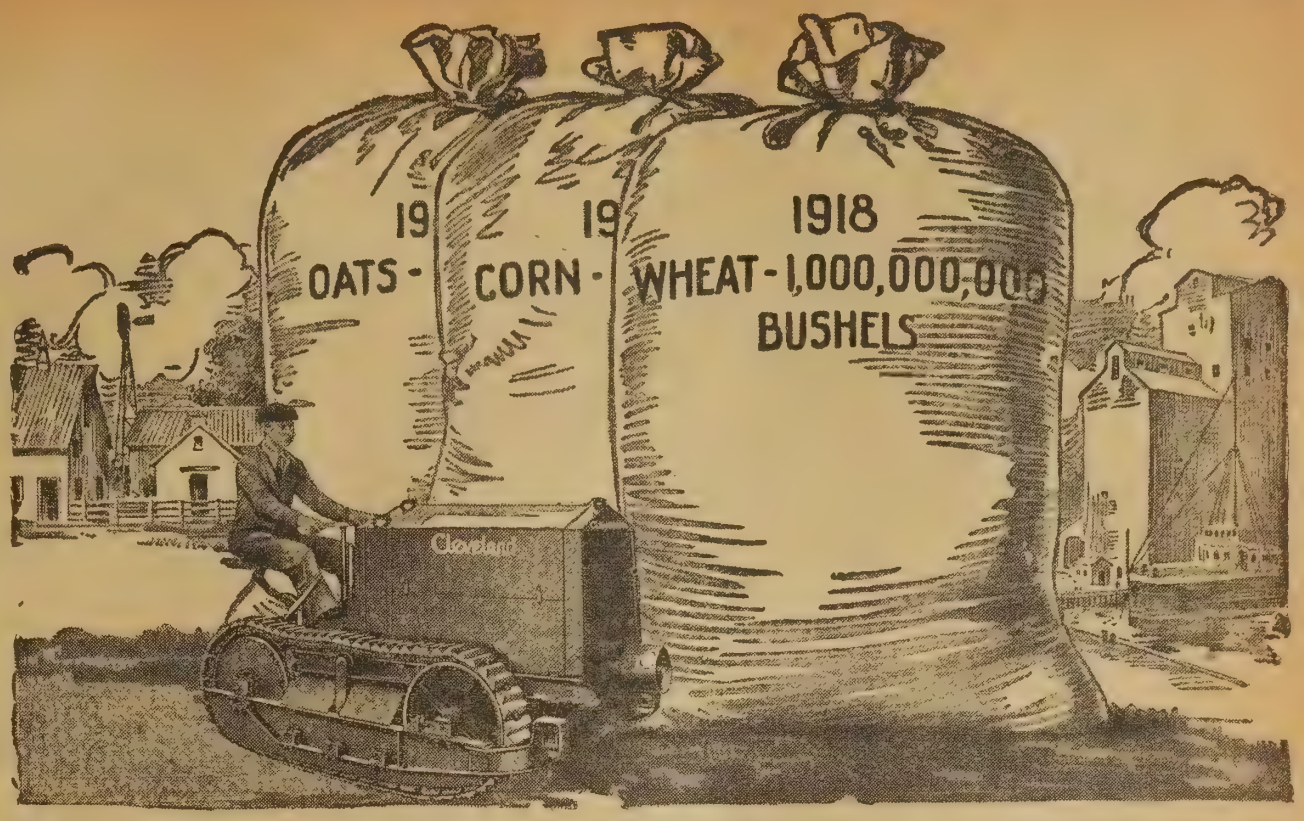
The Northwestern Holstein Breeders' association will hold its semi-annual meeting and banquet April 17, 1918, at a place and hour to be announced at the Western Washington Holstein Breeders' sale at Kent on that date. The coming sale grows in interest as the date set, April 17, approaches. One feature of the sale alone, the consignment of King Korndyke Pietertje Pontias No. 127387 lifts the occasion out of the ordinary and makes it an event of importance in northwestern breeding history. This great western sire is truly bred in the purple, for he is a proven son of the great king of the Pontiacs. The Pontiac family is also represented in the consignments to this sale by two A. R. O. daughters of King Korndyke Pietertje Pontiac, one of which has for her dam a 27-pound daughter of DeKol Burke, the other a 28-pound daughter of Sir Johanna Ruth Fayne.

## Reaugh, County Agent, Quits.

H. W. Reaugh, who has been county agent in Grant county for nearly three years, is now manager of a 38,000-acre irrigation project in the Moses lake district owned by the Grant Realty company. The Grant Realty company now holds the land formerly owned by the Neppel Townsite company, the Manhattan and the Stade and Park Irrigation company.

The county work at present will be carried on by the assistant county agent, Bruce Lampson, who was put on under the government emergency fund and has been with Mr. Reaugh a short time.

## Plant Large Pea Acreage.



Notwithstanding the near failure of the last year's pea crop when the farmers of the Spokane district planted about 30,000 acres to peas, there will be planted in that district this year about 50,000 acres. This is the statement of Spokane County Agriculturist J. R. Shinn, who has been active in promoting pea growing for several years. "The farmers realize that peas are a great war crop," says Mr. Shinn. He says that seed companies are contracting with the farmers to pay 4 to 5 1-2 cents a pound for this year's crop.

### Chinese Cook By Rule.

It is said by those who have employed them that the Chinese always cook by rule, if they have any rule to go by—following the receipts with the same scientific exactness with which the druggists put up a prescription. Hence their results are equally satisfactory. They never burn or spoil anything, nor spill materials on the floor; consequently, nothing that goes through their hands is wasted.

### Ask Anything.

Anything that you want to know you can find out by addressing the information bureau of this paper at Washington, D. C. It is that bureau's business to answer any reasonable question that readers of the Farmer ask. Don't write to the state office of the Farmer, but address the information bureau at Washington.

# The Task Before the Nation's Farmers

One billion bushels of wheat must be produced in this country this year.

An enormous increase in the yield of corn and oats is necessary.

Thousands of extra acres must be cultivated. Each individual farmer must produce about one-third more grain than last year.

The task before the nation's farmers is stupendous. Intensive methods of every kind must be employed. Machinery must take the place of muscle wherever possible.

In the face of this emergency the Cleveland Tractor becomes an absolute necessity. Its tremendous value to the farmer is emphasized more than ever.

## Cleveland Tractor

The Cleveland Tractor not only conserves time and labor—it does far *cheaper* and *better* work. And by doing better work it makes possible the production of larger and better crops—enabling you to do your part for the government—*and make more money for yourself.*

The Cleveland Tractor shows the way. It plows 3½ miles an hour—8 to 10 acres a day. It travels on its own tracks like the great "tanks" of Europe. It will go practically anywhere—through ditches, gumbo, sand and gravel. It is steered by the power of its own engine—simply and easily, and will turn completely around in a twelve-foot circle.

It will not pack the soil, will not mire, will not slip or flounder. It has 600 square inches of traction surface. The track is designed for long service. The sections are constructed to prevent filling or packing with mud, and protection is provided to prevent dirt and mud from falling into the track. The sections are joined with hardened steel pins which have their bearings in hardened steel bushings. The Cleveland weighs less than 3200 pounds. It can be housed in less space than is required for one horse.

The Cleveland develops 12 h. p. at the drawbar for hauling and gives 20 h. p. at the pulley belt—plenty for stationary work of all kinds.

But in spite of its unusual power, the Cleveland is small and can readily be used in orchards and under and among small fruit trees.

Rollin H. White, the famous motor truck engineer, designed the Cleveland Tractor. He has used only the best materials. Gears are protected by dust-proof, dirt-proof cases and are of the same high quality as those of the finest trucks.

Prepare *now* to produce the enormous crops which we must have—and incidentally make more money for yourself. Get ready *now* for the great tasks before you. Order your Cleveland Tractor *now.*

Write to us for complete information and the name of the nearest Cleveland dealer.

# Plant Root Vegetables Now for Seed

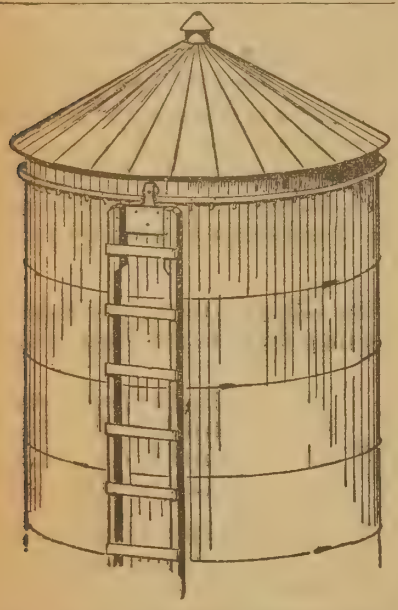
Growers of root crops of all kinds who are likely to need seed for planting in 1919 would do well to take steps to insure at least a partial supply by growing it themselves. This can be done only by the use of roots already grown and now in the ground or held in storage. Such crops as carrots, beets, onions, turnips, rutabagas, parsnips, and salsify are involved.

This is the advise and information given by the United States department of agriculture.

Weather conditions in the regions where the chief seed supply of these crops is produced have been very unfavorable so far this year. This fact, together with the certainty that the usual European sources can not be relied upon to supply us, threatens a very considerable shortage for next spring's planting. Since it takes two years to produce these seeds, this shortage can only be alleviated by the planting for seed of roots already grown.

Seed of the crops mentioned above can readily be grown over a wide range of the northern states. It is highly desirable that persons having uniform, well selected and sound roots should plant some of them for seed.

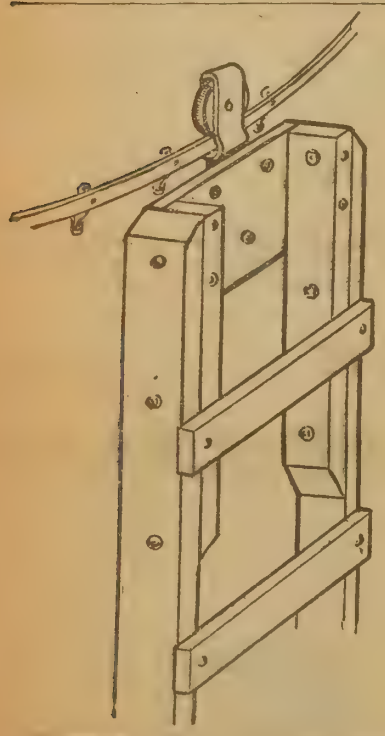
Parsnips and salsify, being hardy, can be most easily provided. The shortage of these is not serious, as the amounts needed are not large. For such roots as must be stored the time is at hand to choose those to be used for planting for seed production. It is of paramount importance that they be gotten into the ground as early as the soil and weather conditions permit. The prospect for a successful seed crop of these roots is very much improved if there is opportunity for root growth before the tops are started by warm weather. It is necessary to cover the roots with one or two inches of soil to protect them from frost and light freezing after planting.



Rows of beets, carrots, onions, turnips and rutabagas should be spaced from three to four feet apart. Plants should stand from two and a half to three feet in the row for all but onions, which may be spaced six inches. Cultivation should be thorough and shallow. The soil should be in good condition and should be fertile.

It is often desirable to support the seed stalks by staking, but not essential in any case except that of onions. Farmers' Bulletin No. 884 gives directions for the home production of seed of these and other vegetables.

# Swings Silo Ladder



## Attachment Perfected at Union

In a letter to the Farmer, Robert Withycombe, superintendent of the eastern Oregon agricultural experiment station, submits sketches of a device for attaching a ladder to a silo,

the object of the ladder being to facilitate repairing and painting the silo when occasion arises and also to make it convenient to get to the top of the silo.

"It has always been quite a problem

for the farmer to tighten and loosen the hoops on a wood stave silo in order to take care of the expansion and contraction of the staves at various times during the year," says Superintendent Withycombe. "Especially is this true in cases where the silo is 30 or more feet in height. We have overcome this inconvenience at the experiment station by suspending a ladder by means of a nondetachable pulley and a barn door track placed at the top of the silo. In this way the ladder may be readily moved to any part of the silo. It can be used for going up and down during feeding operations, to tighten or loosen hoops and for painting and other outside repairs."

The illustrations herewith show the position of the ladder on the track around the top of the silo and also the details of the pulley device.

# Keep Floor Warm

By J. A. WILLIAMSON.

In our farm home at Cocolalla, Idaho, the living room, which is kitchen and dining room with us, is large and has a high ceiling. We were much troubled with cold feet; not the kind of "cold feet" the boys speak of, but the real thing; cold feet from a chilled condition of the air on and near the floor. In my way of thinking there is a reason for everything and a remedy for nearly every wrong. The reason for our trouble was that the heat of the stove arose up to the ceiling and warm air being lighter remained overhead and the cold air about our feet. Naturally the remedy for this condition would be to reverse the forces that were the couse of the trouble. So I made a hole in the brick flue near the ceiling and put in a stovepipe that reached down to within 6 inches of the floor, with a good damper in the pipe.

The draft of this ventilator pipe creates a mild current that draws the cold air and carbonic acid gas off the floor and the warm air that has gone to the ceiling is drawn down to take its place and thus we have a warm floor.

The hole in the flue can be made with a cold chisel and hammer, care being taken to not try to take out too big pieces of brick, as by so doing you may damage the flue; take care to close all cracks so that live pieces of soot will not fall out.

If all factories, rooms and offices where a number of persons work were ventilated in this way there would be a great reduction in the cases of headache, rheumatism and many other ills due to heat overhead and cold floors.

## Farm Tractors in France.

Professor Max Ringelmann, director of the French official bureau for testing agricultural machinery, makes the following statement concerning the future of machinery in French agriculture:

Of the 130,965,000 acres included within the frontiers of France before the war, the agricultural territory amounted to 123,552,000 acres, of which the cultivated area formed 113,668,000. Plows drawn by cattle or horses were employed upon 43,737,000 acres. Assuming that only the tenth part of the above figure—that is to say, 4,374,000 acres—admits of the economical employment of machinery, it would appear that 17,000 farm tractors could be used for plowing purposes in France.

**Rather Unpleasant.**

"I won my wife by saving her from drowning."

"Ah, that was romantic."

"It seemed so once. But now every time I do anything that doesn't suit her she tells me she wishes I had let her drown."—Kansas City Journal.

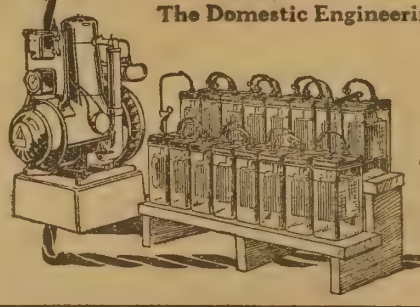
**DELCO-LIGHT**

**Increases Farm Efficiency**



1. **Saves time and labor**—Work formerly done under poor light and by hand can be done better and in less time with the aid of electric light and power.
2. **Labor is attracted to the farm**—The "back to the farm" movement is made practical when the conveniences afforded by electric light and power can be had in the country.
3. **Keeps the boys and girls on the farm**—Electric service on the farm offsets city attractions. Valuable labor and valuable young manhood and womanhood are saved to the country community.
4. **Solves the retired farmer problem**—Electric light and power make the farm home so attractive and comfortable that the farmer and his wife remain on the farm where their advice, experience, and immediate interests are of great practical value.
5. **Lightens burden of the housewife**—Increased farm work in war times means increased labor for the housewife. Electricity offers the only practical means of taking the drudgery of household tasks from her shoulders.

Delco-Light is a compact electric plant for farms or country homes. Self-cranking. Air-cooled. Thick plate, long-lived battery. Ball bearings. No cells.

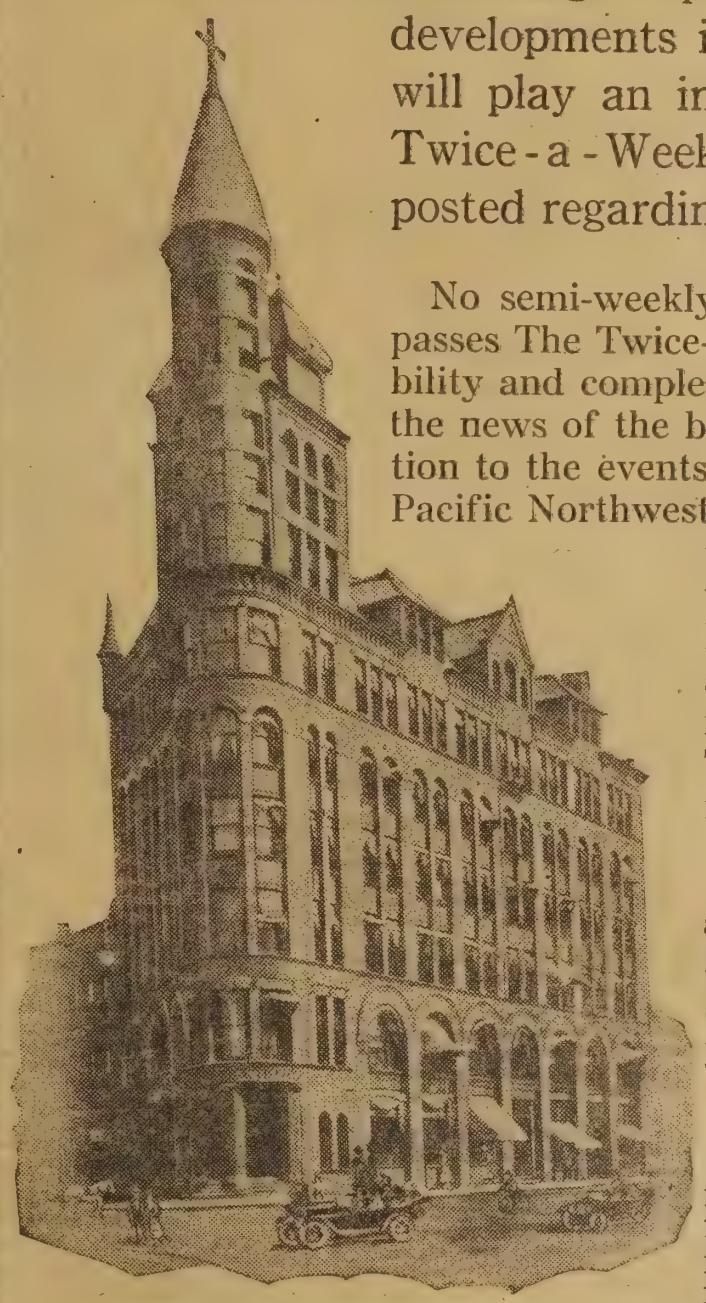
# GREAT BATTLE NEAR



## *Twice-a-Week Spokesman-Review, 1 Year $1*
## *The Washington Farmer, 3 Years--Both for $1*

ALL winter a great battle has been brewing on the western front in France.

With the coming of spring there are sure to be tremendous developments in this sector; and American troops will play an important part in them. Get The Twice-a-Week Spokesman-Review and keep posted regarding the details of this great struggle.

No semi-weekly newspaper in the United States surpasses The Twice-a-Week Spokesman-Review in the reliability and completeness of its war news. It will bring you the news of the big spring drive. It pays particular attention to the events of special interest to the people of the Pacific Northwest; covering the progress of the draft, troop movements, and all other details in which you are particularly interested. Names of killed, injured and missing will always be given as soon as issued by the military authorities. In addition The Twice-a-Week brings you a reliable summary of the general news of the day.

Purchased in any other way The Twice-a-Week will cost you $1 per year. For that $1 you can now get The Twice-a-Week for a year and your state farm paper for three years as well. It is a remarkable offer at any time; especially so in these war times.

**HOME OF TWICE-A-WEEK SPOKESMAN-REVIEW.**

**Above is a picture of the Review Building, Spokane, Wash., built, owned and occupied by the Spokesman-Review. It is the home of a great news gathering organization; the center of world-wide activities in securing reports of the war and all other important events for Spokesman-Review readers.**

# American Farmers Alone Can Win War

## *Germany Wins Only in Case of American Crop and Money Failure*

What is would have meant for this country to have submitted to the demands of Germany a year ago and what can prevent a submission now are indicated in the following extracts from an article written by Herbert Quick, one of this country's noted editors and students of world affairs:

To have submitted would have cost us dear in prosperity; but that would have been the least of our loss.

We should have had to grovel before the German government.

We should have had to accept murder as a thing against which we could not defend ourselves.

We should have allowed this new horor to become a part of all future wars, and have been responsible for its incorporation into international law.

We should have proved that because the fire which burns up our farms' usefulness is beyond the horizon, we will submit to the kindling of it.

We might have accepted the 70 cents or less for wheat, the 6 cents for cotton and the like in case of misfortune, but we could not do it merely because we were commanded to do it.

By so doing we should have accepted degredation. We should have accepted at the behest of a half-crazed autocrat in Europe, a lower standard of living in America. We should have given up at his command the hope for our children's education, the payment of the mortgage, the better school, the new church, that whole scheme of better rural life which is based on freedom to produce and freedom to market what we produce. We should have begun, after winning our freedom in our own revolution, after establishing a Union on the foundation of liberty in the blood and tears of our war between the states, after wresting these states from the wilderness, after gaining religious freedom, and freedom of speech and of the press—after all these victories won by a people gathered from every nation of Europe in the name of freedom, we should have begun to knuckle under to autocracy! We should have basely yielded up our birthright as Americans.

Such a thought is intolerable, when we come to understand it. Peace at such a price would not be peace, but only a preparation for a future revolt against subjugation. Better any sort of war, better war forever than that. Let us remember little Holland, which fought the great empire of Spain for 80 years and finally won her liberty.

This then is the war in which we are fighting. Whenever the time comes for new sacrifices, let us remember that we fight for liberty. Not only for the liberty of the Belgians, the French, the Serbians, the Russians, the British, the Montenegrins, the Rumanians, the Italians, but of all nations, even for the German people themselves, and most of all for our own liberties. Not for our own liberties tomorow, or next year, or 20 years from now, but for our freedom today. Not for the right to live in the future, but for the rignt to make a living this year.

German oppression had begun to pinch us before we entered the war. If we had not declared war, but had accepted the conditions of life ordered for us by the kaiser, we should today be a poverty-stricken people, our factories shut down, our workmen unemployed, our people starving, our farmers ruined by the poverty of those for whose consumption we grew our crops. There is loss and sacrifice in the war, but there would have been far more of loss and sacrifice in accepting the German terms. We should have lost more in money than we have spent in the war, but we should have lost something far more precious. We should have lost our souls.

The farms of this country could carry the war to a victorious conclusion even if all the rest of the nation should quit. The rest will not quit; but we could win it without them if we had to do it.

The farmers of the United States can whip Germany.

We can whip them with guns.

We can whip them with our products.

We can whip them with our money.

Every farmer in the United States must remember that the war has a first mortgage on every cent he has. The last spare cent in the pockets of every farmer in America should be devoted to the war.

The kaiser began foreclosing his mortgage on our farms when he declared ruthless submarine warfare, and the war is our answer to his bill of foreclosure.

Our contribution is, first our sons and brothers for the trenches; second, the last pound of food-products which we can grow by mobilizing our scanty labor-supply, utilizing the man, women, children and the townspeople about us; and third, money for Liberty bonds.

This is the crucial year of the war. Our soldiers are at the front, hundreds of thousands of them in the trenches, and a million more ready to go. The while burden of carrying on our own part in the war and of aiding our sister nations in arms, rests on the United States treasury.

If the treasury fails or falters or finds itself unable to respond to every call upon it, the war is lost. Do you realize that?

Your son, and all the nation's sons are relying on the United States treasury to furnish things with which they may fight.

Their lives are lost if the treasury fails. Our country is lost if the treasury fails.

Germany wins if the treasury fails.

Therefore, every cent you can rake and scrape together belongs to the treasury that our soldiers may come back to us alive and victorious. This is literally true. We can whip the Germans with our money; but not with the money in our pockets or bank accounts. It must go into the United States treasury in subscriptions to Liberty bonds.

While Gerard was our ambassador in Berlin, the kaiser said to him one day that he would stand no nonsense from America after the war.

Do you know what that means? It means that the Germans intend to subjugate this country if they come out of this war victorious.

The German imperial government has preached the superiority of Germany to all the rest of the world until the German nation is drunk with megalemania. One of their great writers expressed the prevailing, official view in 1903, when he wrote:

"The Teutonic race is called upon to circle the earth with its rule, to exploit the treasures of nature and of human power, and to make the passive races servient elements in its cultural developments * * * Whoever has the characteristics of the Teutonic race is superior. All the dark peoples are mentally inferior, because they belong to the passive races. The cultural value of a nation is measured by the quantity of Teutonism it contains."

Are you one of the darker races?

Are you willing to be rated as one of the "servient elements" in Germany's cultural development?

You began to be one of the servient elements when peaceful people were slaughtered as they carried your produce to markt. Was it bcause you belonged to a "passive race?"

This war is for the purpose of saying to that insane claim, with the roar of a hundred thousand cannon, "No!"

In von Tannenberg's book, "Grossdeutcheland," he says—and in saying it he voiced the orthodox official view —"It is Gefmany's task today to pass from the position of a European power to that of a world power * * * A policy of sentiment is folly. Enthusiasm for humanity is idiocy. Right and wrong are notions needed in civil life only. The German people is always right because it is the German people and because it numbers 67,000,000."

If the people of the United States should ever go insane enough to think such things of itself, it would be the duty of the rest of the world to crush the United States the moment it drew its sword and started out to establish itself on that superman basis. It would be its duty to crush us, not only for the sake of the world, but for our own sakes. Until this thing is crushed out of Germany, all other nations will be looked upon by Junkerdom, as they now look upon us, as "servient elements" in the development of German kultur, as "passive races," while they are the active ones, as "mentally inferior," as peoples in dealing with whom Germany will never be so foolish as to be guided by those notions of right and wrong which are needed in "civil life only."

Never since the Turks threatened to overwhelm Europe, perhaps not even then, was the world in such danger as now. Germany is not yet defeated. We must defeat her this year. Unless we win our place in the world it is lost, and our history as one of the "servient elements" begins. We must withhold nothing from the support of the war. We must give our sons. We must bring forth food in abundance, mutiplying our labor to that end. We must give into the treasury of the United States every cent we can spare.

This summer the support of the war is up to the farmers; and Uncle Sam has never called upon the farmers in vain!

# Relief Work in France

Twelve hutments of the Salvation Army already are in operation at American camps in France, five are in the United States, more are in course of construction. It was said there are a total of 188 Salvation Army huts in France. In each of these and where else they will greet the wounded and the sick in body and soul are the colors of the Salvation army—red (blood of Jesus), blue (purity) and yellow (the flame of the spirit).

Bread and pastry baked by Salvation Army lassies in huts at the trenches already have gained fame all over the battle areas in Europe. Women officers of the organization, who with the men are ordained as ministers, also sew for the soldiers and teach them what most of their mothers have urged —to "take care of yourself."

So far no casualties have been reported from Salvation Army headquarters in France, although men and women officers have frequently been in zones of fire and have been outfitted with rubber boots and coats, steel helmets, gas masks and revolvers.

# Bad Company

## It Wrecks a Great Many Lives

**BY JEAN HENRI LE ROY.**

'Way back in the winter of '91 I met Frank Lofton. He was born and raised on a farm and was a most remarkable prisoner in many ways. He served goodness know how long for a crime he said he committed while under the influence of Demon Rum. He was charged with complicity in holding up a saloon.

His two companions were early freed of their alleget part in the crime, but Lofton, who confessed that he had some part in the affair, was left to serve his full term.

The crime for which he was convicted was one of the most sensational in that section of the state. It was shown in the testimony by the prosecuting attorsey that he had been in prison before.

Lofton was an old broken-down grafter. He'd been out of the institution a few years when I ran across him one evening. I'd been having a high fling at faro and monte and my bank roll looked like a cyclone had struck it.

I had dropped into the hotel to look up some of the boys and there I ran across Lofton.

He sidled up to me as I stood at the bar and muttered something about being married and living on the level.

After that I met him quite often. He had the nicest kiddies and a beautiful wife.

One night he sent for me. Would I come and spend the night with him? Of course I would.

That night as I sat before a glowing fire in his cosy parlor, he told me of a little incident which happenet in his quiet life that I must pass along.

"You may think it's an unreasonable tale," began Lofton, "but it ain't. I just got to tell somebody.

"It was one fine, but cold December day in '90, there came here to board, in company with two men, a young man of good appearance. He was gentlemanly, neat, reserved, sad and quiet.

"My wife said she would like to know what his past life had been, but did not think it proper to ask him. He was slow to enter into conversation, and seldom took part in our games or music, except to sing a song sometime.

"My wife was every boy's mother, and she took care of his clothes and made him feel at home, and so he stayed with us some time. One day she asked him if he had parents living, and he replied, 'A father,' but was so embarrassed that she did not question more.

"Four days after Christmas I had a little conversation with him," Lofton said warmly, "and I finally said, "Now Fred, we have become quite well acquainted, and I believe you are in trouble; tell me all about it, if you wish, and perhaps Mrs. Lofton and I can help you. I do not ask out of curiosity, but as a friend.

"'Well,' he said, 'I am in trouble. I was not satisfied at home on the farm and so wandered away, here and there until I had no friends except the rough sort. I have ever managed to keep well dressed, but have not been able to keep good company.

"'I know you would help me if you could, but I am so discouraged. I do not want to do anything bad. If I could get a good situation here as expert accountant or a stenographer, I would try to be a man—but that seems impossible to obtain.'

"Mrs. Lofton told him it would pay to be a man anyway," stammered Frank, "and life was worth living aright. Soon after we bade him good bye and told him to be true to himself and he went to work in the Zuni mountains down in New Mexico.

"The next we heard of him was through a newspaper. Three men had been arrested for holding up a saloon and gambling house. They were living in the woods and getting out props for the coal mines at Gallup.

"Among the names we read Fred Stern.

"'Oh,' we said, 'he is not guilty—it is the result of evil companions.

"They were sentenced—I think"—paused Loften, "15 years in the penitentiary at Santa Fe. Six years later Mrs. Loften and I were in the bank one afternoon when she called my attention to some one standing by the door of the bank.

"She said, 'I am sure that is Fred,' and walking up to him, said, 'Are you not Fred Stern?' His eyes filled with tears as he recognized us and said, 'Yes, what is left of me. If it had not been for your advice and kindness to me, I might still be in the penitentiary serving out a sentence for something I was never guilty of.'

"Oh, we knew, said my wife, you were not guilty of doing such a thing as robbing a saloon and gambling house.'

"'No,' said he, 'but we were in the tent together when the sheriff and deputies arrested us. The appearances were against me, but I never had anything to do with the crime. It was bad associates again—he's one of them, take him along.'

"No friends, no money, no home—a stranger and a very discouraged and weak boy—no wonder they thought him guilty when in such company," cried Lofton.

"'When I was in my cell day and nights I had time to think over things, and see where I had made mistakes that had prevented me from doing better,' Fred told us, 'and I remember your kindness and advice, and so took courage to do my best, and so they released me much sooner.

"'But, Oh, how I have suffered no one can ever know, but perhaps you may have some idea of it from this,' and as he removed his hat," whispered Loften, "we saw that his hair was quite gray.

"We shed tears together, and begged him to look forward and not backward. He married a rich and beautiful widow here the next Christmas, and has lived an honorable Christian life ever since."

Some might think this too unnatural to be true. But very often do we hear and read of just such instances where circumstantial evidence and evil company have put men and women behind prison bars to suffer for the crimes of others.

"Strange things are transpiring every day," continued Loften, "and no boy or girl who keeps bad company is sure of the future.

"How much better to seek such society as will strengthen the good that lies dormant in so many hearts, and make them true noble men and women to fill some worthy place in life and assist others to better things.

"No one can stand still in life," said Lofton, "he is becoming either worse or better, either learning or forgetting.

"Now, you see," whispered Loften, "I've squared it and settled down to try and give the kiddies an education. I want them to be somebody."

**Get the Habit.**

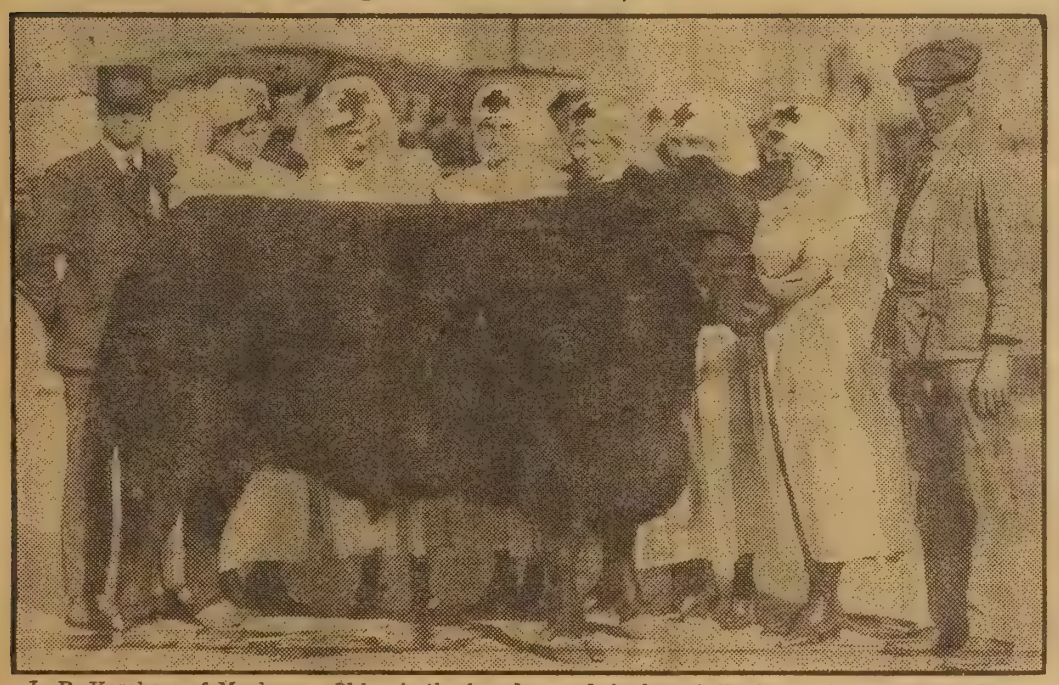
We have come to the end of a wheatless day.
We have eaten no cookies or pie.
We have had no bread that was made of wheat;
It was made out of corn or rye.
And we liked it so well that when war is past
And a glorious victory won,
We'll keep on observing wheatless days
And we'll eat corn pone for fun.

# All the World's a Stage, and All the Men and Women Merely Players

## The Women Bear Their Burden

Of the healthy men in France, practically all are engaged in transportation or in the manufacture of munitions, leaving agriculture absolutely to the women. Not only this, but they have stepped into the place of work animals—women of magnificent, noble womanhood are hitched to the plough and cultivate the soil. Uncomplaining, with high devotion, with an attitude that amounts almost to religious exaltation, the woman of France bears the burden.

## Succeeds Gen. Maude.



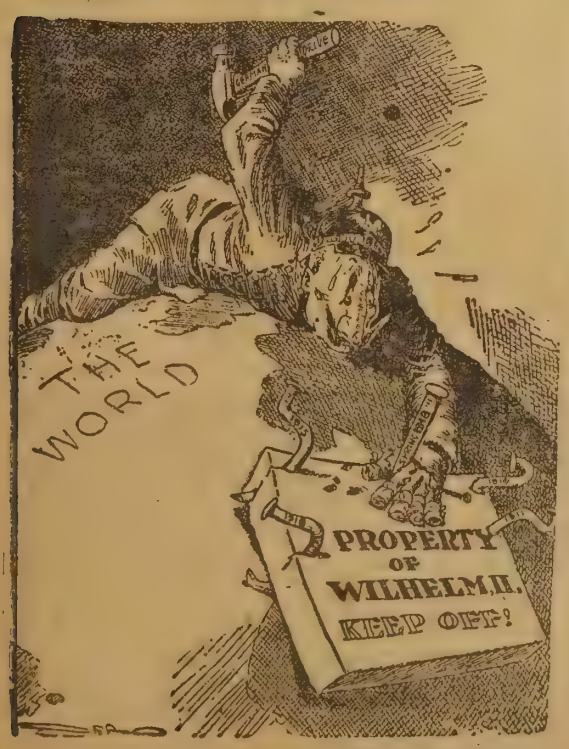
Lieutenant General Sir Walter Marshall, who is in command of the British forces in Mesopotamia, succeeding General Sir Stanley.

## Prepare Battlefield for Harvest

French peasant women stringing vines over barbed wire entanglements which separated the French and German trenches. The Germans have been driven back and these brave women are trying to rebuild their homes.

## Brings Red Cross $5828

L. R. Kershaw of Muskogee, Okla., is the breeder and feeder of Kuskogee Boy, which sold recently at Oklahoma City for $3.10 a pound for the benefit of the Red Cross. As the steer weighed 1880 pounds the sum received, $5828, was also a record for one steer. The hide goes to make President Wilson a coat and the steaks and roasts under the hide go to General Pershing in France. This steer was grand champion over all breeds at New Orleans, Atlanta and Nebraska in 1917, champion of the Angus at Chicago International, and grand champion at Oklahoma City.



## Trying Their Mental Ability

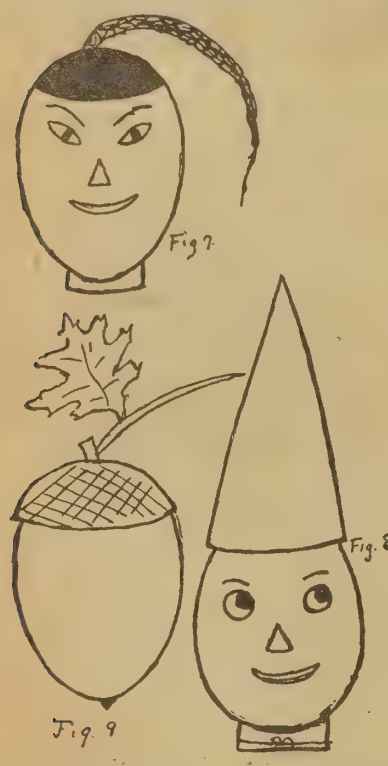
# Easter Gifts That Are Easy to Make



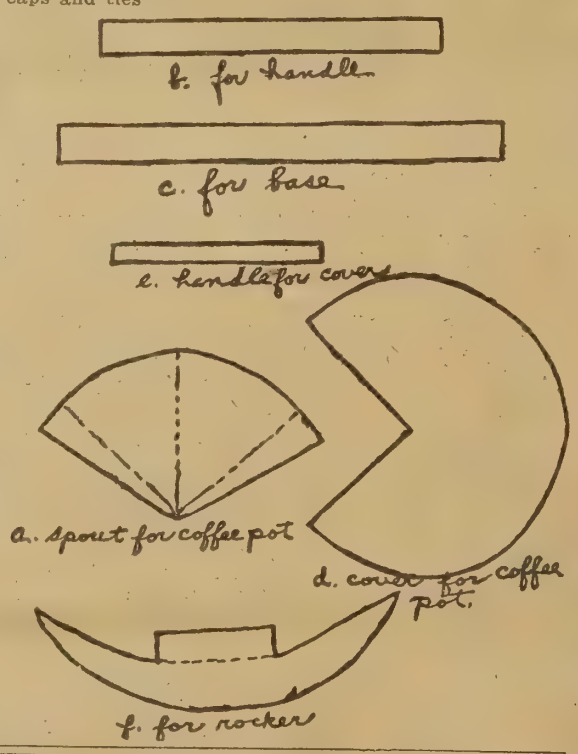
By BESSIE M. PRATT.

Some of the prettiest Easter remembrances can be made from egg shells and hard boiled eggs. It is best to use a darning needle or hat pin and make a small hole in each end of the egg and blow out the contents, except a few of the very whitest, for the dishes may have only one small end. The empty shells are better than hard boiled eggs as they can be kept indefinitely unless broken and they are not nearly so frail as one would think.

**Be Very Careful.**

To make the dishes, take white egg shells with the small end removed and chip them around evenly, a pair of tweezers are a help, but they may be broken satisfactorily with the fingers if care is taken. The paper for the handles, base, covers and saucers should be of the weight of good writing paper. Pink, light blue or green is prettier than white. The strip of paper (figure c) for the base is pasted together in a circle, then the top edge is covered with glue and the shell set on and pressed down gently for a minute. The strip (figure b) is curled slightly at each end by being rolled in the fingers and is then glued to the proper position. The cover (figure d) is made of a round piece of paper with one quarter cut out and the two cut edges glued together. The handle for the cover (figure e) is made of a tiny strip of paper pasted over the top. The saucer is made of a round piece of paper about two and one-half inches in diameter. The spout for the coffee pot or cream pitcher is made as shown in figure a, folded first in the center and then the two sides folded back and used for gluing the spout in position. The dishes are prettier if water color paints are used to decorate them, with a little gilt around the edge, or tinted to harmonize with the paper used. The set consists of coffee pot, sugar bowl, cream pitcher and cup and saucer. The set of dishes might be placed on a pretty tray made of cardboard.

The acorn (figure 9) is made from a very dark egg, or one boiled in coffee for one-half hour. The acorn cup is made of brown tissue paper and a stem is made by twisting the paper tightly and inserting it through a slit made in the paper cup, which is then glued in place. Two or three oak leaves may be added, either brown or green paper being used.



**Cradle for the Baby.**

The cradle is made of a white egg shell with one quarter broken out as shown in figure 4. The rockers are cut by the pattern shown in figure f, the straight piece to be folded over and glued to the bottom of the cradle. Put a tiny bit of cotton in the cradle and a little doll an inch long, the kind you get for a penny.

The brownie (figure 8) may be varied by making different colored caps and ties and the features drawn in differently. The base is made of white writing paper which makes brownies sit up straight and also acts as a collar. A little strip of colored paper is glued in place and tied for a tie. The cap is made of bright colored tissue paper in cone shape. The brownie is the most popular and also easiest to make.

**Can Make a Chinaman.**

The Chinaman (figure 7) is made from an egg shell carefully blown out. Mr. Chinaman's cue is made of coarse black cotton thread braided and stuck in the hole at the top. The rest of the hair is painted black with ink or water colors and the features are drawn in with pen and ink. He will also need a strip of writing paper glued on for a base. The little chick in figure 2 should be yellow and the rest of the egg left white. It would be nice to write "Easter Greeting" on the other side in gilt and tie a ribbon around it with a pretty bow.

## To Aid Liberty Loan.

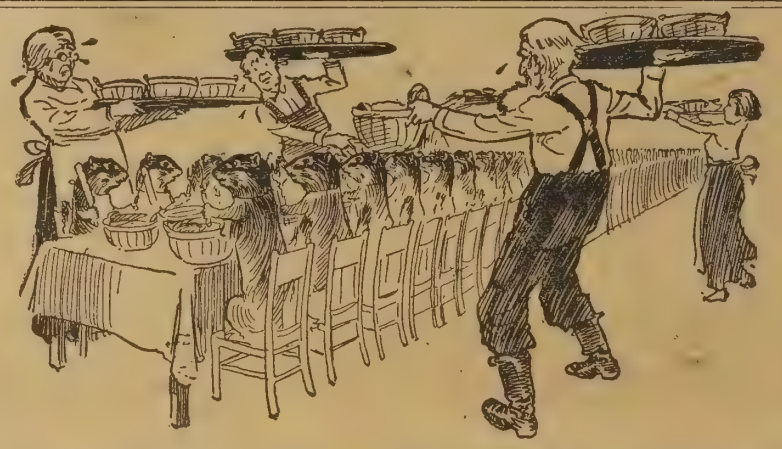
The United States treasury department has announced a plan to have every rural schoolhouse made a community center, from which the work of selling Liberty loan bonds will radiate during the campaign which opens on April 6. This is the date on which this country one year ago formally entered into the war and has been chosen as a logical date for the launching of the third and largest liberty loan campaign. The amount of the third bond issue has not yet been announced.

## Soldiers Eat Potatoes.

The soldier boys in the encampments in the west and southwest will require 4,500,000 pounds of potatoes during the month of April, according to advices received by Robert L. Ringer of the United States bureau of markets. They will likewise need 275,000 pounds of onions.

There's but ONE Caterpillar Holt builds it

THOUSANDS of owners in thirty countries have nothing but praise for the wonderful Caterpillar Tractor—nothing but praise for its design and for the sound mechanical construction of it.



The famous Caterpillar track, plus the steady, powerful, economical Caterpillar motor (built entirely in the Holt shops), plus the best of materials, workmanship and inspection throughout—these have made the Caterpillar the foremost tractor of the world today. Other tractors, lacking one or more of these elements, cannot achieve the same success.

There's only one Caterpillar—Holt builds it. Don't say Caterpillar unless you refer to this tractor.

*We will gladly send details on all models.*

# Tired of Boarding Gophers?

Are you ready to quit slaving to provide a bounteous, free boarding house for gophers? Why not Kill Em? There's a sure, easy way—just use

The Time-Tested **Kill-Em-Quick** Guaranteed Gopher Killer

TRADE MARK REG. U.S. PAT. OFF

## Gopher Poison

Kill-Em-Quick is the cheapest gopher poison you can use, because it never fails to "get" the gophers. You never have to do the job over because it never fails. You waste no grain because of weak poison, no time, no money, when you use this old friend of the crops. Best for ten years, ever since farmers began killing gophers.

If Kill-Em-Quick was apt to fail, could we give the rock-ribbed, money-back guarantee that is printed on every package? If it fails, we are bound to return the purchase price. 40-acre size, 50c; 100-acre size, $1.00; from your dealer or, if he can not supply you, from us, by express, prepaid, upon receipt of the price.

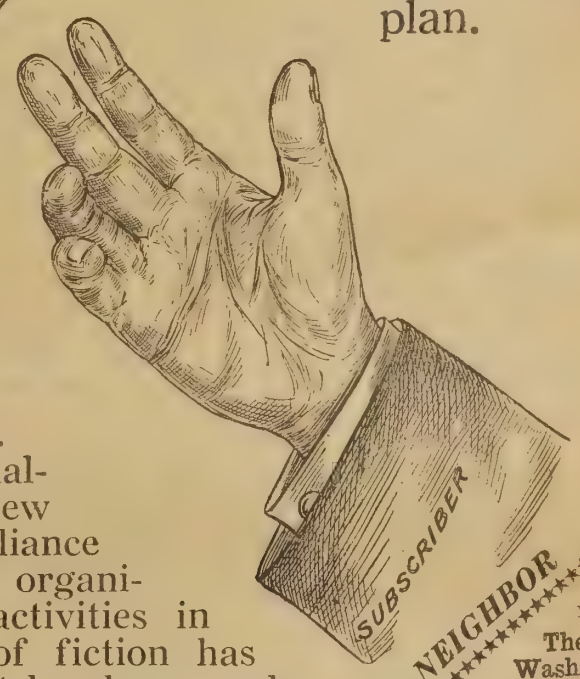
1576 Wazee Street Denver, Colo.



# DIRECT TO READERS

**That is the central idea in preparing this year's subscription plan of The Washington Farmer. It is the reason for our request that readers pass along copies of this paper to neighbors where the various issues have been read.**

We are glad to say that our new plan is being supported wholeheartedly by hundreds who believe in the cooperative principle. We said to our friends—"Send your subscription orders direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, if you believe in eliminating the middleman, help us make our experiment a success. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

## *FORWARD STRIDES TAKEN BY THE WASHINGTON FARMER*

Our old friends know that this is a far better paper than it was a year ago or even a few months ago. The lowering of price does not mean a lowering of quality. Your state farm paper is now printed on a big new magazine press equipped with every modern appliance which makes for better and more rapid printing. Our organization has been strengthened in order to cover the activities in this state more thoroughly. The most popular type of fiction has been secured for our pages. The household department has been made more interesting and helpful. In fact there have been improvements all along the line. Through our cooperative plan you actually get this superior paper for a mere fraction of what it has cost in the past.

## A Real Saving

*Following Rates Now in Effect for Subscriptions to The Washington Farmer*

## The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana, Now the State of Missouri.

By LEWIS B. MILLER

Copyright, 1914, 1915, by Lewis B. Miller.

**SUMMARY OF PRECEDING CHAPTERS.**

In September, 1811, two young men who lived near St. Louis, Ben Armstrong and Jodo Henderson, taking with them their two dogs and donkey Spunky, started on an all-winter's hunt in what was at that time unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination — a salt spring close to the river Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their saltmaking and hunting. After exciting experiences with a buffalo herd and with a bear in a cave, they find their first fresh sign of Indians — moccasin tracks in the snow. And then, in the dead of night, a scouting party visited them preparatory to an attack.

### CHAPTER IX.

**The Earth Sets Up a Quaking.**

Noontime came, and still no Indians had made their appearance. Soon after the partners had eaten their dinner, Ben cautioning Jodo to remain near the cabin, armed himself and set off to visit their traps and deadfalls. In due time he returned with several skins. The two now stretched the furs up against the walls, on the inside this time. Later they boiled down their pots and placed about three gallons of wet salt on flat stones before the fire to dry. And when it was dry they poured it into one of their salt bags.

Brightly, warmly shone the sun today, and in most of the open places the snow melted off. That was a relief, for now the trappers could tramp about the country without leaving such a conspicuous trail. Though, in reality, now that their cabin had been discovered by the Indians, that would probably be of no great advantage.

As night was coming on the trappers carried some hay into the big cave. And there, in a dry place at one side of the noisy stream, they fed Spunky. They were trying to conceal him. They also took down the rope used in reaching the little cave. After that they brought over some salt water for their pots, carried in a good supply of fire wood, and went in and barred both the door and the window. That the night now coming on would bring them trouble they had not a doubt.

First they cooked their supper and ate it. Not long after that Ben said:

"Jodo, you tumble into bed and catch some sleep while you can. I'll stay up and keep watch."

"Hadn't I better stay up with you? I'm not the least bit sleepy."

"One can stand guard as well as two. The dogs are really the only guards needed. I'll wake you the first minute anything suspicious occurs."

"All right, then." Jodo went back and crawled into their bunk with his clothes on. He was soon asleep.

Ben covered up most of the fire, then sat down in front of what remained, with his elbows on his knees and his head in his hands. After an hour or two he got up, unbarred and opened the window shutter, and stood gazing out. There was nothing to alarm him, and he fastened the shutter and sat down in front of the fire again.

Several times he did this. At last he unbarred the door, opened it noiselessly and stepped outside, followed by the dogs. It was already past midnight by the stars. That the Indians would come sooner of later the young trapper had little doubt. But it now seemed scarcely probable that they would come tonight. Having assured himself that there was nobody near, he went in, calling Bose and Tinker, and barred the door again. After covering the rest of the fire he lay down by Jodo for a nap.

Scarcely had he fallen asleep, as it seemed to him, when he and his bedfellow were awakened by the growling of Bose and the barking of Tinker. Both sprang out of bed and seized their rifles.

Now very distinct noises could be heard outside. Somebody was trying to open the door. Ben found a crevice between the slabs and applied his eye to it. The moon had risen since he had gone to sleep, and there was a dim light outside. And by that light he could catch a glimpse of numerous Indian warriors near the door.

For a few minutes the Indians kept working at the door. At first they worked quietly, as if trying to discover how the door-shutter was fastened. Later, becoming impatient, they shook the door till it rattled noisily. And after that they seemed to be pushing hard against it. But the bars held it fast.

At length the working at the door ceased. The trappers peeped out between the slabs. The Indians were still out there. They were busy at something, and could be seen moving back and forth.

"What can we do?" whispered Jodo.

"That's to be seen. But we must keep them out. We don't want to hurt them, though, unless we have to. These are Osages, I think. They rob and mistreat white people, but they've never been bad to kill us. As long as we don't hurt any of that bunch our lives ought to be at least halfway safe. If we kill any of them, though, they'd be likely to burn the cabin down with us inside of it. An Indian will do anything for revenge."

"But unless we shoot, how can be stop them if they try to break in?"

"Oh, we'll shoot! But we'll shoot to scare and not to kill."

"I'm wondering if we can scare away that big bunch without hurting some of them."

For several minutes slight noises could be heard outside. Then, suddenly and unexpectedly, a thunderous crash struck the door and shook the whole cabin.

Peeping between the slabs Ben could see that several Indians now had a log—one that had been left over when the cabin was built—and were swinging it so the end struck the door like a battering-ram. And scarcely had he made that discovery when the log struck again, this time with a violence that threatened to splinter the door even if it could not break it or break loose the bars.

Well knowing that the assault must be stopped, Ben gouged a small hole in the mud daubing by the side of the door, thrust his pistol barrel through and sent a bullet out among the warriors. He had been careful not to hit any of them. But the Osages evidently did not know that; for they gave up their attempts to break open the door. However, they moved round to the back side of the house and began an assault on the wall.

Again and again the battering-ram struck. Everything in the cabin shook under its blows, but the wall stood firm.

Finally the red men, seeing that they were accomplishing nothing against the solid logs, moved round to the other end and began an attack on the chimney. At first the stones seemed to defy their blows, but, laid only in clay mortar, they were not firm, and at the third blow one corner of the fireplace fell out.

Ben had reloaded his pistol, and he now squatted before the fireplace, intending to send a bullet through the opening just made. But before he could shoot the battering-ram struck again and the whole chimney tumbled down with a crash. A few of the stones fell inside of what remained of the fireplace, but most of them fell outside.

And following the fall of the chimney, and seemingl as a result of it, the whole cabin began to tremble, and then to quiver, and soon to shake violently.

Now the trappers were greatly alarmed; and the Osages themselves must have been amazed at the commotion they had started. For not only did the whole cabin shake, but the ground under it was shaking, and the cliff that covered it was shaking.

Ben sprang to the fireplace—the opening where the fireplace had been—and looked out. The Indians had dropped their log and could be seen gazing around wildly, as if in terror of what they themselves had done.

"What in the world are the red varmints up to?" Jodo cried out, in his fright.

Ben made no reply at first. He was waiting for the quivering to cease. But instead of subsiding it only grew worse, till the limestone cliff could be heard grinding against the logs overhead. Now he understood.

"The Osages are not doing this! It's the earth shaking! There's an earthquake on!"

Jodo said nothing. The two stood in the center of their quivering cabin, wondering vagnely what was about to happen. The dogs, well aware that something was wrong could be heard whining as if in terror. Soon Tinker set up a doleful howl. And scarcely was the howl ended when a noisy clattering of hoofs could be heard as Spunky dashed out of the big cave and fled across the valley, his loud, terrified braying echoing from the cliffs as he ran.

But doubtless the attacking band of Osages, gathered at the outer end of the trappers' cabin, were the most terrified of all. Not only was the ground shaking under their feet, but soon gravel and stones, loosened on the mountainside above the cliff, began to shower down around them, and some even upon them. Less than a hundred yards away, toward the southwest, a huge block of the cliff, weighing many tons, fell to the earth with a tremendous reverberation.

That last, together with the stones raining down on their heads, was too much for the savages. With yelps and yells of terror they fled. Ben, looking out through the chimney hole, saw them running toward the creek. There appeared to be more than twenty in the party. He watches till they had disappeared into the woods along the creek bank.

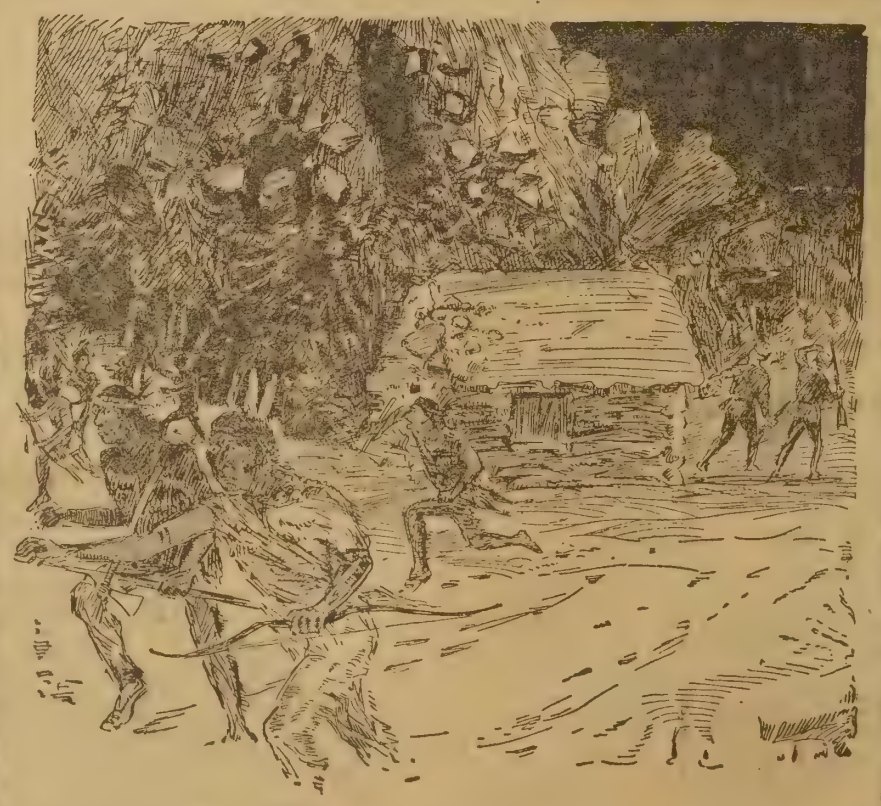
But the earth was still quaking frightfully, and the cabin itself seemed about to tumble down. It was a terrifying time, and the fear of redskins was forgotten.

"Let's get out of here, before the whole cliff crashes down on top of us!" shouted Jodo.

Ben was more than willing. Hastily the door was unbarred, and the two, carring only the guns that were in their hands, rushed forth and took to flight, followed by the dogs. As they dashed out from under the cliff a shower of gravel pelted their bare heads, and a boulder weighing a few hundred pounds dropped to the earth but a yard or two behind them. They only fled the faster. Nor did they pause till at least a hundred yards from that dangerous cliff.

Still the ground kept shaking under their feet—shaking as with an ague. The dogs, frightened at what was taking place, stayed close by their masters, and kept up a constant whining.

And scarcely were the young trappers out in the open when they became conscious of a roar close by. Looking toward the big cave, they saw a dark cloud fluttering forth from its mouth—bats!



"They're swarming out by the million!" cried Jodo.

The creatures of the cave and darkness, frightened by the vibration of the rock roof and walls, seemed all to be trying to escape at once. Out they fluttered, regardless of the frosty air, and scattered in every direction.

And already still another roar, louder and very different, was beginning to be heard. That, too, seemed to issue from the mouth of the cave. Louder and louder it swelled, as the earth kept swaying and rocking, till the noise became almost deafening. To Ben and Jodo, as they listened and watched, it sounded as if the whole earth were being ripped open by some awful convulsive force.

But soon the roar burst from the cave, and the watchers saw that it was made by a torrent of water. The torrent, as wide as the cave's mouth and a yard deep, now came sweeping and thundering down Cave branch's channel toward the creek.

Probably the quaking of the earth had produced a sort of tidal wave in that subterranean sea, which was carrying much water forward and out of the cave's mouth.

**Not only the sudden coming on of a violent earthquake, but also the superstition of the Red Men contributed to save the young hunters from their enemies, though the former, shaking boulders from the cliff above their cabin, jeopardized their lives even more than did the attack of the savages.**

For perhaps an hour, from first to last, the earth kept up its rocking and swaying. After that followed numerous tremblings and quiverings, each a little lighter than the one before it. Gradually, however, the earth's foundations seemed to become fixed again.

When the most violent quaking had ceased the torrent soon ceased to pour out of the cave's mouth. Indeed, even the little stream that had been flowing from the cave now ceased to flow altogether. The bats were no longer coming out; but those already out were hurrying to get back inside, to escape the frosty air.

When the worst had passed Ben and Jodo talked of the recent disturbance. They had been through some slight earthquakes before. Such things occur from time to time in the vicinity of St. Louis. But never had they experienced anything half as frightful as what they had passed through tonight. They knew that this had been no inconsiderable earthquake; and they surmised that it might have been even worse elsewhere than here. But months must elapse before they would learn how extensive and how destructive this agitation of the earth had really been.

The young trappers, alone and far out in the wilds, had many things to worry them just now. There was still a slight trembling of the earth from time to time, and they were afraid to go back to the cabin lest a violent shock should shake the overhanging cliff down and crush them. And yet they were afraid to remain out in the open, not knowing at what minute the Osages might come back. Jodo worried more about the In-

# Split Beans

## Make a Good Wheat Substitute

By MRS. W. F. STECHER, Pullman.

In the bean growing districts of this country many tons of split beans go to waste annually simply because no one knows how to use them. Yet these split beans—split in threshing—make one of the best wheat substitutes we have. If housewives were taught to make bread, cake, cookies, etc., by using part beans with the flour, a market would be created for this product, which would give the farmer a fair profit and help save wheat. The cost of cleaning split beans is comparatively small and if sold at a reasonable price to the public, all split beans and peas could be used for food. By partly cooking them they make good poultry feed. They are as good as the whole beans for soup, bean loaf or bean sausage, and do not require as long a time to cook. As a meat substitute beans take a prominent place.

To use beans for bread or pastry simply cook tender, allowing as much of the water as possible to boil away without scorching them. While still warm, run through a potato dicer or colander and mash the beans very fine. This is necessary to insure success in bread and pastry made with beans or peas.

**Bean Doughnuts No. 1.**

Take a lump of risen bread dough the size used for an ordinary loaf, add a cup of warm milk, half a cup of sugar or honey and wheat flour, to make as stiff as bread dough. Knead well, let rise and roll out and cut doughnuts. Lay these on a cloth to raise and when light fry brown in hot fat. These absorb very little fat in frying. If wanted warm for breakfast, place in the oven a few minutes and roll in sugar before serving.

**Bean Doughnuts No. 2.**

One cup cooked beans, one-half cup sour milk, two-thirds cup sugar, one-fourth teaspoon salt, one-half soda, and a little nutmeg and wheat flour to make dough as soft as you can handle. Fry in hot fat.

**Bean Cookies.**

One cup sugar, one cup cooked beans, one-half cup cold water, one-half teaspoon salt, one-half teaspoon soda, four tablespoons melted fat, one cup corn starch, one cup barley flour, one cup wheat flour, six teaspoons cocoa, one-fourth teaspoon cloves, one teaspoon cinnamon. Mix sugar, salt, beans and fat, add soda dissolved in the cold water, then the dry ingredients sifted together. Roll out thin, sprinkle with sugar and bake in a moderate oven.

**Sugarless Bean Cookies.**

One cup cooked beans, one cup Karo syrup, four tablespoons melted fat, one-half teaspoon salt, grated rind of one lemon, one-half teaspoon soda, one-fourth cup hot water, one cup wheat flour, two cups barley flour. Mix beans, syrup, fat and the soda, dissolved in the hot water. Add salt, grated lemon rind and stir well. Add flour, roll out thin and bake in a moderate oven.

**Bean Cake.**

One cup sugar, two eggs, one cup cooked beans, three tablespoons melted fat, one teaspoon lemon extract, one cup sweet milk, two cups wheat flour, three teaspoons baking powder. Beat eggs, sugar and half a teaspoon salt together, add the melted fat, milk and flour sifted with the baking powder. Bake in a loaf and frost with chocolate or raisin frosting.

**Bean Sausage.**

Two cups cooked beans, one cup stale bread crumbs, one onion, one egg. Mash beans very fine, add dry crumbs, finely chopped onion. Season highly with salt, pepper and sage, add the egg. Mix well and let stand an hour or longer, then shape into sausages or flat cakes, fry in very hot, deep fat. If the fat is not hot enough to brown the sausages in a few minutes they will lose shape and absorb an unnecessary amount of fat. It is not wasteful to fry in deep fat, as food so fried absorbs less than any other way of frying. Only be sure your fat is deep enough to cover the food to be fried by at least half an inch, and hot enough to brown a bread crumb thrown into it almost instantly. This fat can be used again and again.

# Sweets Without Sugar

Popcorn is a splendid substitute for sugar sweet. Pop the dried corn in a regular popper or a covered iron frying pan, shaking vigorously and taking care not to let it burn. A cup of dried corn will make three quarts when popped. It is good mixed with a little salt or melted butter and salt.

To make a sweet of it, combine with sirup. Boil together one cup corn sirup and one tablespoon vinegar until a few drops harden in water. Pour over the popped corn while the sirup is hot. This amount of sirup will cover three quarts of popped corn. As soon as the mass is cool enough to handle, grease the hands well and form into balls.

**Stuffed Prunes and Dates.**

Soak the prunes overnight, dry, and stuff with chopped nuts, raisins or apricots. Wash the dates, dry them, and stuff the same as prunes. These and the Parisian Sweets are good to eat and good for you.

# Make Soap at Home

"Let us revive the old industry of home soap-making," says P. F. Trowbridge of the University of Missouri college of agriculture. "Save the wood ashes separately from the coal ashes, build an old-fashioned leach and secure a good supply of lye. Save all the waste fat from the kitchen, including the ham and bacon rinds. These fats when fed to the chickens or hogs are worth but little more than the same amount of grain. They are worth three or four times as much when made into soap. The ham and bacon rinds and other waste kitchen grease can be boiled up with the lye without previous rendering of the fats and will make a good soft soap for scrubbing or laundry purposes.

"For making a good hard soap for general household use the fat should preferably be rendered and clarified. Custic soda should be used instead of the lye from the wood ash leach. At slaughtering time any smeared fat that is not fit for making lard or any tallow that is not wanted for edible tallow should be rendered for soap grease. In this connection it is recommended to cook up the cleaned entrails for hog or chicken feed. The grease should be skimmed off and used for soap grease.

"The following directions, if followed, will give a good quality of soap for all housesold purposes," says Dr. Trowbridge. "Put one pound of lye into an iron or stone vessel, pour on slowly one and one-third quarts of cold water. Stir with a stick until dissolved, then allow it to cool. Heat eight pounds of soap grease or tallow until it is all melted. Cool until it is lukewarm, then pour the cooled lye solution into the warm grease and stir thoroughly until well mixed and of a uniform consistency. Then pour into a wooden box lined with waxed paper or wetted cloth. Cover and set in a warm place for several days. Turn out of box and cut into bars."

# SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## How Some "Little Things" May Cause Big Eye Troubles

Dr. Hirshberg.

Your eyes are as much a part of your bodily organization as your stomach, heart, hands or feet. They are not just two large balls set into your head to shine and sparkle, irrespective of the other members of your anatomy. You can hardly imagine for a moment your eyes, although they seem not to cooperate in the bodily labor union, can hold out just as long as you choose to drive them. Your eyes are not independent of the other members of your mechanism. When the other organs decide to quit because of the stress and pressure of overwork, do not think that your eyes will continue to sparkle bright, clear and unaffected by the other disturbances. If they refuse to strike along with the other organs, they will be made at least to cooperate in the conspiracy against your anatomical unity and help disrupt your mechanical structure.

**Never Permit Overstrain.**

All the other rebellious divisions have to do to accomplish this is to send the scarlet stream which circulates through them to the eyes. Then it is only a matter of hours or minutes at times until the muscles of your eyes cease to be accurate in their relaxation and contraction. They will probably feel weary and droop, or else they will feel an almost unbearable strain. At this point, then, your brilliant sparklers have joined the discontented factions of your physical makeup.

Perhaps this is a condition not so very frequent, however, for presumably you would not allow all your parts to deteriorate one by one without an attempt at least to keep the coordination between them. Just as you would try to aid your inner tubes and vessels in the proper execution of their tasks, so you can help your eyes in their struggle for an unmarred existence.

It is perhaps the easiest thing in the world to keep a normal machine at work. You can hardly use oil to grease the parts of the eyes, for there is no lubricant that can perform this service for them. The exercise which you give the other parts of your anatomy indirectly acts as oil to the mechanism of the eyes. It helps to change the blood, which, because of rapid circulation, makes the eyes muscles more active. Direct exercises for the eyes, however, is negative. It consists of "don't do this and don't do that."

**Points to Remember.**

Maybe you have never thought it wrong to read in bed, flat on your back. To make matters worse, you perhaps never even thought of the dimness of the light. You rub your eyes every once in a while, and probably squeeze them, too, and then continue to read. In a little while you rub again, and so on until your eyes droop and close for the night. You perhaps continue the process, and in a month, two months or perhaps a year, you begin to take notice and wonder why you need glasses or stronger lenses.

Just a little forethought could have told you that to hold the eyes in a single position for any length of time strains a certain group of muscles. Try to hold your arm extended in one direction for a while to prove this, and it will become so tired in a few minutes that you will perhaps feel stiffness of the muscles for a day or two.

Again, it does not need much contemplation to realize that reading or working in a dim light causes you to strain beyond repair another group of muscles. In a short time, if you are not careful, you will have too rapid or two slow secretion of the eye fluids, and you may soon need lenses an eighth of an inch thick and maybe have to wear eye shades besides.

By means of the roundabout flow of the blood, the stomach, heart, brain and all the other members of your organization will most likely feel the effect of visual disorders, for not a single physical division can escape the injuries done to any other. They either hang together, as a rule, or else your whole anatomical structure becomes disrupted by illness and your physical kingdom is overthrown.

SANITARY CANNING OUTFITS

Home canning is more necessary and more profitable this year than ever before.

Steam pressure canning is the safe, quick and easy way. Our complete outfit saves time, labor and fuel, hermetically seals the cans and sterilizes the contents.

We include instructions and a $2 book of recipes. Write for free literature.

Seattle Can Company. Home Canning Department, 8th Ave. So. and Adams St., Seattle.

A Distinguished Line of Pianos

In "straight" Pianos we carry a very comprehensive line ranging in price from $285 to $3000—each "make" has been selected by us as the very best of its grade.

In the neighborhood of $300 we carry the Aldrich, a good dependable piano at a very moderate price—it will give the purchaser excellent service.

From $375 to $450 we offer the Stroud, Kurtzmann, Emerson and Estey Pianos—four very substantial "makes" which are giving a lifetime service in thousands of homes throughout the United States.

From $450 to $600 we have the Krakauer, A. B. Chase and Weber—these instruments are high-grade instruments, in fact they are old and famous makes.

Then at $575 and upward there is the Steinway, the standard by which all pianos are judged—To have a Steinway is to have the best.

Bear in mind we will arrange convenient terms of payment on any Piano—even the Steinway.

We invite you to call at any of our stores—or write us asking for illustrated catalogs and prices.

*We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, Etc.*

## To Can Trout

To the Editor: Can you tell me how to bottle the native trout so that they will be like canned salmon and the bones be soft. I can put up quite a few fish for winter use, next summer, if I just knew how.

MRS. AXEL ANDERSON.
Marysville, Idaho.

The above question, referred to Miss Edna Walker, extension specialist in home economics, Washington State college, is answered as follows:

The trout should be drawn and cleaned, and skinned by putting them in boiling water, little at a time. This immersion should not be long enough to break the skin, as this will cause loss of the oil or fat that the skin contains. Scrape the trout gently till the skin becomes white and clean. Wipe them dry, but do not wash them in water. Salt the fish and pack it in jars in as large pieces as will go in, cutting across and leaving the backbone in. To a quart jar, put one teaspoon of olive oil or butter on top of the fish. Clean the edges of the jar, put on the lid and let it cook 90 minutes in a pressure cooker at 10 to 15 pounds pressure; or, three and one-half hours in a wash boiler.

To make the bones soft, increase the time for the pressure cooker, at 10 ot 15 pounds, by one-half—that is, 45 minutes. It is doubtful if the bones could be softened by other than the steam pressure method of cooking. It is the intense heat of steam plus pressure that softens the bones.

### Uses for Kerosene.

Wet a cloth in kerosene and after sweeping wipe around your rugs, wipe down your stairs and the bathroom floor with it. You can take up every particle of dust and cover up all scratches and keep your floors looking fine all the time.

When washing windows, put a little in the water, they dry much more quickly and look much brighter.

When ironing, rub flatiron on a cloth wet with it. Your irons will never stick. Dust range mornings and afternoons with cloth that has a little on it.

# Trappers of the Ozarks

(Continued from page thirty-eight.)

dians than did his partner. Ben, having seen that war party fleeing as if for their lives, was confident that they would not be in any great hurry to return.

What to do now was a puzzle. Both would have preferred to start a campfire out here and sit by it till morning. But even the possibility of an arrow or a bulelt from some lurking redskin made sitting by an exposed campfire seem as dangerous as the earthquake. And the night was altogether too frosty to stay out long without fire, unless they could keep walking.

After a good while, no more violent shocks being felt, the trappers mustered up courage enough to go back and enter their cabin. They raked some fallen stones from their ash-covered fire and put wood on it instead. Then, sitting so far to one side that they could not be seen through the chimney opening, they waited to learn what would happen next. Both were ready to rush out and off at a moment's warning.

"You might as well lie down if you feel sleepy," Ben finally said. "I'll wake you promptly if old mother earth starts to cutting capers again."

Jodo laughed in a nervous way. "I couldn't sleep a wink to save my neck—not even if you glued my eyelids together."

So they continued to sit by the fire. When at last this strange, perilous night had ended, the two went out to see by daylight what damage the earthquake had wrought.

First they visited the huge block of limestone that had split off and dropped from the cliff not far to the southwest. Then they noticed a row of stones and boulders that had fallen over the cliff's top, from the hillside above. They saw likewise that the channel of Cave Branch was still without water. Not even the tiniest stream was flowing out.

"That quake must have cracked the floor somewhere, and allowed the water to escape by a lower outlet," Jodo remarked.

"Something of the kind may have happened. And I can't think of anything else that will account for it. When we go in again we're likely to find our underground lake drained as dry as a bone."

"I wonder if that torrent swept our canoe out."

"Not much telling. I hardly think so, though. It was tied hard and fast."

He was right. They afterwards found the canoe floating just as they had left it.

After a walk around the little valley, and seeing numerous frozen bats, the two returned and built up their fireplace and chimney as high as they could reach. Then they went indoors and cooked and ate their breakfast. Knowing that the Osages might come back, the trappers stayed close to their cabin till noon. After dinner Ben shouldered his rifle and set out to visit their traps. While he was returning, Jodo met him at the east edge of the valley, near the salt spring.

"Well, it's flowing again," he reported.

"What's flowing again, Jodo?"

"Why, that little creek from the big cave. It's running just as it has always run. It didn't find itself another outlet, after all."

"So I see. The rocking of the earth must have 'sloshed' a lot of water out of the underground lake; and the lake had to fill up again before there would be any overflow—before a stream could flow out of it."

"Guess that must have been about the way."

"I climbed a pretty high hill over yonder, and looked for smoke from that Indian camp-fire. But—"

"And did you see any smoke?" questioned Jodo, eagerly.

"Not a trace. I'm hoping that the whole band got such a scare from that ground-shake that they'll never stop running till they're far from this country."

"No such good luck, I'm afraid. But we'll see."

About sunset the two shouldered their guns, and after making their way around to where they could get up, they climbed to the top of the wooded mountain back of the cliff to look again for smoke. To their relief, there was none in sight. But even while they were gazing a smoke was seen to start up, as if from a just-kindled camp-fire. It was many miles away, though, and toward the northwest. Ben watched it a few minutes, then remarked:

"That smoke looks good to me. My guess is that those red fellows, after scampering away from here, hurried back to their camp, packed their belongings, and struck a bee-line for their village. And they haven't rested much till now. Let's hope they'll keep on, and that they won't visit this country again till next summer."

"We'll not get lonesome without 'em. But what would you say they thought of that earthquake? That we brought it on?"

"No telling. They may think exactly that. Savages as they are, and full of superstition, they probably connect us with it in some way. It started up just at the right time to make them think that."

"If they once get it into their heads that we can make earthquakes, or that earthquakes protect us, they'll not be apt to trouble us again soon."

After watching the distant smoke till dusk hid it from view, the two went down to their cabin. Next morning they visited their traps as usual, and in the afternoon they set off hunting. While wandering about they came upon the place where the Osages had been camped.

The fires had not yet gone out, and the rib-poles of more than a dozen wigwams were still standing. But little else was to be seen except the bones of the game the hunting party had killed. Taking the Indians' trail the trappers followed it for a mile or two. It led toward where the smoke had been seen to start up. There was no doubt that the Osages had really left the country.

"Yes, they're gone. But they'll be likely to come back sooner or later," Jodo remarked.

"We'll hope it will be later, but I'm afraid it will be sooner."

After a hunting-round, Ben and his companion returned to camp. That the Osages had departed and were not likely to trouble again for a while, was a wonderful relief to the trappers. They had troubles enough to worry them. From the night of the earthquake on for two or three weeks slight but very perceptible tremblings of the earth could be felt. Those did no harm. But they kept the dwellers under the cliff anxious lest another nard earthquake should start up—start up at any moment.

(To be continued.)

## Free War Map 64 Inches by 21 Inches in Size

A splendid four-page war map of the battle front in France, originally published in the Spokane (Wash.) Spokesman-Review will be sent free to any one who mails us one new subscription to The Washington Farmer or one new subscription for The Washington Farmer and The Twice-a-Week Spokesman-Review combined.

This map is printed in four sections and when pasted together, according to directions furnished, will give you a map 64 inches long and 21 inches wide; presenting the details of the great fighting territory in such a way that you will be able to follow every detail of the big battles which are now brewing.

### Louisiana's New Product.

Louisiana has a new product. It is cactus candy. The cactus is peeled, dipped in hot syrup of molasses and coated with powdered sugar. Sugar mills are also taking it up as a side product to be turned out during the slack seasons of the year.

# Apt to Hit Mark

## If Each Farmer Does His Part

By GEORGE LA RUE, Twisp, Wash.

What is the most profitable crop to grow, is one of the perplexing questions that many farmers are trying to solve at this period of the season. Of course the majority that are prepared to grow wheat have the problem already solved, and will grow all the wheat they can, and are apt to neglect other farm crops that may prove more important than wheat. There will be much wheat needed, and if the summer season is favorable there will be a wheat crop in this country that will make all previous records look small. We hope such will be the case.

It is a true saying that one extreme follows another. Last year until it was too late to plant potatoes, most farmers were excited over the prospect of a small fortune from a few acres of potatoes. The result was an over supply, and many were disappointed with the over supply of potatoes and brisk demand for other farm produce; and the tendency we have to supply the strongest demands is apt to lead to a short potato crop for 1918.

Even if the government does control the price on the staple products of the farm, the supply will influence the price to a certain extent. The farmers raise their produce for the market and if they can't get the government price they will sell for less. The high price of meat and especially pork has encouraged hog raising until it is only a question of time until the supply will be too great for the demand and there will be a great slump in prices.

We are not pessimistic, but we are trying to show how often we miss it by getting excited over something that is exciting everybody else. We see how the farmer is showing his wisdom and patriotism by raising all the farm produce he possibly can. About all lines of farm industry are more promising now than they have ever been, and if we do our part in grain farming, stock raising, dairying, poultry raising or gardening we are very apt to hit the mark this year. Famine and starvation has been predicted for the American people before the end of this present year; but with a favorable season and our best efforts those horrid conditions predicted for us can be reversed and we can as well enjoy prosperity with plenty for ourselves and a surplus for our allies. Each of us will in a degree be responsible for his condition at the end of the year. The industrious will be more prosperous than usual and the lazy, shiftless ones will see harder times.

### Modern Conveniences.

A Berkshire (Mass.) man has rigged up a device whereby he can rock and read and smoke and saw the wood at the same time. The sawing arrangement is attached to his rocking chair.

## Wheatless Gems Most Palatable With Syrup Made With MAPLEINE

Your appetite will surely call for more, for there is nothing more delicious than that mapley syrup—just sugar and water flavored with Mapleine. Easy to make, costs less.

**Your grocer sells it—2-oz. bottle 35c**
**(In Canada 50c)**

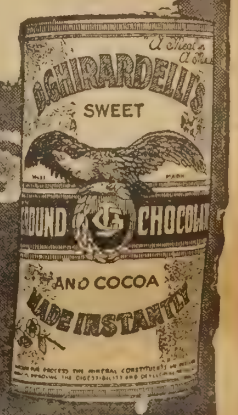
Send 4c in stamps and carton top for Mapleine Cook Book, Dept. PN, Crescent Mfg., Co., Seattle, Wash.

CRESCENT MAPLEINE THE DELICIOUS GOLDEN FLAVOR

## "—use foods that require less sugar"

THIS is one of the most important recommendations of the Food Administrator: "In cooking and baking use foods that require *less sugar.*"

In other words—use Ghirardelli's. Use it freely and wisely—in place of other less nutritious and more expensive foods. Not only will you save money but you will help in food conservation.



Cooking and baking require less sugar when you use Ghirardelli's. Because—it contains in itself the sweetening flavor you need. More than this—it adds a new touch of richness to your icings, your puddings and other desserts.

*In ½ lb., 1 lb. and 3 lb. cans; a tablespoonful—one cent's worth—makes a cup.*

D. GHIRARDELLI CO.

Since 1852 San Francisco

Ghirardelli's Ground Chocolate

Dear Corner Cousins: Have the cousins ever wondered what Aunt Nellie's favorite flower is? I will tell you what it is and why. The chrysanthemum is my favorite flower, not because it is a hard name to spell, but because it blooms in the winter time. It blooms when nearly everything else is still. Its blossoms are here when the snow is on the ground and when the rain is falling and the earth is frozen. I like the other flowers, too; there is the early arbutus and the volets and hyacinths and crocuses that come when the first warm days are here; and then the daisies, the roses, asters, pinks, lilacs and, about June or July, almost any flower will bloom. But the chrysanthemum blooms in the winter time.

It reminds me of a faithful friend—one that is always ready. When the winter time of sickness and loss of money comes, the faithful friend is at hand, there to cheer you up and help you, but the fair weather friend is only friendly when we are in good health and have plenty of money and everything goes nicely—the pleasant summer time. For you know there is a saying:

It is easy enough to be pleasant
When life flows along like a song;
But the man worth while
Is the man who will smile
When everything goes dead wrong.

That is a kind of a friend we want—one that will stay by us "when everything goes dead wrong." That is the time that we need to be cheered up; that is the kind of a flower the chrysanthemum is—it blooms in the winter time when life is lowest and most things are dead or sleeping.

So let us select our friends with the utmost care and take those who are real friends—who will be with us in the winter time of sadness as well as in the summer time of gladness.

Don't you like chrysanthemums, too?
Lovingly, AUNT NELLIE.

### Luella Will Write Again.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I hope it won't be the last. I enjoy reading the letters very much. I go to the Fallsview school and am in the eighth grade. I will tell you what I got for Christmas. I got a pair of gloves, a pin with the bluebird on it, a lavalliere, a handkerchief and some candies and nuts. I have five brothers and two sisters and their names are Carl, Otto, Willie, George, Alfred, Emma and Clara. My oldest brother is married. My nieces' names are Verna and Louise. They are Carl's babies. They are very cute. We have lots of horses, cows, calves, chickens and pigs on our farm. There are only six pupils in our school. Their names are George, Alfred, Clara, Julius, Ray, Bumgarner and me. My birthday is December 17 and I am 17 years old. I think my letter is getting too long. I will write again if I may join the Corner. May I?—Luella Venneberg, Manson, Wash. (We are glad to welcome another new cousin, Luella, and we do want you to write again.—Aunt Nellie.)

### Open the Corner Door for Leland.

Dear Aunt Nellie: Tap, tap, tap. I am knocking on the door of the Children's Corner. I am 13 years old and live on a farm in southern Grant county, 10 miles from Warden, our postoffice. Our school is known as the Liberty school. Our teacher is one of the best teachers we ever had. His name is J. Elmer Bovey. H is also a musician and we have organized a brass band. The band is known as the Liberty school band. All of the children have instruments. Last Wednesday afternoon the school was dismissed to take part in a patriotic rally at Wheeler, a town 10 miles from here. Our band played several selections. The town gave us a free supper and we certainly had a fine time. Hon. H. J. Hibschman and Professor Schlough of Spokane gave addresses in the afternoon and evening. The lectures were instructive and interesting. I wish the cousins good luck.—Leland Guffin, box 23, Warden, Wash.

### Viola Has Not Written Before.

Dear Aunt Nellie: I have not written to the Corner before so I thought I would write. I like to read the Corner very much. I am 11 years old. Have I a twin? If I have I wish someone would write to me. I have two sisters and one brother. We have one cow and one calf. We have a few chickens and 40 pigs. My brithday is December 29.—Viola Jessie Rudes, Box 8, Kennydale, Wash.

### Whitefaced "Funny" Is Gazel's Pony.

Dear Aunt Nellie: This is the first time I ever wrote to the Children's Corner. My birthday is the sixth of August. I have brown hair and brown eyes. Have I a twin? If so, I would like for them to write to me. We live one and a half miles from school and seven miles from town. We have 15 horses and seven cows. We also have six pigs, two dogs, four cats and about 60 chickens. I have one sister and no brothers. I am 12 years old and in the eighth grade. We walk to school. I have a pony. She has a white face and white spots on her stomach. Her name is Funny. Our cats' names are as follows: Bobby, Tom Grey and Sicy. Our dogs' names are: Joe and Santa. Our horses' names are: Queen, Chub, Darkey, Jake, Babe, Frisco, Collie, Kate, Roan, Colonel, Pitty, Dandy, Dicky, Billy and Funny. Our cows' names are: Beauty, Red, Slipper, Betsy, Flossy and Jim. We have not had any winter hardly at all. The sun has been shining daily. I hope to see my letter in print. It isn't very long. I like to read the stories in the Children's Corner.—Gazel Elizabeth Rosenkranz, St. John, Wash.

### Mama Teaches Them at Home.

Dear Aunt Nellie: May I be a a cousin? I am a little girl 6 years old. My birthday was December 17. I have only gone to school five weeks. I have two sisters, Freda, 8 years old, and Lola Maud, 4 years old. Mama teaches us at home. We are doing the second grade work. When we are at home we live on a homestead in Stevens county, but we are living in a little old log cabin in a lumber camp this winter. The men are putting logs down the hill near the cabin where we are living. They bring them to the top of the hill with teams, then they shoot them down the hill. There they are piled on skidways, from which teams take them to the mill. There is about 30 inches of snow here. We like to play in it. We are not having much candy this winter, for mama says we must Hooverize. We like to read the Children's Corner.—Gretta Dietz, Ione, Wash.

### Snow Battles Are Lots of Fun.

Dear Aunt Nellie: It has been a long time since I last wrote to you. I am 12 years old and in the sixth grade at school. My birthday was January 7. I have brown hair and blue eyes. Have I a twin? If I have I would like to correspond with her or him through the Children's Corner. I have two sisters and one brother. Bernice is 10, Mary is 8 and Jimmie is 2 years old. We live on our grandfather's farm. One night a mink got into grandma's henhouse and killed 14 hens. Grandpa killed the mink and is curing the skin now. My sisters and brother and I have lots of fun playing in the snow. Sometimes we have snow battles. I enjoy reading the Corner letters and I hope that every one will try to write to it. I am going to write again some other time.—Kathryn Margaret Smith, care A. W. Craig, Northport, Wash.

### Cuts Snips for Soldiers' Pillows.

Dear Aunt Nellie: This is the second letter I have written to the Children's Corner. I hope every cousin enjoys reading the letters as I do. I have not found my twin, but I hope I will some time. I do wish some of the cousins would write anyway, and even if you are not cousins, write to me just the same. I am 12 years old and in the sixth grade at school. My teacher's name is Mrs. Hallany. She is a good teacher. My birthday is September 27. We live on a 30-acre farm. I like the place fine. I have brown hair and dark brown eyes. My complexion is dark. I go to the Swanton school. We live four and one-half miles from town, which is Oak Harbor. It does not seem so far to town now that we have a car. The name of our car is the Buick. I am cutting snips for the Red Cross. I like to cut snips for our soldiers' pillows. I hope all the Corner children are doing something for the soldiers or the Red Cross. I do not have any brothers in the war, but I have a cousin that is expected to go across the ocean any time. Now, some one please write to me, for I am looking for a letter every day.—Bertha Millenaar, Oak Harbor, Wash.

### Mabel Was Born in Virginia.

Dear Aunt Nellie: This is the first time that I have written to you. I live in the country. I am 8 years old. My birthday is February 10. I was born in the state of Virginia. My parents came to Oroville when I yas 2 years old. My father raises wheat, alfalfa and cattle. We have 30 head of cattle and six horses. We have 40 chickens. Our hens lay 18 eggs a day. We have two pet dogs and one pet cat. My little sister thinks lots of it. We have two hogs. Sister's name is Lillian. She and I attend school in town. Sister and I often put the little calves in the barn and drive them to pasture. Our school gave a Christmas entertainment. Little sister and I sang five songs. My teacher's name is Miss Pickering. We will have some drills and songs on George Washington's birthday. I have three brothers. Their names are Roy, Talmadge and Carl.—Mabel Bogge, Oroville, Wash.

### A Long Time Since Necia Wrote.

Dear Aunt Nellie: It has been about a year since I last wrote to you. I am 8 years old. My birthday is September 21. I am in the third grade at school. Have I a twin? If I have I would like to have a letter from her. There was a girl named Anna who wrote to the Corner. She was 8 years old. Her birthday is September 17. I was going to write a letter to her, but I lost her address. I have a little pony. Her name is Maud. My papa has a new Ford car. I have a little sister. Her name is Martha. She is 2 years old. Here is a riddle: Old Mother Twichitt had but one eye and a great long tail which she let fly, and every time she went into a gap a bit of her tail was caught in a trap. Can you guess that riddle?—Necia Hire, R. F. D. 3, Box 21, Odessa, Wash.

### Good Times Coasting at School.

Dear Aunt Nellie: This is the third time I have written to the Children's Corner. I enjoy reading the letters in the Corner. We have about nine inches of snow. I belong to the Red Cross and know how to knit. I go to school and am in the fifth grade. I am nine years old and will be 10 May 14. Have I a twin? At school we have fun coasting. There is a hill in front of the schoolhouse. We start clear from the top and come down. Then it is quite level and we go down with such a force that we go down another hill. I will write to some of the cousins in the Corner. We had our term examinations and I received an average of 91 per cent. I do not have to take any more examinations this year.—Eva Boud, Valley, Wash.

### Up in the Mountains Last Summer.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I would like to find a twin. I will soon be 10 years old. My birthday is February 25. I got 20 valentines on Valentine's day. I made 21 and over, I guess. The snow is melted enough just to make the ground muddy. My brother Carl went to Cloverland today. Papa sent him after some overshoes, but he forgot them. I had a pet grouse, but the pig turned him out and I guess he went back to his own range again. Papa was up in the mountains all summer last year. My cousins, Mr. Mizer and all of us went up to the mountains three days. Isn't this war awful? We had a new pupil come to school about two weeks ago.—Viola Thornbrne, box 74, Cloverland, Wash.

### Bernard, Our Cousin From Yelm.

Dear Aunt Nellie: This is my first letter to the Corner and I hope not the last one. I am 14 years old and will be 15 the first of April. I am in the eighth grade at school and my teacher's name is Mr. Temperly, and I like him fine. I have blue eyes, light hair and a light complexion. Have I a twin? If so I wish they would write. I live on a 10-acre farm on the Yelm prairie, in Thurston county. I have not been going to school because we had the measles in our family. May I be a cousin? I hope to see my letter in print.—Bernard La Pine, Yelm, Wash.

### Pussy Willows in the Woods.

Dear Aunt Nellie: I have dark brown hair, dark brown eyes and a dark complexion. I am nine years old and in the fourth grade. My birthday is January 3. Have I a twin? If so let them write to me. I have three sisters and one brother. Their names are Mathilda, Henrietta, Cornelia and John Henry. There is a large woods back of our house. My sister and I often go to gather pussy willows and all kinds of floers.—Jacoba Muyskens, R. R. 1, Lynden, Wash.

### A Pet Dog Named Prince.

Dear Aunt Nellie: I have never written to the Children's Corner before. I am 13 years old. My birthday is on August 27. I saw a letter in the Corner which was written by my cousin Verna. I like to go to school very much. Our teacher's name is Miss Burns. I like her very much. My papa does not take the Farmer, but my grandma takes it, so she said I could write, any way. There are certainly some very interesting letters in the Corner and I do love to read the letters. I have one brother whose name is Leslie. He is in the second grade. I am in the sixth and seventh grades. My brother has a pet dog named Prince. Have I a twin? I would like to have one to correspond with me.—Etolin Thompson, Port Stanley, Wash.

## Aunt Sally

Among the old-time games was "Aunt Sally," played by any number of person, who threw sticks at the head of "Aunt Sally," a block of wood shaped and painted to represent the face of an old colored woman. This is placed on a pole set into the ground and decorated with an old woman's cap. A dress is then put upon the figure and a tobacco pipe is stuck into the mouth. Sometimes pipes are stuck into the ears also. Players stand about 25 feet from the figure and in turn throw sticks 20 inches to two feet in length at "Aunt Sally's" head, trying to break the tobacco pipes. The side pipes count each one point and the front one two points. He who scores the most points in a given number of throws is the winner.

### Will Gracie's Twin Write Her?

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I have been reading the letters for a long time and so I thought I would write to the Corner. I am 10 years old and in the fourth grade. My birthday is September 29. Have I a twin? If I have a twin please write to me. I will write to you. I live on a 160-acre farm. I live one and one-third miles from school. There is a store there and a mill, but the postoffice is at Republic, which is a mining town. I have two brothers. Their names are Cecil and Lloyd. My oldest brother Cecil is in the same grade as I am. My little brother is going to start to school about March 15.—Grace Blackwood, R. F. D. 1, Box 107, Republic, Wash.

### Little Sunshine Is Our Cousin.

Dear Aunt Nellie: Will you let a little Grant county cousin into the Children's Corner? I would like to tell the rest of the cousins how I pass the time out here on the prairie, 10 miles from the postoffice. We have a literary at the schoolhouse every Tuesday evening. Papa and the other men debate. Us children have band music, dialogues, recitations, etc. I play an alto horn. My brother, Leland, who is 13 years old, plays a tenor. I think it is lots of fun to play in a band. The band has elected me for their librarian. Our teacher calls me little Sunshine. We all like our teacher and we hope we may get him to come back next year. Here is a kiss for Aunt Nellie and best wishes for all the cousins.—Delma Guffin, box 32, Warden, Wash.

### Hopes to Get a Certificate.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I hope I will see my letter in print. I am in the fourth grade in school. My birthday is August 23. Have I a twin? If so I would like for them to write to me. I would surely answer their letter. I like to go to school. I like to read the Farmer. We have a pet chicken and cat. I have two sisters and three brothers. Their names are Rhoda and Olive, John, Paul and Addison. I go to school every day and haven't missed yet this year. I hope I will get a big certificate this year. I was sick several times last year. There are 10 scholars in our school.—Gladys Mabel McCully, R. F. D. 3, box 61, Colfax, Wash.

### Girls Go for Horseback Rides.

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. I have light brown hair and blue eyes. I am 14 years old. My birthday is October 27. I go to school every day. I am in the seventh grade. I like to go to school. I like my teacher. Her name is Miss Ida Stuliff. I have a black saddle horse with a white star in his forehead. His name is Coalie. I have two chums. I will tell you what their names are. They are Minnie and Olive Wilkinson. They have two black saddle horses with white stars in their foreheads. The girls come over sometimes with their horses and we go for horseback rides. —Lottie Mae Diggs, Ford, Wash.

### Snowy and Browny Are Pet Chickens.

Dear Aunt Nellie: This is the first time I have written to the Corner. I like to read the Children's Corner very much. I go to school at District 166 and am in the fourth grade. I am nine years old. My birthday is October 10. Have I a twin? If so please write. I hope to see my letter in The Farmer. I have two sisters and three brothers. We have a chicken named Jack and I have one pullet named Browny and one named Snowy. I have not been absent or tardy as long as I have gone to school. My teacher's name is Mr. Martin.—Olive McCully, R. F. D. 3, Box 61, Colfax, Wash.

### Fourteen in Her School.

Dear Aunt Nellie: This is my first letter. I am eight years old. I am in the third grade and I weigh 56 pounds. We live on a big farm. We have 107 cows and 50 horses and mules. Mama has 100 chickens. Papa has 60 pigs. I have three cats and one dog, one cow and one horse is mine. I have one brother. His name is Joe and he is three years old. He weighs 34 pounds. Fourteen children go to our school. My teacher's name is Minnie Dorrance. I would like to see my letter printed.—Irene Vera McCown, R. F. D. 3, Waitsburg, Wash.

### Has a War Saving Stamp.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 11 years old and I am in the sixth grade. My birthday is August 22. I have light brown hair and blue eyes. Have I a twin? I have three brothers and one sister. My brothers' names are Glenn, Willis and Jack. My sister is Marjorie. I joined the Red Cross and have a war saving stamp.—Marguerite Starcher, R. D. 1, Box 21, Yakima, Wash.

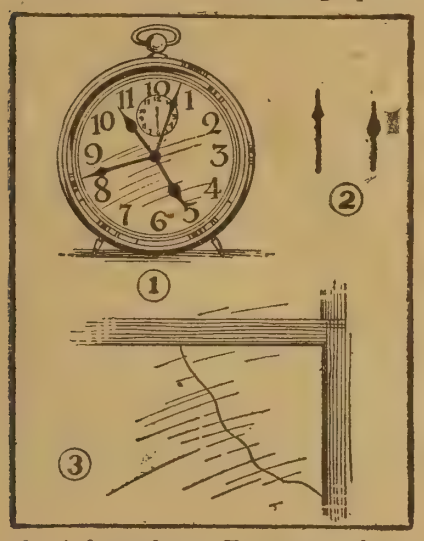
### Pranks for April 1.



Nobody objects to being fooled on April 1, providing the prank is free from every element of danger that might result in personal injury or damage of some sort.

The success of an "April fool" prank depends upon knowing how and when to play it. You must take a person unawares, when he is not thinking of what day it is, and your actions must be natural.

During the early morning, the clock is probably the most looked upon object in the house. Therefore, if it develops an extra pair of hands overnight, the abnormality is not likely to escape any one. You must be right on the spot, of course, to greet each exclamation of surprise with "April fool!"

Figure 1 shows a four-handed clock, and Fig. 2 how the extra minute hand and hour hand are cut out of black paper. Paste the hands in place.

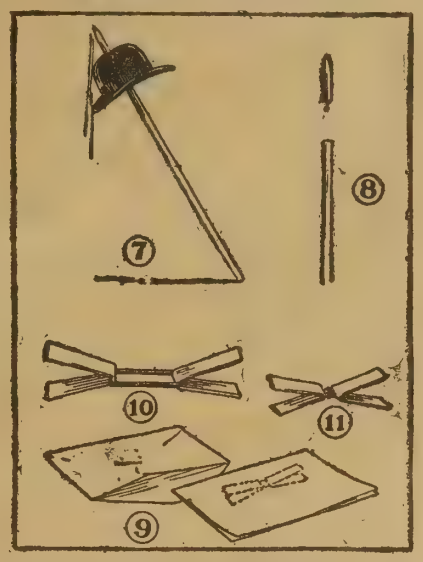
One of the most surprising and annoying things for father or mother to discover is a fresh crack across the corner of one of the large panes

of window glass. You can make a perfect imitation of a broken window pane by gluing a piece of cotton wrapping twine to the glass in the manner indicated in Fig. 3. Put only a touch of glue here and there, where you make a turn with the string. I have never known this deception to fail, even when the person examining the window has stood but three feet away. After every one has seen the "crack" and all are wondering "who did it!" remove the string, and have your laugh.

### Overturned Ink Bottle.

Quite as startling as the "broken" window pane is the sight of an overturned ink bottle upon one's writing desk. The ink bottle used in this prank must be empty, of course, and the spilt ink must be represented by a piece of black paper placed so as to extend up to the mouth of the bottle (Figs. 4 and 5).

You will have the job of cleaning up after playing the paper-shower window shade prank, but never mind the work, you will have had your fun.



Take down the window shade roller from its fixtures, unroll the shade, scatter paper over the unrolled portion (Fig. 6), then roll it up again, and replace the roller in its fixtures. Be on hand when it is time to draw the shades at nightfall, but be careful not to have the duty imposed upon yourself, else the joke will be upon you.

Father or brother may be greatly excited upon seeing a stick apparently running right through the crown of his everyday hat (Fig. 7), but this prank does not damage in the least, because the upper end of the stick is sawed off (Fig. 8), and only a needle runs through the hat crown.

### The Flutterer.

The flutterer shown in Figs. 9, 10 and 11 may be mailed in due time to be received on April first. By having it come by mail no suspicion will be

aroused. The flutterer consists of two rolled-up pieces of paper, folded over, and connected by a rubber band. Letter "April Fool!" upon the pieces. Twist the papers in opposite directions, until the rubber band is twisted very tight. Then place between the folds of a sheet of note paper, slip the paper into an envelope, and seal, address, stamp and mail.

Upon removing the paper from the envelope, the flutterer will jump about very lively until the rubber band is entirely unwound, when the person receiving it will be able to read the "message."

# Sidelights

**One Thing.**

"Before I take the case," said the lawyer, "there is one thing to be looked into."

"I presume," said the client, "your refer to my pocketbook."—Boston Transcript.

**Wouldn't Start Even That.**

"What became of that sign you had in your bank which read: 'If you're looking for trouble, start something?'"

"Oh, we had to take it down. New customers read it and were afraid to start a bank account.—Boston Transcript.

**Certain to Win.**

"How's your boy getting on at the training camp?"

"Wonderful!" replied Farmer Applecart. "I feel a sense of great security. An army that can make my boy get up early, work hard all day an' go to bed early can do most anything."—From the People's Home Journal.

**Classified News.**

The politician rushed past the official Cerberus into the editorial sanctum.

"What do you mean?" he roared. "What do you mean by insulting me as you did in last night's Clamor?"

"Just a moment," replied the editor. "Didn't the story appear as you gave it to us, namely that you had resigned as city treasurer?"

"It did. But you put it under the head, 'Public Improvements.'"

**Too Rich Cream.**

"To illustrate the uses of advertisements," says a well-known theatrical manager, "there is one experience I had of which I often think.

"I was driving when I came to a farm where there was a meadow to let. The owner of this farm would have made a good avertisement manager, for the big poster announcing that the meadow was to let was worded:

"'This field to let, 17 acres, for grazing. Persons having old cattle, or cattle with strong appetites, had better be cautious in turning them out to graze here, as my grass is so rich that it wouild be liable to injure them for the first week or so.'"

# Some Good Times

(Continued from page twenty-eight.)

the Rush pond that filled up regularly every spring and furnished interest and excitement until frost came. It was a big flat between two rock ledges, not more than 200 yards from the house, and along in March, when we first discovered it full of water, our thoughts flew to boating. Ed and I coaxed the big wooden tub away from mother and away we went to the pond. We set the tub upon the water and it floated beautifully. Then Ed took up the two light poles we had brought for propellers, steadied himself on one foot and set the other in the tub, which he had drawn up beside a flat-topped rock that made a landing place in about two feet of water. Now he lifted the other foot, expecting to place it also in the tub, but the tub shot out and away with startling and unseemly velocity, and feet, boy, poles and all landed in the pond with much display and watery noise.

"That won't work," he announced with conviction a few moments later, when order was restored. I agreed entirely and the experiment was at an end. Then we worked for days dragging down posts, fragments of boards and an old barn door. We nailed and hammered and toiled like slaves until we had made a raft. It was too small and part of it always sagged under water with our weight. However, we put the tub upon it and stood inside to keep our feet dry when it was too cold for comfort, and when it grew warmer we went barefoot and dispensed with the tub.

Now it was that sister Frances began to have ideas; she wanted to go swimming. Ed and I were given to following beaten paths, but Frances was more likely to blaze out new and startling trails. Long and heated were the discussions which took place, to pursuade her out of her notion. Then one day, when it was her turn on the raft, she fell off. It was a complete surprise to her and she spluttered and splashed and scrambled to get back on. The water was only waist deep, and Fanny, our little black dog, was swimming joyously round and round the raft. All at once Frances backed off and straightened up. "I'm going to swim," she announced. "No, sir," we protested. "You're wet; you've got to go home and get dry." We argued and counter argued till she had been in the water as long as she probably would have been had she gone in expressly to swim. Then she came out and went dripping off up the path to the top of the rock ledge and out of sight to the house.

When the water dried off in this pond the tules grew up higher than a man's head, and we made trails and runways and hidden places that rivaled the jungles of Africa. After three or four years a lot of cousins came from the east; the Hennings and more Youngs, and there was always a full program when we came together. There was one specially watery day in March when the bunch of us started down the road to grandfather's. The road ran in and out among clumps of tall sagebrush, stretches of rimrock, little gullies and potholes; every dip and hollow full of running snow water. We were cautioned not to get our feet wet; wise caution which we really meant to heed. I know I tried carefully at first to avoid puddles and deep places. I conscientiously hopped from rock to rock, and from one sod clump to another; but there came a time when one foot and then another slipped and went into the water. There were holes to let the water in and to let it out all over our shoes, and I became careless. The other children were going through the same process of disintegrating conscience, and by the time we were at grandfather's gate we were every one going far out of our way to find deep places to wade through. Grandma was horrified, and persuaded us to take off all our shoes and stockings, which she hung around the stove to dry. There were five or six pairs, and they made quite a display. Finally they were considered dry enough to put on and we started back, just as firmly determined to keep dry as we had been when we started from home. However the program repeated itself in every detail, and we got home wetter than before. I don't remember that mother said anything; she was pretty well used to startling exploits, and a new one more or less made little difference.

Another feature that contributed largely to our entertainment was the Indians. Every year, in springtime, they camped by the spring to dig roots for the next winter's food supply. There was the camas, the roots of the rock roses and the chuck-a-loosie—I never saw the word in print. This last root we children found quite palatable, with a flavor somewhat like a parsnip. It was like a little turnip, and grew deep, deep down in the earth among the rocks, and at the end of a very slender stem. We had no irons with which to dig them, but with our bare hands and a little stick scratched and poked and pried with an amazing amount of patience and energy to gather maybe three or four, which we proceeded to enjoy with great relish. We probably would not have cared to eat them had we not worked so hard to get them, for we never cared to eat the camas or rock rose roots.

One summer there was a consumptive Indian in the camp. We children stood by one day while he explained to father his troubles and needs. "Halo butter, halo eggs, halo milk," he finished up simply, and was silent for some time, gazing stolidly off into the west from his position on the ground, where he sat leaning against a pile of Indian luggage. After that we took great interest in bringing him fresh milk from the corral every evening, for which he and his squaw were very thankful.

One evening when it was my turn to bring the milk there was no one outside the tents in the camp. It was a raw, cold evening, and they were all inside. I didn't know which tent, but took a chance at the nearest, which was also the biggest. I parted the flap at the little entrance, stooped over and looked around inside. They were all there, sitting flat on the ground in a big circle around the little campfire in the center. The sick man's wife sat nearest the entrance and took the pitcher with a friendly smile. Then I backed out and was starting to the house when a voice called behind me. I turned, and there was the squaw looking out and beckoning me. I returned, she parted the flaps and in I crawled. Then she patted the ground beside her and I sat down. Now she drew forth one of the big leather saddle bags that can hold the Indian's entire earthly kingdom. Out of this bag she presently brought forth a pair of buckskin moccasins, which she proceeded to put, with her own hands, upon my bare feet, showing me exactly how and where they were to be adjusted and tied. Then I stood up, resting first on one foot then on the other, looked them over, said "hiu skookum" as gracefully as I could, for I was somewhat bothered by the silent inspection of the whole circle, and went away to the house.

Another evening as we were lingering near I became interested in watching one of the men roast a mouse. He had it caught in a small willow fork, and was carefully singeing off the hair. It was just getting nice and clean when we were called to the house. I hurried back as soon as I could to see what had been done with the mouse, and stood around for some time without seeing any evidence of it. Then I noticed a year-old baby taking something sleek and brown and shiny from its mouth. I edged up closer and saw it was the head of the mouse, but who got the rest of the juicy morsel has always remained a mystery.

The only time that unpleasantness suggested itself in connection with Indians was during a spell of what we later considered religious excitement among the tribes across the Columbia. There was a period of uncertainty and wild rumors, but no definite information or action, and at last it all quieted down and everything went on as before. And life was not entirely spent in pleasure seeking and joy making. I hope in time to tell of real work that had to be done in order to keep alive anr fairly comfortable during those first years of bunch-grass homestead life.

# Pocket Gophers

To the Editor: Can you inform me, through your paper, the best method for getting rid of pocket gophers? They are in our alfalfa in large numbers and give much trouble and worry in watering the land. I try to trap them, but it is slow work. J. W. MOORE.
Grandview, Wash.

The above question, answered by the zoologist, W. T. Shaw of the State College of Washington, is as follows:

We now know that much of the food used by the gopher is stored in little side pockets off the runways underground. It is therefore possible to poison the gopher in the spring by dropping poison bait down itno his runway where he is accustomed to finding his food. The direction of the runway is indicated by the way in which the mound has been made in throwing out the earth from the burrow. About a foot back of the mound prod around in the earth with a sharp peg about the size of a fork handle. When the burrow is struck, drop three poisoned cubes down into it and cover with a little dead grass to keep out most of the light.

The poison cubes are made in the following way: Cut sweet potatoes into cubes of half an inch; wash and drain well. While the sides of the cubes are still moist, sprinkle four quarts of them with this mixture:

Strychnine (alkaloid, powdered) one-eighth of an ounce.

Saccharine, one-eighth of an ounce.

The strychnine and saccharine are mixed dry.

In case sweet potatoes can not be secured, carrots or parsnips may be used. It is important that the work of extermination be done early in the season, when the ground is most free from vegetation.

**Guernsey Grades Won In Wisconsin Test**

At the Wisconsin Dairy Cow Competition held at the Experiment Station, 23 grade Guernseys averaged 10,073 lbs. milk and 475 lbs. butter fat for the year. The 4 leading cows were Guernsey grades. One produced 15,744 lbs. of milk and 729 lbs. of butter fat, and calved again during the year. She yielded a profit of $130.35 above the cost of feed. (9)

*After the day's grind, a rest and a chew of Real Gravely. This is solid tobacco comfort; and to think—Sis sent it, too!*

**His Best Friend Sent Him a pouch of Real GRAVELY Chewing Plug**

You will be sending your friend more tobacco comfort and satisfaction in a pouch of Real Gravely Plug than in a half a dozen plugs of ordinary tobacco. Real Gravely is worth sending a long way. It is *condensed quality.*

Give any man a chew of Real Gravely Plug, and he will tell you *that's* the kind to send. Send the best!

Ordinary plug is false economy. It costs less per week to chew Real Gravely, because a small chew of it lasts a long while.

If you smoke a pipe, slice Gravely with your knife and add a little to your smoking tobacco. It will give flavor—improve your smoke.

SEND YOUR FRIEND IN THE U. S. SERVICE A POUCH OF GRAVELY

Dealers all around here carry it in 10c. pouches. A 3c. stamp will put it into his hands in any Training Camp or Seaport of the U.S. A. Even "over there" a 3c. stamp will take it to him. Your dealer will supply envelope and give you official directions how to address it.

P. B. GRAVELY TOBACCO COMPANY, Danville, Va.

*The Patent Pouch keeps it Fresh and Clean and Good —It is not Real Gravely without this Protection Seal*

Established 1831

## News for Breeders

Last November T. M. Meikle of Castle Rock, Wash., sold 10 head of grade Shorthorns to C. A. Pauley of Kelso, Wash., who brought them with a car load to the Portland Stock yards. A Chicago buyer, who was at the Pacific International Stock show, selected a pure bred barren heifer and a roan steer and took them to Chicago for Christmas beef. The cattle were off the aftermath of a meadow, with no grain. They were not exceedingly fat and the flesh they had was put on with good grass and hay. The result is quite an honor to Mr. Meikle and to western Washington beef.

B. B. Hailey of Boise, Idaho, recently purchased from Ed Carey of Carlton, Ore., a young Jersey bull out of St. Mawes Coffee Violet, that has an official record of 914 pounds of 85 per cent butter in a year. Mr. Hailey, who has a pure bred and grade Jersey herd and does a retail milk business in Boise, has made a good buy and deserves credit for his enterprise in securing so good an animal. Mr. Carey has 11 of his Jerseys on test and is making some big records as usual. Among other St. Mawes Susie will considerably increase her record of 936 pounds if no accident happens.

### Many Shorthorn Prizes.

By far the largest amount ever offered in cash prizes for Shorthorns will be awarded at the county, district, state and national shows this year, says the Shorthorn Breeders' association. The total offered by the American Shorthorn Breeders' association will exceed $60,000, and as this amount is offered on the basis of $1 appropriated by the association to every $2 offered by the fair and show organizations the combined amount will approach $200,000. In addition to this are numerous special prize offers and a great many local and county fairs have cash prize lists.

### West Washington Holstein Sale.

The coming sale of the Western Washington Holstein Breeders' association, which will be held at Kent, April 17, promises to be one of the most successful in the entire history of the organization. In the first place, this is the first sale to be held in the big sales pavilion recently leased for a term of years by the association. This will give buyers and consignors the benefit of the most convenient and the largest sale pavilion in this part of the country, while the location, midway between Seattle and Tacoma, is practicaly a central point for western Washington patrons.

In common with all sales conducted by this association, the coming sale will carry with it a guarantee of all animals disposed of, all of which will be sold subject to a 60-day retest privilege. All the leading breeders of western Washington are consigning some of their best animals—among these being the entire herd of D. J. DeHogg of Lynden, Wash., while the Greenback company will sell their proven son of the King of the Pantiacs.

P. E. T.

### Buys Young Herefords.

John A. Platt of the Platt Bros.' Highland stock farm, Genesee, returned recently from Iowa where he purchased a carload of young Herefords. Mr. Platt says that Herefords are selling at unusually high prices in the middle west, but that many are being distributed notwithstanding the high figures at which they are held.

Mated with Batten's cock birds, producing great layers and beautiful show birds. Mine are among the highest record Reds in the west. Prices for eggs reasonable.
**VERNAL FORREST, R. 1, McMinnville, Ore.**

## TRAP-NESTED BARRED ROCKS

All hen-hatched and hen-raised. Every hen trap-nested. First pen has, I believe, for past two years highest Barred Rock av. egg record in the world. All other pens practically same blood lines.
Pen 1, 12 hens, av. over 240 eggs, crossed to yearling cock, parents av. 260 eggs, $5 setting of 15. Pen 2, 25 yearling hens, av. over 200, crossed to 2 sons of No. 44, 708 eggs in 3 yrs., $5 setting of 15. Pen 3, about 20 hens and pullets, with reserve cocks and cockerels, same breeding $3.50 per 15. A few cocks and cockerels from $5 up.

**IRVINE P. GARDNER. Riddle, Ore.**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, March 25.—Grain prices weakened today, owing chiefly to the bearish effect which war developments appeared to have exercised temporarily on the New York stock market. Corn closed unsettled, 1-8 to 1-4@3-8 net lower, with March $1.27 3-4 and May $1.25 3-4@1.25 7-8. Oats finished 1-2@5-8 off to 1-8 advance. Provisions wound up at virtually the same figures as on Saturday.

Reports that an increase of oats acreage would be at the expense of corn helped somewhat to steady the corn market in the late dealings. Rallies in Wall street quotations tended likewise to give a little more courage to holders.

New buying on the part of export interests aided in counteracting weakness of the oats market. War happenings and a likelihood that the Illinois acreage of oats would be enlarged had previously led to general commission house selling.

In provisions demand from packers overcame the influence of lower quotations on hogs.

## Portland Market.

PORTLAND, March 25.—There was no trading in the local grain market at the close of the week. The exchange was closed to give the members an opportunity to hear the grain dust explosion lecture by Dr. H. H. Brown of the United States bureau of chemistry. Dealers reported a keen demand in the country for milling barley and $80 f. o. b. was offered wherever any barley was available. Oats are dull with no offerings and but little inquiry.

Egg storing is proceeding on a larger scale. Local handlers have about come to the conclusion that prices will be no lower this spring. There is a good city trade, but not much shipping inquiry.

City creameries found they could not make the recent one-cent advance in print butter stick, in the face of the general weakness of the market, so they have cut prices four cents to 49 cents in plain wrappers and 50 cents in cartons. At the same time they lowered the buying price of butter fat four cents to 51 cents for No. 1 grade. This brought down cube prices and at the close of the week extras were going at 47 cents.

Country dressed meats are ruling very firm with limited receipts. Poultry arrivals are small and prices are more or less nominal.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 2 white, $60 per ton.

Millstuffs—Bran, $30 per ton; shorts, $32.

Barley—No. 1 feed, $74; brewing, $81; rolled, $77@79.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $24.50; grain, $22.

Eggs—Oregon ranch, case count, 34½@35c per dozen; candled, 36@37c.

Poultry—Ducks, 32@35c; turkeys, live, 26@27c; geese, 20@21c.

Butter—City creamery, prints, 49@50c per pound; cubes, extras, 47c.

Cheese—Tillamook triplets, 26c; Young Americas, 28c.

Dressed meats—Veal, 20@20½c; pork, 21@21½c.

Hops—1916, nominal; 1917 crop, 14@17c.

Potatoes—Oregon, buying price, 75c per 100.

Wool—Eastern Oregon, 44@65c; valley, 50@55c.

Beans—Buying prices: Oregon white navy and Lady Washington, 10¼@10½c; white kidney, 10c; colored, 9c.

## Butter and Eggs.

PORTLAND, Ore., March 25.—Butter—Prints, extras, 49@50c; cubes, extras, 47c; prime firsts, 46c; dairy, 31c. Butterfat, Portland delivery, No. 1 sour cream, 51c.

CHICAGO, March 25.—Butter—Higher; creamery, 35@41c.

Eggs—Lower; receipts, 17,001 cases; firsts, 34¼@34½c; ordinary firsts, 33@34c; at mark, cases included, 33@34c.

SAN FRANCISCO, March 25.—Butter—Extras, 46½@48c.

Eggs—Fresh extras, 39c; extra firsts, 37c; firsts, 36½c; fresh extra pullets, 37c; firsts, pullets, 35c.

Cheese—Young Americas, 27½c.

**METALS.**

**Oil Meal**—$78 per ton.

**Hay**—Timothy, $32 per ton, $31 ton by carload; alfalfa, $27 ton, $26 ton by carload.

## Seattle Wheat.

SEATTLE, March 23.—Pending adjustment of the wheat price for the 1918 crop, as announced from Washington, Seattle millers and grain dealers are studying the effects of a $2.50 per bushel price. If, as has been outlined, Seattle bacomes a primary market, wheat at this point will be worth the same as at Chicago.

Millers have taken the position that they would be unable to compete with the government in the purchase of wheat here, and that their flour would be placed at such a disadvantage because of the high price at which it would have to sell that they could not find a market unless the government took their entire output.

Seattle millers, however, do not believe that such a high wheat level will be allowed, and that by the time the measures reaches President Wilson, who has already been appealed to, it will be checked.

# Overland

The Thrift Car

$795

**Now is the time to get your Overland car**

"Since McCormick invented a reaping machine, no other invention has been so beneficial to farmers as the automobile."

And when it comes to farmers' wives, what *compares* with the automobile?

The fact that farmers have bought 60 per cent of the cars we have built, we consider the greatest evidence of their value.

For farmers, above all other business men, need and look for those qualities of performance on which Overland supremacy is founded—efficiency, dependability and economy.

Farmers particularly need the room and riding comfort of the Overland.

Farmers' wives tell us of their appreciation of the style distinction of the Overland.

These Overland qualities are of even greater importance today when time and energy are demanded on the farm as never before.

So now while thousands of other farmers and their families are saving time, energy and money with this Overland Thrift Car—

We suggest that you let the Willys-Overland Dealer show you how this same Model 90 will earn its way for you.

**In your interest, today is none too early to place your order.**

# THE WASHINGTON FARMER

SUCCESSOR TO

THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XLI. NO. 14. APRIL 4, 1918. ** WEEKLY.

# BUSINESS FARMER—CONSERVE YOUR TIME

Study the picture. It has a vital message for you. It is an object lesson in conservation.

Are you spending hours of valuable time on the road, behind a plodding team, or are you meeting modern conditions with modern methods?

It costs no more to feed a motor vehicle this year than it did last year. How about the great increase in the cost of feed for your horses?

Motor power in place of horsepower is conserving the farmer's time and energy—increasing his profits and releasing man power for national service.

Time is your most valuable asset. You must realize on it to the fullest extent, for there are obligations binding you in this respect. It is your patriotic duty to use your time that your government may be profited by it, else it fail in its greatest task—the winning of the war. And remember, that unless we win this war, your time will be worth but little to you. Then there's your duty to your family—they have a right to expect a portion of your time. They need your companionship, your advice, your more mature judgment.

That boy of yours! What about him? You are looking to him as your assistant and—in time—your successor. You know the best possible place for him is on the farm with you, but you must compete with the city for him. Eventually he will choose the farm or the city. Give him an opportunity to work without drudgery, time to study and a part of your time for counsel and advice, if you would keep him with you.

The motor car is the greatest conserver of time. Men and women, urged to crowd the most service possible into every working day, turn more and more to the motor car. With this need for the motor car comes the need for economy of purchase price and economy of operation, the guarantee of which in a car makes the purchase of such a car an investment instead of an expense.

Recognizing these facts, the Chevrolet Motor Company placed on the market, in addition to its passenger cars, a complete line of light delivery cars, especially adapted to meet the needs of the progressive business farmer. These cars will solve your marketing and other problems for you, as they have for scores of other northwest farmers.

It is poor economy to use a heavy truck to carry a few hundred pounds load to or from town—it would be slow and expensive. Nor can you afford to run your passenger car for such use. The Chevrolet light delivery car will solve your problem for you—at a minimum and QUICKLY.

There are three different models of these delivery cars. Ask your Chevrolet dealer to show them to you today, or write the nearest Chevrolet branch.

*No. 5 Delivery, no top, $715.00*
*No. 6 Delivery, detachable top, $735.00*
*No. 7 Delivery with full panel body $785.00*
*At Pacific Coast Points*

# Ready for Third Liberty Loan

## *Campaign Will Be Launched in Three Billion Dollar Drive on April 6*

On April 6, just one year from the date of the entrance of this country into the war against Germany, the third Liberty loan campaign will be launched. Three billion dollars is the amount to be offered, but the treasury department announces that all oversubscriptions this time will be accepted for the Liberty loan bonds issued for the full amount. Secretary McAdoo of the treasury department has announced that it is the hope of the administration that during the campaign a total of four billion dollars will be subscribed. The bonds of this issue will bear four and one-fourth per cent interest, a quarter of one per cent more than the bonds of the second loan and three-quarters of one per cent more than those of the first loan. It is especially noted also that the bonds of this issue will not be convertible into bonds of a subsequent issue as was the case in each of the two previous loans.

The bonds of the first and second Liberty loans may be converted into those of the third loan by those who wish to increase the rate of interest which their investments will bear.

The treasury department plans the establishment of a sinking fund by means of which it will be possible to purchase bonds if they should be thrown on the market in such amounts as to result in a price too much below par. The object of this fund would be to help maintain the stability of the Liberty bond issues.

While the campaign has not yet been started for the sale of the bonds of this third issue, applications to a considerable amount have already been received by the campaign leaders from those about the country who plan the purchase of greater or smaller blocks of the bonds. In speaking of the campaign which opens Saturday, Secretary McAdoo said:

"I am sure that the people will respond to the third Liberty loan with the same loyalty and enthusiasm that characterized their support of the first two loans. The great events now happening in France must fire the soul of every American with a new determination to furnish all the dollars and all the material resources of America that are needed to put an end to the execrable atrocities of German militarism. Defeat faces the kaiser. Let us hasten it by asserting America's might with increased vigor in concert with our gallant comrades."

Organization is being perfected in every state, every county and practically every locality for the sale of the three billion dollar bonds to be offered, and especially in view of recent developments on the battle fronts in Europe it is hoped that the people will respond with even greater enthusiasm than they did when they oversubscribed the first and second issues.

## Farm Help

### Sixty Dollars for a Steady Job

"Please give the widest publicity," says a telegram from the Washington state council of defense, "that the state council and the United States employment service are starting an active and practical campaign to secure farm help for all districts in need. Don't let farmers reduce their acreage fearing a labor shortage. Reasonable wages must be paid. Sixty dollars and board seems to be recognized as fair for a steady job, with a reasonable increase for short periods or special skill. Please wire the views of your community on this feature. It is very important to establish a labor wage as uniform as possible."

In his reply N. W. Durham, chairman of the Spokane county council of defense, telegraphed that from the best information obtainable he believed that the wage schedule proposed would be generally satisfactory to farmers of the Inland Empire, provided that efficient labor can be supplied, adding:

"I am giving your telegram publicity in The Washington Farmer, The Oregon Farmer and The Idaho Farmer, having a very large combined circulation."

Commenting on the state council's telegram, E. E. Flood, formerly a large dairy farmer and now vice president of a Spokane bank, said:

"Sixty dollars a month and board is double the wage that was paid for farm labor in 1914, before the war, and counting the increased cost of boarding men it is more than double. But the increase is here and will have to be met. All things considered, the state council's schedule seems reasonable all around."

## As to Sweet Clover

To the Editor: Can you give me any information concerning sweet clover? I seeded down a field to clover and timothy last spring, but the seed did not come up well—in fact, it is not half a stand. I was wondering whether if sweet clover seed were sown on this field and then rolled or floated down it would catch and yield a good crop of hay this year. It is a big expense to have to replow the field and sow it to oats, clover and timothy again. Also, will sweet clover catch if sown on wild, rocky land, for pasture?

A. L. BECKETT.

Orting, Wash.

E. G. Schafer, professor of farm crops, Washington State college, to whom the above question was referred, makes the following reply:

I can not tell, from the information submitted, whether the land is in proper condition for the seeding of sweet clover, or not. Sweet clover, like alfalfa or red clover, does best where the seed bed is properly and carefully prepared. In case you seed it to sweet clover, you should seed it very early in the spring; that is, as early as the soil is in condition for tillage or for working.

Sweet clover is a biennial crop, and makes a fair growth here. However, you could not expect as large a crop of sweet clover the first year as you can the second year.

In using sweet clover, it is desirable either to use it for pasture or to cut it very early for hay. The stems become woody as the plant nears maturity. Very often, live stock will refuse to eat sweet clover for hay if the cutting is delayed too long.

Sweet clover might be seeded in the same manner as red clover or alfalfa. If it is seeded, using the clover seeder attachment with a drill, it should not be seeded very deep, say half an inch, early enough in the spring so that the surface soil will not dry out. If your land is not in proper seed-bed condition, it might be well to disk thoroughly as early in the spring as possible and before seeding. It depends more or less upon the condition of the land whether or not replowing would be necessary, or if the seed bed could be put in proper condition by simply disking or harrowing.

## Change the Clock

Everybody must do it or be out of step with the rest of the country from now till October 27. There has been a feeling in the minds of many that the measure recently passed by congress and signed by the president, advancing the official time of the nation one hour from March 31 to October 27 would result in a great deal of confusion, but there is no ground for such fear, unless it be that large numbers have failed or will fail, to change their clocks according to the official schedule.

The system has been worked out beautifully. The official clocks were advanced one hour at 2 a. m. Sunday, March 31. They will be turned back that hour at 2 a. m. Sunday, October 27. Sunday being a day of rest generally throughout the country the change in either case should cause no inconvenience.

But it is vitally essential in order to avoid confusion that everybody, no matter where or what his occupation, keep his clock on the official schedule. Trains will run on the new schedule, postoffices will open and close upon it, banks and business houses will regulate their hours according to it, schools will conform to the new law and the man or woman who insists on running according to sun time will be the one to suffer.

Last Sunday was the first 23-hour day in the history of the United States. October 27 will be the first 25-hour day, and it is interesting to note that the former was Easter Sunday, and that the latter will be the strenuous Theodore Roosevelt's birthday. The colonel will be 60 years old on that date.

## FIVE DOLLARS IN THRIFT STAMPS FOR WOMEN OF THE FARM HOME

A First Prize of $3 and a Second Prize of $2.

These prizes are for the women and girls of the farm home which has

1. An automobile, or
2. A farm lighting system, or
3. A farm water system.

A first prize of $3 and a second prize of $2 in Thrift stamps will be given for the best article written from your own experience on either of the following:

Why you would not be without an automobile, or

Why you would not be without your farm home lighting system, or

Why you would not be without your farm home water system.

The contest will close May 1.

Write on one side of the paper and mail your article to The Editor of The Washington Farmer, Spokane, Wash.

### A Bee on Every Farm.

Next week this paper will begin a series of articles on the A. B. C. of bee management. They will be written at our special request by George W. York of Sandpoint, Idaho, for several years prior to coming west editor of the American Bee Journal. It is a well-recognized fact that there are hundreds of thousands of dollars' worth of nectar lost every year in this country for lack of honey bees to harvest it. It is a fact, equally well known, that half the world is well-nigh starving for sugar or its equivalent at the present time. Hence the great need of more bees scattered everywhere throughout the county. Mr. York in the introductory paragraph of his first article, which will appear next week, April 11, explains his purpose and method as follows:

"I shall endeavor not only to go into details quite minutely, but I will also try to use such terms in describing methods and equipment as shall be easily understood by any one not having the slightest previous understanding of the subject. I do not expect to interest the expert beekeeper—the man who has already made a success with bees. My aim will be to try to get the common, everyday farmer to take an interest in the work of beekeeping."

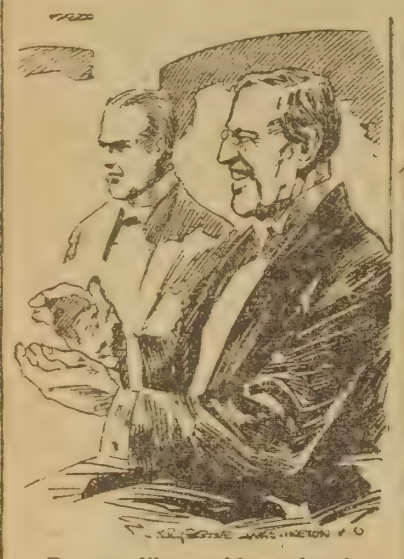
## Make Idle Acres Work

Nearly every farm has some portion of it that is either not used at all or is used in such a way as to produce very little. On many farms there are patches of low ground which can not be tilled because they are too wet. Usually when drained these wet areas are the richest land on the farm.

Just at present, when the world is engaged in the most gigantic struggle in its history, the forces of democracy against those of autocracy, the product of these idle acres is needed. This is an excellent time to put them into use. Small patches of wet land can be drained at small expense. Every farmer, part of whose farm is unproductive because it needs drainage, should take advantage of the present opportunity to add to his cropping area by supplying the necessary drainage. These lands will produce more than average farm lands. Every product will help to win the war.

### Death of T. B. Wilcox.

Theodore B. Wilcox, federal milling commissioner for the Pacific northwest, died at his home in Portland Sunday of acute intestinal troubles. Mr. Wilcox was the dominant figure in the milling industry of the Pacific northwest. He was born in Massachusetts in 1856 and moved to Oregon in 1877.



### Help Mobilize Labor.

Secretary William B. Wilson of the United States department of labor has issued a call to 736 daily newspapers throughout the country urging upon them that they help mobilize labor for the farms this year.

# Boom City of the West Springs Up Within Historic Washington

NATIONAL CAPITAL SKETCHES

PRESIDENT AT THEATER.
(From the Washington Herald.)

Do you like problem plays? No? Well, you need not be ashamed, for the president of the United States doesn't like them, either, and never goes to see them.

His idea of a real show is good vaudeville, with lots of action and some good lines. When he doesn't get vaudeville, he wants a good, clean comedy or a snappy musical comedy.

He hasn't got the movie habit—yet.

When a situation or the lines of the show amuse the president he throws back his head and lets out a real laugh that you can hear half across the theater.

At first this was a terrible shock to Washington, which is notoriously the coldest show town in the country—old-time Washingtonians consider it almost a crime to let any one hear them laugh.

But they are gradually getting used to it, and with the influx of red-blooded folks which the war has brought to the capital, laughing at theaters may even become the fashion in Washington.

Were it not for the Washington monument and the historic buildings one could readily imagine the national capital to be a boom city of the west. Buildings of a more or less temporary nature are going up everywhere. Whole blocks are occupied by these structures three stories high and filled with war time offices. These blocks, one after another, dozens of them, are tenanted with thousands and thousands of clerks called by the exigencies of the war. At 4:30 in the afternoon these thousands of clerks finish their day's work and stream out into the streets. There is hustle and hurry everywhere. The play houses and the movies are crowded to the limit and one has to make early reservations.

The exacting duties and the serious responsibilities connected with the conduct of the war may require the multiplying of diversions. How seriously these thousands and thousands of clerks and other residents of Washington are pressed with the burdens of the war the reader may judge, but that there are persons weighted with and it is perhaps to save himself from this mighty burden, that the president this seriousness of the war at the national capital goes without the saying, himself finds it necessary to seek relaxation.

From this point of view it may not be surprising to learn that the morning before reaching Washington (this was shortly before the big German drive) I read in the morning paper that the president, Mrs. Wilson, and their party had attended the theater, the president himself breaking the record by making a speech from the theater box. The next morning, I think it was, the society columns of the papers contained an account of a camouflage party, the society event of the season. This was an elaborate affair with costumes and masks and Gypsy fortune telling booths and so on. The presidential party entered heralded by a commander of the navy and a lieutenant of the army, together with other due escorts, visiting the scene at 10:30 in the evening and taking part and leaving soon after midnight. The next afternoon the society columns announced that the president and Mrs. Wilson, accompanied by Miss Bones, Miss Benham and John Randolph Bolling, occupied the presidential box at the National theater, at a program of French music which was followed in the evening by the president and Mrs. Wilson attending a theatrical performance. I think it was the following afternoon, according to announcement in the papers, that the president and Mrs. Wilson accompanied by Mrs. Bolling, Miss Bolling and John Randolph Bolling, mother, sister and brother of Mrs. Wilson, attended a performance at the theater, the president and Mrs. Wilson playing an early game of golf in the morning at a suburban club.

E.A.S.

# Millions Loaned to Farmers

## *Federal Farm Loan Bank Succeeds in Pacific Northwest*

The record of loans to March 1, 1918, is conclusive proof that the government made no mistake in placing a federal farm loan bank in the Pacific northwest. Only one of the 12 banks leads the Spokane institution in volume of loans, and that is the St. Paul bank, which also serves the great northwest to the Montana line.

Since the establishment of the land banks up to March 1, the nation's farmers have made 28,495 loans, amounting to $64,532,343, divided among the 12 banks thus:

| | |
|---|---|
| St. Paul | $11,939,200 |
| Spokane | 10,734,925 |
| Wichita, Kan. | 9,505,800 |
| Omaha | 6,278,040 |
| Berkeley, Cal. | 4,546,000 |
| Houston, Texas | 4,529,438 |
| New Orleans | 3,839,945 |
| Louisville, Ky. | 3,779,000 |
| St. Louis | 3,088,195 |
| Baltimore, Md. | 2,427,250 |
| Springfield, Mass. | 1,931,195 |
| Columbia, S. C. | 1,915,445 |

It is surprising to find that the south is not using these banks to the extent that was anticipated. The call for a federal farm loan system was especially strong from that section, where the highest interest rates in the United States were said to rule, and six of the 12 institutions were placed in the south. These six southern banks have loaned an aggregate of only $19,579,273, a sum less than the combined loans of the Spokane and St. Paul banks. With half of the institutions, the south has taken but 30 per cent of the total loans.

The federal farm loan board is planning a campaign to induce state legislatures in the state where farm loan boards are not now legal investment for all public and private funds to enact legislation admitting these securities. The board believes that as the bonds are, in effect, secured by mortgages on all lands on which government money has been lent, they should be regarded as gilt-edged and above all criticism.

So far only about $30,000,000 in farm loan bonds have been sold to the general public, and the board and the 12 federal land banks feel that it would be good advertising and a long step toward popularization of these securities if all states would formally accept them as suitable for investment for insurance companies and fiduciaries. Farm loan bonds now are legal investment for all public and private funds in 22 states. The board intends to seek the cooperation of the legislatures in the other 26 states, so that the indorsement will be unanimous. The states now accepting the bonds are Arkansas, California, Colorado, Delaware, Florida, Idaho, Maine, Minnesota, Mississippi, Nebraska, New Hampshire, New Jersey, Ohio, Oklahoma, Oregon, Pennsylvania, South Dakota, Tennessee, Texas, Utah, West Virginia and Kansas.

The Spokane district comprises Montana, Idaho, Washington and Oregon. Idaho and Oregon now recognize these bonds as legal investments for all private and public funds.

## Protects Depositors

"The Washington bank depositors' guaranty board, created by the legislature of 1917, is just what its name implies—an organization, under state supervision, to protect depositors against losses in the event of failure of any member bank," says R. L. Rutter, president of the Spokane & Eastern Trust company and member of the Washington bank depositors' guaranty fund board. Mr. Rutter stated further: "The law under which the board operates provides for the ultimate recovery of every dollar deposited in guaranteed banks."

"The law enacted in Washington, as it had been in Oklahoma, Kansas, Nebraska, Texas, North Dakota and South Dakota, because the members of the legislature felt it the duty of the banks to provide the same protection for individual depositors as is required by the United States government, the state, the city and the county for the protection of their deposits.

"Federal, state and municipal governments require for the protection of their deposits either first-class securities or the guarantee of a reputable surety company. In view of these facts the members of the legislature saw no valid reason why the individual depositor should not have the same measure of protection.

"The Washington guaranty law provides that a deposit in securities of the class acceptable as security for savings deposits by the United States government be placed in the hands of the state treasurer as security for the payment of assessments levied against the fund for expenses or for the payment of losses due to the failure of a member bank or banks.

"The work of the federal reserve bank and the guaranty fund board do not conflict in the least. The purpose of the first-named is to finance the United States government and provide for the expansion and contraction of currency, as it is necessary for the conduct of the commercial business of the nation, while the purpose of the guaranty fund law is to protect individual depositors against losses by the failure of guaranteed banks.

"There is not the least doubt in my mind that the guaranty of deposits will in time become national and that the public will demand that their deposits be treated in the same manner and given the same protection as those of the government or state."

**An Economical Shortening.**

An economical shortening is made by combining rendered suet and margarine or chicken fat and cottonseed oil.

# Must Not Handicap Production

## *Roosevelt Joins Hand Against Arbitrary Price-Fixing*

In an address delivered in Portland, Maine, last week, Colonel Theodore Roosevelt expressed unqualified disapproval of experimental or arbitrary price-fixing, declaring that anything that interfered with the production of staple foodstuffs at this time was greatly to be disapproved. The following are extracts from the colonel's address touching upon the subject of price-fixing and upon the subject of farm ownership and operation:

"Let us steadily keep in mind the one great fact that nothing must be allowed to interfere with ample production. There must be no limitation of production. This means that there must be no attempt by the government at price-fixing which shall result to the detriment of the farmer. Any experiment in price-fixing, and especially in maximum price-fixing, should be entered into only most cautiously, and only when there has been such thorough canvass of the situation as to enable us to guarantee that good and not harm will result. The price-fixing by the government during the last year has worked nothing but mischief. It has slowed up production, it has aggravated existing inequalities by making some prices too high and some too low."

"It is a mere truism to say that the prosperity of the farmer stands as basic to the prosperity of the nation. On the whole, in every great crisis in the past, the farmer has stood as preeminently the archtypical American, who in peace and in war took the lead in the work without which the republic must succumb. In our country the typical farmer has been the man who owned the land which he himself, with his own hands, assisted by is sons and by one or two hired men, tilled—and this is the farmer of whom I especially speak.

"We can not afford to have him supplanted by the man who merely holds his land as a tenant for an absentee owner. We can not afford to have his farm absorbed by a big landowner. Yet in sections of our country the tenant farmer has tended to increase ominously at the expense of the man who owns his farm, and in other sections there has been an equally ominous tendency to see the big landowner, especially the big absentee landowner, grow at the expense of the small landowner. We should sharply discriminate in favor of the actual farmer against the moneyed man, not really a farmer at all, who buys thousands of acres and holds them for speculation. We must in every way favor the man who lives upon the land which he owns and which he himself cultivates. Moreover, we must render it possible for the man who works on the farm, but who does not own any land, for the hired man who is not a tramp laborer, but a hard working, steady, industrious worker, to acquire and to own a farm for himself.

# Don't Cultivate Orchards Clean

## *It Starves Both Orchardists and Orchards, Says Expert*

By P. S. DARLINGTON.

Many orchardists are coming to feel as the author of this article, Mr. Darlington, does concerning the matter of orchard cultivation. There are yet, however, many who believe in the thorough cultivation of orchard land rather than the growing on it of cover crops. This article is an address delivered by Mr. Darlington, field horticultural inspector of this state, before the Washington Horticultural society convention at Kennewick several weeks ago.—Editor.

Up until recent years the fruit business in this state has been on a very unstable basis.

We clean cultivated our orchards, kept little or no livestock, and perhaps not even a garden. We were so enthusiastic over the fruit business that we forgot that there might come a year when there would not be a profit in the fruit business with which we could buy our provisions at the store. We have since seen some such years. We have seen years when the credit of a good many of our fruit growers at the grocery store was not gilt edge, and, in fact, some of them got hungry and walked out.

In 1911 we shipped into Wenatchee 150,000 pounds of butter, 20 carloads of canned milk, 200 gallons of fresh milk a day, 43,000 dozen eggs, 20 carloads of packing house products and about 1800 tons of hay. Our farmers, if they could be called that, were going to town and buying their milk, butter, eggs, meat, etc. Wenatchee probably carried this condition to a greater extent than most other sections of the state, but perhaps necessity has caused the orchardists of Wenatchee to advance farther toward correcting this condition than has been the case with the orchardists of most other districts.

Clean cultivation was not only starving our orchardists, but was also starving our orchards. If there is any one here that does not know what a starved orchard looks like, just take a drive out through any of the older orchard sections next summer and you will see here and there an orchard with small, sparse and yellowish looking foliage, red or yellowish bark and probably a light crop of small apples. These are indications of partial starvation. This condition may be brought about by any one of a number of different causes, but whatever the cause the effect is partial starvation.

In some cases it may be due to lack of water, but since all plant food must be taken up in the form of solution lack of water is starvation. In a light, sandy soil it may be due to too much water, in which case the soluble elements of plant food are leached away. It may be due to an impoverished soil, but there are comparatively few of our soils but what contain enough of the elements of plant food to properly nourish the trees if the elements of plant food that are in the soil are made available to the tree.

This appearance of starvation is most frequently due to the fact that the elements of plant food which are in the soil in abundance are, on account of the lack of proper physical condition of the soil not made available to the tree. An ideal apple soil is a rich, heavy loam. But this type of soil, as well as other types, if clean cultivated for a period of years, becomes void of humus and organic matter. The soil particles then rapidly run together. In this condition the soil breaks up cloddy. It puddles easily when wet. It does not take water readily. In fact, a strata just beneath the surface cultivation develops which becomes almost impervious to water and almost as hard as hardpan. A soil in this condition, though it may be ever so rich in the elements of plant food, will not release or make available to the tree plant food in sufficient quantities to properly nourish the tree.

This condition of the soil has been brought about by the continuous burning up and the almost continuous exhaustion of the organic matter in the soil. This is the result of continued clean cultivation without addition of organic matter to the soil. The point that I want to bring out most forcible here is that our soil troubles are mostly physical rather than chemical and that the addition of chemical or commercial fertilizers can do little toward the permanent upbuilding of our conditions. Further, without an adequate supply of humus, or organic matter, we do not get get full benefit of whatever chemical we may use.

To build up and maintain a constant supply of available plant food with the least possible waste we must have humus or organic matter in the soil. Humus is decomposed organic matter. Humus acts as a sponge to not only hold moisture, but to hold available elements of plant food. In the decomposition of organic matter various weak acids are formed, known as humic acids. These weak acids have a dissolving effect upon the soil particles, and change the otherwise unavailable elements of fertility into available form. Humus holds the soil particles apart and prevents the soil from becoming hard and compact.

In my opinion any system of orcharding in our semi-arid irrigated districts which does not provide for a goodly supply of organic matter in the soil is not a permanent or sound system of orcharding.

I shall not enter here into any extended discussion of the different methods of supplying that humus any more than to say that under conditions existing generally in our fruit sections far the cheapest and most economical method of supplying that humus, together with additional fertility, is by means of cover crops. Neither is it my purpose here to enter into a discussion of the merits and demerits of the different cover crops any more than to say that in my opinion no other crop has been introduced yet that has much to recommend it as an orchard cover and manure crop of alfalfa.

Alfalfa produces an immense mass of vegetable matter, not only above but also below the ground. I believe that it is unexcelled in this respect by any other crop than we can grow in our orchards, and as is explained above it is vegetative or organic matter in the soil that we need.

Alfalfa is a soil renovator. It is a more successful soil renovator than plow or harrow or even dynamite. No clods form in an alfalfa field nor in an orchard sowed to alfalfa. Alfalfa roots penetrate the soil to the depths of 20, 30 or 40 feet, and have been known to go down to a depth of 127 feet. The decaying roots and side laterals of the alfalfa keep the soil open and porous for the penetration of air and water.

Alfalfa is a legume, and therefore a nitrogen gatherer. It not only gathers nitrogen from the air, but it penetrates the soil far below the reach of ordinary plants, brings up other elements of plant food and makes them available at the surface. It has been estimated at the New Jersey experiment station that the amounts of plant food gathered by a test acre of alfalfa in two years were equivalent in nitrogen to 3500 pounds of nitrate of soda in phosphoric acid, to 600 pounds of bone black superphosphate and in potash to 1200 pounds of muriate of potash. This amount of fertilizers purchased at ordinary prices of commercial fertilizers before the war would cost about $124, the nitrogen alone being worth about $105, and this was taken almost entirely from the air.

The water requirement is usually the first question that interests most growers in the discussion of this subject. The water requirements depend almost entirely upon the methods of handling alfalfa in the orchard, and will be discussed more fully below. I will simply say here that conservation of moisture is one of the benefits that may be derived from alfalfa in the orchard.

I have mentioned some of the reasons why alfalfa should be beneficial to the orchard. This may be just theory. But the proof of the pudding is in the eating. We have plenty of evidence to show that the alfalfa actually does get results. I might mention the Barney & Williams orchard, which has been in alfalfa for about 20 years. This is the oldest alfalfa orchard that I know of, and had the largest bearing record of any orchard that I know of. I have the bearing record of this orchard for the six years from 1907 until 1912, inclusive. The average bearing per tree for those six years were 19 boxes per tree per year. Mr. Williams told me since he has harvested his 1917 crop that these trees still keep up the same performance. I could mention many other instances of beneficial results. In fact the results have been so generally satisfactory that about 75 per cent of our orchards at Wenatchee are now in alfalfa.

So far I have spoken of alfalfa as a cover and manure crop and of its direct benefit to the orchard. The ideal method of handling alfalfa as strictly a cover crop and manure crop for the most rapid upbuilding of the soil and for the conservation of moisture is to allow the whole crop to fall on the ground and rot. However, there is the other phase to be considered, the matter of providing our own living, as much as possible, on the orchard farms. This is a phase that can not be overlooked at this time. It is a phase that is in line with the recommendations of the food administration, and further than that it is in line with a policy of permanent thrift. Every orchard farm should have its family cow, a hog or two, chickens and a garden.

Where there is no shortage of water there is no reason why a crop or two of alfalfa, or even three crops, can not be taken from the orchard if it is fed on the ranch and the manure put back on the orchard. In this way the feeding value as well as the greater part of the fertilizing value can be obtained. If we have to go out and buy feed for work stock and other animals today we are in a bad way. Alfalfa hay is selling for $30 a ton at Wenatchee, and it is the cheapest feed we can buy, at that.

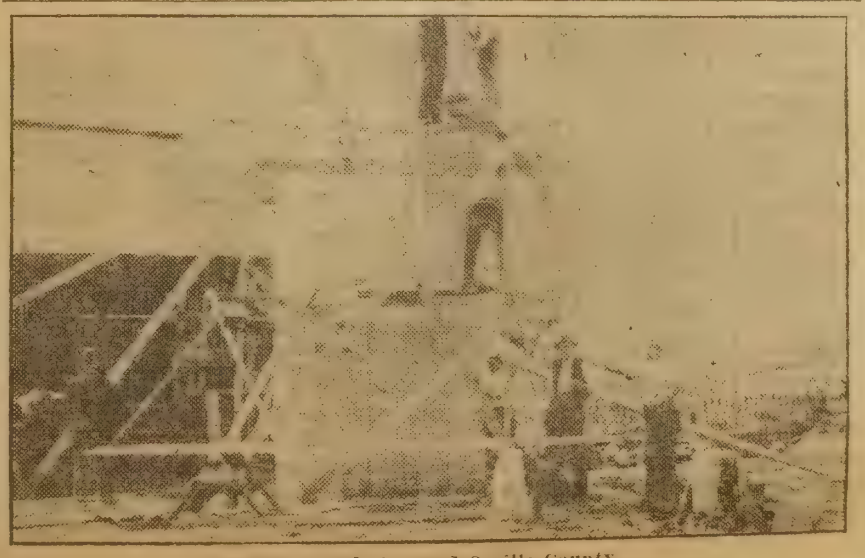
As I have said, the water requirements of alfalfa in the orchard depend largely upon the methods of handling. If your alfalfa is a strictly

(Continued on page fifteen.)

# Thousand Tons of Pea Straw

## *Worth $10 a Ton, Produced in Spokane County*

By J. L. ASHLOCK.



Reporting on the work of the Spokane county agricultural office the last year, Agent J. R. Shinn speaks of attempts to extend the growing of peas, clover and sweet clover, the building of silos and use of silage, more and better live stock on every farm and extension of boys' and girls' club work in every rural community.

Five thousand acres of peas were contracted for in 1916 and in 1917 the acreage increased to 32,000. Fourteen companies contracted for peas in Spokane county and they were from California, Connecticut, Michigan, Colorado and Wisconsin. Mr. Shinn estimates that no less than 20,000 hogs have been fattened for market by pasturing on shattered peas left in the fields and knows definitely of 1938 hogs that last year were pastured in this way, making gains of 75 pounds per hog while on the pasturage of shattered peas. At least 100 tons of pea straw, worth $10 a ton, was produced in Spokane county last year, which was the most unfavorable for peas of any yearss ince the establishing of the agricultural office. Wheat grown on pea land, according to records given Mr. Shinn by the farmers, made, in one instance, 28 bushels per acre, against 18 bushels on summer fallow. Many instances are cited showing that peas when used as an interwheat crop in lieu of leaving the land in bare fallow the off-wheat year, serve to increase, rather than diminish, production of the year following the peas.

The agricultural office in Pend Oreille county was established less than a year ago. County Agricultural Agent M. J. Newhouse's first report tells of beginning progress in such county projects as dairying, the construction of silos and use of silage, the introduction of pure-bred sires, impetus to poultry production, cure and prevention of animal diseases, the organization of farmers for purposes of cooperative marketing and buying and to help in carrying on approved agricultural projects; reclamation of land by drainage and diking, the use of more fertilizers and boys' and girls' club work.

Up in Okanogan county, according to Agent W. A. Holt's report, more live stock and more feed for live stock are dominant in the agricultural development there. Okanogan county stockmen have a winter feeding season varying in length from two to four months, and, naturally, the temptation to start the season with feed for two months has been strong, resulting in losses. The building of many silos for the storage of winter feed and the production of more forage are looked to as corrective measures. Other propects of the county agricultural office are the control of crop pests and diseases, drainage and irrigation, control of animal disease, farm crops and soil problems and the forming of a county council of agriculture.

Stevens county opened up an agricultural office less than a year ago and Agriculturist A. R. Hahner's first annual report, like others from the northern and wooded counties, deals with live stock and the supplementary problems of feed, control of disease among animals and the introduction of purebred sires. A county agricultural council has been organized. The county at times apparently is not quite self-supporting in the matter of feed, nine carloads of alfalfa hay, two of pea straw and three of barley having been shipped in for farmers around Colville and Addy. The rapid advance of forage production, marked by the putting down of additional alfalfa fields, control of the squirrel problem, elimination of noxious weeds, the construction of silos and use of inoculation for new fields of alfalfa and peas, all spoken of by Mr. Hahner in his report, indicate that the county is more apt to have a surplus of feed than a shortage in the immediate future.

Building a Silo in Pend Oreille County.

# Fakers at Work

## Misrepresent the Farm Loan Bank

Farmers should pay no attention to any one who appears in their community offering to organize federal farm loan associations and charging a fee for his services, says a statement made by the farm loan board. The board has recently discovered a swindling scheme that is said to be being practiced in some sections of the country.

A man advertising himself as an authorized organized of national farm loan associations is sending out advertising matter emblazoned with the national flag, stating that he will organize such associations at $500 each, and will teach others the trick for a certain sum of money. His advertisements have reached farmers and business men over a large part of the United States. He claims to be so busy organizing national farm loan associations that he needs help, but will take time to teach others for a monetary consideration.

All such representations are fraudulent. In order to borrow under the farm loan act, it is necessary for farmers to organize cooperative national farm loan associations in their local communities. It is a violation of a ruling of the federal farm loan board, published more than a year ago, for a national farm loan association or a joint stock land bank to spend any money for promotion purposes. Associations thus organized will not be chartered by the federal farm loan board. Farmers are warned therefore against any one asking a fee for his proffered services in connection with applying for a loan under the federal farm loan act.

## Allied Citizens Must Be Calm

When the great German offensive was launched several days ago there was a feeling of dread, if not actual fear, in evidence among many of the people of the allied countries. Perhaps there was and is cause for those feelings in greater or lesser degree. The allied armies are facing a powerful, desperate and barbaric foe—a foe that has descended to the lowest levels of the brute creation in his war practices. His stupendous drive against the allies on the western front, the greatest in the world's history, was launched with a fury born of desperation and backed by material power before which it seemed nothing short of the superhuman could stand.

The enemy made successful attacks in several quarters. Before this writing reaches the readers his advantages may be increased or the cause of the allies advanced. But, whether or not, the spirit of doubt or fear or dread must not be allowed to weaken the home support of the armies of civilization. Germany can not win this war. The righteous cause of the civilized peoples of the earth will triumph, whatever may be the fortunes of the first days or weeks of the great battle. On the battle front are hundreds of thousands of men facing the death-dealing implements of German barbarism. They are not faltering. They are facing death, if death must come, as it will to thousands of them, calmly and with bravery that should put to shame the heart that palpitates with misgivings at home.

German ingenuity is great, but the ingenuity of England and France and our own America is greater. German resources of men and materials are great, but the men and materials of the allied nations are greater. German patriotism is great, but the patriotism of British and French and American is greater, for it is founded upon the eternal principle of honor and right dealing and love of mankind. Germany is doomed to defeat, be it this year or ten years hence, as certainly as the night is doomed to defeat before the rising of the sun.

Hence, without fear or doubt or misgiving, let every American whose wonderful privilege it is to remain in peace at home in these trying times stand firmly behind those heroes on the battlefield, certain that the God in heaven will crown the cause of righteousness with victory in His own good time.

## Potatoes for Patriotism

That this country can save large quantities of wheat by the more intelligent use of potatoes in the many forms in which they may be prepared for eating is the sentiment expressed by the New York state food commission in a bulletin, "Potatoes for Patriotism." Here is an extract from the bulletin:

"By eating potatoes instead of wheat, the people of the United States can help win the war. We have not enough wheat for the allies and ourselves. We have an abundance of potatoes. Wheat flour is a concentrated food and therefore good for shipping; potatoes are bulky and are consequently not suited for limited shipping space, nor are the allies so short of potatoes as of wheat. Next to cereals, potatoes have been in this country the mainstay for starchy food, which supplies energy.

"The more potatoes we eat, the less wheat we need. A medium-sized potato, weighting about three and one-half ounces, supplies about as much starch as two small slices of wheat bread one-half inch thick. In other respects, also, the potato measures up well with wheat bread and even has the advantage over it in supplying certain salts which the body needs to counteract the acidity resulting from the use of such foods as cereals, meat and eggs."

## Big and Loyal Thought

The honor of being first to go "over the top" in the third Liberty bond campaign in the New York district goes to John Muir, and he went over in a big and patriotic way.

"Please enter my subscription," wrote Mr. Muir, "for one million dollars third Liberty loan. I do not yet know the rates these bonds will bear. I do not much care. I do know the necessity for the success of the issue. I know the peril of this country which would result from a failure. And now that I know that $50 and $100 denominations will be included, and that partial payment facilities will be offered to all, I am confident that the loan will be successful, if larger subscribers participate as whole-heartedly as the smaller subscribers are sure to do."

There is a big and loyal thought in that. The interest rate is of little consequence. The big thing is to win the war, to make America safe and keep it free, to make the world a safe place to do business in; and to win the war we must all "come through."

We owe that to the boys in France and the boys who are training to go to France. We owe it to Uncle Sam. And we owe it to our children who will be here when we are gone and are entitled to the same full measure of freedom that we have enjoyed living in the America that our fathers gave to us.

## What the Roar of the Battle Says

The roar of the battle is telling the people of America to save wheat and bacon by eating corn or potatoes or poultry or vegetables—something that will conserve the staple necessities for the men who are facing the shrapnel and poison gas in the trenches. The report of each German attack is a fresh plea to the heart of America.

P. S. Darlington, field horticultural inspector of Washington, is an ardent advocate of cover crops for orchards, as he indicated in an address before orchardists recently. Not only has there been a loss of crops through clean cultivation of orchards, he says, but there has been a loss of nourishment and protection to the fruit trees. It sounds paradoxical to argue for the soil to produce two things better than one, but many authorities are now urging the growing of alfalfa or some other cover crop in the orchard.

## Washington Gleanings

The farmers of western Whitman county are preparing for the "spring drive" by dragging and grading the roads.

The dairies and farms of Thurston county are furnishing nearly 1800 gallons of milk daily to the soldiers at Camp Lewis.

The dairymen in the Chehalis district are contemplating an organization in order to combat the recent cut in milk prices made by the Chehalis condenser.

Vancouver, Clark county, is to have an immense kiln-drying plant, which will be able to handle between 8,500,000 and 10,000,000 freet of spruce a month.

Frank H. Patten of Kennewick has been named federal labor agent to work with Benton County Agriculturalist Lee M. Lampson and the county agricultural council.

At a meeting of 20 potato growers of the Satsop valley, in Grays Harbor county, each man in attendance agreed to raise 100 acres of spuds during the coming season.

Frozen whale meat is to be shipped to all sections of the United States this year by a whaling company which has opened a cold storage plant at Bay City, Grays Harbor.

School children of Grays Harbor county will raise upwards of 150 pigs this year for a contest being staged by the Aberdeen Chamber of Commerce. The chamber of commerce is offering $225 in prizes.

Philip Kinger of Uniontown recently added another section of land to his Alberta holdings, now owning a section and a half in that country, 830 acres of which will be in crops this season.

The first commercial shipment of broom corn from the Hanford valley was made recently by E. H. Stradling to a broom factory in Seattle. The shipment consisted of 12 bundles, approximately 3000 pounds.

As a test of loyalty to the United States, and to weed out and identify, if possible, those of pro-German sympathies in the community, every resident of Castle Rock was compelled to pass before the flag and salute it. The demonstration was arranged by a committee of citizens.

R. M. Turner, county agriculturist; W. H. Whitaker, poultry specialist for the state college, and Miss Olga Grizzle, home economics demonstrator for the seven northwestern counties, have been holding a series of meetings in the various communities of Skagit county to stimulate better production.

A group of farmers in Thurston county have purchased a 30-ton car of limestone to be used as a neutralizer for their soils. Tests made on the prairies about Lacey showed that the soil was so sour that nothing could be expected of it without neutralizer being used, and in some cases at least a ton to the acre will be required.

## What Others Say

The Dakota Farmer: Eating twice as many vegetables will relieve the food shortage. A good garden is a rear guard.

The Fruit Grower: He is a wise farmer who will keep a few sheep and who keeps them out of a low-headed orchard and protected from dogs.

Rural New Yorker: Ten to one a good hired man will do a better job in some new "skilled industry" than the skilled workman could ever do on the farm.

Wallace's Farmer: It is high time a stop was put to some of these blue-sky enterprises. All of the spare money of all of the people is going to be needed for war expenses of one sort and another before peace comes.

Farmers' Mail and Breeze: If the end of the world is about here there is one thing certain, I can't help it or prevent it. Maybe this is as favorable a time for a general smashup as any, though I presume most of us are selfish enough to wish to put off the final day for some future generation.

REO
"THE GOLD STANDARD OF VALUES"

# All the Former Excellence Plus Many Refinements

THIS NEW REO LIGHT FOUR is, in all mechanical essentials, the same as its famous predecessor—Reo the Fifth, "The Incomparable Four."

THAT IS TO SAY, those principles of design and of construction which made that great Reo famous the world over for dependability and low upkeep, have all been retained.

WHEN YOU CONSIDER that that Reo Four remained standard in practically the same form for eight seasons (longer than any other automobile ever built save one);

IT MUST HAVE BEEN wonderfully right at every point; must have been. For during those years an host of rivals and imitators came and went.

AND ALWAYS REO maintained its supremacy.

SO WE FEEL that the best possible recommend for this latest Reo—this new Light Four—is to say that all those principles of design and that same quality have been retained.

REFINEMENTS have been made at many points however.

WE PREFER THE TERM "refinements" rather than improvements. For, truth to tell, no owner of a Reo Four could suggest an improvement in that great car.

REO ENGINEERS, at the same time the most experienced and the most progressive, are always seeking opportunities to refine details of Reos.

AND THEY FOUND WAYS to make parts of this chassis, always the most accessible ever built, still more accessible.

ALSO MORE POWER has been developed in the same motor by refinements of valve mechanism; better balance of reciprocating parts.

THE OILING SYSTEM has not been improved—no use trying to improve on what was already perfection.

ODDLY ENOUGH when we begin to talk about this new Reo Light Four, we feel an inclination to emphasize rather those features in which no changes have been made, than those where they have!

SUCH WAS THE QUALITY—such the dependability—such the low upkeep—such the satisfaction of 100,000 owners, that a better could be made only by refining details of the original model.

AND THIS ONE IS BETTER only because it is the latest, the most refined edition of that Reo Four.

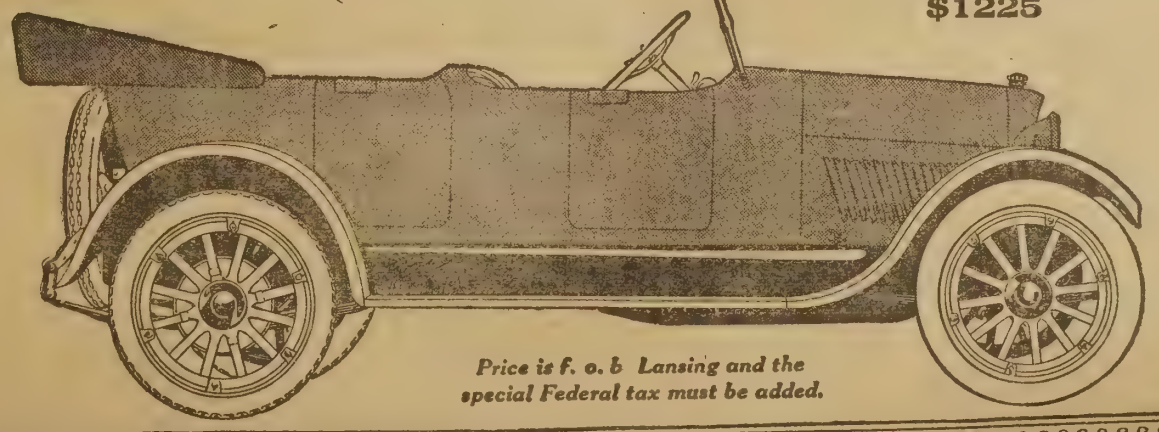
YOUR REO DEALER will show and explain to you the points wherein these refinements have been effected—and he'll tell you the reason for each.

IN A WORD, for your convenience—in every case. For still greater accessibility. For still longer life. And for still lower cost of upkeep.

ASK HIM about these things.

WHEN YOU SEE THIS REO you will say the body lines, the finish, the upholstering are the finest Reo has ever turned out.

A LUXURIOUS EQUIPAGE; as handsome in appearance as it is excellent mechanically; yet at a price less than you had planned to pay for such a car.



DEMAND SEEMS unlimited. At present, almost hopelessly in excess of factory output.

SO ONLY THOSE who decide now and order at once can hope to obtain a Reo Light Four for spring delivery.

TODAY won't be a minute too soon.

## Reo Motor Car Company, Lansing, Michigan

*Price is f. o. b Lansing and the special Federal tax must be added.*

# More Oats, Fewer Milk Cows

## Hard to Get Good Help at Any Price Because of the Demands for Men in Other Industrial Enterprises

DARRINGTON, Snohomish County, Wash., March 24.—This month has been the coldest and roughest of the winter, storming, and at present unusually wet, delaying all spring work. No planting has been done yet. Farmers are somewhat puzzled as to what to raise. It looks as if there will be less potatoes raised this season, as there seems to be a surplus of spuds on hand. Logging camps have taken a lot, and will use a lot of them yet. The price paid for them is about $25 per ton. More grain, oats principally, will be planted this spring, and a few cows less will be kept, as some think they make more raising oats than milking a lot of cows with hired help. Fifty dollars per month and board is the least you can get a man for to work on a farm, and it is almost impossible to get an ablebodied man to work on the farm at any price, as the camps are paying good wages and work only eight hours. Alfalfa hay costs the few that have to buy some $32 per ton laid down at Darrington. Cream brings 62 cents a pound (butter fat); eggs 45 cents per dozen, pork from 18 to 20 cents, but there is no money in raising hogs as it costs about as much to raise them.

The Red Cross is doing splendid work around here, and everybody, young and old, is buying war savings stamps. C. B. NEIDERPRUM.

### Hog Production Increased.

SPOKANE, Spokane County, Wash., March 15.—In Spokane county, there does not seem to be a shortage of labor this year. In practically every instance farmers who find it necessary to hire labor have been provided sufficient help to care for the planting of the crops. In the matter of power for putting in the crops, horses are relied upon as a chief source of supplying the same. There are plenty of work horses in the county and in some communities there is a surplus of lighter weight horses. Tractors are not coming into permanent use as yet and until the companies demonstrate that these are staisfactory for work on hill land it is not likely that they will replace horses to any considerable extent.

There will be a great increase in the hog production this season and as a matter of increasing this production the office of county agent has been placing many brood sows upon the farms throughout the county. Sows that have been shipped to market but which are due to farrow this spring are returned to the farmers where they can assist in increasing pork production this fall. Through this effort we expect to increase greatly the number of hogs and farmers are availing themselves of every opportunity of making use of brood sows in this manner.

The matter of pasture is an important one here and beyond all question the greatest pasture crop that we have tried in the county has been sweet clover. It is good alike on the better and also upon the thinner soils in timber sections.

Spokane county has recently organized a county agricultural council and we have laid out a very definite system for increasing food production this coming year. J. R. SHINN.

### Pastures Are Excellent.

CATHLAMET, Wahkiakum County, Wash., March 13.—Due to the fact that so many young men have been called to the colors from this community, there will be some decrease in the amount of work that has been done on farms of this county. We have an excellent dairy section and little plowing is done on the average farm of the county. We have horses to take care of the local work, but no more than is necessary.

Pasture is the one crop which we have in abundance. Excellent pasture for so many months of the year enables the farmers to be quite independent from the purchase of feeds from the outside. Orchard grass, rye grass, timothy and clover are found in most of the meadows in the county. A. T. FLAGG.

### Grain Crops Looking Fine.

CENTERVILLE, Klickitat County, Wash., March 26.—We talk about the labor shortage here and if we are able to supply the demand for farm help, even at from $55 to $65 per month and board. It is just impossible at present as only those that contracted for their help ahead are making a success of the help proposition. Even all work on the wagon roads are cut off a good deal, the most work being done on rural route roads. Our supply of farm power is being renewed quite a good deal. There are a good many new tractors to be used this fall to see which kind of tractor is the best adapted here. There are plenty of work horses, and I think plenty of feed to get the crop in, with maybe a skimp for some. I do not hear so much of the sale of horses to the government, but suppose there is about the usual amount. The farm machinery proposition is a question, and most farmers have looked ahead for repairs or new machinery. There are quite a number of small combines being sold in the neighborhood, so as to take the place of the usual threshing outfit at which you always had to take your turn. I believe our usual stock of beef animals is being prepared for market, some stock going already toward the mountain pasture. There is quite an acreage of alfalfa being plowed up this year, possibly for change to be sown to wheat, and also to get a full new reset in clover, as all fields grow thin by years of use. The winter wheat is in good condition, generally, some very good, with a general average quite in advance of the last few years at this time of the year. Everybody here is doing their best on food increases, both as crop increase and saving of grain. The spring sowing of grain will soon be on, as there is plenty of spring seed as far as I can see. The weather is fine on the winter wheat, as it is shooting out rapidly. Some gardening of the early kind is being started. C. A. LESTER.

### Spring Work in Full Swing.

PROSSER, Benton County, Wash., March 21.—Spring is here and spring work is on in full blast, plowing, seeding and planting. The ground is in good shape. The farmers in this community have enough workhorses to do their work, but not many for sale. There is enough good machinery of all kinds. Some of the farmers are getting tractors, and quite a few new spraying machines are being bought. This community is shipping from one to two cars of meat animals per month. There is no pasture in this community. We have to feed the year round, but out on the hills there is plenty of bunch grass. I planted some field peas last year and I had a good crop, but the peas had lots of weevils in them. Can some one tell how to keep them out? G. W. WILGUS.

**Plow an Acre an Hour—on Kerosene**

HUNDREDS are doing it and more with the "Allwork"—the light tractor that's different. Burns kerosene perfectly—has the largest 4 cylinder motor on any 3 plow tractor—mounted crosswise on the frame. Direct spur gear drive, no intermediate belt pulley on direct drive from crank shaft extension. Four wheels; turns in a 12 foot radius. The

**Allwork KEROSENE TRACTOR**

is proving one of the biggest successes in light tractors. Its low upkeep cost, all around usefulness, ease of handling, great store of power make it the popular tractor everywhere. Built with the construction that insures years of good service—backed by an organization that can give you quick, dependable service. Satisfied owners everywhere. Write today for special folder.

# Man Needs a Balanced Ration

By P. G. HOLDEN.

Feeding the family is as important as feeding the animals. Food, whether it be for man or animal, has two functions to perform:

First, to build up the body and repair wasted tissue.

Second, to furnish energy for the production of heat and motion.

By observing a few general suggestions it is possible to keep a diet well enough balanced for practical purposes.

Both the growth of the body and its working capacity are dependent upon the amount and kind of food we eat. This should be borne in mind in these days when our country needs our best efforts and every ounce of food must be utilized to the utmost.

People must have protein substances to build up muscles and tissue. The protein is secured manly from meats, eggs, milk and cheese, or from legumes and cereals.

The legumes and cereals have such a large per cent of starches and sugars that if we were to depend entirely upon vegetables for our protein we would eat too much of the starches and sugar. Furthermore, the vegetable protein is not so easily digested as that found in animal food. For these reasons it is usually thought best for us to eat a mixed diet and secure a considerable part of our protein from meats, eggs, milk and cheese.

The best energy-producing foods are sugars and starches in cereals and vegetables. Corn, wheat, potatoes and rice should make up a large part of our diet. The fats are used in the same way as the sugars and starches, but have a much higher energy and fuel value and should be taken in much smaller quantities.

Fat is secured from butter, oils, olives, fat meats, nuts, etc. Cereals and vegetables contain a small quantity of fat.

Fruits, green vegetables and relishes furnish bulk, juiciness, flavor and the needed mineral element.

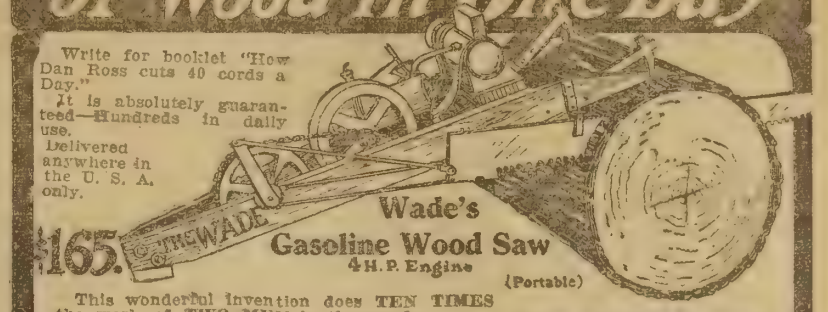
Water helps to dissolve and distribute the foods in the body and carries off the waste material.

A great deal of water is supplied to us through food material, such as milk and green vegeaables, but this is not a sufficient amount. People should drink a great deal of water besides that consumed with meals.

# Relieves the Horses

On a 60-acre irrigated farm in Yakima county, Washington, E. M. Chandler uses a small tractor principally for haying. "I farm with ton and better registered Percherons used also for breeding purposes and use the tractor to relieve them of heavy grind," says Mr. Chandler. "With tractor and 6-foot mower I cut 12 to 14 acres heavy alfalfa per day when in July in hot weather can cut only five with team. also use tractor for heavy spring-toothing in spring, discing corn land, and expect to use it in future to draw corn binders, two way plow for alfalfa sod, manure spreader and to operate silo filler and feed grinder and wood saw from pulley provided. I learned to run my tractor in a few minutes and my foreman had as little difficulty."

George C. Hardin of Tieton, Wash., says he has replaced eight horses and two men on his farm of 130 acres. Some idea of Mr. Hardin's activities with his tractor in one season is given in his own words: "In the spring of 1917 I put in 130 acres of spring wheat, plowing, harrowing and seeding at the same time. Then I plowed 40 acres of alfalfa sod, for another party, and after getting done with my own crops, broke up about 20 acres of sage brush land for another. Following this I disked 110 acres, plowed more sod and last November I started to plow stubble. Find I can plow six acres of stubble on 20 gallons of gasoline, running on high gear at the rate of 3 3-4 miles per hour."



Asked what he considered the main advantages of the tractor Mr. Hardin says: "Tractor works rain or shine, hot or cold, does not cost as much to feed as the number of horses it replaces, and the repair bill on my machine has been less than the cost of keeping six horses shod. It doesn't eat when not working. I believe I can get 10 years' profitable service out of my tractor, running it myself and replacing worn parts as soon as they begin to need replacing."

Mitchell

The Greatest Car
Sold at $1250 Today

YOU will find no car like the Mitchell Light Six which sells at $1250 now.
It is big and roomy, with a 120-inch wheelbase. Its 40-horsepower motor exceeds every requirement.
It is a marvelous car in its strength and endurance. All safety parts are oversize. The parts which get a major strain are built of Chrome-Vanadium steel. To every part we apply the most radical tests. Every part and process gets the most exact inspection.

The Car of Today

This is the coming type of car. Men are asking and expecting more than they used to get.
Today they buy a car to keep, and they want immense endurance. They want ample power and room.
They want a lasting finish. So the finish coats on Mitchells are fixed by electric heat.
They want a car to be proud of — handsome and impressive. A hundred details in this Mitchell add some luxury or beauty.
They want comfort on a country road, so we equip this car with shock-absorbing springs.
They want smoothness and capacity — economy in tires and gasoline. They get that in the utmost in this highly-developed Six.

The Best We Know

This car sells below any comparable car, but nothing has been skimped. It represents the best we know after 14 years of car building.
The price is due to factory efficiency. We build the complete car — chassis and body — in a mammoth, model plant.
Waste has been eliminated. Production cost has been minimized by countless expert ways. Years have been spent to equip this plant to build this type economically.
Write for our catalog, then see this car—our latest— at your nearest Mitchell Showroom. It comes in five body styles. Write today, for we cannot guarantee this price against advance.

# Wooden Hoop Silo

## Must Use First Class Material

By A. B. Nystrom.

There is a question in the minds of some prospective silo owners as to the advisability of putting up the home-made wooden hoop silo. They are not sure that it will stand the test.

This much must be understood, that if this type of silo is to be compared with any other wooden stave silo, the same grade of material must be used in both or the comparison will not be just. It is the belief of the writer that if the material that goes into a wooden hoop silo is selected with the same care as that which goes into the better grade of stave silos there will be little or no difference in the length of time the silos will remain in good condition.

Material for wooden hoop silos must be clear, straight grained and properly sized. Especially is this necessary for the hoop material. This should be about three-eighths inch thick, at least three inches wide, and in lengths from 12 feet upward. These should be nailed on from four to five ply, depending on the size of silo.

While this high quality material is required for a silo that will last for 20 to 25 years, a shorter lived silo can be made out of cheaper material. In one instance that has came to the writer's notice ordinary one by six common, not sized and full of knot holes, was used for the sides and short lengths of barn bats were used for the hoops. In spite of the poor quality of material the silage in this silo this year is of No. 1 quality—much better than the silage found in other types of silos in the community. The owner is more than satisfied with the results.

$17.95 Upward American CREAM SEPARATOR

On trial. New, well made, easy running, easily cleaned, perfect skimming separator. Skims warm or cold milk. Different from picture which shows larger capacity machines. Our guarantee protects you. Get our plan of easy

# Dairy Questions

## Are Answered by A. B. Nystrom

To the Editor: Will you please advise me through your paper if it is safe to feed parsnips to milch cows? I have several hundred pounds which are too small for market and nothing will eat them but the cows. L. D. O.

Answer—Parsnips are very desirable for dairy cows. They are very high in digestible nutrients as compared with other root crops. The following table, taken from Henry and Morrison, shows comparative analyses:

| | Per cent protein. | Carbo-hydrates | Fat. | Total |
|---|---|---|---|---|
| Parsnips | 1.3 | 12.5 | .4 | 14.2 |
| Carrots | .9 | 8.6 | .2 | 9.7 |
| Mangels | .8 | 6.4 | .1 | 7.3 |

In some of the European countries parsnips are widely used for dairy feeding, but in this country they have not come into very general use because of the low yields per acre.

**Buttermaking on the Farm.**

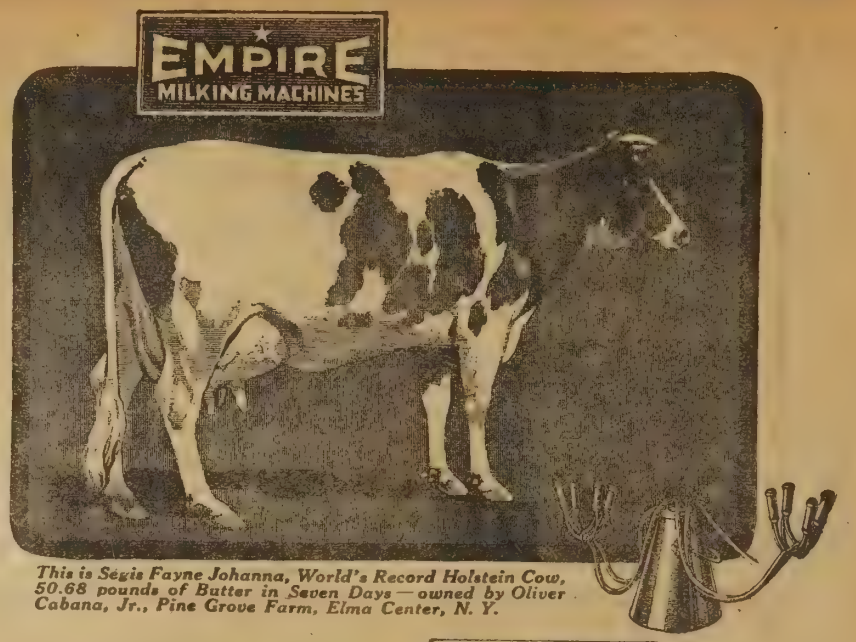
To the Editor: My trouble is about making butter. I have not had any farm experience until lately, so consequently I find buttermaking rather difficult. If you can enlighten me I will be grateful to you. R. R.

Answer—There are certain definite rules that are very useful in buttermaking. I will enumerate them as follows:

1. Good butter can be made only from good, clean flavored cream.
2. Cream containing about 30 per cent fat is the best for buttermaking.
3. Keep cream as cold as possible until time to churn. Then warm it to 65 to 75 degrees Fahrenheit and hold for six or eight hours or until a mild acid taste develops.
4. Always use a thermometer to ascertain the right temperature.
5. Overripe cream makes a poor quality of butter.
6. The churning temperature should be such that the churning will require about 30 minutes and at the same time have firm granules—from 52 to 60 in the summer and from 58 to 60 in the winter.
7. Clean, scald and cool all churning utensils before using.
8. Stop churning when the granules are about the size of small peas.
9. Wash these granules with pure water of about the same temperature as the buttermilk after the latter has been drained off.
10. What buttermilk is left must be washed out not worked out.
11. Add salt at the rate of ¾ ounce to each pound of butter.
12. Work butter just enough to distribute the salt evenly and to give it a solid, smooth body.
13. Overworked butter has a sticky body.
14. Mottled butter is caused by the uneven distribution of salt.
15. Put up butter in neat, attractive packages, wrapped in parchment.

**Milk Fever.**

To the Editor: Is there any way to prevent milk fever? I lost one cow last summer from that and the other day I nearly lost another. M. H.



Answer—Cows that are susceptible to milk fever should be fed laxative feeds previous to calving. If the cow gets down with the trouble use a milk fever outfit at once and pump filtered air into each quarter of the udder. Tie a piece of wide cotton tape around the base of the teat to hold in the air. The pressure made by the air will stimulate the milk secreting cells into activity and the cow is up in a short time. If a milk fever outfit is not available use a bicycle pump, some rubber tubing and a sterile milking tube. This treatment is almost infallible.

## Open Alaska Farm Land.

With a view to increasing the agricultural production of Alaska, surveys are to be made this summer by the national forestry service as a result of which much land suitable for cultivation in Alaska will probably be eliminated from the forest reserves and placed open to settlement.

**Oregon Jerseys Win.**

Among the six highest Jersey records completed during 1917 Oregon had two—Viva La France owned by Pickard Brothers, and Goldie's Nehalem Beauty owned by Clifford Reid. No other state had two animals among these six top Jerseys last year.

*This is Segis Fayne Johanna, World's Record Holstein Cow, 50.68 pounds of Butter in Seven Days—owned by Oliver Cabana, Jr., Pine Grove Farm, Elma Center, N. Y.*

**Why?** EMPIRE MILKING MACHINES

**HERE are the names of a few of the many famous breeders of registered dairy cows of every breed, who use EMPIRE MILKING MACHINES:—**

Oliver Cabana, Jr., Pine Grove Farm, Elma Center, N. Y.; Senator A. T. Fancher, Fancher Farm, Salamanca, N. Y.; Charles Pratt Estate, Glen Cove, L. I.; Sherwin Farm, Willoughby, O.; Woronoak Farm, Westfield, Mass.

And these are a few of the thousands of market milk producers who use EMPIRES:

E. W. Smith, Richford, Vt.; Glen W. Jeffers, DeKalb Junction, N. Y.; Frank Baumgartner, Joliet, Ill.; Fred Pabst, Oconomowoc, Wis.; C. P. Fisher, Owatonna, Minn.; Chas. McFrederick, Jerusalem, Ohio; F. M. Helm, Fresno, Cal.; C. H. Conrey, Durango, Colo.

Why do the foremost breeders and the most successful dairymen of every class use EMPIRE MILKING MACHINES?

The reasons are these: Empire Milking Machines solve their labor problems and at the same time safeguard their cows. They milk uniformly—*the same way every day.* They lengthen the cow's period of lactation. They make it possible for one man to do the work of three or four hand milkers, thus saving many times their cost in wages in a remarkably short time. They produce better, cleaner milk than is possible by hand milking—and frequently *increase* the milk flow. They work equally well on easy and hard milking cows.

If you're milking more than eight cows you will want an Empire Milker—*you need it.* Our factory is overcrowded with orders, so see the Empire Dealer at once, so you will not have to wait for your Empire Outfit.

## Truth in Advertising

Nationally advertised goods may be depended upon for the reason that national advertisers know that their goods must be truthfully advertised to gain and hold popularity. A good name in advertising has to be won on merit, therefore the buyer may be sure of obtaining right value when buying widely advertised articles.

# Take the chill out of early rising

At arising time—the coldest, chilliest part of the day—the whole house can be as balmy as a June day with IDEAL heating

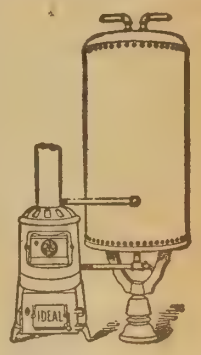
Why don't you enjoy this wonderful comfort, which is so economical? Spend part of your improvement money for IDEAL heating. It is the safest and most beneficial investment you can make. It means as much to you as a bumper crop at high prices.

## For any farm house

AMERICAN RADIATORS & IDEAL BOILERS

Whether your house has a cellar or water pressure does not matter, because IDEAL Boilers and AMERICAN Radiators can be put in any house, anywhere, with splendid results. Thousands of farmers today enjoy the labor-saving, cleanly and economical IDEAL heating.

## *Farm success depends on home comfort*



You will always find a prosperous farm where IDEAL heating has changed the *house* into a *home*. IDEAL Boilers burn the cheaper fuels—hard and soft coal, wood, lignite, slack, screenings—and are the greatest heat developers—now saving over millions of tons to their users. Most easily operated. No more work than to run one stove for one room. No coal gas or dust and the outfit of IDEAL Boiler and AMERICAN Radiators will outlast even the building itself.

IDEAL Boiler fuel pots mix the air and coal gases as in a modern gas mantle, extracting ALL the heat from the fuel.

### Send for large illustrated catalog "Ideal Heating" *free*

IDEAL heating for the home is thoroughly explained and illustrated in this complete catalog which we want you to read. An inquiry places you under no obligation to buy—but get the facts from this book.

Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for home and stock at small cost of few dollars for fuel for season.

Sold by all dealers. No exclusive agents.

## WOMAN IS SHEEPMAN.

### Operates Big Washington Ranch.

One of the prominent sheep breeders of the northwest is Mrs. Zora Jackson of Dayton, Wash., who operates a large sheep farm in Columbia county. It is stated that her investment approximates $380,000, the land under her control totaling 17,000 acres, some of which is good farm land, but the bulk of which is pasture land. She features the Rambouillet breed of sheep. It is understood that her flocks now total between 7000 and 8000 head.

The Jackson sheep have taken prizes at Chicago, St. Louis, Denver, San Francisco and Portland. Shipments have been made to customers in South Africa, Australia and to practically every wool growing state in this country. The band produced a single fleece weighing 69 pounds, which is yet intact at the Tucanon farm.

The winter quaters for the sheep on the Tucanon are equipped with every modern appliance, including an electric plant for lighting the buildings and supplying power for shearing machines and other necessary purposes. Although Mrs. Jackson directs her enterprise very largely from her home in Dayton she pays frequent visits to the mountain camps during the summer season, and keeps in close touch with the affairs of her business at all times. She contributes to the winning of the war by supplying from 80,000 to 100,000 pounds of wool and thousands of mutton sheep annually and the services of two sons at the front in France.

## GET READY FOR SHOW.

### Prospects at Lewiston Are Good.

With a view to working out details for the live stock show at Lewiston the coming fall the executive board of the northwest live stock show held a meeting at Lewiston recently. Considerable revision of the premium lists was made, the object being to strengthen a number of departments where improvement was considered possible. The board agreed upon and announced the following department heads:

General superintendent of grounds—D. S. Wallace, Lewiston.

Horses—W. J. Kressley, Fenn.

Beef cattle—H. L. Summers, Bozeman, Mont.

Dairy cattle—Ira T. Whitney, Spokane.

Swine—A. L. Wilson, Greenleaf, Idaho.

Sheep—J. L. Chapman, Asotin.

Young people's classes—J. H. McCroskey, Fishtrap, Wash.

Transportation—W. J. Jordan and L. M. Foss.

Improvement of grounds—Thomas F. Wren, D. S. Wallace and O. P. Hendershot.

The executive board consists of Thomas F. Wren, president; Henry Thiessen, D. S. Wallace, James McCroskey, E. J. Iddings and O. F. Hendershot.

## Veterinary

Dr. S. B. Nelson

**Milk Flow**—I have a 5-year-old cow that has always been a good milker and is now fresh again about two weeks ago and giving 28 to 30 pounds of milk a day. But she has not come to her milk in either front teat. Probably gives less than a pint in the two together. I can't discover anything wrong with her bag. It simply acts like a dry udder. Bag was slightly caked, but that has about disappeared. Can you suggest any treatment that will restore the milk flow?

W. W. S.

Newberg, Ore.

Try giving your cow one and one-half pounds of Epsom salts in two quarts of water. Two days later begin giving her approximately half a teaspoonful of potassium chlorate in one pint of water once daily. I am not sure that this treatment will give you results, but it is the one that seems to me to be indicated in the case you relate.

**Mare's Legs Swollen**—One of my mare's hind legs is badly swollen and inflamed. The hair is coming off and I have been doctoring for mud fever, but without results. A. G.

Yelm, Wash.

Try applying the following ointment to the mare's leg: Zinc oxide, one part; starch, one part; glycerine to make an ointment. Apply that once daily. Then give her in her feed one ounce of Fowler's Solution of Arsenic morning and evening for a week or 10 days.

**Affected With Piles.**—I have a pig that is in perfect health only it has the piles, but not so very bad. Is there any cure for it and what is it?

M. B.

Mossy Rock, Wash.

Apply to the affected portion the following liniment: Fluid extract of ergot, one part; fluid extract of belladonna, one part. Apply morning and evening with a little cotton.

**Calves Cough**—I have a bunch of calves that cough continually and some have a discharge from the nose. This cough seems to stay with them until they are about a year old. They are well fed, but do not seem to grow as they should.—A. L., Trout Lake, Wash.

Try treating your calves for lung worms. Place the calves in a tight or fairly tight room. In the center of the room place a tub with two inches of water in it with two bricks in the center. On the bricks put a tin pan full of flowers of sulphur. Set fire to the sulphur and then let the calves breathe the sulphur fumes for 15 to 20 minutes. Repeat the treatment two or three times four to six days apart.

**Started With a Limp.**—I have a sick horse and do not know what the trouble can be. She started to limp a little in the right foot. Think it is in the shoulder. The first time we noticed this was in June, and from then on did not work her. At harvest we woked her three days and on the fourth day she limped on the left hind leg so bad that we could not use her any more at all, and she is still in the barn, doing nothing. She is almost well in the hind leg and now has it also in the other front leg. When she lies down and gets up she can only move the front legs six inches at one time till she gets to moving around. Then she can step ahead at full length. She feels good when she gets out and jumps and kicks, but has not a very good appetite. She will be 7 years

DOES BETTER WORK COSTS YOU LESS

20 Head——Jacks and Jennets For Sale——20 Head

For forty years we have been breeding them. For twenty-eight years they have won every premium offered through Oregon and Washington, with one exception. They are native-bred, and all of them make good. They are all registered in Standard Jack and Jennet Register of America. We have mules to show from them, and we make prices that are lower than importers can meet. Come and see them, or write.

B. F. Swaggart, Prop. EASTERN OREGON JACK FARM. Lexington, Ore.

old next spring and weights over 1200 pounds. When she stands she keeps moving her front legs or shifts from one to another constantly. Will you kindly tell us what the trouble is?
Chilco, Idaho. J. I.

Give your horse a powder, morning and evening, of the following: Potassium iodine, one-half ounce; powdered colchicum, two drams; potassium bicarbonate, one ounce; powdered anise seed, one ounce. Have this made into four powders and give one night and morning. You can repeat the treatment in four or five days if necessary.

**Trouble With Teats**—Last fall one of my cows had trouble with her teats. A little scab formed on the end of the teat and I had to pick it off before I could milk. This scab bothered for several days and then went away. The teat appeared to be all right but I could get hardly any milk out of it. The other quarter also stopped giving milk. The cow wasn't giving much so I quit trying to milk her. She came fresh about six weeks ago and the two quarters that were affected give very little milk. One about two cupsful and the other about half that much. I think for the last few days there has been more milk coming into one quarter than I can get out. Another cow has a little hard lump in the end of two teats. The lumps almost close the milk passage and it is very hard to get the milk. The lumps came about two months ago and seemed to be sore at first. Can you tell me what is the cause of this trouble and cure if there is any. L. C. H.
Alsea, Ore.

The scab which formed on the end of the teat was probably due to necrosis bacillus. It may be possible that they affected the entire quarter. I do not know of any treatment that will bring the milk back except the gradual massage of the udder. The treatment of the scab is to dip the teat into tincture of iodine before and after each milking. That frequently gives good results.

Regarding the other cow that has little hard lumps in the end of the teat I wonder if you mean the lower end of the teat or the upper end? If it is the lower end of the teat I would advise the application of iodine ointment after each milking. If you have a veterinarian at your command he could probably take an instrument and remove the lump from the interior of the udder by surgical means but I do not believe that it would be possible for a layman to do this and have it come out successfully, therefore you had better try the iodine ointment. You can get that at any drug store.

**Potato Water for Hogs**—I was told that in feeding cooked potatoes to hogs they did better if the water they were boiled in was not used, and would like to know if that is true. That is, when they are boiled with the skin on. I have a sort of mange or poison of some kind among my cattle which starts about the eyes and takes the hair off, spreading in spots over the body. Does not make a scab at first, but does some later. What can I do for it?
Camas, Wash. D. H. S.

Regarding the first part of your question, there is no definite evidence that the water which potatoes are boiled in is detrimental to hogs. However, during the spring of the year, when potatoes begin to grow, sometimes there is a little danger that some of the poisonous substance which is contained in the skin of the potato, solafine, might by continuous boiling, go into solution and be detrimental. For that reason it is better not to feed the water along toward the spring of the year.

Regarding the scabs around the eyes of your cattle, that is very likely ringworm. Treat the cattle by painting the spot and one-half inch around the spot with tincture of iodine once a day for a few days.

**Blood Poisoning From Cut.**—A colt 6 months old got a cut, either wire or snag, on front ankle joint of front foot. Blood poison evidently set in. I never knew he was cut till he went lame. Used flaxseed poultice for three weeks, then soap and sugar poultice. Leg swelled clear to body, but mainly at ankle. Was lanced 11 times, exuding yellow pus. Swelling now gone out of leg except joint and mainly in front. He is very lame and it broke open lately, exuding bloody pus. This case is now eight weeks old. I am now using white liniment. Have always bathed leg in warm carbolic water. C. D.
Felt, Idaho.

Give the colt, internally, 15 grains of potassium iodine night and morning for about a week and then stop the treatment. There may be a diseased tissue in the bone, which will break at any point, but gradually the growing bone will get better, I think.

**Mare Does Not Get Fat**—I have a mare eight years old that will not get fat. She seems to be in good condition in every way, has a good appetite and has a nice, glossy coat. I had her teeth worked on a couple of years ago and they seem to be in good shape. It seems to me that it may be worms, but can not tell for sure. I have been feeding chopped barley and straw lately, but before had been feeding grain hay. Please give me your opinion on her.
Wallowa, Ore. G. C. M.

Try giving your mare one-half ounce of Fowler's solution of arsenic once daily on her feed for 30 days.

**May Be Ringworm**—I have a yearling heifer that has some kind of skin disease around its eyes. A white scab forms a large circle around each eye and the hair comes out. It seems to be all sore and is getting larger every day. Now I notice that my cow and calf are getting the same thing. Is it a catching disease and would it infect a person if he touches it?—W. F. B., Leland, Idaho.

Your yearling heifer is probably affected with ringworm. There are a number of treatments available for this deases. Just the application of lard daily will sometimes cause a cure; also the painting of the spots daily with tincture of iodine gives relief, and a still better treatment is to paint the spots with a 4 per cent solution of silver nitrate, and immediately after paint it with tincture of iodine. It is very seldom the trouble is ever transmitted to man, although it occasionally occurs.

**Is Cow With Calf?**—About the 1st of February I bought a young registered Holstein cow. Is there any definite way of telling whether she is with calf or not? She shows no sign of coming in heat. Will you tell me what will remove small warts from old cow teats?—Subscriber.

It is a very difficult task indeed to definitely tell whether a cow is pregnant or not unless she is fairly well advanced, past the fourth or fifth month. After that time it may be told generally by a person who is experienced.

In regard to the small wart on the old cow try the application of the prescription which has appeared in the Farmer on numerous occasions.

**Calf Going Blind**—I have a calf about 4 months old which is going blind. I noticed it about a month ago. The pupil of her eye is too large and her eyes look dark green when you look straight at her when it is a little dark. Is there anything I can do for them? C. E. A.
Gloyd, Wash.

I am not able to make a specific diagnosis of the trouble affecting your calf. Therefore, I can not give you a treatment for it. I am of the opinion that it is probably some trouble with the optic nerve and that treatment will not avail.

**Sucks Herself**—I have a very valuable cow that sucks herself. What could I do to prevent it? She has only been doing it just the last two weeks.
R. R.
Parma, Idaho.

About the only way to keep a cow from sucking herself is by putting a mechanical appliance on her which will prevent her from being able to turn her head so far back that she can reach the udder. Generally by placing a strap around the body just behind the fore-legs and have this go through a slot in a stick which passes between the front legs up to and fastens to the halter you can prevent her from sucking herself.

First Eastern Oregon

# Shorthorn Sale

## At Ontario, Oregon

**Thursday, April 25th**

UNDER AUSPICES OF THE NORTHWEST SHORTHORN BREEDERS' ASSOCIATION.

**75 Registered Shorthorns 75**

**Males and Females**

Drawn from the following well known herds of

| | |
|---|---|
| Day & Rothrock | A. D. Dunn. |
| Jas. McCroskey & Son. | W. O. Cummings |
| W. J. Townley. | W. W. Green. |
| Joe Turner. | G. W. Delay. |

and Hutchinson & Sherman.

**Breeders, Farmers and Rangemen** will find this sale an exceptional opportunity to select a class of cattle best suited to their requirements.

Included in the offering are some of the best bulls ever entered for sale in the northwest, both as to pedigree and individuality.

The females are **very high class** and should draw the attention of discriminating buyers, therefore any one wishing to strengthen his herd should not overlook this opportunity.

All stock will be judged day preceding sale by F. W. Harding of Chicago, secretary American Shorthorn Breeders' Assn.

## Pure Bred Percheron Stallions and Mares

### By Emmet Mulhall

23 HEAD, 10 STALLIONS, 13 MARES

SATURDAY MAY 20, 1918.

These Percherons are well bred, representing the blood of Moulinet, Carnot, Calypso, Rabelais, Etudiant, Powerful, and Seductor; well grown and well conditioned and as workers and breeders are the kind that are an asset on every farm. In this consignment is the coming three-year-old colt Minet, by Moulinet, out of a Rabelais dam who in the get of a sire group at Illinois state fair defeated the leading sires in the United States. This colt should be heard from on the Pacific coast circuit this fall. Also General Funston, a well turned coming three-year-old colt teeming with quality, possessing remarkable finish and wonderful action. These colts should head a herd of pure bred mares. Also several prize winning mares in eastern shows.

This is an opportunity to make a selection for the breeder, beginner or stallion buyer. The catalogue will interest you. Mention the Pacific Northwest Farm Trio.

Geo. A. Gue, Harry C. Cranke } Auctioneers — Emmet Mulhall, Fenn, Idaho.

Fenn is located sixty miles southeast of Lewiston; on the Camas Prairie railroad.

*"Setting up work" puts him in fine condition. And what an appetite—and how good the little chew of Real Gravely does taste!*

## It's Easy to Send Him a pouch of Real GRAVELY Chewing Plug

**That's the tobacco for him—Real Gravely Chewing Plug—condensed quality—the most tobacco satisfaction in the smallest space, ready to give him the solid comfort of tobacco wherever he happens to be.**

Give any man a chew of Real Gravely Plug, and he will tell you *that's* the kind to send. Send the best!

Ordinary plug is false economy. It costs less per week to chew Real Gravely, because a small chew of it lasts a long while.

If you smoke a pipe, slice Gravely with your knife and add a little to your smoking tobacco. It will give flavor—improve your smoke.

**SEND YOUR FRIEND IN THE U. S. SERVICE A POUCH OF GRAVELY**

Dealers all around here carry it in 10c. pouches. A 3c. stamp will put it into his hands in any Training Camp or Seaport of the U. S. A. Even "over there" a 3c. stamp will take it to him. Your dealer will supply envelope and give you official directions how to address it.

### Testing Out Infertile Eggs.

It is not possible to tell whether an egg has been fertilized or not until it has been in the incubator or under the hen for a few days, in other words, until it has been subjected to an incubating temperature of 103 degrees to start the development of the germ or embryo. The tested out eggs are good food for the chicks, and they are even good for cooking purposes. An infertile egg doesn't go rotten; it remains clear, and if tested out in four or five or six days it is good food for the chicks and may be used for human food. They should not, however, be sold as good eggs. It might subject the person doing it to arrest and punishment.

There are usually some infertile eggs in every setting, and in large incubator lots the number is quite an item. Probably the best use to make of them is to feed them to the newly hatched chicks. There is nothing better for them.

White shell eggs may be tested in four or five days after set; brown eggs in two days later. They are tested by the ordinary methods of candling. It can be done at night or during the day in a dark room. There are various ways of candling eggs. One simple method is to hang an electric bulb inside of a shoe box or cereal box, cutting a hole opposite the bulb about the size of the egg, a little smaller. An ordinary coal oil lamp may be used instead of the electric light. The light is turned on, and the eggs, one at a time, are held up at the opening. An infertile egg will show clear or like a fresh egg, while a fertile egg will show the beginning of the chick or darker, the embryo and blood veins being plainly visible. Test out the infertiles and save them for food for the chicks.

J. D.

### Certainly Not!

We have received the following question from one of our readers: "Do we have to let other people's turkeys eat up our crop, and what course should we take to stop it?"

Poultry, including turkeys, are not looked upon as live stock and therefore are not entitled to free range privileges as is the case with some other animals. We are very certain that if a neighbor's turkeys trespass upon another's crop, the person owning the crop has recourse through the courts to secure damages. However, we recommend in all such cases as this that efforts be made as between man and man to prevent the necessity of taking the matter to the courts.

### Storrs Contest.

At the end of the first four months of the Storrs egg-laying contest a pen of Oregons from the Oregon Agricultural college stood in second place, with a pen of Wyandottes owned by Obed Knight, Rhode Island, first.

## Buy War Stamps, Too

The great campaign is on for the sale of the third Liberty loan bonds in the sum of $3,000,000,000, but the little thrift stamp and the war savings stamp remain on the market as an ideal investment for any sum ranging from 25 cents to $1000.

The purchase of a dollar's worth of these little "baby bonds" by each of the people in this country would produce for the conduct of the war the sum of $100,000,000 or more and in addition would mean the investment of that amount at a good rate of interest in gilt edged security.

The beauty of the war stamp is that it takes only a small amount to purchase it and that that amount can be taken back if needed practically upon notice to the postoffice in your community. The 25 cents that you throw away for luxury if spent for a thrift stamp will be saved for your future use when you need it and will in the meantime help this country and the allies stem the stupendous attack of the barbarians of central Europe. Four dollars and fifteen cents invested this month in a war savings stamp will be worth $5 on the first of January, 1923, or, if you should need the money earlier, it will be worth the purchase price plus 3 per cent interest up to whatever time you find it necessary to call for your money back.

On another page of this issue there is printed a coupon by means of which you can readily order thrift or war savings stamps from this paper. We are glad to offer our services in helping our readers and Uncle Sam get together in this little financial transaction. Look up the coupon, fill it out, clip and mail it to us and your stamps will be sent by return mail.

# Do Not Cultivate the Orchard Clean

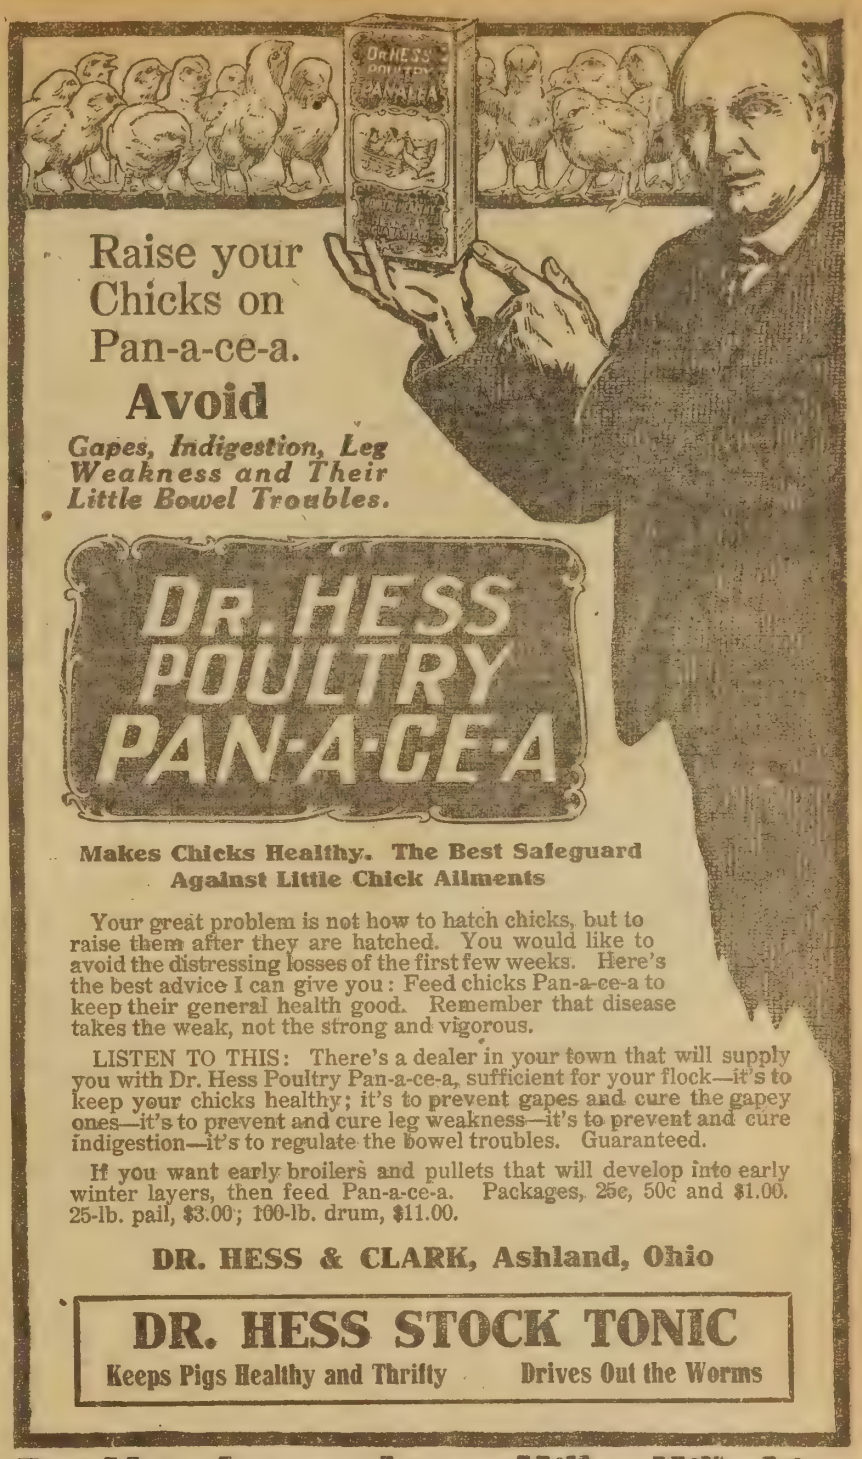
(Continued from page five.)

cover crop and manure crop and you allow it all to lay on the ground, I am satisfied that it does not require any more water than clean cultivation, and I earnestly believe that it requires less, although I have no accurate data to prove this. I am personally unfortunate enough to be interested in an orchard for which we have to raise water over 200 feet by means of pumps. You can readily see that with us conservation of moisture is a feature. We had the last season, in our part of the state, the most severe long drouth that we have had in recent years, but our orchard suffered less from drouth this year than ever, because we cut only a portion of the first crop of alfalfa and none after that. It seemed a shame to see that dense mat of alfalfa fall down and rot on the ground, but we could get only a limited amount of water, and we did not dare cut the alfalfa and take it off. The alfalfa saved our apple crop. As I see it now, however, we could have installed an additional pump and doubled our water supply and paid for the pump and the extra power with the alfalfa we could have saved, figuring it at $30 a ton. We are negotiating for a pump to double our water supply next year.

We have learned something also this year about handling our water. Up until this year we have used four or five small furrows between the tree rows, but have always experienced considerable difficulty in getting our water through these small ditches. This year we made just two large ditches with a turning plow, with very much better results.

We have always had the best success sowing the alfalfa about the middle of August on soil that has been clean cultivated all summer. At that time it is necessary to irrigate it up and is sometimes necessary to irrigate it once after that. If the soil should get dry at the time the seed is germinating or soon after that you will not have much success getting a stand. Alfalfa sown the middle of August should get about six or eight inches high before winter, and is then ready to start off good and strong in the spring.

Let me give you a word of caution. Do not expect beneficial results the first year after the alfalfa has been sown. In fact, it requires quite a little care the first year to prevent detrimental results. Your stand is not likely to be heavy enough the first year to afford the soil sufficient protection, and the ground is apt to bake. Further than this the little seedlings are yet shallow-rooted and are taking their moisture and food from the first two or three feet of soil, right in competition with the feeding roots of the trees. The alfalfa will need more water and more care the first year than any year after that, and you are not likely to see any beneficial results until the second or third year.



Do not think that it is necessary to plow alfalfa under to get results on the orchard. Your results become accumulative year after year, and the longer your alfalfa remains in the orchard the better for your orchard.

# Leads Cow by the Tail

Freemont Kelley of North Bend, Wash., is the author of a unique method of leading a stubborn cow. In a communication to the Farmer Mr. Kelley tells of his struggle with an unruly animal and of his final victory over her.

Unable to lead her by the halter he tied a rope loosely about her horns, passed the free end through the loop and back so that it could be tied to the end of her tail. He tells his experience in the following words:

"Now I pulled gently upon the head with the lead rope then with the other rope gave a few jerks upon the tail and she went like a shot past me. But now I was master for I had dropped the lead rope on her head and took both hands hold upon the rope running through the loop around her horns and tied to her tail, which by her movement drew her head rigid by her side. Naturally she fell. But I soon got her up and petted her and tried again to lead by the lead rope but got the same refusal. So I renewed the jerk upon the tail which of course repeated the former bolting. Gradually she got timid about the bolting and if she would not follow by a gentle pull upon the lead rope, just to jerk lightly upon her tail made her take the hint to come on. In a short time she would walk as fast as I could and was not any bother whatever after that."

Raise your Chicks on Pan-a-ce-a.

**Avoid**
***Gapes, Indigestion, Leg Weakness and Their Little Bowel Troubles.***

**Makes Chicks Healthy. The Best Safeguard Against Little Chick Ailments**

Your great problem is not how to hatch chicks, but to raise them after they are hatched. You would like to avoid the distressing losses of the first few weeks. Here's the best advice I can give you: Feed chicks Pan-a-ce-a to keep their general health good. Remember that disease takes the weak, not the strong and vigorous.

LISTEN TO THIS: There's a dealer in your town that will supply you with Dr. Hess Poultry Pan-a-ce-a, sufficient for your flock—it's to keep your chicks healthy; it's to prevent gapes and cure the gapey ones—it's to prevent and cure leg weakness—it's to prevent and cure indigestion—it's to regulate the bowel troubles. Guaranteed.

If you want early broilers and pullets that will develop into early winter layers, then feed Pan-a-ce-a. Packages, 25c, 50c and $1.00. 25-lb. pail, $3.00; 100-lb. drum, $11.00.

# Control Tomato Blight

Preventive measures that may be taken against western blight of tomatoes are described in a recent statement from the United States department of agriculture. The disease is distinguished by a marked upward and inward curling of the leaves, by a yellow color of stems and foliage, and by failure of the plants to produce fruit. It is believed to be due to a soil fungus which attacks and kills the feeding roots. This parasite can live on organic matter in the soil and is beyond the reach of sprays. Control, therefore, is difficult and has not as yet been fully accomplished. The following precautionary or preventive measures are advised:

Grow the tomato seedlings in soil in which tomatoes have shown no symptoms of the diesase or in soil sterilized by steam or boiling water.

There is some advantage also in setting out large plants, as they make considerable growth before the fungus invades their tissues, and therefore produce fruit.

It should also be helpful so to grow the plants that their roots will not be injured in transplanting. Although a parasitic fungus can invade uninjured tissues of its host plant, it usually enters more readily through wounds. If from the seedbed the plants are pricked off into paper pots, dirt bands, or paper drinking cups without bottoms, they can be grown to considerable size and transplanted to the field without removing the paper or injuring the roots. This is also a convenient and relatively economical method of doing the work.

One of the most effective means of controlling tomato blight is the use of other crops in rotation with tomatoes. As the parasite is unable to live on other crops, it is obliged to exist saprophytically; that is, living on dead or decaying organic matter, in competition with other fungi. This does not entirely eliminate it, but greatly reduces it in quantity. To prevent its accumulation, tomatoes should not be grown on the same land oftener than once in four or five years.

The breeding of blight-resistant varieties is the most hopeful means of controlling this disease. Some preliminary tests of resistance are now being made with a view of developing a resistant variety, but every grower should also make selections for himself. Select from a badly infested part of the field only the plants that are free from the disease, and plant the seed of the selections from the average disease resistance and yield and quality of fruit of their progeny. Do not mix selections nor save seed from any but the one that transmits the most desirable qualities to its progeny. When this is found multiply it and use it as seed for the field crop.

# How to Grow

From U. S. Dept. of Agriculture

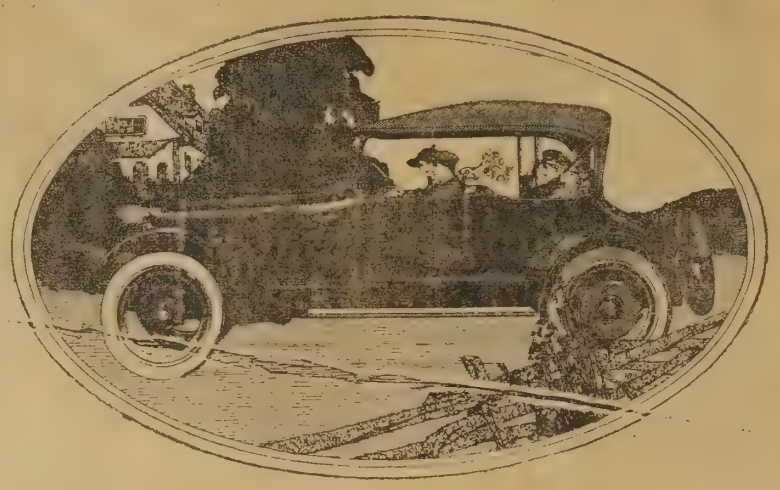
## Cauliflower.

The cauliflower requires a rich, moist soil, and thrives best under irrigation. It will not withstand as much frost as cabbage, but is very sensitive to hot weather. To make a success of the crop it is best to plant it about the time of the last killing frost in spring, using plants grown in the hotbed or window box. This gives it time to mature before hot weather comes. The rows need not be more than 2½ to 3 feet apart for horse cultivation, or 24 to 30 inches apart for hand work. The plants should be from 14 to 18 inches apart in rows. The culture is the same as for cabbage until the heads begin to develop, after which the leaves may be tied together over the heads to exclude the light and keep the heads white.

This crop is one of the aristocrats of the garden. If you succeed in growing high-grade cauliflower you will qualify as a good gardener.

## Kohl-rabi.

The edible portion of the kohl-rabi is the thickened stem. It is closely related to cabbage and cauliflower. It should be started in the hotbed or window box and set in the open ground about the time of the last frost. The method of planting and the cultivation is similar to that practiced for cabbage. It can be planted in the open at the same time. Early sowings are made and if thinned to 4 to 6 inches apart the plants will soon grow to edible size under favorable weather conditions. This plant should receive much more consideration than usually is given it. It is really a poor man's cauliflower.



## Okra.

Okra is a delicious vegetable that deserves a better acquaintance with the home garden than it now posses. Say "Chicken Gumbo Southern Style" to the initiated; that is all the argument needed in favor of growing this crop.

It thrives on any good soil, and the seeds should be sown in rows 4 to 5 feet apart after all danger of frost is past, or about the same time as tomato plants are set in the open. The plants should be thinned until they stand about 2 feet apart in the rows. The edible portion of the okra is the pods, which must be gathered while young. They are used in soups or as a stewed vegetable.

**CHANDLER SIX**

*Famous For Its Marvelous Motor*

**It Offers So Much More For So Much Less**

DON'T choose the Chandler just because the price is so fair.

Choose the Chandler because of its wonderful motor, now in its fifth year—constantly refined, never radically changed, and now approximating perfection in power, flexibility and endurance.

Choose the Chandler because of the extraordinary excellence which distinguishes the whole Chandler chassis.

Choose it for the beauty and comfort of its bodies; for the economy of its operation.

And meanwhile remember that the Chandler positively offers you value not found in other cars priced at hundreds of dollars more.

## HOLSTEINS SELL WELL.

### Record of Western Sales Made.

The most remarkable sale of registered dairy cattle and what is declared to be the highest average price ever received at a sale of cattle, of any breed in the Pacific northwest and possibly in the entire Coast region, must be recorded as the result of the Holstein sale at Tillamook, Ore., March 15.

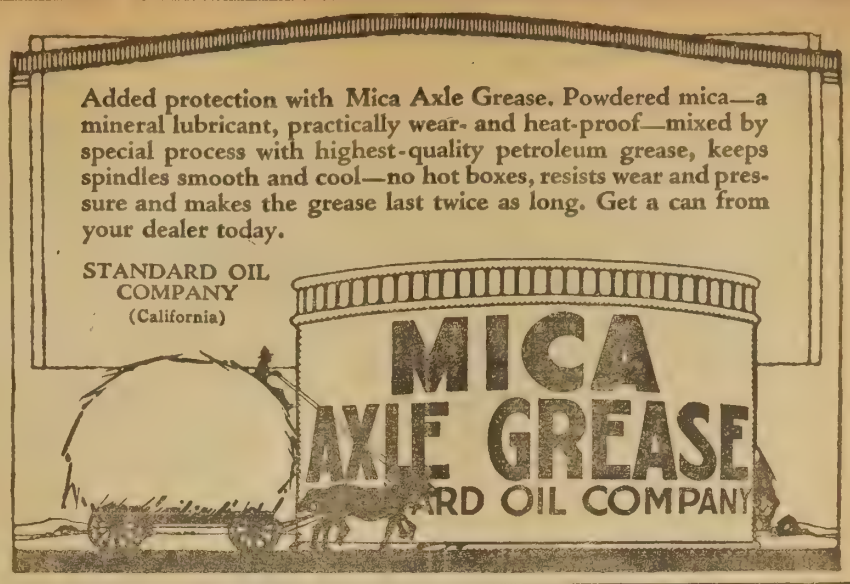
Just one carload—16 head of females—had been brought in. They were from the Maplecrest farm at Chadron, Ohio, and the Cleveland, Ohio, City farm, and were of some of the greatest producing blood lines of the breed, with world record blood in almost every pedigree, and the Tillamook Holstein men showed their appreciation by paying what they were worth.

Top price of $1100 was paid by F. R. Beals for Maplecrest High Lawn Korndyke, a bred heifer, with two world record sisters and a half sister with a world record. Mr. Beals took one other for $775. John Ebinger paid $825 for the great cow Nina DeVries Schuling and Fred Maurer $785 for Maplecrest Hengerveld Burton, a very promising 2-year-old.

Colonel J. W. Hughes, auctioneer, drew the high dollar on every animal sold. The total for the 16 head was $9180, or an average of $573.75. While not showing the rich breeding, the following is a complete list of animals, buyers and prices:

Maplecrest High Lawn Korndye, born September 15, 1916; sold to F. R. Beals, Tillamook, Ore. ....$1100
Nina De Vries Schuling, born May 21, 1908; John Ebinger, Tillamook, Ore. ..... 825
Maplecrest Hengerveld Burton, born October 29, 1915; Fred Maurer, Tillamook, Ore. ..... 785
Forest City Pontiac Segis Salome, born June 12, 1915; Fred Maurer ..... 375
Forest City Pontiac Dolores, born September 11, 1915; John Ebinger ..... 600
Forest City Pontiac Lucile, born June 25, 1915; H. A. Springer, Tillamook, Ore. ..... 495
Forest City DeKol Hilda, born May 2, 1915; Ben Neilson, Tillamook, Ore. ..... 465
Forest City Pontiac Angeline, born September 14, 1915; John Ebinger ..... 575
Forest City Pontiac Constance, born February 21, 1916; L. D. Smith, Tillamook, Ore. ..... 500
Maplecrest Bonostine Lady, born March 18, 1915; L. D. Smith.... 750
Maplecrest Nina Pontiac, born January 22, 1915; F. R. Beals.. 775
Forest City Pontiac Myra, born December 9, 1915; C. A. Saling, Beaver, Ore. ..... 350
Forest City Highlawn Ella, born October 23, 1916; Ben Neilsen.... 365
Forest City DeKol Ladoska, born March 1, 1916; W. Kuppenbender, Tillamook, Ore. ..... 320
Ruby Pietertje Hengerveld, born September 13, 1913; Rollie Watson, Tillamook, Ore. ..... 550
Forest City DeKol Camille, born January 23, 1916; Fred Maurer. 350

Besides the above, Rollie Watson sold a bull calf, born in Tillamook, for $200, and two greatly bred bulls had been purchased and brought with the females on consignment. These were Maplecrest Hartog DeKol 2d and Maplecrest Beauty DeKol, both sons of Friend Hengerveld DeKol Butter Boy. They had cost $1000 and $700, respectively, and are owned jointly by A. J. Rogers, B. A. Folks and J. Ebinger. They will be used on the herds of these gentlemen and allowed to serve other cows.



H. A.

## Preparing Garden Soil.

A simple test to determine when garden soil is ready for plowing or working is to take a handful of earth from the surface and close the fingers tightly on it. If the earth compacted in this way is dry enough for cultivation, it will fall apart when the hand is opened.

### Skim Milk.

Many people do not realize how nutritious skim milk really is.—Oregon Countryman.

In answering advertisements please mention this paper.

## 150 Scientific Recipes

Appreciating the universal demand for good food, properly and attractively prepared, The Washington Farmer offers its readers an exceptionally useful booklet containing 150 new recipes for canned goods by the highest scientific authorities.

Every housewife will be glad to have this book and preserve it for reference.

These recipes include a wide variety of sauces, soups, salad dressings, salads, desserts, etc., selected from the investigations of the Research Laboratory of the National Canners' Association. They will help any woman to keep herself posted on the latest scientific methods of preparing nutritious and appetizing foods.

You can secure them free by sending a 2-cent stamp for return postage, with your name and address, to

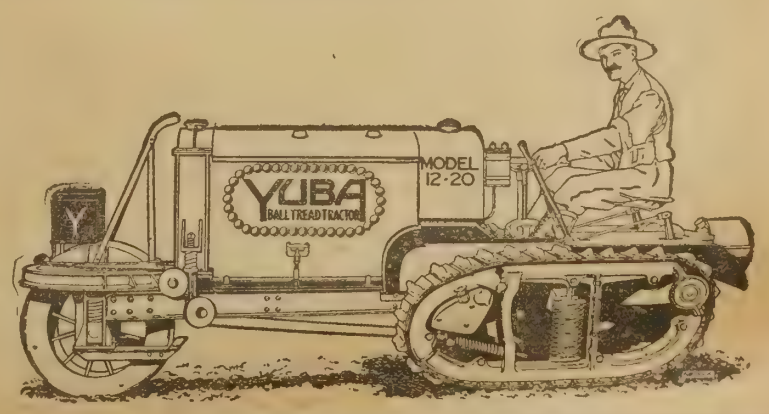
# The Balls don't care

whether the weight is on the top or either side—no difference at what angle the machine is running. The balls are round, they take the thrust from any direction. THRUST—(Dictionary) to push with sudden impulse from any direction, shove with more or less force; to force ahead; to push; to drive; to press; to urge; to impel; to attack; to crush.

The balls are held in place by the rigid steel frame and the shoe below. For side-hill work the **Yuba Ball Tread Tractor** is the most serviceable.

Ball-bearing machinery is the nearest approach to frictionless mechanism—and it is friction that wastes power.



As the tractor glides more easily over the rolling balls, the plows sink deeper; the acreage increases; the cost decreases—that means money saved for you.

# The Big Test Is On

## *Crisis in Battle Has Been Reached*

At this writing, after 10 days of furious fighting resulting in an advance by the Germans of from one to 37 miles and what appears now to have been a masterful, strategic retreat by the British, indications are that the great test of the conflict is on. British, French and American forces apparently have begun the promised counter blows designed not only to halt the German advance, but to regain the territory lost and possibly to push the enemy back to the starting point of the present fighting. What any day may bring forth is wholly problematical, but reports from the allied headquarters are optimistic in tone, and there appears little doubt that the crisis of the present encounter has been reached.

Statements from both the French and British headquarters have told of gains in practically every part of the battle line. Several points previously taken by the Germans have been retaken by the allies.

Especially interesting is the official statement that the formal offer made by General Pershing to General Foch of the entire American forces for the service of the allies wherever and whenever wanted had been readily accepted, and that "more than 100,000 Americans" had been ordered into the front line of the battle. The rules of censorship prevented the revealing of the exact number of Americans called into the battle, or the positions that they would take.

So closely have the reports from the battlefields been consored by the allied government that it is impossible for the person outside the inner circle of military affairs to know what the exact situation is. No intimation has yet been given of the probable casualties suffered by the allies and nothing but wild guesses as to the losses suffered by the Germans and Austrians. Reports from Berlin say that the German authorities claim to have captured 70,000 allied soldiers and 1100 guns.

Another matter that is not clear in the mind of the average person is whether or not the British retreat was forced upon them by the Germans or whether it was in accordance with a pre-arranged plan of the allied military leaders. A general belief that the allies were carrying out a program exactly as planned when it became evident that the Germans were going to launch the great drive appears to be borne out. This belief was given strength last week when Major General J. Franklin Bell of the United States army, who recently returned from Europe, told the senate military affairs committee that he had been given confidential information while in Europe concerning the plans of the British and French when the attack should be launched, and that this plan had been carried out exactly. If this is true it would appear that the allies had planned to make a considerable retreat before the strongest attack of the Germans, holding both flanks, however, with a view of making vigorous counter attacks on the flanks of the German advance movement after the Germans had been exhausted as much as possible.

As the situation existed at the time of the allied counter attack the German army in the north, probably not less than a million men strong, had made advances of from one to 37 miles. the British army being partially forced back and retreating partially for strategic reasons to these distances. The foremost point reached by the Germans was considerably farther into allied territory than it was when the allies made their famous offensive a year ago. This point is only a few miles east of the city of Amiens, a vital railroad center for the allies. This city is believed to have been the immediate object of the Germans' attack.

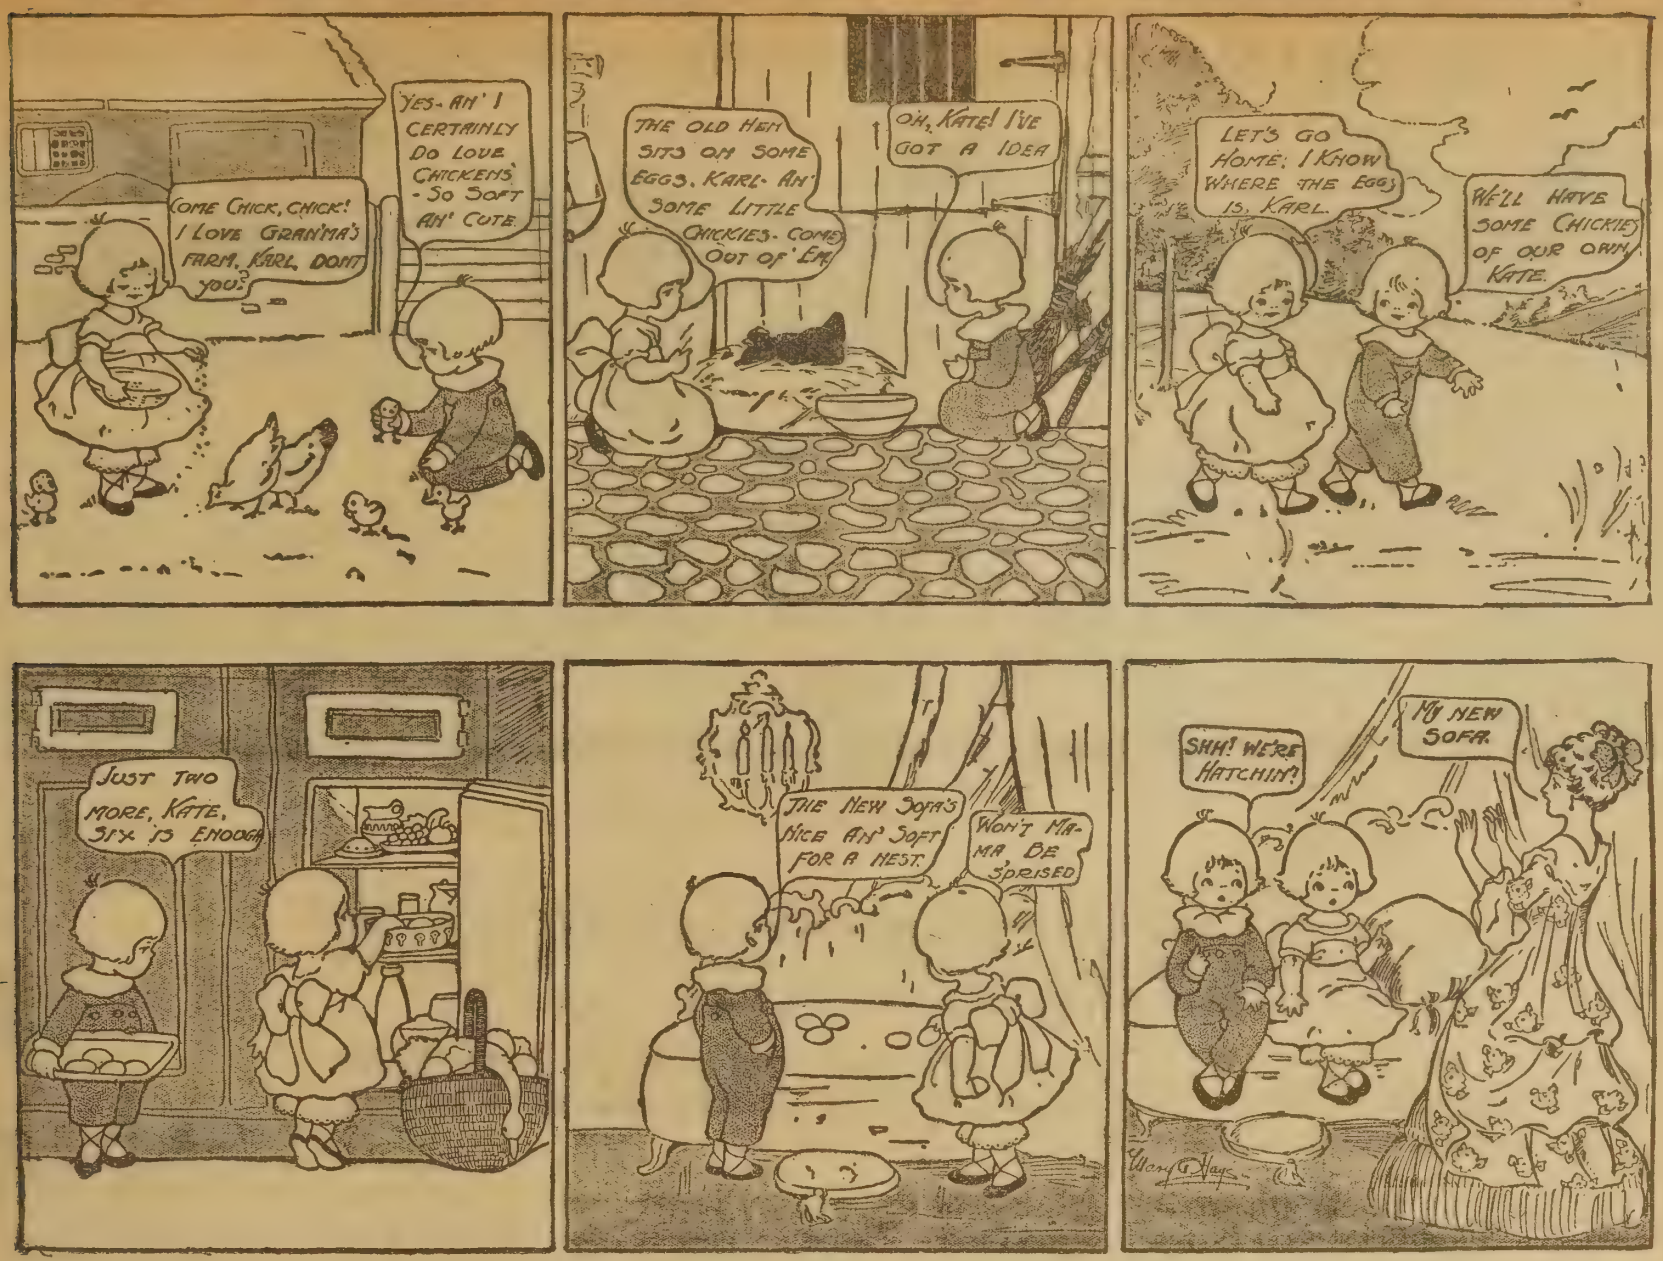
It will be seen from this that the German line, some 50 or 60 miles in length, had taken on a somewhat semi-circular shape with the allies strongest at both ends of the semi-circle. Intense interest has centered about the question of whether or not the allied plan would be the centering of vigorous counter attacks on these points of the semi-circle with a view to forcing the Germans back toward their base of supplies, which would have the effect of endangering the support of the enemy soldiers that had advanced farthest into the allied territory. Should such movement occur, it has been argued, and be successful it would necessarily require the retreat of the Germans from the territory which they have now captured in order to avoid the cutting off of a large part of their forces.

Up to this time the British army, the French army and the American army has each been controlled by its own military leaders, but in order to coordinate the efforts of all three allies, agreement has been reached whereby General Foch of the French army will assume the supreme command of all allied forces during the present campaign.

General Pershing, who is in charge of the American forces in France, appeared before General Foch last week and formally offered to him the services of all the American resources, both of men and material, now in France, or that can be placed in France in time to be of service. The reports of the entrance of the American soldiers into the battle indicates that the offer was accepted at once.

Reports from the Italian front indicate that very soon, probably before this will have reached the readers of this paper, the Austrian army will be massed for an attack on Italy second in enormity only to that launched on the British by the Germans in the north. Evidence indicates the presence of at least half a million men forming against the Italians, and a stupendous effort will probably be made at once with a view to putting Italy out of the war, as Russia and Rumania have already been put out of it. A cheering fact, however, in the situation is the official statement from allied headquarters that there have been no British or French soldiers withdrawn from the Italian front. This means one of two things: That the British and French defending the French frontier have not felt the need of their reenforcements from Italy, or that they have felt confident that a great drive would be made against the Italian front requiring the presence of British and French soldiers there. No information is available as to how many British and French men there are in Italy ready to help bear the shock of the Austrian attack.

Though most of the interest of the past two weeks has centered about the warfare on the western front, reports have continued to come from Russia showing that the Germans are still overrunning that country. Conflicting reports concerning the possession of Odessa, the Russian port on the Black sea, have been made, some claiming that the Russians have still maintained possession of it against the attacking Germans and others claiming that the port is in the possession of the German forces. Little has been heard recently of the movement of



(Continued on page twenty-three.)

## What Will We Do?

**The bread ration of the allied soldiers now facing the fearful onslaughts of German guns and gas has been reduced! Why? Because they haven't enough to go around! They haven't enough wheat to make their war bread out of! What are we going to do about it?**

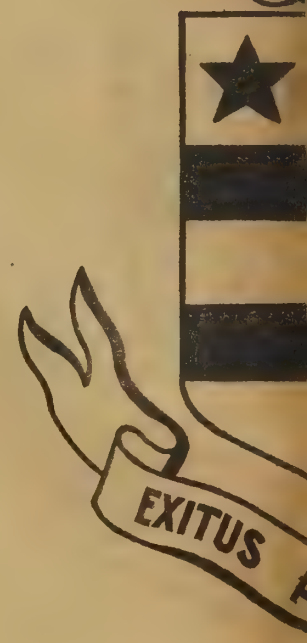
# MUGGSY PLAYS A MEAN APRIL-FOOL JOKE ON MULLIGAN

# Washington's

Across the glorious years of America's freedom stretches the hand of George Washington to lead and inspire the state that so proudly bears his name in the third loan for Liberty.

For George Washington's ancestral coat of arms, from which America's starry flag was born, is to be the state of Washington's emblem of honor.



In many places special honor days have been set apart for Washington's honor subscribers. Their badge of patriotism and glory will be George Washington's arms, entwined through all America's history with the founding of this land whence freedom sprang.

All those who come forward in the first inspiring days with the dollars that will make the world a safe place to live in may feel within themselves the well-springs of duty splendidly done.

They may see their names leading Washington's vanguard of patriotism; they may know that the share they performed in carrying the third Liberty loan to success will be recorded in the archives of the United States government at Washington, D. C.

Nor will this honor shield go indiscriminately to all who buy. The man who can and should buy $100,000 worth of Freedom's securities and who with smug complaisance would walk with the elect when he has bought only $1000 worth is a slacker. So is the man who could buy a $100 bond and takes only a $50 bond.

Your conscience must decide whether you are doing your full share. You are "on your honor."

# Shield of Honor

**'s Coat of Arms**

*o is "Judge the Action his to the Third Liberty riotism by America's*

With its minimum of $3,000,000,000 and its unlimited maximum, the Third Liberty Loan is to America's patriotism at once a challenge and an opportunity.

It is a challenge to oversubscription on such a scale as to show the German kaiser that one hundred million Americans are in this war to the last man, to the last dollar, to the last heart-beat.

It is an opportunity to supply the Government with so much money for the prosecution of the war that the next succeeding Liberty loan will be thrust far back in the future.

With a thrill of patriotic pride, in the spirit of that greatest of all Americans, let's make Washington lead the Nation. Let's make other states set their pace by Washington. Let's bring to the Evergreen State the great Honor Flag that the federal government promises the first commonwealth submitting its full quota in the Third Liberty Loan.

You are going to subscribe—every one is going to subscribe.

Step up! You'll find representatives of the Liberty Loan Committee in every bank, in every precinct of city and county—at every turn.

The Kaiser will soon know that America counter-attacks his last desperate lunge on the western front. Not only with her brave sons, but with so many billions of dollars that victory will quickly spread her shining wings upon the Stars and Stripes and the banners of our allies.

Subscribe the first day instead of the last!

# Succeeds With Alfalfa in Skagit County

## *Man Who Grew 75 Tons Corn Silage to Acre, Turns Attention to Alfalfa*

By PAUL E. TRIEM.

On the cover page of this issue is a photograph of Mr. Hall, referred to in this article, standing in his barn door beside some of his Skagit county corn.

John Hall of Skagit county admits that he can raise 75 tons of corn silage to the acre. He not only admits it, but he has proof in the form of an affidavit, the latter setting forth that on a certain date a reputable merchant of Mt. Vernon journeyed to the Hall farm and then and there measured a typical plot of ground in Mr. Hall's cornfield, cut the corn growing thereon and weighed it. The bulk of corn and cars produced was at the rate of 79 tons per acre. Mr. Hall has the affidavit framed, so that the next time a visiting agricultural lecturer tells a Mt. Vernon audience that no man can raise that much silage to the acre he will have something to offer in rebuttal. On a former occasion he was caught unprepared.

But last year, however, it was not corn about which the Mt. Vernon man proved successful in western Washington.

"As far as corn is concerned, I believe I have proved that we can raise more silage to the acre than can be raised in any other part of the world," he comments. "But that isn't all—we can raise alfalfa. Skagit county farmers don't have to buy their hay across the mountains—and when I tell you that I am able to back up my claim by the fact that I have been raising alfalfa in Skagit county for 10 years or longer. This patch," pointing to a nearby field, "is 10 years old. I cut it four times each year and get about eight tons of hay to the acre. When people try to tell you that alfalfa doesn't do well here on the sound, just remember this field. As a matter of fact, I have found alfalfa growing in a logging camp high up in the foothills, and have also seen a fine patch within 40 feet of salt water. It does as well here as anywhere in the world—once you get it started."

In getting alfalfa started, however, is just where the majority of growers have fallen down. Mr. Hall laughed when I told him so.

"Perhaps they are too easily discouraged," he commented. "I tried six or eight times before I could get it to grow on my farm. No, it isn't the soil—this 10-year-old patch is growing on heavy clay, although many people will tell you that it must be raised on a light, sandy soil. The water table is important—never try to raise alfalfa, in this part of the state at any rate, where water stands closer than four feet to the surface in the summer time. Apparently there is little danger of its drowning out during the winter—this field is covered at times during the rainy season. And I'll tell you one thing more, although a good many people will dispute it: alfalfa doesn't have to be inoculated to do well on Puget sound. None of my seed was treated."

Here are some of the things that must be done in order to secure a satisfactory stand, according to Mr. Hall:

"The most important point in the whole business," he says, "is to have your land thoroughly tilled and free from weeds. Weeds are the greatest menace to a new field of alfalfa, and unless the ground is pretty free from them to begin with there is hardly a chance of securing a good stand of hay. And the soil must be firm. After deep plowing and thorough harrowing the land should be firmed with a heavy roller.

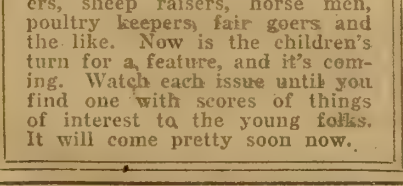
"And then sow your seed. Sow it without a nurse crop—many a farmer has failed because he violated this rule. If alfalfa is unable to compete with weeds during its early stages it stands to reason that it will not be able to make headway against a thickly sown nurse crop. Sow it by itself about May 15. You should get two cuttings the first year and four cuttings annually after that.

"The last point in connection with growing and harvesting alfalfa applies with equal force to the handling of all other hay crops in western Washington," Mr. Hall concluded. "Use hay caps! There isn't a country in the world where they are more needed. Of course they are pretty expensive just now, but you must remember at the same time that hay is high. And hay caps are one of the biggest helps in the world in securing prime quality hay."

## The Big Test Is On

(Continued from page eighteen.)

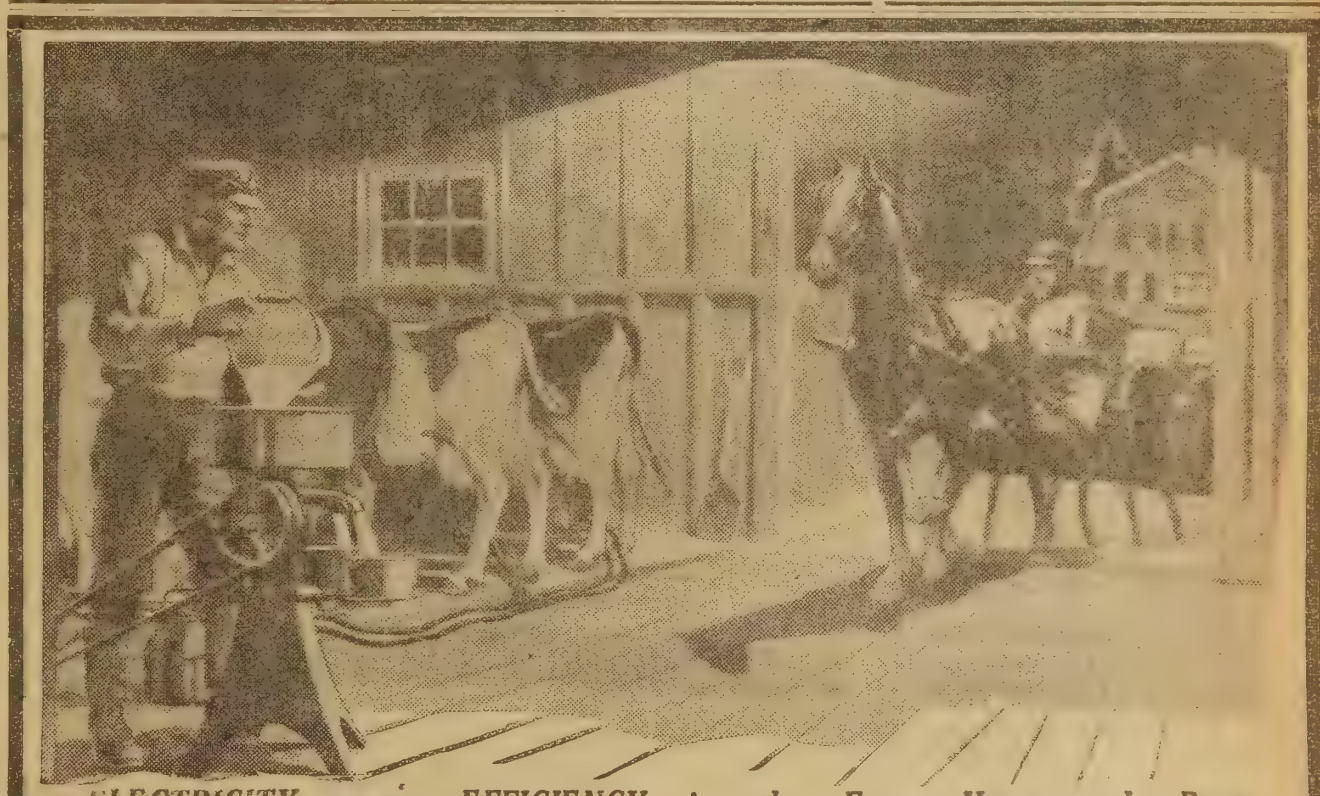
Japan in the far east, though it is understood that that country is standing in readiness to take active part in Siberia for the protection of stores of supplies against the Germans should such supplies be menaced by the invaders.



### More Meat; Less Wheat.

The national food administration has issued an order permitting the eating of meat including pork without restriction for the next 30 days beginning March 30. This order is issued, it is officially stated, because a large number of hogs are being placed on the market. This together with the large amount of beef and mutton available is about to have the effect of congesting railroad facilities and the meat eaters will be permitted to secure the benefit, though it may mean an additional hardship on the allies

The wheat situation, however, has not been relaxed, but has been made more rigid. The food administration has issued orders prohibiting the use of any wheat in any form in hotels and restaurants and it is reported that hotel and restaurant keepers are falling in line with the new regulation readily. This wheat order is issued because of the extreme shortage of wheat in Europe. Reports from the trenches say that bread rations of the soldiers have been reduced considerably owing to inability to secure enough wheat to tide them over until the harvesting of this year's crop. The food administration is therefore making strenuous efforts to conserve every available bushel of wheat in this country. Even if all the wheat now in storage in America were shipped to Europe it would be scarcely adequate to maintain the American, French, British and Italian armies on normal rations until the 1918 crop comes in.



### It's Coming.

# An Old Man's Prayer, and Other Things

By GRANVILLE LOWTHER.

I was walking recently in a section of Los Angeles, looking at the lawns, the flowers, the buildings, home gardens, and reading the signs, when I happened to see the sign "Old Fashioned Revival Now Going On."

Dr. Lowther.

I was curious to see what it was like; thought it would be a good place to rest and perhaps hear something of interest, so I went it. The tabernacle would seat perhaps 2000 people, and was about one-third full. I found a comfortable seat and began to take observations, not in a spirit of criticism, but in that feeling of respect for every one's religion that I would wish every one to feel toward mine.

The meeting was what it was advertised to be, "An old fashioned revival" of the emotional, vociferous, gesticulating, shouting type.

The feeling of the audience was approaching fever heat, when an old man, large, square-shouldered, and loud voiced, got down on his knees to pray. Gradually he warmed up to the occasion, and as he did so he gradually lost control of himself, and expressed his feelings without much reference to modern customs or literary style. After paying his respects to "the world, the flesh and the devil," he came to the war, and said:

"Oh Lord, bless our boys in the trenches in Europe, and bless every one who is called to fight for his country. Bless the folks at home, and help them to save and work and sacrifice for success, and not fool away their time and money for fashions, fandangoes, tomfooleries and folderols. Oh Lord, send us peace, but don't send it, Lord, on the kaiser's terms."

"Amen! Amen!" was shouted from every part of the room.

The old man continued: "Oh Lord, you know we can not trust anything the kaiser says, for he is such a devil of a liar. I mean, Lord, he lies like the devil. I mean, Lord, he is — — he is — — I mean——."

Here he paused again and when a voice from the audience said: "You had it right in the first place. Let 'er go at that."

"Amen!" came a response, "Amen!"

The old man then seemed to get possession of himself and said: 'Oh Lord, you know what I mean, even though I can't say it right. I don't mean to use bad language and I don't mean to swear, or anything of the kind, but I can't say what I feel about the kaiser without saying the worst things I know of. Good God, if it is wrong, forgive me. And now, Lord, bless my boy on the firing line in France. Bless all the boys over there, and send them back to their homes, their wives and their sweethearts as good and as pure as when they went away."

"Amen!" "God grant it!" "Heaven help," were some of the responses that came from all parts of the building.

As the old man arose from his knees, I went out, wiping the brine from my cheeks, and saying: "I probably would not agree with that old man's theology or demonology, but I would like to see in the United States a million revivals like that, going on in a million places all at the same time, and I would like to feel that a hundred million people in this country had the old man's faith, devotion to the cause of justice, and his large heart of love. What are hair-splitting theologies, philosophies or political prejudices in the presence of a world where whole nations are bleeding in their efforts to give birth to a new age of justice to all races of mankind?"

### WHAT HAS THE RAIN DONE FOR YOU?

"Oh Lord, I wish it would quit raining," said a grand opera singer from New York, as she sat at a hotel in Los Angeles, where she was spending the winter, and she yawned and stretched and looked disgusted with everything about her. "We can't get out, and we can't see anything, but just look out of the window and watch the gloom."

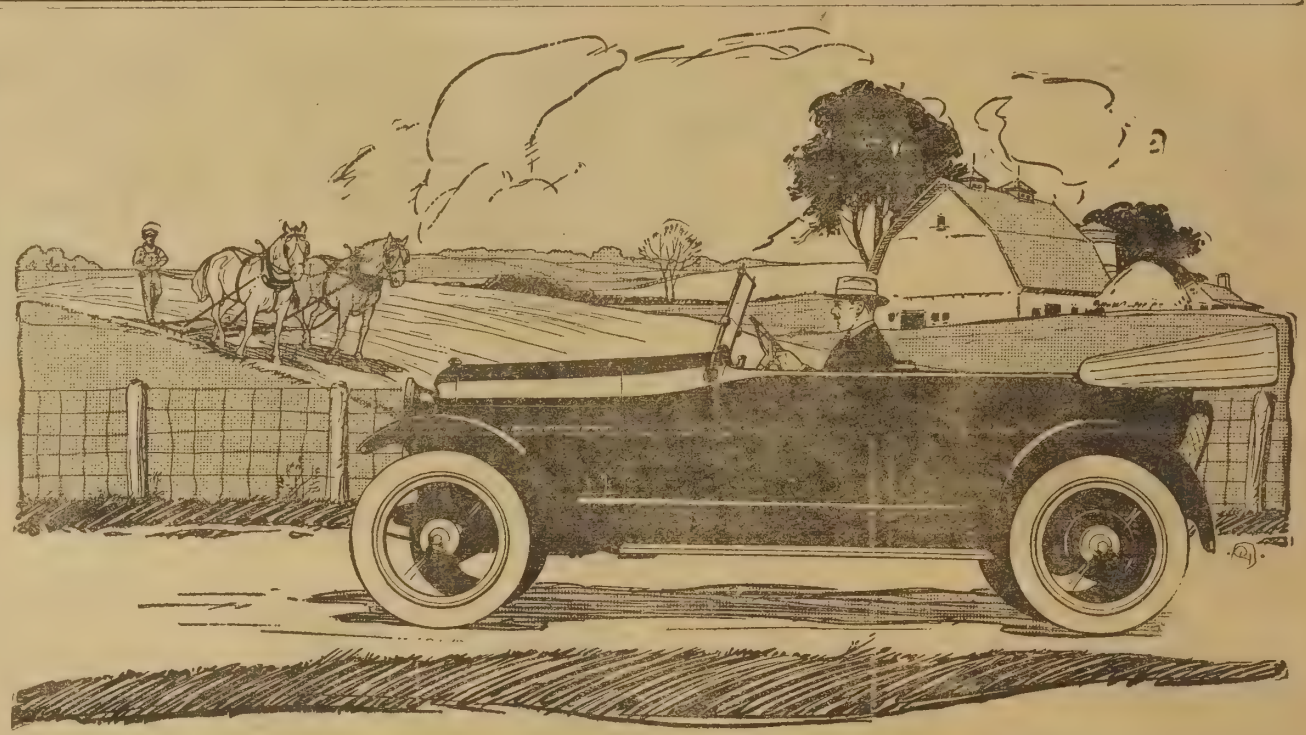
"Why," I said, "the farmers are happy over this rain, and some of them are praising whatever fates there are and some of them are praising a kind Providence and want another week or two of it. By the way, did you read in the papers that out here in a little town the people met to pray for rain?"

"No," she said, "and I don't think it would do any good, either."

"Perhaps not," I said, "but if I wanted to convince them that prayer had no effect on the weather I would try to select a case where they had not succeeded in getting what they prayed for."

"Well, said she, "if I had been praying I would have asked for clear weather, so there you are, and the prayers would have been in conflict."

"Yes, I said, "but the farmers beat you to it. They wanted rain for their wheat, potatoes, beans, oranges, lemons alfalfa, and a thousand and one things which the farmers grow, and without which they could not live, and without which the rest of us would get pretty hungry. They are calling this their 'billion dollar' rain and you ought to see the broad smiles on their faces as they look forward to the crops they will get. Do you remember one of our poets said:



'It is not raining rain to me, it is raining daffodils,
In every dimpled drop I see wild flowers on the hills.'"?

"Well, these poets are an impractical class. They profess to see and enjoy things no one else ever could see, and things that may not exist. I don't want to gamble in futures about flowers that are not sprouted yet. I would rather have something now, something certain."

"When you trained your voice," I said, "for the stage, it seems to me you were gambling in futures. When you married your husband, if he's like they say most men are, you took another chance that was about as uncertain as when you trained your voice. When you brought your child into the world, there was an element of risk in it that you could not estimate, and now that you are educating your daughter, it is in the hope that something good will result from the efforts you are making and the money you are expending. In the northwest were we grow those big apples you see in large dishes in the dining room, we look for the rains and the melting snows to fill the reservoirs in the mountains, so that we will have water for irrigation, and it is just as easy for the orchardist to think of the beautiful fruit the rain will produce and that he will harvest next fall, as it is to think of the mud on his boots. Let it rain, I see great, big red apples, and I enjoy them."

### Eyes of Fish.

The eyes of a South American fish are divided into two parts, the upper being adapted for vision in the air, the lower for use under water.

PAIGE

*The Most Beautiful Car in America*

# Time Is Money

How much time do you waste in "hitching up" when you drive to town in the buggy? How long does it take you to get there—and back? What is your time actually worth in dollars and cents?

If you answer these questions correctly, you are bound to arrive at two very startling conclusions. First, you can't *afford* to get along without a motor car. Second, you are paying for a car *now*—whether you own it or not.

Time, please remember, is money. A productive hour is worth just so many bushels of wheat, so many barrels of flour, so many loaves of bread. A wasted hour is worth precisely nothing.

Because this is true, you can't afford to use your horses for a task that the motor car will perform ten times more efficiently.

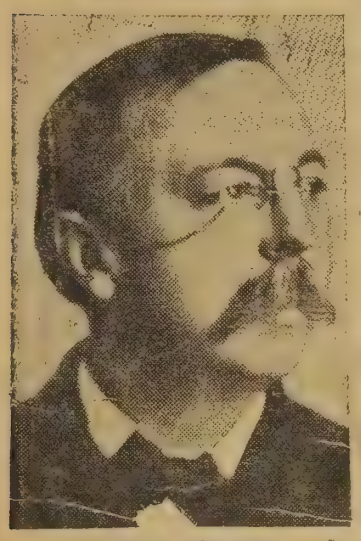
because this is true, you can't afford to lose the profits that would *pay* for a car—and show a handsome surplus to boot.

You actually need a car; there can be no question about that. But you also need a *good* car—a reliable car—a comfortable car.

In the opinion of ourselves and more than 50,000 satisfied owners, you need just such a car as the Paige.

PAIGE-DETROIT MOTOR CAR COMPANY, 247 McKINSTRY AVENUE, DETROIT

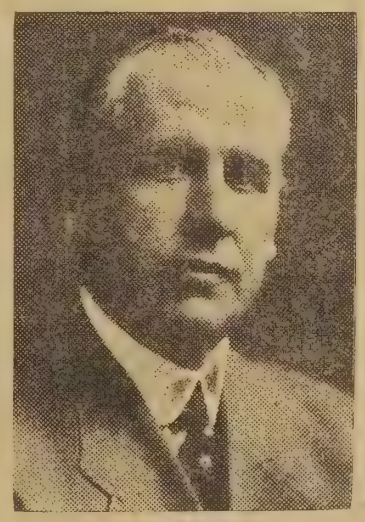
# All the World's a Stage, and All the Men and Women Merely Players



## They Work for Us at National Capital

Miles Poindexter.

Wesley Jones.



G. E. Chamberlain.

Charles McNary.

W. E. Borah.

John Nugent.

Here are the six senators from Washington, Oregon and Idaho, now attending the session of congress at Washington, D. C.:

**Washington.**

Miles Poindexter, republican, was elected senator from Washington for the term 1911-17. Poindexter was born at Memphis in 1868 and was educated at Fancy Hill academy, Va., and the Washington and Lee university, receiving his degree of bachelor of laws at the latter institution in 1891. The same year he removed to Walla Walla, Wash., and in 1892 was elected prosecuting attorney of Walla Walla county. He located in Spokane in 1897 and became prosecuting attorney for the county in 1898, serving till 1904, when he became judge of the superior court, serving till 1908.

Wesley Livsey Jones, republican, Washington's other senator was born in N. Bethany, Ill., in 1863. In 1889 he moved to the territory of Washington, just before its admission as a state. He became senator in 1909, being reelected in 1915, his term to expire in 1921.

**Oregon.**

George Earl Chamberlain, democrat, was elected to the United States senate from Oregon for the term 1909-15, and reelected for the 1915-21 term. Chamberlain was born in Nachez, Miss., in 1854. He came to Oregon in 1876 and was elected member of the Oregon house of representatives in 1880. He was governor of Oregon before going to the senate.

Senator Charles Lindsay McNary, republican, was born on a farm eight miles from Salem in 1874. He attended public school and worked his way through Stanford university. On May 20, 1917, the governor of Oregon appointed him to the United States senate to fill the unexpired term of Senator Harry Lane, deceased. Senator McNary is the owner of a fruit farm near Salem, and has always taken a great interest in the industry.

**Idaho.**

William Edgar Borah, republican senator from Idaho since 1907, was born at Fairfield, Ill., in 1865. He was educated at the Southern Illinois academy at Enfield, and the University of Kansas. He was admitted to the bar and practiced law at Lyons, Kan., for two years, coming to Boise in 1891.

John F. Nugent of Boise was appointed by Governor Moses Alexander to succeed the late Senator Brady. He will serve until a successor is elected at the coming November election. Nugent was born at LaGrande, Ore., in 1869.

# Alfalfa Seed Growing

To the Editor: Can you tell me whether alfalfa seed can be grown with as little precipitation as wheat? Would like to raise 300 to 500 acres of alfalfa seed, either first or second crop. Will it live and bear one crop of seed on 20 inches of rainfall? Am very anxious to know facts about alfalfa seed growing in Washington, Idaho and Oregon.
W. H. KAUFMAN.
Bellingham, Wash.

Following is the answer to the above question by E. G. Schafer, professor of farm crops, State College of Washington:

There is a comparatively small amount of alfalfa seed grown in the state of Washington. Often alfalfa makes a good growth, blossoms profusely, yet the blossoms fall before maturing seed without any known reason. The best crops of alfalfa are grown under irrigation when the water is withdrawn early enough so that the soil becomes fairly dry, just about the blossoming period. Thus we find that it uses its strength for producing seed rather than producing vegetative growth. Where alfalfa is planted thick on dry land very often there is difficulty in getting seed. In many cases the first crop will not set seed, and there is not enough moisture to grow a second crop for seed. This seems to be particularly true in the Palouse country. It would seem as though 20 inches of rainfall would probably be the minimum under which it would be safe to grow alfalfa for seed without irrigation.

It occurs to me, however, that the grower would be running a very great risk in taking a chance on 300 or 400 acres of alfalfa for seed, before he has experimented on a smaller scale and proved his ability to produce alfalfa on a smaller scale. There is a good deal to learn about alfalfa-growing with seed production, and unless one is very well informed on the subject, the entering upon the project in so large a way might result in disaster.

# More Live Stock

A recent estimate of the number of live stock in the principal countries of the world, compiled by the International Institute of Agriculture, shows that in spite of the war there are about 47,000,000 more animals now than before the war. Of this number, cattle show an increase of about 18,000,000, sheep about 15,000,000; swine about 11,000,000 and horses 1,000,000. European Russia has the highest gains to her credit. Paraguay shows large increase in cattle, and the United States makes a marked gain in swine.

The figures for the United States are as follows:

| | Jan. 1, 1918. | 1914. |
|---|---|---|
| Cattle | 66,830,000 | 56,592,000 |
| Sheep | 48,900,000 | 49,719,000 |
| Swine | 71,847,000 | 58,933,000 |
| Horses | 21,563,000 | 20,962,000 |

## At the Editor's Desk.

One of the most interesting booklets of recent publication is the War Cyclopedia, issued byt hen ational committee on public information. This cyclopedia, issued by the national compages, is sold by the government printing office at Washington, D. C., for 25 cents and contains exhaustive information concerning the war. One special feature which it contains is a chronology of the events of the war from the murder of Archduke Francis Ferdinand in June, 1914, to the taking over of the railroads of this country by the government the last of December, 1917.

Among the garden catalogs received are those of the Inland Seed company and the Spokane Seed company, both of Spokane, Wash.

Three interesting pamphlets in the nature of personal experiences, written by Jean Henry Le Roy, dealing with the experiences of a colored inmate of a state penitentiary before, during and after incarceration, are obtainable from the Volunteer Industrial store, W26 Main avenue, Spokane, Wash. The titles of the pamphlets, which come at 20 cents postpaid, indicate their subject matter: "Letters You Should Read." "After Thirty-Two Years of Bitter Remorse" and "Fourteen Years Behind the Walls of Prison."

## Must Save Eggs, Too.

Mrs. Herbert Hoover joined her husband in the work of food conservation recently when she headed a commitee of prominent women of the nation in urging upon the people of this country an eggless Easter. The idea of the committee was that the custom of eating eggs on Easter has resulted in the eating of many more than are needed, which amounts to a waste of hundreds of thousands of eggs. The committee said that conservative estimates indicated that an eggless Easter would save the country 60,000,000 eggs.

## COW MAKES RECORD.
### Six Years Old; Has Seven Calves.

Olive V. 2d, now owned by D. A. Gunning of Reardan, Wash., who purchased the animal last week from Alex. Morrison of Valley, Wash., at the latter's dispersal sale of milking Shorthorns at Spokane, has a record worthy of note.

She is only 6 years old, yet she has raised or is raising seven calves of her own. The first time she freshened she had only one calf, the second, third and fourth time, two each. Her youngest twins are now only a few days old, going with her to Mr. Gunning's farm when he bought the mother for $625.

## Sheep Dipping Probable.

The prevalence of ticky sheep may compel the first dipping of all the animals in the state this year, according to Veterinarian Lytle. Under the law the dip is to be an annual affair, but may be suspended any year by proclamation.

### Control Near Beer.

Near beer and temperance drinks coming within the designation of malt liquor are included in the president's proclamation limiting brewers of beer to 70 per cent of the amounts of grains and other food materials that were used last year.

# Girl to Do Farm Work

Miss Margaret Weeks of Carter, Mont., is a student of domestic science in the State College of Washington and her brother went to France, she made ready to operate a tractor on the 700-acre wheat farm of her father in Montana. Her parents are Mr. and Mrs. J. H. Weeks, formerly of Pullman. Writing in to the state college Mr. and Mrs. Weeks said:

"The papers state that there will be an effort made soon to mobilize women for farm work. Not much prospect here for farm help. Help to run tractors we must have if we get in the 700 acres of wheat I planned for. Our son Vance is in the service in France and that leaves us without help. Our tractor was idle quite a while last fall after Verne left. We will have a tractor for Margaret, which is easy to handle."

Miss Weeks was one of over 100 students, mainly men from all parts of the state, who took the short course in the operation of gas and steam tractors recently given by the department of elementary science of the State College of Washington.

# Scabby Potatoes

To the Editor: Will potatoes that have been planted in soil that has been manured this winter have a tendency to be scabby? If soil becomes infested with scab is there any way to overcome this, or will potatoes raised on this ground always be scabby?

E. G. ROGERS.

Opportunity, Wash.

The above question was referred to F. E. Heald, department of plant pathology, Washington State college, and is answered as follows:

It is not good policy to plant potatoes on ground that has been manured during the winter. Such a procedure has a tendency to increase the amount of scab in case there is any of the organism in the soil. You will note from reading bulletin 106, of the Washington state experiment station, that scab may be either present in the soil, or carried into the field by the use of infected manure, or by the planting of diseased seed stock without treatment. If ground has become thoroughly infested with scab there is no way that you can treat it so as to produce an absolutely clean crop, but the severity of the disease can be lessened to a considerable extent by certain treatment. The most feasible thing, under present conditions, is the application of sulphur. This may be broadcasted and worked into the surface soil just before planting at the rate of 350 to 900 pounds per acre. At the rate of 500 pounds or over per acre the yield may be reduced somewhat, but the scab will be more reduced than the yield of potatoes. There is no seed treatment that you can employ that will prevent dry rot in potatoes. Corrosive sublimate, which we are recommending for the treatment of seed stock, lessens the amount of scab, blackleg, or the "rhizoctonia" disease, but has no effect on dry rot. For more complete information on potato diseases I refer you to bulletin 106, which, if not already in your possession, can be secured by writing to the state college at Pullman, Wash.

## A Size for Every Engine and Motor

Piston rings prevent escape of gas and power. They must fit exactly or there is compression leakage, excessive carbon, and power loss. The scientific construction of

McQUAY-NORRIS LEAK-PROOF PISTON RINGS

assures equal pressure all around the cylinder walls. They are made in all sizes to fit every model and type of engine, automobile, tractor, etc.—every size accurately gauged to fit the particular model of motor.

Your local dealer or garage has—or can get—our data book of piston ring sizes of practically every engine and motor made. This will tell exactly what rings you need. Complete size assortments are carried by more than 300 jobbing and supply houses all over the country from which you can be quickly supplied. Over 2,000 unusual sizes and oversizes—all widths and diameters—are kept constantly on hand at the factory ready for prompt shipment anywhere.

McQUAY-NORRIS Superoyl RINGS

A special ring for engines that pump oil. Used in top groove only of pistons to control excess oil, with McQuay-Norris LEAK-PROOF Rings in lower grooves to insure maximum compression and fuel economy.

## The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana, Now the State of Missouri.

By LEWIS B. MILLER

Copyright, 1914, 1915, by Lewis B. Miller.

### SUMMARY OF PRECEDING CHAPTERS.

In September, 1811, two young men who lived near St. Louis, Ben Armstrong and Jodo Henderson, taking with them their two dogs and donkey Spunky, started on an all-winter's hunt in what was at that time unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination — a salt spring close to the river Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their saltmaking and hunting. After exciting experiences with a buffalo herd and with a bear in a cave, they find their first fresh sign of Indians — moccasin tracks in the snow. And then, in the dead of night, a scouting party visited them preparatory to an attack. The attack followed soon, and would have resulted in the capture of the boys by the savages had not a violent earthquake frightened them away.

### CHAPTER X.

#### In the Hands of the Osages.

When at last the earth tremors had ceased altogether Ben and Jodo mixed some clay mortar and rebuilt both their fireplace and chimney. They also replaced the mud daubing that had been knocked out of the log walls by the Osages or shaken out by the earthquake. After that their trapping and salt making and hunting and meat curing went on as before the red men had come to trouble them. But morning and night, and sometimes oftener, they climbed a hill to look for Indian camp fires.

They talked much of the earthquake, and speculated not a little as to the amount of damage it might have done, particularly in and around St. Louis. But there were few stone and brick buildings in that trading post. All their friends lived in wooden houses—most of them in log houses—and there was no reason to worry on their account.

Being very busy, the trappers found that time passed rapidly. Not caring to lose themselves, they were keeping count both of the day of the week and of the month. Each night, just before going to bed, they marked the record. The earthquake had occurred on the 16th of December. Soon the year 1811 ended and the year 1812 began.

The weather had by this time become sharply bitingly cold; and it continued cold. This was an advantage. It improved the quality of the furs the trappers were taking. Nature provides an animal with good fur only when it is needed. Their trapping was unusually successful, and bale after bale of excellent pelts was drawn up and hid away in the little cave in the face of the cliff. The partners also stored their salt up there, and the meat they were curing. Having little doubt that the Osages would come back sooner or later, the trappers had prudently resolved to keep everything of value in a place of safety till they were ready to start home.

Day after day and week after week slipped by—busy days and busy weeks. Between attending to their traps, keeping their salt-pots boiling, and watching for Indians and hunting, the partners were busy from dawn till dusk every week-day. And even on Sunday there was work enough that must be done to make the day pass rapidly. And so January slipped by, and part of February.

Then, one morning, Jodo, who had been up to the mountain-top to look for smoke, came hurrying back to report that there was a camp-fire only two or three miles down the river. Ben now hurried up to inspect the smoke for himself. On returning he said:

"Not much doubt about it, I guess. The Osages are in the country again. And as they know where our cabin is, they're likely to show up here at any minute. We can't safely count on anything else."

"And what can we do?"

"One of two things. Either we must get ready and fight them when they come, or we shall have to pack up and travel. We being in the Indians' country, I'm strongly of the opinion that we'd better travel."

"Travel toward home?"

"No. We're not ready for that yet. I think we'd better cache nearly all our things, then take Spunky and the dogs and set out for a little trapping-trip. We can make a circuit of a hundred and fifty or two hundred miles toward the southwest or south. Our salt-cooking will have to rest while we're absent. But maybe we can take more furs to make up for that. By the time we get back here, the Osages will probably be gone, and then we can go about our affairs in peace."

"But what will they do to our log-camp if we leave it?"

"No telling. At the worst they can only do what they're likely to do if we stay in it—burn it down. But we can either build another one when we come back or camp under the cliff. The weather may be comparatively mild by that time. But when they see we've abandoned it, the chances are they won't go to the trouble to stick fire to it."

Jodo agreed with his partner that a trapping-trip was the wisest thing for them under the circumstances.

"And the sooner we start the better," he declared.

So they hung their spliced rope, the lower part with sticks in it, down the face of the cliff, and across the mouth of the little cave. Then Jodo climbed it, and was soon drawing up their big pots and all their other things, except their blankets and weapons and traps. It would not do to start out with more because they hoped to have Spunky loaded down with pelts by the time they got back. All their cooking-vessels and tools they hid away, and also what remained of their flour and meal. During the two weeks they expected to be absent, they would have to rely wholly on their rifles for food, and on broiling-sticks to get it cooked. They would not even take their tent.

When everything had been put away up in the cliff-cave, Jodo came down. While he was making his round to the top of the cliff, to drop the rope, Ben caught Spunky, girded the pack-saddle on him, and tied their roll of blankets on the saddle. Then away they started up the creek, one leading and the other driving. And they threw their deadfalls and gathered up their traps as they went. When the last trap was on the pack-saddle, they changed their course and set out toward the southwest.

All the rest of the day they traveled steadily, not halting for dinner, and not kindling any camp-fire till after dark. The weather was clear and cold. They hid their camp in a deep gorge, and slept by a roaring fire. Next morning they were up early, and had eaten their breakfast and got on the march by daylight. They traveled till the middle of the afternoon, then camped on a creek. Being now at least forty miles from the Osage hunting-camp, they felt reasonably safe, and decided to do some trapping before traveling farther. So they spent the rest of the day setting their traps along the creek, and in killing a deer to feed themselves and their dogs.

Early next morning they started out to visit their traps, leaving Bose and Tinker to guard the camp, and Spunky lariated to a bush close by. Somewhat to the trappers' surprise, their traps had caught nothing worth mentioning. After making the round they decided to move a few miles down the creek before trying again. So they came back to camp crossing the creek on the ice, and intending to eat their dinner, and then gather up their traps on the way down.

"Spunky's on hand all right, but where are Bose and Tinker?" remarked Jodo, as they approached their smoldering camp-fire.

Suddenly, tomahawk in hand, a savage appeared before them.

"Not far off, I'd guess. Some kind of game may have passed by and they ran after it. They'll be coming back pretty soon."

The remains of the deer were hanging to a limb. After opening the live coals, the trappers got their broiling-sticks, cut some good-sized slices of venison, and sat down to broil and eat their dinner. While they were still eating, and wondering why the dogs failed to return, an Indian warriar suddenly emerged from some brush in front of them!

Both sprang up and turned to grab their rifles, which had been lying on the grass close by. The rifles were there; but instead of lying on the grass, they were in the hands of two warriors.

"White mans, we got you now!" exclaimed one of the Indians, a big fellow, and rather fat.

The trappers had their pistols; but with all those weapons confronting them, resistance was out of the question. There was nothing but to make the best of the matter. So Ben answered, pleasantly:

"Yes, I see you've got us. And now the question is: What are you going to do with us:

The big Indian flourished his bow. "You run, us shoot!"

"Yes. But what will you do with us if we don't run?"

"You wait! You see what!"

More than a dozen Indians now gathered round the prsioners, removing all weapons from their belts. Ben repeated his question.

"Maybe so chop head off," answered the big warrior.

"Chop our heads off! That's no way to treat people. You'd better let us go. We've never done you any harm."

"What white mans do at Osages' country?"

"Is this the Osages' country?"

"Yes: All Osages' country. Always Osages' country. What you do here?"

"We're trapping—trapping and hunting."

"You nebber hunt Osages' country nudder time—no!"

"Oh well, if you don't want us to hunt here, of course we'd better stop it and go home." Ben looked around, as if thinking of starting home at once.

"You no go home now. You go by us. You no go by us, you go dead!"

Ben tried to talk with the big warrior further; but the Osages seized both captives and tied their hands together behind them.

Soon the warriors were busy broiling meat, some of it cut from the white men's own deer, and eating their dinner. When the meal was ended, they began to make preparations to travel.

All the Indians were traveling afoot. Each was carrying a small pack, with a blanket or a buffalo-robe in it. But when the time came to start, the Indian who spoke English, and who seemed to be the head of the band, was seen gazing at Spunky, as if he thought riding a mule would be easier than walking. So Spunky was brought up, and while some of the warriors were girting the pack-saddle on him, the fat Indian said to Ben:

"Me Snappy Turtle." He struck himself on the breast. "Heap big Osage chief!"

"Well, I'm glad to know you, Snapping Turtle. Hope we may get to be better friends than we are now. I'm Ben Armstrong, and he's Jodo Henderson." He inclined his head toward his fellow-captive.

"You Strong Arm, him Dodo," repeated the chief, as if to fix the names in his memory. "Maybe so not be Strong Arm when head chop off."

The pack-saddle was on by this time, and had been girted fast. To the surprise of his owners, the little mule had stood perfectly still. But there was a look in his eyes which meant that he was not too well pleased with his surroundings.

Presently Snapping Turtle walked up to the mule and climped awkwardly into the pack-saddle. From his manner he did not appear to be much of a rider. For a few moments Spunky gave no sign. Then his ears fell flat, and he suddenly almost stood on his head in an angry, determined effort to rid himself of this burden. And the first effort was successful, the fat chief plunging over the mule's head promptly and easily.

The Indian fell on his hands and head, turned a somersault, and uttered a loud grunt as he struck the ground. The prisoners wanted to laugh aloud, but only smiled.

Up bounded the chief, red in the face and very angry. He made no attempt to mount again, but seemed to be urging some of his followers to mount. One after another declined, but finally a warrior consented to ride Spunky.

He, too, climbed into the pack-saddle awkwardly, but without trouble from Spunky. However, his troubles began immediately afterwards, when the mule's hinder parts got in swift motion. The warrior clutched the saddle desperately, and for a minute or two held himself in place. At last he was thrown so high that his hold broke, and then he, too, flew over the mule's head.

At this a few of the savages laughed, but the others stood solemnly. Snapping Turtle was one of those who laughed.

Three other Indians tried to ride Spunky, one after another; and three other Indians shot over Spunky's head with more or less promptness. Finally, unable to induce others to make the attempt, the chief turned to Ben:

"Strong Arm ride mule!"

Ben grinned and shook his head. "Not today, Snapping Turtle! That mule's got mischief in him just now. We don't commonly ride him anyhow. He just carries things for us."

"What for Strong Arm no ride mule?"

"He's too little for me to ride much. He's just a pack-mule."

The chief said nothing more, but he seemed to understand. Now the warriors made a bundle of all their buffalo robes and blankets and put them on the pack-saddle. Ben told the chief how to strap them fast. Spunky took another kicking-spell, but the pack remained in place. Then the party started.

But the mule proved so stubborn with his new managers that they had hard work to get him along. When he stopped they struck him, and every time they struck he kicked out furiously. Finally Ben, to save the mule brutal treatment, turned and held out his hands to Snapping Turtle as he said:

"Untie us, and we'll get him along for you."

The chief shook his head. "No untie. Strong Arm run away."

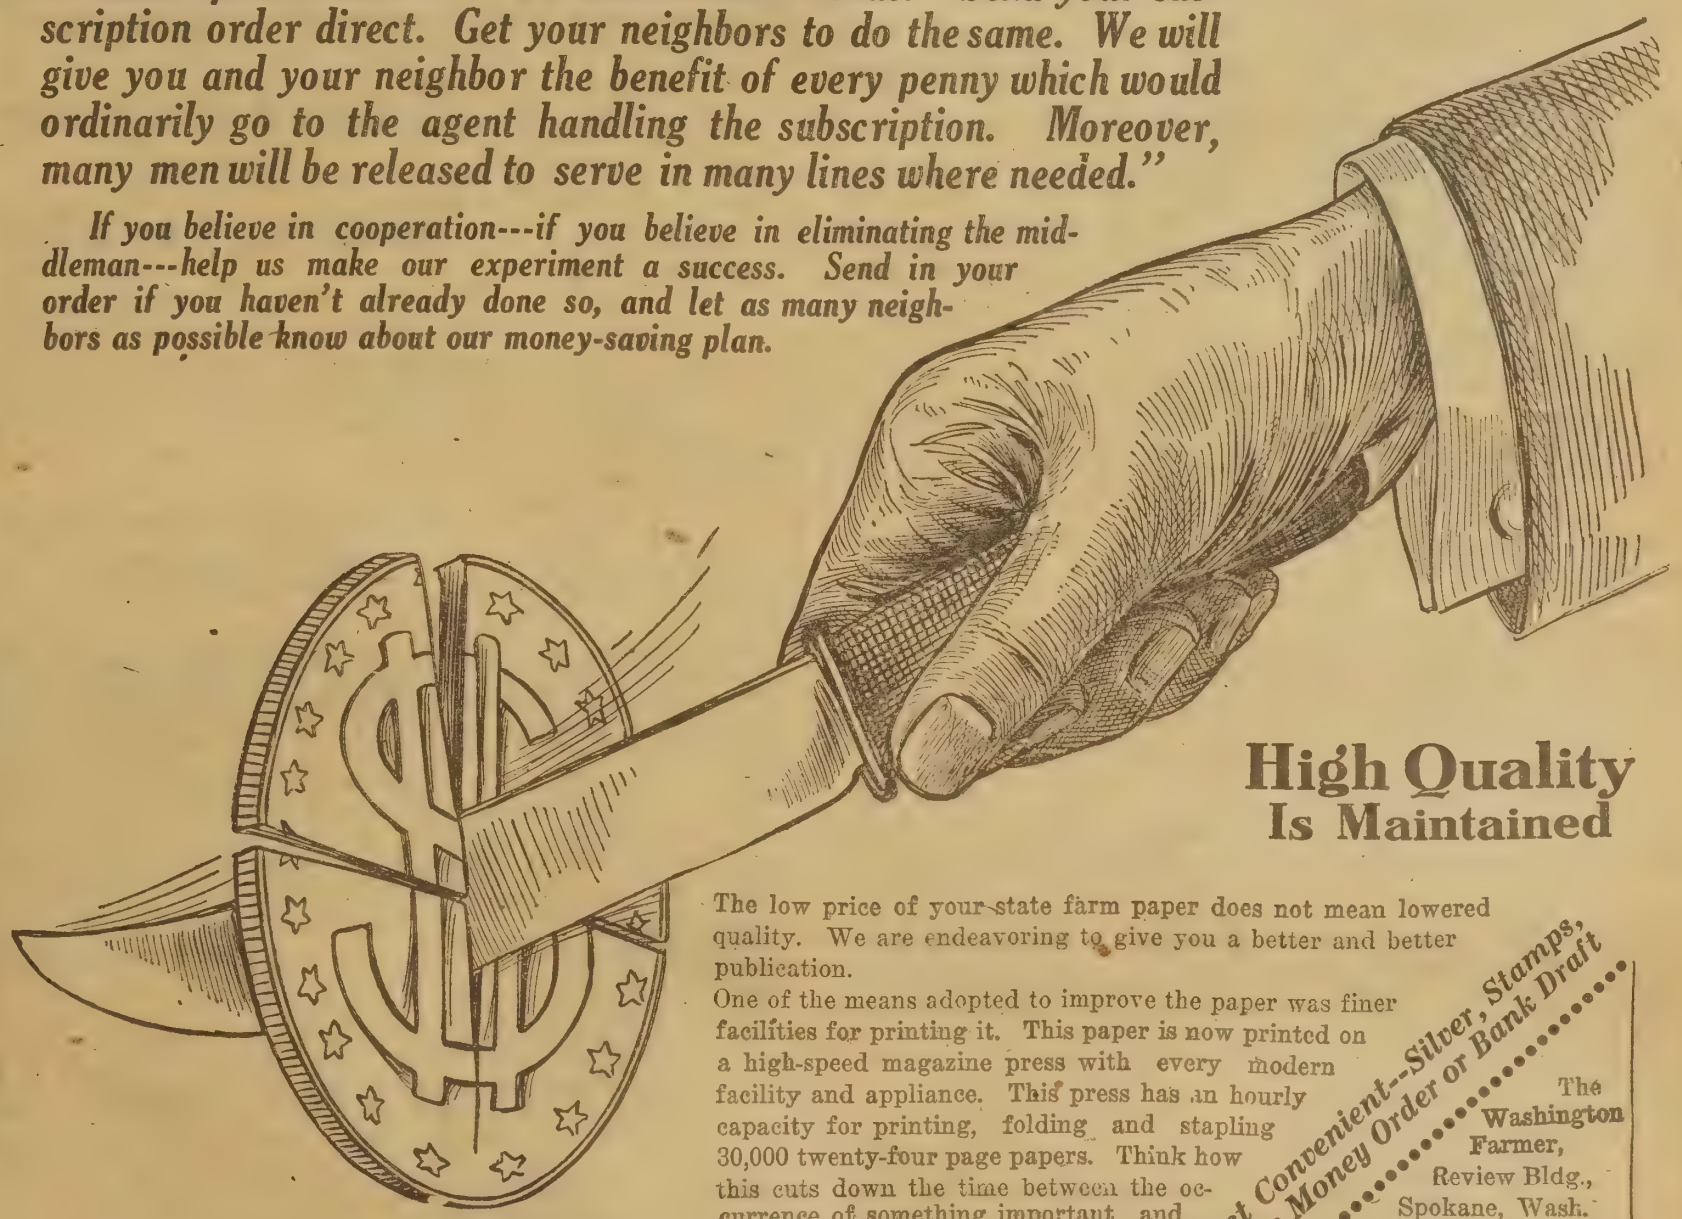
"Run away!" exclaimed Ben. "Can't fourteen Osages keep two white men from running away without tying their hands?"

This seemed to impress the big chief. He talked with his warriors, and soon the hands of the captives were unbound. Now Jodo led the mule, while Ben got a switch and drove him along. With his accustomed handlers Spunky gave little trouble.

The whole party marched toward the northwest.

"What do you s'pose has become of Bose and Tinker?" Jodo found an opportunity to say to Ben. "Did the Osages kill 'em?"

"I hardly think so, or they'd have been lying somewhere near our camp. Though, of course, the Indians



(Continued on page thirty.)

# COST OF READING MATTER CUT

*"Cooperation" has been a rallying cry with farmers and farmers' organizations for many years. How to eliminate the middlemen has been the question.*

*Your state farm paper put the principle of cooperation to a test when the announcement was printed that an effort would be made to dispense with the middleman, or agent, in subscription matters. We said to our friends: "Send your subscription order direct. Get your neighbors to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription. Moreover, many men will be released to serve in many lines where needed."*

*If you believe in cooperation---if you believe in eliminating the middleman---help us make our experiment a success. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.*

## High Quality Is Maintained

The low price of your state farm paper does not mean lowered quality. We are endeavoring to give you a better and better publication.

One of the means adopted to improve the paper was finer facilities for printing it. This paper is now printed on a high-speed magazine press with every modern facility and appliance. This press has an hourly capacity for printing, folding and stapling 30,000 twenty-four page papers. Think how this cuts down the time between the occurrence of something important and the hour you hear about it in your state farm paper!

Tell your neighbors how much you like your state farm paper, and at what a low price they can secure it.

THE SELF-OILING WINDMILL

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load. We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

(Continued from page twenty-eight.)

might have carried them away and concealed them. My guess is that when the Osages came the dogs were prudent enough to take to flight. They may be wondering around somewhere in search of us; or they may have taken the back trail to the cabin under the cliff. At any rate, we're pretty sure to find them when we return to headquarters."

"And when do you think we can get back there?"

"That I don't know. Depends upon how long it takes us to give these fellows the slip. We'll make it, though, sooner or later."

"We don't want to escape without our guns and some ammunition."

"No. Better captivity with the Osages than wandering unarmed in this wilderness."

By this time the Indians seemed to be noticing their talking, and the captives said no more. But a few minutes later Ben found an opportunity to add:

"I'm going to get on friendly terms with Snapping Turtle if I possibly can. The fact that he speaks English is pretty good evidence that he has been associated with white people, and has been friendly with them."

When the party camped for night, the prisoners were allowed some of the venison the Indians had killed, and were given sticks to broil it on. Snapping Turtle seemed to be the only Osage that spoke or understood English. From him Ben learned that the party were marching toward the Osage village, which was somewhere on the Osage river, a few days' travel to the northwest. As to what would be done with the captives when they arrived there, the only answer Ben could get from the chief was: "Maybe so chop head off."

That was not very encouraging, and the trapper did not press the matter further.

When sleep-time came, the captives were given their own blankets to lie on. But their hands were tied together, and their feet tied together. The Indians started to tie the captives' hands behind them; but Ben protested to Snapping Turtle, and their hands were tied in front. They slept together, near the camp-fire, and in the midst of sleeping warriors. Also, there was one warrior that did not go to sleep, but stayed up on guard.

"Not much chance to escape tonight, I guess," Ben whispered to Jodo, after they had lain down. "In fact, I doubt if they'll give us any chance on this trip. These red fellows don't seem to have much to do but to guard us."

Jodo was both tired and discouraged. "Do you s'pose we'll ever see home again, Benoni?"

"Yes, we will—that we will! We'll find some way to get free. Maybe I can persuade old Snapping Turtle, as he calls himself, to turn us loose. At any rate, it won't do any harm to try."

Next morning the party was up early any traveling again. And so they kept on for a few days. Again and again they crossed good-sized streams, on the ice. But at last, late one afternoon, they found themselves on the bank of a river, which the captives surmised was the Osage. And a further march of three or four miles brought them, at dusk, to their destination—the Osage village.

(To be continued.)

## Why Motor Cars Quit.

There are two reasons why some cars and trucks have "quit" or, in other words, worn out and have been discarded. They are **use** and **abuse**, the principal one being named last.

Very few motor vehicles wear out through intelligent, careful use—most of them become useless through abuse and carelessness on the part of the driver or owner. We venture to say over 60 per cent of car troubles can be traced directly to abuse.

An owner should know his car, and, knowing it and what is necessary to do to keep it in condition, he should care for it intelligently and drive with at least a moderate amount of care.

### Spontaneous Combustion.

Spontaneous combustion is caused, chemists tell us, by floating particles of coal dust or other inflammable material jostling and clashing against one another until the friction they set up raises their temperature to the ignition point. If this explanation is correct, it would appear as if such fires could be prevented by perfect ventilation. Such, however, is not the case, for ventilation may actually help to bring about fire by spontaneous combustion. Air facilitates oxidation, really fanning the warm dust into a blaze. Keep air damp and quiet to avoid fire.

The Nation Needs Food - You Need Money The Kirstin Furnishes Both

Pull Stumps Free

Send for This Wonderful One-Man Puller

and pull your stumps 30 days FREE. One man alone handles and operates. No horses needed—no extra help required—wonderful leverage principle gives man a giant's power to pull big stumps, little stumps, rotten and low-cut stumps, tap-rooted stumps and brush.

**The Veteran:** "Yes, by all means, learn about our past wars in your school books; but don't fail to read the history of the present world war in The Twice-a-Week Spokesman-Review."

# Twice-a-Week Spokesman-Review 1 Year and The Washington Farmer 3 Years, Both for $1.00

## War News

The present war is the greatest, most far reaching and stupendous conflict in the history of the world. You and your family will want to keep in touch with every move in this tremendous drama of the nations. You can do so at low cost by accepting our clubbing offer. The Twice-a-Week Spokesman-Review presents a reliable, condensed review of all current events.

Being a member of the Associated Press, the important happenings are flashed to it without delay from every capital and village, and from every far flung battle line, where the history of our day is being recorded. It pays particular attention to the war news of special interest to the people of the Pacific Northwest. It reports the progress of the draft; and from its pages you will learn who among your friends and neighbors have joined the colors.

If any of the young men you know are killed, injured, or taken prisoner on any of the battle fronts, you will be given the information in The Twice-a-Week Spokesman-Review as soon as it is issued by the military officials.

In addition to this intensely interesting and important war news, the Twice-a-Week brings you an accurate summary of local, state, national and international events. It is published every Tuesday and Friday. Purchased in any other way it costs $1 per year. Certainly an offer so liberal should appeal to every one of our readers. Every issue contains important news. If you have not acted already send in your dollar now.

*In case you are already a subscriber, your subscription will be extended if payment is sent now.*

If your neighbors don't know about this offer please tell them what they can get for $1.00.

## The Washington Farmer

SPOKANE, WASHINGTON

# Women Must Awaken

## Get to Work for Boys at Front

Dear Sisters of the Family Circle: I felt moved to write you a heart-to-heart letter this time about our country, and what we as women can do to help in this war. I will put it stronger and say, what we as women must do if we win this war.

I wonder how many women in the United States there are who have calmly thought over the outcome for Americans in the event of our not winning the war? I heard a speaker talking on the task of interest that is manifest among some people in the different lines of what we call war work. She said: "It is quite time we realize that there is danger of losing the war. It is time we direct our efforts toward our boys in khaki instead of being absorbed in our own affairs to the exclusion of all other interests." I think these remarks were well timed. It is time we waked up; there is too much dreaming. All yesterday afternoon I sat at a power sewing machine and made bandages. I shall be doing it again tomorrow and every alternate day for heaven only knows how long. Faithful women come day after day and week after week, and too frequently, in all the Red Cross headquarters, the same women are seen working day after day, and this is true all over the country. I am sure, in very many instances, the explanation of this lack of interest is due to the fact that a full realization of what we, as a country, have before us has not yet sunk into the minds of very many, both men and women.

It would seem that every woman who has enjoyed the safety and freedom of our country would be enthusiastic in her efforts to defend our government against the alien who would seize our land and make ironclad laws, backed up by guns, telling us what we shall do and what we shall not do.

When the boys are willing to leave behind all who are dear to them and go out prepared to die, should we, here at home, do less than feed and clothe them?

This is peculiarly a woman's war. Never before in any war was there so many ways where women can help. It is time, then, that we enlarge our horizon to reach beyond the petty duties under our own roofs and within our own households. It is the gigantic task of us Americans of putting in the field such an army as the world has never seen, one which must be strong and clean and confident of success. We must let the boys know we are behind them down to the last ditch. It is this knowledge which sends them "over the top" with a smile on their lips and takes half the sting out of suffering and death.

Oh, women! If I can but make you see the vital importance of every one of us doing everything possible to help, if I can stimulate you to post yourselves as to how your helpfulness can become most effective, I am confident results will follow. Every woman can influence at least one more, and it is like an endless chain.

In another letter I will give some definite plans for effective war work which none but us women can carry out and where you will see the matter is squarely up to us and us alone. It is time we realized our responsibility.

ALICE BARLAND.

## "Air Post" Letters 25 Cents.

Plans for the first air mail route between Washington, Philadelphia and New York contemplate the use of machines capable of carrying 300 pounds of mail 200 miles without a stop. For air letters a special postage rate will be charged, possibly not exceeding 25 cents an ounce.

# SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## Gossip, Though "Innocent," a Danger to Mind and Body

Dr. Hirshberg.

"Thy friend has a friend and thy friend's friend has a friend, so be discreet." Gossip, report, scandal, "they say" and "I heard" or "Is it true?" are all tale-makers and tale-bearers, commonly part and parcel of the same evil. The mischief they brew and spread can seldom be caught up with.

When nearly everybody says a thing, it is probably not true. Psychologically, what most people quickly agree upon is accepted as a self-evident truth. But pschology, logic, mathematics and reason all prove that there are but very few self-evident facts. Almost all assertions must not be agreed upon until they are searched, analyzed, tested and examined according to actual circumstances and not accepted by word of mouth, repetition and head-shaking rumors. Gossip often makes much unhappiness and ill health in neighborhoods and communities.

Curiously enough, this "malicious small talk" is generally not spread by enemies or envious persons. Sometimes it owes its origin to greed, jealousy, rivalry or quarrels, but, as a rule it is taken up and scattered far and wide by neutral of indifferent individuals with that normal human nature which twirls an unpleasant or far from usual circumstance upon the lips as a delectable morsel.

Since the makeup of a perfectly sane man's intellect arises from the realities of the physical world, which are interwoven in him through his muscles, feelings, sights, sounds and other perceptive structures, the immeasurable amount of ill health, injury and destruction done to many persons by slander, scandal and gossip can better be judged than calculated, as the following case shows:

### A Case in Point.

Mr. ——, a gentleman attended recently by several distinguished physicians, was in good health and happy until he applied not long ago to the government for a position to help win the war. He had only a motive of self-sacrifice and heroic endeavor, and would have received neither financial compensation nor any honor glory as a reward.

His name when presented happened to be heard by a person who did not know him personally, but who had heard once from some other person in Gath or on the streets of Askelon that he did not live with his wife. This gossip at once blurted out the mischievous lie with the result that the applicant's name was held up without his knowledge. He had already begun to do some of the work of the expected appointment, for no thought of rejection ever entered his head.

The scandal-monger was not acquainted with him, but some one less neutral, if not envious, did see him at his patriotic, unselfish work, and asked him, half-curiously, if he had been appointed.

"Not yet," said Mr. ——, "but I expect the appointment any day now."

The evil which lurks in many a less successful person's heart made the interlocutor write a vigorous protest at once to a friend of his in authority, saying that "Mr. —— was unfit for such sacrificial duties, and that he should be expelled because of his imposture."

Meanwhile the innocent victim of these abominable untruths, with his wife, was hard at work, devoting all his time and much of his money to patriotic service, with never an inkling of the gossip that was going on about him.

### The Wreck Complete.

Finally, after he investigated the delay of his eternally postponed appointment, he was told, to his chagrin and surprise, that he would not be acceptable because he was separated from his wife, was a drunkard, liar and an impostor.

## Always Make a Suds.

Always make a suds in which to wash woolen materials, says Leta M. Meacham in the Oregon Countryman. Never rub the soap directly onto the material. The soap, too, should be a neutral soap, free from alkili, as alkilis have a corroding effect on wool fibers. Blankets should be washed by what is known as the "sousing" process, that is, rubbed gently between the hands and agitated in the suds. Blankets should never be rubbed hard as on a board.

### Rye Still Is a Substitute.

The period during which rye flour may be used as a wheat flour substitute in victory bread has been extended to March 31, as in some sections of the country other substitutes are not yet available.

# Win the War by Preparing the Land, Sowing the Seeds and Producing Bigger Crops

**Work in Joint Effort the Soil of the U. S. and Canada—Cooperative Farming in Man Power Necessary to Win the Battle for Liberty.**

The Food Controllers of United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat can be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rest the burden of supply.

**Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist.**

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operations.

**Canada's Wheat Production Last Year Was 225,000,000 Bushels; the Demand From Canada Alone, for 1918, is 400,000,000 Bushels.**

To secure this she must have assistance. She has the land, but needs the men. The Government of the United States wants every man who can effectively help to do farm work this year. It wants the land in the United States developed first, of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there. Apply to our Employment service, and we will tell where you can best serve the combined interests.

**Western Canada's help will be required not later than April 5. Wages to competent help, $50 a month and up, board and lodging.**

Those who respond to this appeal will get a warm welcome, good wages, good board, and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had, apply to

**U. S. Employment Service, Dept. of Labor**

Seattle, Tacoma, Bellingham or North Yakima, Wash.

Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.

**What Cousin May Does All Day.**

Dear Aunt Nellie: This is the fourth time I have written to the Children's Corner. My subject is what I do all day. I get up in the morning, dress, wash my face and hands. Then I set the table and eat my breakfast. Then I wash dishes. My mama combs my hair and I get my clean dress on, wash my teeth, get my books and dinner, put on my coat and hat and start for school. I get in the school wagon and ride to school. I take off my coat and hat and go into the room and put my books in my desk. Then I go out and play till the bell rings and then the teacher reads a story to us. Next we study our reading, then our spelling and arithmetic. Then we eat our dinner and after that we study our reading again and then have language and geography. Now school is out and we get our wraps and get in the school wagon and go home. I get in my wood and set the table. After I eat my supper and wipe the dishes I study my lessons and go to bed. I wrote to Edna Smith, who was the same age, in the same grade and lived on the same number of acres as I do. I haven't heard from her yet. We are going to try to start a Junior Red Cross. I have one brother that is in the war and one brother that is home. The one who is home wrote to you and got a prize, so I am doing my best. We have 23 pupils in our room who joined the Red Cross. I live on a farm and I am glad of it. Some of the cousins think that the Corner is growing little. But I don't. This time I had one whole page.—May Millam, Menlo, Wash.

**Brother's on His Way to France.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope it will not be the last. I will describe myself. I am 14 years old, about five feet two inches tall and weigh 80 some pounds. I have light hair and blue eyes. I have a pug nose and some freckles, so now you and the cousins know how homely I am. Is there any cousins the same age as I am? I go to the South Bay school. It is a consolidated school. There are over 100 pupils going to the school. We have two school buses. One bus makes two trips after the children every morning and the other one makes one. There are three rooms in our school. Each room has three grades. I have had two teachers this year and so has my sister, who is in the sixth grade. I have five sisters and five brothers and one brother who is dead. My sisters' names are Ruby, Emma, Mabel, Abbie and Edna, and my brothers' names are Ernest, Elmer, Frank, Norman and Donald. My brother Ernest is on his way to France. He got the mumps or he would have been on the boat that was sunk just a little while ago. He has been sick ever since he went over to the eastern states. I live on a 10-acre farm. We have two cows, one pig and about 30 chickens. Our school is closed now for a week on account of Liberty measles. I missed two weeks of school on that account.—Flora B. Reed, R. F. D. 3, Box 72, Olympia, Wash.

**Shirley Austin a New Cousin.**

Dear Aunt Nellie: This is my first letter to you. As I was reading the letters this afternoon I thought I would write to the Children's Corner. I am 13 years old and in the seventh grade. I will be 14 the 11th of May. My teacher's name is Miss Lena Gollehur. She is away now and we are not having school. For pets I have a dog named Keno, and a pony named Jack. I like to ride horseback. Sometimes I go over to the postoffice. Quite often I get some groceries and some mail. Sometimes I get our neighbor's. We have had hardly any winter yet. There is a little snow on the ground now. It rained today and it is quite slushy. I took music lessons on the organ for about three years. I play for the children to sing at school. I have only one sister and no brothers. My sister's name is Hazel. My cousins live not very far from us and there is a big family of them, three girls and three boys. Their names are Edith, Viola, Eva, Loren, Wallace and Clarence. We have 320 acres of land. We have two places. I think we will move over to the other place in the spring. We have six horses and one cow and one calf. Our horses' names are Jack, Jeff, Owen, Molly, Spike and Toodles. Our cows' names are Spot and Lulu. Have I a twin? If I have, write me.—Shirley Austin, Gloyd, Wash.

**Lilies and Bluebells Are Coming.**

Dear Aunt Nellie: This is my first letter to the Corner. My father takes the Farmer. We get the Farmer every Saturday. I read the letters every time it comes. Have I a twin? If I have I wish they would write to me. I am 10 years old. My birthday is November 24. I am in the fourth grade at school. My teacher's name is Miss Brown. I like her very much. We have 28 pupils in my room. I have a sister and a brother. My sister's name is Hildur and my brother's name is Rudolph. We have three horses, nine milking cows, five heifers and two bulls. We have 25 pigs, three dogs and one cat. Her name is Pussy. I am going to learn to knit. I can crochet a little bit. I live on a 155-acre farm. May I join the Corner? We used to have a mill by our house, but they tore it down. There is a creek by our house. We have lots of fun in the summer time going swimming. We have two big orchards. One is a pear orchard, the other is an apple orchard. The lilies and bluebells will be coming out pretty soon. I think I had better stop for this time.—Elve Hillstrom, box 10, R. F. D. 1, Oakville, Wash.

**Derla Makes Her Own Clothes.**

Dear Aunt Nellie: It has been a long time since I have written to the Corner. I like to read the letters very much. We have three horses, one cow, two dogs, five cats and several calves. The horses' names are Topsy, Snip and John. The dogs are Locus and June. I have four cats and my sister has the other. Their names are Gray, Spot, Hornet, Yellowjacket and Dandy. We call the cow Sanfred. I have one sister and one brother. My sister's name is Frances and my brother's name is Dea. I live on a 160-acre farm eight miles from Othello. I go one-fourth of a mile to school and am in the eighth grade. My teacher's name is Miss Headrick. Our school is the Deadman school. We have five pupils. There are four girls and one boy. I can tat and crochet. I just finished a crocheted yoke and am making a tatted one. I make my own clothes, too. I got a wrist watch for Christmas. I will be 14 July 8, and I have blue eyes and brown hair. Have I a twin?—Derla McManamon, Othello, Wash.

**Helps Mother in Many Ways.**

Dear Aunt Nelie: May I join the Children's Corner? This is the first time I have written to the Corner. I am 9 years old and in the third grade. I like to go to school. I have one playmate. Her name is Anna Wraspier. I have one sister and one brother. My brother's name is Lee and my sister's name is Violet. Lee is four years old and Violet is 2 years old. Violet will be 3 years old August 17. Lee will be 5 years old June 6. We live on a farm three miles from town. But we move to town so I can go to school. I wash dishes for mama and many other things in the house. Last year I raised some flowers and some cabbage, some beans, beets, radishes and two sacks of potatoes and sold them and got $4. I had one dollar and so putting them together I had $5. I put it in the bank at Spokane. I feed the chickens every night. We have 35 chickens. One is mine. I call her Golden Neck. My papa has eight horses, but one horse is mine. Her name is Nellie. We have two calves. One is mama's and the other is mine. I will be 10 years old in September. Our horses' names are Snip, Babe, Billy, Nellie, Prince, Fannie and Molly. My calf's name is Spot. Mama's calf's name is Jersey. It has been raining today.—Agnes McMurray, Irby, Wash.

**Reads the Letters First Thing.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope to see my letter in print. I am 10 years old. My birthday is December 29. Have I a twin? I have one dog and one cat. The dog's name is Tip. We have about 150 chickens and six horses, three cows and two calves. The calves' names are Buttercup and Torpedo. The cows' names are Boss, Teddy and Louise. I go to school every day. I am in the fifth and sixth grades. My brother Russell is in the fourth grade. There are 22 in our school. There are seven in first grade and six in second grade. Our teacher's name is Miss Georgia Land. She has been down here three times to stay all night. I walk one mile to school, whenever it is bad, papa takes us. We take the Farmer. Just as soon as I get home from school I read the boys' and girls' letters. We also take the American Thresherman. It has good letters in it, too, but there are not many from LaCrosse, Wash. I am going to write to it some day.—Elizabeth Schoeff, box 58, R. F. D., LaCrosse, Wash.

**Baby Looks Cute in His Jumper.**

Dear Aunt Nellie: May I join the Children's Corner We live on a 10-acre place one-half mile from Meyers Falls. I have twin sisters, 13 years old. I have one brother 7 months old and he has six teeth. My sisters' names are Maebelle and Clarebelle. I am 7 years old and in the third grade. My birthday is June 10. Has any one a birthday the same day as mine? Please write to me if you have. Brother is very cute in his jumper and his name is Chester Allen. I have a kitty and his name is Jimmy. We have a cow named Dinah and 30 White Leghorn chickens. The Colville river is back of our place. We have a fine swimming place. I have learned how to knit.—Alta Lucile Winnifred Gerking, age 7, Meyers Falls, Wash.

**Goes After the Cows on Horseback.**

Dear Aunt Nellie: This is my first time to write to you. I am 9 years old. I will be 10 April 1. I go to school and am in the fifth grade. My teacher's name is Miss Bessie Long. I have half a mile to go to school. There are 18 pupils in school. I like school fine. I expect to finish the fifth grade this year. There are seven girls and 11 boys in school. We have about five dozen chickens, two cows and two calves, one pig and about 14 head of horses. I have no brothers or sisters. I have a little pup. His name is Spot. I have two cats. Their names are Mamie and Negro. I like to ride horseback after the cows. I live on a 320-acre farm.—Bertha Gash, Mold, Wash.

**Taught Mother How to Knit.**

Dear Aunt Nellie: This is the first time I have written to the Childrens' Corner. As I glanced over the paper I saw the name of a girl who is almost my twin. I am 11 years old and my birthday is January 12. The twin I have reference to is Margaret Binning. We live three miles north of Medical Lake and three miles south of Deep Creek. We go to Deep Creek school. I like my teacher. Her name is Miss Florence Woodward. There are three rooms in our school. I am in the fifth grade. My biggest brother is in the 10th grade and the smallest brother is in the third grade. I have a girl chum at school. Her name is Marjorie Bly. I see her mostly every day and just about every Sunday. I would be glad to see my letter in print. Also if one of the cousin girls would write to me. In February 15 the Farmer had 31 cousins who wrote. I want to join those and be a member. I joined the Red Cross and I made a pair of wristlets and am starting on another pair. As soon as we can get the sweater yarn we will knit sweaters. My school teacher has knit a couple of sweaters and so has my sewing teacher. I taught my mother how to knit, too.—Eleanor Bursch, R. F. D. 1, Medical Lake, Wash.

**Would Answer the Cousins' Letters.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 12 years old and will be 13 July 10. I am going to school and am in the fifth grade. I am going to the Edgerton school, district No. 66. My teacher's name is Miss Light. We live on a 40-acre farm. I have two brothers and one sister. Their names are James, Clarence and Avaline. James is 11, Clarence is 5 and Avaline is 1. She will be 2 years old March 30. If the cousins would write to me I would answer their leters.—Mabel Bar, Eatonville, Wash.

**Stevens County Baby.**

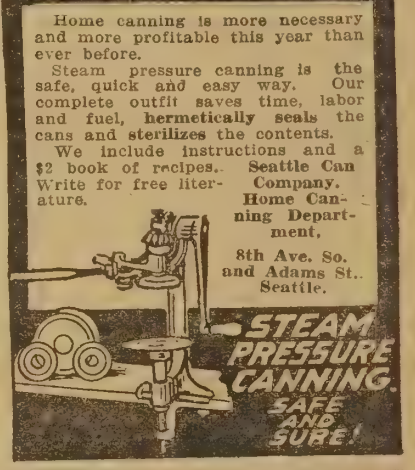
The above picture shows Faye Little, daughter of M. S. Little, a well-known Stevens county rancher residing at Fruitland.

**Post Card Worth Dollars**

Dozens of advertisers in this paper are offering to send you detailed information about the articles they manufacture.

There is usually no charge for this information. Catalogs, booklets and circulars are sent for the asking. This does not mean that they are not worth money. A great deal of time, effort and skill is put on this printed matter by the manufacturer in order that buyers may understand exactly what he has to sell. Often the various features of his product are illustrated with carefully drawn pictures and diagrams.

Fifty cents invested in postcards used to send requests for "further information" from advertisers will yield a big return on the investment. For that fifty cents you will receive printed matter which cost many dollars to prepare and which is perhaps worth hundreds of thousands of dollars in the suggestions it contains.



**SANITARY CANNING OUTFITS**

Home canning is more necessary and more profitable this year than ever before.

Steam pressure canning is the safe, quick and easy way. Our complete outfit saves time, labor and fuel, **hermetically seals** the cans and **sterilizes** the contents.

We include instructions and a $2 book of recipes. Write for free literature.

**Seattle Can Company. Home Canning Department, 8th Ave. So. and Adams St., Seattle.**

**FREE!**

**Coat Lapel Button**

Just like illustration, only smaller. The perfect size for your coat lapel. A dandy American flag in red, white, blue and gold.

One of these flags will be given free to any one sending two one-year subscription orders to The Washington Farmer.

Your own subscription counts for one.

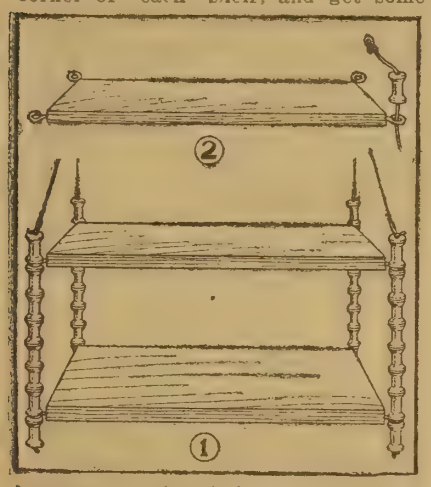
# Handicraft For Girls



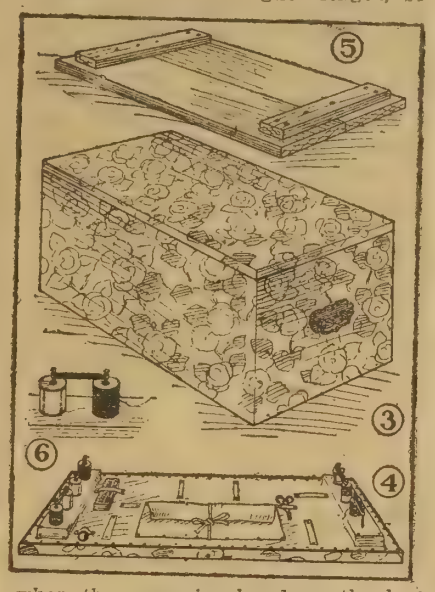
## By Dorothy Perkins

(Copyright by A. Neely Hall.)

### For a Girl's Room.

There are many things a girl can make out of wood without having had experience in wood working, and among them are the shelves, fancy-work box and bolster roll shown in the illustrations.

What girl would not like to own the set of shelves shown in Fig. 1, to hang upon the wall in her room? The shelf boards should be about three-fourths inch thick and ten inches wide, by whatever length you wish to have them. Buy eight half-inch screw-eyes and screw one into each corner of each shelf; and get some



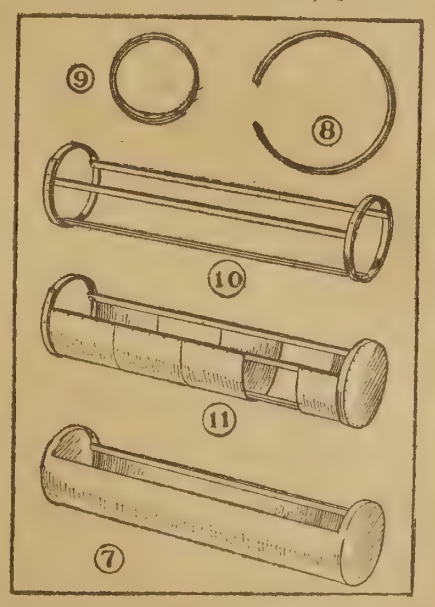
heavy wrapping twine on which to string the corner spools.

The illustrations show how the spools are strung, with a spool below the screw-eyes of the bottom shelf, and another above those of the top shelf, with a knot tied upon the lower end of the cords, and a loop upon the upper end, to hold the spools together. The cords must be pulled tight, and the loops tied close to the top spools, to make the corner stiff.

Paint the woodwork with two coats of paint, and when dry hang the shelves from picture hooks by means of picture wire attached to the loops on the corner cords.

### Handy Work Box.

Every girl needs a work box like that shown in Fig. 3. The only carpenter work necessary is the fastening together of the cover boards with a couple of strips nailed across them as shown in Fig. 5. Place these cross strips close enough to the ends, and make them of the right length, so



when the cover is placed on the box they will prevent the cover from shifting lengthwise and crosswise. This makes hinges unnecessary.

The box must be covered to conceal the roughness of the boards. A pretty figured cretonne looks well for the outside, and a plain colored lining is best for the inside. Before the covering is put on, tack a layer of cotton wadding to the wood for padding. Screw a brass handle to the center of each end.

Fig. 4 shows how a cloth pocket and elastic tapes should be tacked to the inside of the cover; also how to make a spool rack by driving nails into the cover and slipping rubber bands over the nail heads (Fig. 6) to keep the spools from dropping off.

### Bolster Roll.

A bolster roll to encase the pillow is quite the proper thing for a girl's bed, and a roll like that shown in Fig. 7 is not difficult to construct. Get two barrel hoops for the ends, and three wooden strips one-half inch thick and one and one-half inches wide with which to connect them (Fig. 10). The length of the strips should equal the

width of the bed the roll is made for.

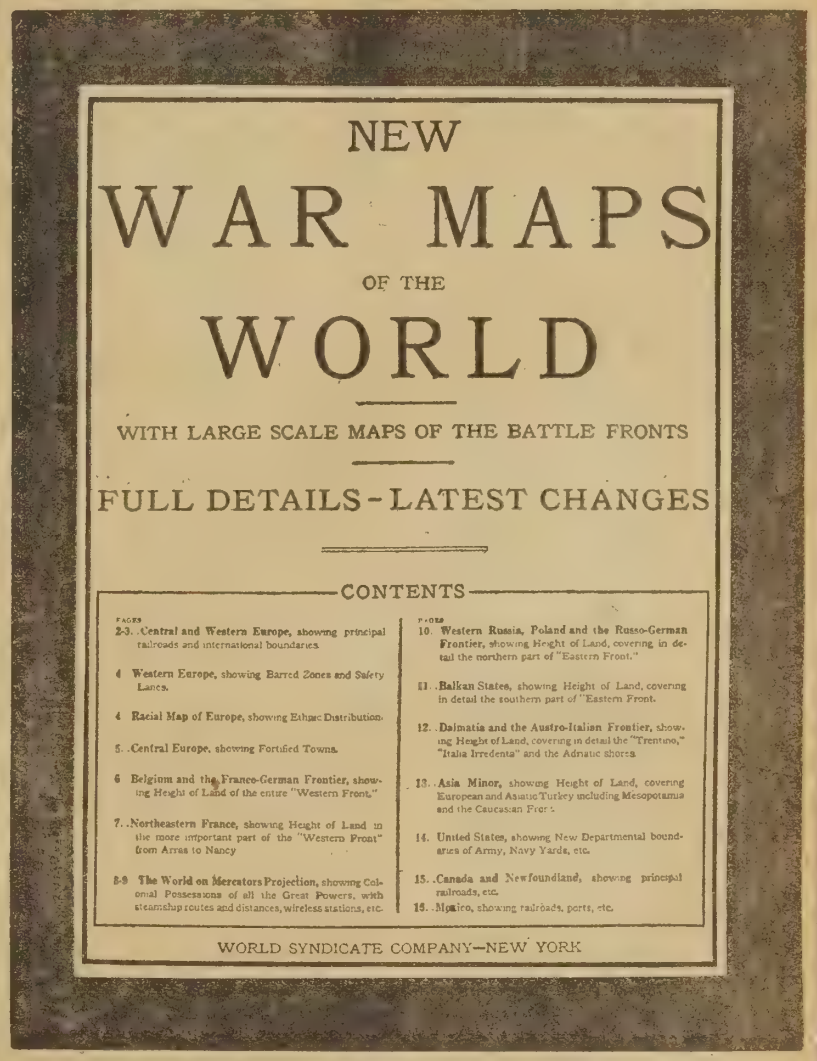
The diameter of the hoops must be made 11 inches from outside to outside. Remove the hoop fastenings, turn in the ends until the right diameter is obtained, and renail (Figs. 8 and 9). Connect the hoops with the strips, spacing these equidistantly around the inside.

Two-thirds of the framework must be covered with cardboard, the other third is left open. Cardboard boxes may be used for covering material. Bend this around the framework, being careful to curve each strip. Also cover the barrel hoop ends with cardboard (Fig. 11). Then reenforce the cardboard with paper pasted lengthwise, both inside and out, to conceal the joints between the pieces of cardboard; also, tack padding over the edges of the barrel hoops. Then cover the entire roll with cambric lining.

## Free War Map 64 Inches by 21 Inches in Size

A splendid four-page war map of the battle front in France, originally published in the Spokane (Wash.) Spokesman-Review will be sent free to any one who mails us one new subscription to The Washington Farmer or one new subscription for The Washington Farmer and The Twice-a-Week Spokesman-Review combined.

This map is printed in four sections and when pasted together, according to directions furnished, will give you a map 64 inches long and 21 inches wide; presenting the details of the great fighting territory in such a way that you will be able to follow every detail of the big battles which are now brewing.



Send orders for new subscriptions and war map to

## News for Breeders

George Beirsdorf of Cornelius, Ore., for the month of January had nine pure bred Jerseys that averaged an income of over $30 each. All except one are by William Schulmerick's bull Golden Maid's Prince. She is by Mr. Schulmerick's other bull, Monmouth Noble, and yielded an income of $46. The milk was sold to the Forest Grove condensery at $3 a hundred and Mr. Biersdorf finds that, in spite of high priced feed, he can still make some profit with good pure bred Jerseys.

A $2000 offer for a bull that cost them $405, made by the man who sold him, is making Pomeroy & Son of Scappoose, Ore., proud of their buy. At the North Portland Holstein sale last November the Messrs. Pomeroy were the successful bidders for Hollywood Lileth Korndyke at the price above mentioned. The dam of the bull, Petiertje Korndyke Abbekirk, already had an A. R. O. record of 25.8 pounds of butter. She was on official test again at the time, and increased her record to 31.26 pounds. Now she is again on a 30-day test, and has good prospects of producing 35 pounds of butter in seven days. Mr. Stimson, proprietor of Hollywood farm, wired Mr. Pomeroy offering $1000 or a bull from a 30-pound cow and $600. H. A.

### Rides Pure Bred Bull Calf.

The accompanying photo shows little Miss Lida May Hanna of Independence, Ore., riding a registered Holstein bull calf at her home on the Hanna farm. H. H. and J. I. Hanna purchased two of the good cows at the Jones Holstein sale at the Oregon State fair a year ago last fall. For one of them, Queen Small Hopes Juliana, they paid $500, and for Small Hopes Clothildemar they paid $400. Each of the cows dropped a fine bull calf by Sir Johanna Fayne Bonheur and it is one of them that Lida May is riding. The cows now have each a heifer calf by a son of Johanna De Kol of Rushcourt, the cow that made a world's milk record for age as a two-year-old for Mr. Jones. The Hannas have a large grade dairy herd. They are still well pleased with their Holstein purchases and will build up a purebred herd. H. A.

### Trade "Sight 'n Unseen."

Carnation Stock farms, Kent, Wash., report the recent sale of a bull calf for $250, the transaction being carried to a conclusion without the purchaser having looked at the animal he was buying.

"This purchase," an official of the company explains, "was made solely by getting the buyer's interest up to the point of buying a purebred sire, through our little folder and our guarantee, which goes with the animal, to be healthy in accordance with the United States bureau of animal industry test and our guarantee that each animal is just as represented. The pedigree and records closed the sale."

**A Novel Watch.**

A bullet-throwing weapon has been made in the shape of a watch. Called on to surrender your watch, you may use it to shoot

# Cutter's
*Germ Free*
# Blackleg Filtrate
*and*
# Blackleg Tissue Aggressin

*The New, Safe and Efficient Agents for Protecting Calves from Blackleg.*

**Cutter's Blackleg Filtrate positively protects** against Blackleg.

**Cutter's Blackleg Aggressin,** made directly from animal tissues, **affords even greater protection** and is recommended for Pure Breds.

**Neither the Filtrate nor the Aggressin can possibly produce Blackleg** in even the most susceptible animals since **both are germ free.**

**Both have given 100% protection** wherever used.

**Prices—**

| | | |
|---|---|---|
| 10 | dose pkge. Filtrate | $2.00 |
| 50 | " " " | 8.00 |
| 100 | " " " | 15.00 |
| 10 | dose pkge. Tissue Aggressin | 4.00 |

**N. B.**—Cutter's Filtrate (a "cultural product" aggressin) is full 5 c.c. to the dose, as we believe that smaller doses, whether concentrated or not, afford less protection.

**Write for booklet** telling what germ free vaccines are and wherein **"cultural product" Aggressins differ from Cutter's Aggressin** made from animal tissues.

**While these new "germ free vaccines" have advantages** that should be known to every stockraiser, we see no reason for a quick change to them by stockraisers who have had satisfactory results from the use of

## CUTTER'S BLACKLEG PILLS

**"California's Favorite" for nearly 20 years**

**Year in and Year Out** they have given better satisfaction than any other vaccine made, and as far as price and convenience of administration are concerned, they have all the advantage.

**Prices:**

| | | |
|---|---|---|
| 10 | dose pkge. Single pills | $1.00 |
| 50 | " " " | 4.00 |
| 10 | dose pkge. Double Pills | 1.50 |
| 50 | " " " | 6.00 |
| | Cutter's Pill Injector | 1.50 |

**Insist on Cutter products.** If unobtainable, order direct. We pay shipping charges.

**D. C. BUNN,** Prosser, Wash.

### Kintrye Farm Berkshires

A few good gilts bred for spring farrow.
**CLARK BROS.,** Prosser, Wash.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, April 1.—Burdensome arrivals of low-grade corn had a bearish effect today on the corn market. Prices closed unsettled, 5-8c net lower, with May $1.25 1-4. Oats finished 1 3-8c to 1 5-8c off. The outcome on provisions ranged from 20c decline to a rise of 5c.

Depression in the corn market developed in the main after cash dealings had shown that poor to rotten samples had fallen in value 20c to 25c a bushel. Corn that was out of condition proved hard to sell even at the bottom figures reached, which were about the lowest so far on the 1917 crop.

Oats underwent a decided setback on account of lowering of bids from the seaboard.

Provisions averaged lower as a result more or less of a falling off in shipments. Supplies of hogs in March exceeded all previous records for that month.

**Chicago Futures.**

| | Open. | High. | Low. | Close. |
|---|---|---|---|---|
| Corn— | | | | |

## Seattle Wheat.

SEATTLE, March 30.—The car situation enters heavily into the distribution of Washington wheat and flour, and while the shortage of rolling stock is beneficial in keeping the wheat in this territory it is also working against Puget sound millers in the way of preventing shipments of wheat from the interior to this city. If Washington wheat can be brought in here in place of being shipped east local mills will be able to keep in operation until the new crop year.

Millers have been more vitally interested this week in the proposal of the department of agriculture to lower the wheat grades for the 1918 crop than in any other phase of the grain situation. There has been vigorous objection here to this plan of getting more money for farmers. The alternative would be to work this through price differentials. It is pointed out by Charles J. Brand that change of grades would be only during the war, but Seattle millers say that months of weary effort have been expended in establishing a satisfactory grading basis and that to tear it down at this time not only would fail of its object, but would create dissatisfaction after the war.

Crop conditions in so far as Seattle millers can get them from country representatives and agents are flattering. Seeding in the Ritzville district is practically completed. In the Big Bend country, where a large percentage of bluestem is being put in, operations will be under good headway within a week. There have been some misgivings as to the moisture supply, owing to the fact that there is no snow in the Cascade mountains, but this situation has occurred before at this time of the year without any serious consequences and anxiety is not widespread.

Seattle millers frankly say that it will now be impossible for the food corporation, under the conditions of the car shortage, to move the wheat out of the state in time to be of service to eastern millers in supplying the flour requirements and that undoubtedly it will have to be ground here.

## Seattle Market.

**BUYING PRICES.**

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

Eggs—Local, 34@35c per dozen; eastern Washington, Oregon and Idaho, 34c.

Poultry—Spring roosters, live, fat, 2½ to 5 lbs., 26@27c; old roosters, 17c lb; squabs, large, $3.50 dozen; geese, fat, live, 20c lb.

Butterfat—51c lb; dairy butter, 35@36c.

Beef—Buying prices: Prime beef steers, 11@12c; cows, fat, 9@11c lb; heifers, 10@11c.

Hogs—Light, 18@20c lb; heavy, 17@18c lb.

Veal—Fancy light, 17@18c lb; heavy, 9@16c lb.

Hides—Salted, 14c lb; flint-dry hides, 29c lb; salt kip, 16c lb; green hides, 11c lb; green calf, 23c lb; dry calf (under six pounds), 29c lb; bulls and dry salts, 4c lb less; green bulls, 9c lb; dry salts, 4c lb less; green bulls, 9c lb. Clean, long wool, western Washington flint dry pelts, 39c per lb; heavy to clean eastern Washington flint dry pelts, 30@ 35c lb.

**SELLING PRICES.**

Feed—Scratch, $79 per ton; all grain chop, $77 per ton; oats, $76 per ton; rolled oats, $78 per ton; bran, $34 per ton; shorts, $33.50 per ton; whole corn, $79 per ton; cracked corn, $81 per ton; alfalfa meal, $36; rolled barley, $85 per ton; Milo maize, $75 per ton.

Butter—Washington creamery extras; cubes, 47c lb; do bricks, 48c lb.

Eggs—Fresh ranch, 40c dozen.

Potatoes—Puget sound, $20 per ton; eastern Washington, $25 per ton.

## Portland Market.

PORTLAND, Ore., March 30.—Butter production is increasing at a more rapid rate and the market is weakening. City creameries announce another cut of a cent in the print price and they have reduced the buying price of butterfat 2 cents. Cubes sold down to 45 cents and are tending lower.

Apples are closely sold up, only a few lots of Romes, Newtowns and Red Cheeks remaining on the market. Prices are firmer.

Walla Walla spinach is holding steady at $1.25 a crate.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 2 white, $70 per ton.

Millstuffs—Bran, $30 per ton; shorts, $32.

Barley—No. 1 feed, $74; brewing, $81; rolled, $77@79.

Hay—Buying prices: Timothy, eastern Oregon, $29@30; alfalfa, $24@24.50; grain, $22.

Eggs—Oregon ranch, case count, 35c per dozen; candled, 36@37c.

Poultry—Ducks, 32@35c; turkeys, live, 26@27c; geese, 20@21c.

Butter—City creamery, prints, 48@49c per pound; cubes, extras, 45c.

Cheese—Tillamook triplets, 26c; Young Americas, 28c.

Dressed meats—Veal, 18 1-2c; pork, 21 1-2@22c.

Hops—1916, nominal; 1917 crop, 14@15c.

Potatoes—Oregon, buying price, 75c per 100.

Wool—Eastern Oregon, 44@65c; valley, 50@55c.

Beans—Buying prices: Oregon white navy and Lady Washington, 10¼@10½c; white kidney, 10c; colored, 9c.

**White Lead**—Strictly pure white lead in oil, ton lots, 11¾c lb; 50-lb lots, 12½c lb.

## Portland Wheat.

PORTLAND, Ore., April 1.—It was announced at the close of the week that the food administration had removed the embargo on the shipment of whole barley from California to Oregon and Washington. Following this some business was worked in southern barley for Portland and there was also buying for shipment to Seattle. It is not believed that any large trade will develop, as barley stocks in California have been cut into deeply by exporters. Although there is a decided scarcity of barley in the north, millers at the moment are not showing much interest and prices at the exchange closed unchanged.

Oats and corn are very dull, with offerings small, and the trade apparently supplied amply for the present.

The hay market is firm, with indications that stocks of everything except alfalfa will clean up closely by the time the new crop arrives.

**COTTON.**

NEW YORK, April 1.—Spot cotton steady; middling, 34.95c.

## Butter and Eggs.

PORTLAND, Ore., April 1.—Butter prints, extras, 48@49c; cubes, extras, 43c; prime firsts, 42c; dairy, 30c. Butter fat, Portland delivery No. 1 sour cream, 49c.

SAN FRANCISCO, April 1.—Butter—Extra, 43@44c. Eggs—Fresh extras, 39c; extra firsts, 38c; firsts, 37c; fresh extra pullets, 38c; firsts pullets, 37c. Cheese—Young Americans, 26½c.

CHICAGO, April 1.—Butter—Steady; creamery, 35@41½c. Eggs—Higher; receipts, 32,663 cases; firsts, 34¼@34½c; ordinary firsts, 33¼@33½c; at mark, cases included, 33@33½c.

**HOPS, HIDES, WOOL.**

NEW YORK, April 1.—Hops—quiet; state medium to choice, 1917, 35@43c; 1916, nominal; Pacific coast, 1917, 20@22c; 1916, 14@16c.

Hides—Steady; Bogota, 30@33c; Central American, 29@32c.

Wool—Firm; domestic fleece, XX Ohio and Pennsylvania, unwashed, 65@66c.

# 65,000 IN USE

DEPENDABILITY—that's the most desired quality in the world when **necessity**—makes the accomplishment of some certain thing essential.

Today, Mr. Farmer, **you** realize the **necessity** of **conserving** and **perserving** every pound of feed you can. Our country requires this that we may meet our present national crisis. You require it that you may avoid the expense of buying feed at such tremendously high prices again.

A silo is essential to your **success** this year. It spells the difference between **profit** and **loss** in the handling of your livestock. It means that the **average silo will save** enough **foodstuff to feed 80 soldiers 30 days.** It helps **you,** and it helps **the nation.**

There are other duties for you to follow, too. The duty to yourself. Your crop is the result of a lot of expense and hard work, you can't afford to risk putting it into a silo of **unknown merit.** Buy a silo that you absolutely **know** will give back to you a ton of rich, nourishing feed for every ton put into it. Get a silo of proven quality—an

# INDIANA SILO

Indiana Silos are made from the best **material** that money can buy or **skilled manufacturing** can produce. A silo constructed according to the best ideas gained through 15 years of **exclusive** silo manufacturing. A silo tested out in actual use on the farms of 65,000 American farmers—**successful ones.**

Guaranteed to do all for you that it has done for them. Backed by **warranty** with **millions** of **resources** behind it. There is no doubt remaining as to the Indiana Silo's efficiency. Other types MAY be as good—but we KNOW what the Indiana Silo will do. Its **results** are **established** by 65,000 **successful silos.**

**Conditions demand that you have a silo—NOW. Don't wait until next fall. Raw materials are fast being diverted for government use. So to avoid disappointment order AT ONCE. You can pay us later. Mail your name on Post Card for Indiana Silo Book—FREE!**

# O.K'D BY THE NATION

# THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XLI. NO. 15. APRIL 11, 1918. WEEKLY.

# Force to the Utmost Is America's Answer

"There is, therefore, but one response possible from us: Force, force to the utmost, force without stint or limit, the righteous and triumphant force which shall make right the law of the world, and cast every selfish dominion down in the dust!"

IN these words President Wilson expresses the sentiment that is rapidly sweeping over this country, the sentiment favoring the utmost physical force necessary to wipe from the face of the earth the Prussianism that knows no law but the law of might. The president's declaration, perhaps the most definite and vigorous of any that he has made, came at the conclusion of an address delivered before 15,000 people at Baltimore, Maryland, last Saturday, April 6, the anniversary of this country's entrance into the war and the opening day of the Third Liberty Loan campaign. It only re-emphasizes this country's determination to carry on the war until the despotic, inhuman government now ruling over the people of Germany and seeking world dominion is destroyed and the people of that country and of the world freed from its inhumanity. The following is the address of President Wilson in full:

Fellow Citizens: This is the anniversary of our acceptance of Germany's challenge to fight for our right to live and be free, and for the sacred rights of free men everywhere. The nation is awake. There is no need to call to it. We know what war must cost, our utmost sacrifice, the lives of our fittest men, and, if need be, all that we possess.

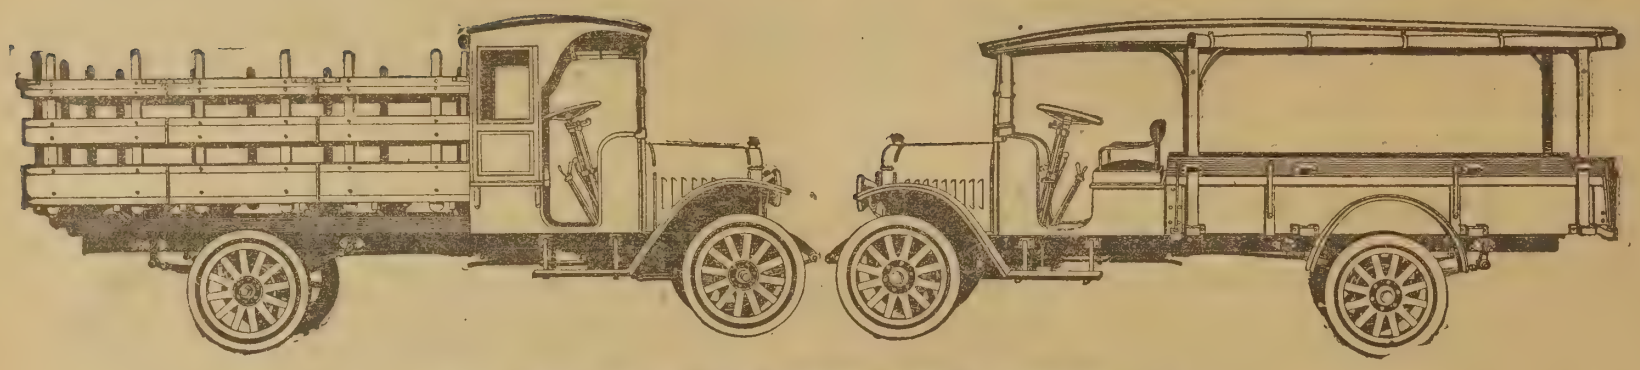
The loan we are met to discuss is one of the least parts of what we are called upon to give and to do, though in itself imperative. The people of the whole country are alive to the necessity of it and are ready to lend to the utmost, even where it involves a sharp skimping and daily sacrifice to lend out of meager earnings.

They will look with reprobation and contempt upon those who can and will not, upon those who demand a higher rate of interest, upon those who think of it as a mere commercial transaction. I have not come, therefore, to urge the loan; I have come only to give you, if I can, a more vivid conception of what it is for.

The reason for this great war, the reason why it had to come, the need to fight it through, and the issues that hang upon its outcome, are more closely disclosed now than ever before.

It is easy to see just what this particular loan means, because the cause we are fighting for stands more sharply revealed than at any previous crisis of the momentous struggle. The man who knows least can now see plainly how the cause of justice stands and what the imperishable thing is he is asked to invest in. Men in America may be more sure than they ever were before that the cause is their own and that, if it should be lost, their own great nation's place and mission in the world would be lost with it.

I call to you to witness, my fellow countrymen, that at no stage of this terrible business have I judged the purpose of Germany intemperately. I should be ashamed in the presence of affairs so grave, so fraught with the destinies of mankind throughout all the world, to speak with truculence, to use the weak language of hatred or vindictive purpose.



We must judge as we would be judged.

I have sought to learn the objects Germany has in this war from the mouths of her own spokesmen, and to deal as frankly with them as I wished them to deal with me. I have laid bare our own ideals, our own purposes, without reserve or doubtful phrase, and have asked them to say as plainly what it is that they seek.

We have ourselves proposed no injustice, no aggression. We are ready whenever the final reckoning is made to be just to the German people, deal fairly with the German power, as with all others. There can be no difference between peoples in the final judgment, if it is indeed to be a righteous judgment. To propose anything but justice, even handed and dispassionate justice to Germany, at any time whatever, the outcome of the war would be to renounce and dishonor our own cause. For we ask nothing that we are not willing to accord.

# *More Brains than Metal are Used in Building this*

# MAXWELL TRUCK

This truck costs little more than a first class team, wagon and harness. Costs less when you figure up-keep. Eats only when it works. Requires one-twenty-fifth the care and attention horses do. Travels the 7 or 12 or 16 miles to market, under load, in one-fourth the time.

The farm hand who formerly took all day to drive to mill with a load of grain can now go and return in two hours.

Here is a truck with all the features of $5000 trucks, and sold under the same guarantee. Worm drive. Electric lights and generator. 10-foot loading space. Gas consumption, 16 miles to every gallon. A tire miser. Mechanical trouble practically unknown. Repair bills are too low to mention.

This Maxwell is built for the farm. Weighs 2500 pounds. Goes faster than heavier and more expensive trucks and goes where they daren't follow.

6600 Maxwell trucks are in service. 1100 on farms. Service records show a verdict of 99.6% perfect based on all the trucks now in use. You'll find no mechanical faults in the Maxwell. A safe investment and a paying one.

You save $400 the day you buy this Maxwell truck, for its price is $1085. And $1085 is $400 less than any other truck of similar capacity on the market.

$1085 Chassis only, f. o. b. Detroit. Electric lights. Electric generator. Worm drive. 10-foot loading space. 2500 pounds. 16 miles on a gallon of gas.

## One Million a Month

### *Farm Loan Bank Celebrates Its Anniversary*

The Spokane branch of the federal farm loan bank has just completed its first year's activities and the records show the remarkable fact that it has placed in the hands of the farmers of the four northwestern states an average of more than a million dollars a month for the 12 months of the year. The statement just issued by the board of directors shows total loans made up to April 1 of $12,615,905.

The scope of the activities of the bank is also indicated by the statement that 5425 farmers have received loans during the year.

While the foregoing figures are themselves large they indicate only in part the enormous task that the land bank has developed for itself during the first year of its life in these states. During that year there have been more than 17,000 loans applied for. Of these to date 9198 have been approved and 2622 rejected. This means that there are now on file in the offices of the bank considerably more than 5000 applications for loans—which the office force is working hard to act upon at the earliest possible dates.

The total amount of money applied for by the farmers of the northwest during the year was more than $43,000,000. The total amount of loans approved by the bank approximates $21,000,000.

The charge has been made at times that the land bank was making loans too loosely, charges of this kind having come primarily from private loan and mortgage companies into whose business the land bank was necessarily breaking. That such charge is poorly founded is indicated by the fact that the 2600 applications for loans rejected totals more than $5,650,000. These loans have been rejected because the applicants were unable to meet all of the conditions required of them by the bank board. It has been from the first the policy of the bank to require ironclad security for all loans allowed. This policy is based on the fact that the continuance of the work requires the issuance of land bank bonds, the farm mortgages accepted by the bank being used as the security back of these bonds. In order to insure these bonds being safe investments at all times and thereby finding ready market, it has been necessary to prevent the possibility of a criticism on the ground of inferior security back of them. The first annual statement of the bank at Spokane shows that these farm loan bonds have been issued up to the present time to a total of $11,750,000.

The bank started business with the appropriation from the government of $750,000. This was all the capital it had, and the only means of securing additional capital under the provisions of the law was the adding from time to time of stock subscriptions taken by borrowers.

The law requires that every farmer who borrows money from the land bank shall purchase stock in the bank equal to five per cent of the loan which he secures. The accumulation of these purchases of stock has increased the capital of the bank from the $750,000 with which it started to $1,382,742.

### Fresh Beef Exports.

During a three and one-half year period, beginning July 1, 1914, the United States exported to the allies more than 616,000,000 pounds of fresh beef and nearly 203,000,000 pounds of canned beef.

## Washington Jerseys Sell

Tillamook county, Oregon, is a record making county, and it made three new records when the entire herd of 53 Jerseys of H. H. Curtis of Pullman, Wash., was dispersed at Tillamook April 2 for a total of $18,010, an average of $339.81. The six bulls sold for $2580, an average of $430, and the 47 females for $15,430, an average of $323.30. The highest price ever received in the west for a Jersey bull or cow, and the highest average price at a Jersey sale in the west were received at the sale. The herd carried the greatest producing and the most sought for blood lines in the west, and was entitled to bring the prices. There were quite a number of outside bidders, and many mail bids, but the highest-priced and most of the best animals were purchased in the county.

Only one animal, a baby bull calf, went for less than $100.

**Females.**

St. Mawes Waltz Rosiare, born Sept. 25, 1911—Sold to Wm. M. Maxwell, Tillamook, Ore. .....$850
Eminent Lad's Pussy, born Jan. 6, 1911—Joe Donaldson, Tillamook, Ore.$650

St. Mawes Countess, born Feb. 19, 1917—I. Nordstrom, Bandon, Ore.....$200
Katy's St. Mawes Malden, born Oct. 3, 1916—P. W. Todd, Tillamook, Ore.$335
St. Mawes Rosiare's Rose, born Oct. 27, 1917—Albert Johnson, Bay City, Ore. .....$150
Merry Glynllyn's Poppy, born May 9, 1916—Joe Donaldson .....$470
St. Mawes Majesty Bess, born Nov. 25, 1917—McArthur & Stauff.....$400
St. Mawes Lady Pearl, born Jan. 8, 1917—T. W. Todd .....$215
St. Mawes Gertie's Stoke Pogis, born June 16, 1917—T. W. Todd.....$185
Rinda Lad's Matilda, Aug. 14, 1915—E. M. Clark .....$390
Lad's Carnation of M. F., born June 17, 1912—Claude Ackley, Tillamook .$340

(Continued on page thirty-six.)

**Beekeeping.**

Don't fail to read every article by Mr. York on the subject of beekeeping on the average farm. The first one is on page 5 of this issue, and others will follow regularly during the next several weeks.

## Forced to the Utmost

(Continued from page one.)

It has been with this thought that I have sought to learn from those who spoke for Germany whether it was justice or dominion and the execution of their own will upon the other nations of the world that the German leaders were seeking.

They have answered, answered in unmistakable terms. They have avowed that it was not justice, but dominion and the unhindered execution of their own will.

The avowal has not come from Germany's statesmen. It has come from her military leaders, who are her real rulers.

Her statesmen have said that they wished peace and were ready to discuss its terms whenever their opponents were willing to sit down at the conference table with them.

Her present chancellor has said—in indefinite and uncertain terms indeed, and in phrases that often seem to deny their own meaning, but with so much plainness as he thought prudent—that he believed that peace should be based upon the principles which we had declared would be our own in the final settlement.

At Brest-Litovsk her civilian delegates spoke in similar terms; professed their desire to conclude a fair peace and accord to the peoples with whose fortunes they were dealing the right to choose their own allegiance.

But action accompanied and followed the profession. Their military masters, the men who act for Germany and exhibit her purpose in execution, proclaimed a very different conclusion.

We can not mistake what they have done—in Russia, in Finland, in the Ukraine, in Rumania. The real test of their justice and fair play has come. From this we may judge the rest.

They are enjoying in Russia a cheap triumph in which no brave or gallant nation can long take pride.

A great people, helpless by their own act, lies for the time at their mercy. Their fair professions are forgotten. They nowhere set up justice, but everywhere impose their power and exploit everything for their own use and aggrandizement; and the peoples of conquered provinces are invited to be free under their dominion.

Are we not justified in believing that they would do the same things at their western front if they were not face to face with armies whom even their countless divisions can not overcome? If, when they have felt their check to be final, they should propose favorable terms with regard to Belgium and France and Italy, could they blame us if we concluded that they did so only to assure themselves of a free hand in Russia and the east?

Their purpose undoubtedly is to make all the Slavic peoples, all the free and ambitious nations of the Baltic peninsula, all the lands that Turkey has dominated and misruled, subject to their will and ambition, and build upon that domination an empire of force upon which they fancy they can then erect an empire of gain and commercial supremacy—an empire as hostile to the Americas as to the Europe which it will overawe—an empire which will ultimately master Persia, India and the peoples of the far east.

In such a program our ideals, the ideals of justice and humanity and liberty, the principle of the free self-determination of nations upon which all the modern world insists, can play no part. They are rejected for the ideals of powers; for the principle that the strong must rule the weak, that trade must follow the flag, whether those to whom it is taken welcome it or not; that the peoples of the world are to be made subject to the patronage and overlordship of those who have the power to enforce it.

The thing is preposterous and impossible! and yet is not that what the whole course and action of the German armies has meant wherever they have moved? I do not wish, even in this moment of utter disillusionment, to judge harshly or unrighteously.

What then, are we to do?

For myself I am ready, still ready even now to discuss a fair and just and honest peace at any time that it is sincerely purposed—a peace in which the strong and the weak shall fare alike, but the answer when I proposed such a peace came from the German commanders in Russia and I can not mistake the meaning of the answer.

I accept the challenge.

I know that you accept it. All the world shall know that you accept it.

It shall appear in the utter sacrifice and self-forgetfulness with which we shall give all that we love and all that we have to redeem the world and make it fit for free men like ourselves to live in. This now is the meaning of all that we do.

Let everything that we say, my fellow countrymen, everything that we henceforth plan and accomplish, ring true to this response, until the majesty and might of our concerted power shall fill the thought and utterly defeat the force of those who flout and misprize what we honor and hold dear.

Germany has once more said that force, and force alone, shall decide whether justice and peace shall reign in the affairs of men, whether right as America conceives it or dominion as she conceives it shall determine the destinies of mankind.

There is, therefore, but one response possible from us:

Force, force to the utmost, force without stint or limit, the righteous and triumphant force which shall make right the law of the world, and cast every selfish dominion down in the dust!

# Home Grown Seed Grain Proves Best

## *The Matter of Acclimation of Seed Is Important, Experience Seems to Prove*

By E. F. GAINES.

The question often confronts the farmer of the northwest, "Shall I send to Montana or Minnesota and get a supply of pure seed wheat, or oats, or barley, or shall I plant what I grew last year?"

Some interesting experiments have been conducted during the last eight years at the Washington state experiment station at Pullman, which may help answer this question for some of the farmers of the Palouse country.

In the spring of 1910, 10 pounds of Minnesota Blue Stem was sent to Pullman, Wash., and 10 pounds to St. Paul, Minn. The seed from these original samples has been grown continuously by each of these stations for seven years. Each year the two stations have exchanged seed for a control plot to be grown beside the continually home grown material.

**Minnesota Not Superior.**

The yields of wheat from seed grown continuously at Pullman may be readily compared with the yield produced by seed that was introduced from St. Paul each year. They are as follows:

| Year. | Washington Seed. | Minnesota Seed. |
|---|---|---|
| 1910 | 43.9 bu. | 44.8 bu. |
| 1911 | 33.8 bu. | 30.7 bu. |
| 1912 | 57.6 bu. | 51.6 bu. |
| 1913 | 44.9 bu. | 41.3 bu. |
| 1914 | 25.3 bu. | 27.5 bu. |
| 1915 | 38.3 bu. | 39.8 bu. |
| 1916 | 41.8 bu. | 49.2 bu. |
| Average | 40.87 bu | 40.70 bu. |

Some years the seed introduced from Minnesota produced more grain per acre than the home-grown seed, other years the home-grown seed yielded the highest; but an average of the seven years shows a slight percentage in favor of the home-grown seed.

The experiment with Williston, N. D., seed showed the same result, according to the following figures:

| Year. | Washington. Seed. | N. Dakota. Seed. |
|---|---|---|
| 1913 | 44.9 bu. | 39.6 bu. |
| 1914 | 25.3 bu. | 31.2 bu. |
| 1915 | 38.8 bu. | 39.4 bu. |
| 1916 | 41.8 bu. | 45.2 bu. |
| 1917 | 27.0 bu. | 22.2 bu. |
| Average | 35.56 bu. | 35.52 bu. |

This indicates that seed wheat under proper control does not run out. It also indicates that the matter of good seed wheat is entirely a seasonal fluctuation, and that on the whole, the Inland Empire has better seasons for growing good seed than either North Dakota or Minnesota. In a critical season like last year the seed that has been grown here during the several years shows decided superiority.

**Quality Not Superior.**

The grain which came from Minnesota and North Dakota each year was hard and horny compared with the more starchy material grown at Pullman. The hard and horny character did not seem to be inherited in the least for the difference between the home-grown and introduced seed was entirely wiped out in the succeeding crop. One could not tell from the threshed grain what state the parent seed came from. According to present government standards, the grain from all the plots in 1916 and 1917 graded Dark Northern Spring. According to actual test, the Minnesota seed produced 2.1 per cent more yellow berries and the Dakota seed produced 1.7 more yellow berries than the Washington seed. Therefore the crop produced from the introduced seed was not superior in quality and actually showed a slightly higher percentage of starchy kernels in 1916 and 1917.

A more striking illustration of the advantage of home grown seed is shown in an experiment with Emmer, which was carried out in the same manner as was the experiments with wheat. The Emmer was tested at Pullman, Wash.; Highmore, S. D., and Bozeman, Mont. The following table shows the result in bushels per acre. In 1915 there was a crop failure in South Dakota and Montana, consequently no seed was sent and no record was obtainable.

| Year. | Wash. Seed. | Mont. Seed. | S. Dakota Seed. |
|---|---|---|---|
| 1910 | 46.0 bu. | 44.8 bu. | 48.6 bu. |
| 1911 | 51.4 bu. | 53.4 bu. | 56.9 bu. |
| 1912 | 116.5 bu. | 102.0 bu. | 65.0 bu. |
| 1914 | 50.0 bu. | 52.0 bu. | 42.4 bu. |
| 1915 | 71.0 bu. | 64.8 bu. | 70.6 bu. |
| 1916 | 70.5 bu. | 76.9 bu. | 78.6 bu. |
| 1917 | 46.2 bu. | 42.0 bu. | 44.5 bu |
| Ave. | 64.51 bu. | 62.27 bu. | 58.09 bu. |

From this table it will be seen that in four years out of seven the introduced seed from one station or the other outyielded the home-grown seed. Yet an average of seven years shows that Washington seed produced 2.24 bushels per acre more than Montana seed and 6.24 bushels per acre more than Dakota seed. If we average these two results, we get 4.33 bushels average yearly loss from introduced seed. Assuming this experiment to be generally applicable, it will be seen that the Washington farmer who sent east of the Rocky mountains for his seed lost 30.3 bushels per acre plus the freight during the seven years' period.

The Wing Seed company of Mechanicsburg Ohio, sent a sample of their Pedigree Beardless barley to the Washington station at Pullman for a test in 1917. The Washington Beardless barley outyielded this sample by 66 per cent. In discussing this test the Wing Seed company wrote: "We are not surprised at the results of the test. We find in changing your grain to our climate that we have the same results. * * * This selection in our country is far above the average, and we do not hesitate in offering it to our customers as a good thing, but felt that we were going too far away from home when we sent to you."

Nowhere in the United States is there finer harvest weather than in the Pacific coast states. Especially in the Palouse and Big Bend countries, the months of July, August and September are practically rainless. This affords the most ideal conditions for maturing and storing seed grain on the farm.

**A state college experiment. The three plots are of seed from different states. They show little difference so far as straw is concerned. There are many things to be considered in experimentation.**

# Pasturing Stock on Alfalfa

## *Declared One of the Big Puzzles of Farming*

The published proceedings of the fifth annual meeting of the Washington Irrigating institute contain many good suggestions in papers and in the discussions following these papers. Here is an extract from a discussion following the address of I. D. O'Donnell of Billings, Mont., on "Sheep on Irrigated Farm."

Voice: I think there are a number here who are interested in pasturing sheep on alfalfa. Will you explain it in detail?

Mr. O'Donnell: Pasturing any kind of stock on alfalfa is one of the big puzzles. I have pastured it for 35 years and have never lost enough stock to give it any consideration whatever. My alfalfa has been the most profitable part of my farming. But it has been tried in various places and there are various ways. Some farmers in our country put bits on the dairy cows. I struck a man in Wyoming the other day who never turns a cow into alfalfa without a bit. In bringing in range stock we fill them on dry hay or something before letting them in the pasture. In Arizona they only pasture the full grown alfalfa. They let a field get up full grown. They never turn onto it when it is small or growing fast, but let it get its growth. I saw a thousand head of steers in one alfalfa pasture in Arizona with alfala clear up to their briskets, and they told me they never lost one. There are various ways, and I would figure out some scheme so I would not lose the pasture. In a small pasture some keep a rack of hay there at all times during the summer. The next thing is when you turn stock on alfalfa leave them on it. Some of the dairymen in our country leave them on it all the time. When they begin to fill up don't drive them, but leave them alone. The best illustration I have had of that happened in our home town of Billings. A man who had 50 head of dairy cows sold a neighbor 25 of them. He delivered them at 10 o'clock in the morning. They had been on an alfalfa pasture. In driving them a half mile he lost 23 out of the 25; the other two was turned into the pasture and there was one left, showing that the exercise and the driving must certainly have killed them. There is a lot to learn about bloat. I can't tell you all. There are a great many things to use. We occasionally find lambs bloated on a beet top—not bloated, but choked. For that we use a piece of three-quarter-inch hose and shove it right down the lamb's throat and he goes off all right. That is our main remedy where they choke. They say on a cow they use a whalebone horsewhip that you can shove clear down.

Mr. Bean: There is one other thing on which I must take issue with Mr. O'Donnell. I dislike bringing up points of contention with a man who has had the experience Mr. O'Donnell has had; however, I think I will be borne out in this contention by a majority of farmers, and certainly my own observation would require that I make this statement, that there is a cure for alfalfa bloat. (Applause.) It is an absolute cure, and is the only one. Keep stock off it. While Mr. O'Donnell hasn't had any loss from alfalfa bloat for awhile, he will probably be like Mr. Benson, who has had no loss until this year, or like Mr. Splawn, who once thought he had a "cinch" on alfalfa bloat until he went out one morning and found seven dead cattle. The balance between an animal bloating and not bloating is a very delicate balance. Sometimes the animal seems to bear a charmed life and can gorge itself with alfalfa with apparently no ill effect, and perhaps the very next day a few mouthfuls of alfalfa under, so far as we can see, exactly the same conditions, will cause a bad case of bloat. The only practice I can suggest with any degree of certainty is this: Some sheep men make a practice of corralling the ewes in one corner of an alfalfa field and allowing the lambs to go into the alfalfa for pasture and come back and suckle the ewes. There seems to be something about ewe's milk that will prevent bloat, possibly a property the milk has in stimulating digestion. I hope we will some day have more definite information on this, but so far no lambs are known to have been lost by this practice.

Mr. Richards: Isn't that a fact also with calves?

Mr. Bean: I think it is.

Mr. Lampson: I may have been somewhat responsible for this sheep bloat question, as I asked for detailed information on how to handle sheep on alfalfa to keep them from bloating. I am glad to have Mr. Bean's suggestion, because it is at least definite. My own experience in this valley with sheep and cattle both has been exactly the same. I have found a number of instances where sheep and cattle had been pastured for a number of years without any bloat. I can give you the names of men who have pastured four or five years on alfalfa without any trouble from bloat, and then run into the condition that Mr. Benson has found this year. Men like Duncan Dunn tell us that we can figure on a loss of 10 to 15 per cent of our investment as long as we pasture on alfalfa. I am just mentioning that as the experience of men who pasture up and down this valley, so that it may prevent some person being misled. Possibly under some conditions it is better to take chances on losing an animal once in awhile rather than to let the alfalfa go to waste. I am not arguing that point; men can figure that out for themselves. But I believe as long as we continue to pasture on alfalfa we can figure on 10 to 15 per cent loss each year.

Mr. Burlingame: I feel very sure that 90 per cent of this is in the man who handles the stock. The sheep men in this valley, I believe, pasture entirely on alfalfa, and we do in our valley, too. We have one big sheep man who has been coming into the valley for years with sheep and he loses practically none. Other people come in there, and lose 25 to 30 in a day. By inquiring closely you will find it is entirely in the man. One turns them loose and sits down and reads his paper, and does not stir until it is time to go out and skin two or three sheep. The other man lets them eat a few feet and then turns them back over it again, and watches them constantly, and he loses none. I have 10,000 sheep on my alfalfa field, and some of the men are not losing any, and with some the losses are heavy. There is no cut and dried rule, but it is largely a matter of horse sense. You have got to learn the alfalfa business and the sheep business, too.

# Build Elevators

## Planning to Handle Grain in Bulk

The Farmers' Union Mill and Grain company of Tekoa, Wash., have the material on the ground ready to start the erection of their new 75,000-bushel bulk grain elevator. This elevator when completed, will have floor space of 40x42 feet, with elevation height of about 100 feet. The foundation will be concrete, while the body of the elevator will be wooden cribbing.

The same company have the plans drawn for a 50,000-bushel elevator which they will erect at Lone Pine, after the same model in construction. They also contemplate an increase of their capitalization to $50,000. They are now capitalized at $16,000, with a surplus available of over $25,000 for the much needed development.

Both elevators have adequate railroad trackage serving their present warehouses, where they have been handling crops under the old sack system.

L. J. Lauritzen of Tekoa, secretary-treasurer of the company, has been in the grain and milling business in Tekoa for 25 years. A. B. Willard is president and C. H. Langbehn vice president of the company. W. S. C.

## More Cranberries.

The remarkable growth of the cranberry industry on the Long Beach peninsula, southwestern Washington, was seen from the fact that in 1916 2500 barrels were harvested, in 1917 8000 barrels, and this year a total of 25,000 barrels is predicted. A call is being made upon the commercial clubs of Seattle, Tacoma and Portland to be ready to offer help in harvesting the crop.

# Bee-Keeping Offers Opportunity

## *Average Farmer Can Handle Bees and Make It Worth While*

By GEORGE W. YORK.

ARTICLE I.

In this series of articles on beekeeping for the farmer that I have been requested to write for the great farm trio of agricultural papers I shall endeavor not only to go into details quite minutely, but I will also try to use such terms in describing methods and equipment as shall be easily understood by any one not having the slightest previous understanding of the subject. Briefly, then, I do not expect to interest the expert beekeeper—the man or woman who has already made a success with bees. My aim will be to try to get the common, every-day farmer to take an interest in the work of beekeeping—to keep at least two or three hives of bees on his farm, so as to help produce the major portion of the sweets needed on his own table during the year. And when he has honey produced by his own bees, right on his own farm, it will taste all the sweeter, of course.

There are three kinds of bees that are found in every normal colony. (Perhaps I would better say at the start that I shall use the word "colony" when I refer to all the bees found in a hive. The word "hive," then, properly designates the box or receptacle in which the bees or the colony live and "keep house.") These three kinds of bees are, first, a queen bee; second, worker bees, and third, drone bees.

**The Queen Bee.**

The queen is the mother of the colony. She lays all the eggs that produce not only the workers but also the drones. The queen is quite a little longer in form than the workers and drones, and commonly lives from two to three years. From the egg it requires 16 days to rear a queen bee. There is only one queen in a natural colony of bees, and during the busy

**Here are the three kinds of bees that it takes to make up the bee world. Note the large, long-bodied queen in the center, the smaller drone at the left and the worker bee, with his nectar-gathering equipment, at the right.**

working season she will lay as many as 3000 eggs in a day of 24 hours. The queen may begin to lay eggs as early as February, but her maximum capacity may not be reached until the last of May or the first of June in the north or colder section of our country.

Should the queen accidentally become lost or killed it will be necessary to secure another by mail from some queen breeder or let the colony rear a successor, which they will do if the old queen left any freshly laid eggs before her departure. From three to four weeks' time will be saved, however, if a queen can be secured promptly by mail, although it is not always easy to introduce a queen successfully to a colony that has been queenless for some time. Several methods of introducing queens will be described later on.

The worker bees constitute the main portion of the colony. They are what may be called "neuters." It is not within their province to lay any eggs, and yet there is occasionally a case of laying workers that may develop in any colony, and if so, their eggs always hatch drone bees, as they (the laying workers) have not been fertilized through connection with the drone as has the queen bee. Laying workers are surely a nuisance in any colony, for if they can not be overcome the colony will soon result in only a lot of drones and thus become extinct as a working colony.

It requires 21 days to hatch a worker bee from the egg. And during the busy working season, when nectar is being gathered and stored rapidly from the flowers, the life of a worker bee is only about six weeks. It will thus be seen the necessity for the queen bee to lay a large number of eggs daily, to be hatched into worker bees in order to replace the thousands of workers that die off every six weeks.

The worker bees, as noted before, not only gather all the nectar that is brought into the hive, but even prepare the food for the queen bee and feed it to her. They must also gather the food for the drones, and of course it is their work to see that all the young baby bees are fed properly and sufficiently.

**The Drone Bees.**

Lastly come the drone bees. They are really the "gentlemen" of the hive. In a colony consisting of from 10,000 to 20,000 bees about 500 of them are likely to be drones.

Now, the drone is quite generally charged with much laziness, because he doesn't seem to work any at all—at least he never has been caught at doing any work. And yet he shouldn't be lambasted for that, for he is not to blame—he has no tools for gathering nectar or manipulating wax for the making of honeycomb. His sole object in life is to fertilize the queen. This is accomplished while both are on the wing. If successful, the queen is fertilized for life, and after returning to the hive does not again leave the hive except at swarming time. (Swarming will be treated in another article.)

A queen that has not met the drone will lay eggs, but they will all hatch into drones. A queen that is fertilized has the power at will to lay eggs that will produce either drones or worker bees. But the eggs that produce drones are laid in comb cells that are a little larger than ordinary worker cells, the former or drone cells measuring in diameter about five to the inch, while the worker cells run about four and one-half to the inch.

The cappings of drone cells and worker cells vary also, the latter having a flat cap or cover, while the drone cell caps are raised and appear on the comb somewhat like a lot of little bullets. Drone cells are thus very easily distinguished from worker cells.

Queen cells are usually built at the bottom of a comb in the lower part of the hive. They hang down, and appear something like a peanut. The egg in the cell is surrounded with an abundance of a white jelly-like substance called "royal jelly." Usually as soon as one queen bee hatches the other queen cells are torn down by the bees, as a normal queen will not tolerate a rival to rule in the colony, except in very rare instances a mother and daughter have been known to get along together in the same hive for a time. In case more than one queen hatchces out at the same time, there is forthwith a royal combat to prove the survival of the fittest.

No house has ever been large enough for two human queens to rule under the same roof, and so no beehive seems to be large enough for two queen bees to get along peaceably together.

# Dairymen's Association

## *Breadth and Strength of Control Is Needed*

At a meeting of the Inland Empire Dairymen's association held in Spokane, April 6, 1918, the work of organization made several big strides toward completion. The talk by Ashur Hobson, state director of markets, was the feature of the meeting, and the plan of organization outlined by Mr. Hobson was received with great enthusiasm by the dairymen.

The first point made by the speaker was that a stock organization such as had been suggested at a former meeting of the producers was not a practical mechanism for the ends in view.

"It takes butter fat to make a successful creamery, and it takes patronage to make a successful producers' association of any kind," declared Mr. Hobson. "The mere ownership of stock will not secure the loyalty of your members. It promotes the spirit of 'Let George do it.'"

Mr. Hobson was strongly in favor of the employment of a skilled, diplomatic and intelligent selling agent to direct the marketing of milk controlled by the farmers. He was almost as strongly opposed to the idea of the producers turning manufacturers or distributors.

"It will be time enough for you to make a permanent investment in machinery after you have tried out your organization two or three years, and have found that it will work in its simpler form," he explained.

Turning to the practical details of the plan, Mr. Hobson stated that the association must figure on controlling the output of at least 2000 of the 4000 cows now supplying milk to Spokane. Financial maintenance will be provided by a charge of one-half cent per gallon of milk handled, which, on the basis of one gallon daily per cow, would bring in about $3600 yearly. This would go for the salary of a selling agent, his office rent and clerical work.

In addition to this and in order that the organization could be incorporated under the state laws, it would be necessary to sell each member one share of stock, nontransferrable and bearing no interest, which would really be in the nature of an entrance fee. The $5 received for this share of stock would not be returnable under any circumstances.

The teeth in the proposed contract would be furnished by each member's depositing with the board of directors, at the time of joining the association, a noninterest bearing note at the rate of $5 per cow for every cow signed up, the principal of this note to be forfeited in case of a violation of contract. Mr. Hobson called attention to the fact that this feature is absolutely essential to the success of a selling association of this character.

"Your board of directors can't go to any one and make a satisfactory bargain for your milk," he assured his audience, "unless they can say, 'We have the output of 2000 cows right here in our hands, and are able to deliver it where we think best.'"

In conclusion, Mr. Hobson advised the dairymen against any organization unless the requisite breadth and strength of control could be obtained. The contract whose main features he described has been examined by state and national authorities on legal matters, he explained, and could be depended upon to hold in line all those who signed it.

Following the offer of County Agricultural Agent Shinn to take upon himself and his office the work of signing up the requisite 2000 cows, a motion was passed extending the time for organization to April 27, when another meeting is to be held. It is confidently expected that by that time everything will be ready for the signing of permanent contracts.

# Wheat Price Stands

While congress has not, at this writing, taken final and definite action on the movement for the increase of the wheat price for 1918 to $2.50 a bushel, reports from the capital indicate that the price will remain as previously fixed by the president.

The senate voted to increase the price to $2.50. This provision was in the form of an amendment to an agricultural appropriation bill already passed by the house of representatives. The measure as amended had to go back to the lower house for approval, and the committee to which it was referred appears to have voted to disapprove the wheat price amendment. It is believed that the senate will recede from its amendment rather than hold the bill up in deadlock if the house fails to agree to the amendment. Final action should be taken at an early date, probably this week.

## Cow Testing.

The latest monthly report of the 12 cow-testing associations in Washington shows the Chehalis district association was a close second in the average production of milk per cow for the month, with 697 pounds of milk, as compared with 711 pounds for the White River Valley association. The average butter fat per cow for the latter was 27 pounds and for the Chehalis district 26.9 pounds.

## Thurston Farmers Have Seed.

Reports from 36 farmers' meetings held throughout Thurston county, called by County Agent C. A. Cole, give evidence of enough seed on hand for all the farmers in the county, and a few still have some to sell.

## Elwha Valley Potatoes.

A shipment of 1300 sacks of potatoes raised in the lower Elwha valley has just been made from Port Angeles to the government for use at various military posts.

# City Folks Are Learning

After a year of painstaking investigation, the food price committee of the Merchants' association of New York city, has rendered an able, courageous and sound report to the public of that great metropolis. It frankly tells the consuming public that there are economic reasons why the farmers must receive higher prices, and that it is futile for consumers to expect or strive for a return to the old order of cheap agricultural products grown at actual loss to the producers. The fact that many producers did not realize at the time that they were "mining out" their soil and actually marketing their crops at a loss does not alter the fact. The report well says:

"During the last 50 or 75 years (principally since 1840), while the large cities in this country and Europe have been growing, the established agricultural areas that produced food were supplemented by the opening up of new lands in the middle west, Canada, Brazil, Argentina, South and Central America, Australia and Siberia.

"Food products, chiefly grains and meats, were produced on virgin, unfertilized lands. Emigrant labor was employed and subsequently there was cheap railroad and steamship transportation, so until recently (about 1905) the people in cities have been fed on food produced and sold at a price which did not take into consideration the cost of production and the value of plant food contained in crops which must be returned to the soil to maintain productivity.

"Today conditions are changed. There is not much unclaimed virgin soil. Fertilizers, needed to maintain and augment soil productivity, are scarce and consequently increasing in price. Labor is scarce and high in price. Taxes, capital, costs (higher land values) and transportation costs (because of longer distances) have increased. The increased costs arising from changed conditions have resulted in increased food prices compared with those of former days when virgin soils produced bountifully, when there were low land values, a plentiful supply of low-priced emigrant labor, cheap transportation and practically no overhead charges.

"The actual cost of distribution of food products, after they reach the city limits, has greatly increased since 1905 and is steadily increasing, due to (1) the crowded conditions of the population and traffic, (2) higher wages paid to the 400,000 persons employed in distribution, and (3) lack of intensive, detailed study by carriers, distributers, consumers and educational and regulative agencies to see how each class of food products could be most efficiently distributed after reaching the city."

Consumers, the report concludes, will do well to drop impossible expectations and get down to a practical basis of working out plans for relief. It recommends more effective cooperation of producers, manufacturers, carriers, distributors and consumers, and educational and regulative agencies. That is substantially what the Farmer has been saying all along. The consumer long enjoyed cheap food at the producers' expense. By working himself, his family, his hired help and his stock to the limit of endurance, and by wearing out his soil, the farmer went on year after year delivering low cost of living to the consumers, not only in the United States, but in Europe and even in Asia. We have been exhausting our virgin soil for the benefit of nations across the seas.

It will take time to impress that economic fact upon the masses in the great cities of the land, but reports like that just made by the New York committee will set thoughtful people to thinking along right lines.

Meanwhile for a time at least, and probably for the duration of the war, the trend of food prices will be upward instead of downward. They are certainly upward now, as pointed out in the last Monthly Crop Reporter of the U. S. department of agriculture:

The level of prices paid producers of the United States for the principal crops increased about 6.3 per cent during February. In the last 10 years the price level increased about 2 per cent during February. On March 1 the index figure of prices was about 39.9 per cent higher than a year ago, 108.4 per cent higher than two years ago and 107.9 per cent higher than the average of the last 10 years on March 1.

The prices of meat animals (hogs, cattle, sheep and chickens) to producers of the United States increased 0.5 per cent from January 15 to February 15. In the last eight years prices increased in like periods 3.2 per cent. On February 15 the index figure of prices for these meat animals was about 34.3 per cent higher than a year ago, 82.2 per cent higher than two years ago and 83.3 per cent higher than the average of the last eight years on February 15.

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## *Only Slackers Are Idle*

Mayor Hays of Boise, Idaho, has issued orders, according to reports, for the police inspection of pool halls and other loafing places with a view to rounding up loafers and idlers and seeing that they earn their bread by the sweat of their faces.

The state of Idaho has taken vigorous action on such matters as this and the officers who are taking the lead are greatly to be commended therefor. There is no room in America for the loafer at any time. He is a parasite living off the public, though the public perhaps scarcely realizes it. He is a millstone about the neck of progress and the sooner he is cut loose and allowed to sink to the oozy depths of oblivion the better it will be for the industrious and patriotic citizens of this country.

The present period is one which demands the utmost in a constructive way of every citizen. Those who work should work harder; those who save should save with greater sacrifice; those who make their living at the expense of those who toil, whether they be the pool hall loafers or pool hall proprietors, should be wiped out of existence by whatever means are necessary. Many public officials sit back supinely defending their inaction on the ground that there is no law on the statute books giving them authority to close unproductive places of so-called business or to compel industry and loyalty where laziness and disloyalty now exist.

But this is a day of necessity, call it military necessity or what not. The people are in no mood to tolerate the parasite, and the official who will act against him need have little fear of public disapproval. A hundred cities in the northwest would do well to take inspiration from the order of Mayor Hays and go and do likewise.

## *Buy Live Stock at Home*

The fascination of elsewhere still seems to bewitch some of our prospective purchasers of live stock, and we have entirely too much "going east" after pure bred stock of various kinds.

Live stock prices in the central states are now so high that no one there can afford to send stock out west unless it be something that nobody wants. There was a time a few years ago when the reverse was true, but the rapid development of the herds and flocks of the northwest has entirely changed the situation.

We will admit that it may in some cases be possible to buy better stock in the east, but it takes a mighty good judge with a pocket full of money to do it. One of the best cattlemen in the west recently remarked that one could not get anything in the east that would do either the buyer or the breed any good for less than $2000. It is our belief that he put the figure low enough.

The prospective breeder should be especially careful about where he buys his foundation stock. He should remember that when he buys his foundation stock in the east he is cutting the ground from under himself, and that later in the game his prospective customers will probably do the same thing, and, taking his example, go east to get poorer stock for less money.

## *Guard Your Optimism*

It is often the case that a pessimistic outlook on a situation works a great injury to the cause, but it is also true that too much optimism frequently works similar injury.

The American people have taken an optimistic view of the war from the time the first shot was fired by Germany to the present time, but that optimism, while it should not be supplanted by pessimism, has worked, and will continue to work, strongly against the interest of this country and her allies. Hope for the early cessation of the war obtains in the mind of the average American, it would seem, almost to such a degree as to lead him to look for an early and sudden cessation of the great conflict, but those who are studying the situation say no. General Pershing, who heads this country's soldiers on the battle front in Europe, is one of those who predict a long war. He scouts the idea that the war will be over in a few months, and voices the sentiments of scores of military leaders when he says that it may last one, two, five or even more years. That Germany is today taking steps for her military strength 25 years hence in case of defeat in the present struggle can not be denied by any one at all conversant with the situation.

That the easy going and optimistic habit of this country is reflected in easy going and optimistic methods in handling the war problem at the national capital is a charge made by many of the leaders in the business world. Just now a statement is given out by Wadell Catchings, chairman of the war committee of the Chamber of Commerce of the United States, voicing this sentiment. He says that business men have been denied the privilege of playing their part in this country's conduct of the war. "There are few business men in the councils of the nation," he said in a recent address in New York. And he might well have added that there are few representative farmers in the councils of the nation at this grave period in the nation's and the world's history. War is the most strenuous business known to the world, and it takes the ablest business minds, whether commercial or agricultural, to carry on the war activities behind the lines, just as it requires the ablest military strategists on the battle front.

## *A Balanced Food Ration*

Do we know the importance of a balanced ration? Do we know what it means to feed a horse alfalfa hay, and give him no other kind of food, or to feed him grain without hay, or any particular food alone, without properly balancing it with something else? Do we know what it would do for us if we had to live on potatoes alone?

Wheat flour makes good bread, but we would get very tired of wheat bread alone. The food experts are studying, as they have never studied before, the subject of a properly balanced food, and are publishing some exceedingly valuable things on the subject.

It is now generally known that the acids neutralize the sodas and the alkalies, and that the sodas and the alkalies also neutralize the acids. For instance, if I am making a trip across the country and I fear that the water is too heavily charged with alkali, I will take with me lemons, oranges, apples, fruit juices or vinegar, and mix with the water I drink. It is known that prunes, figs and some other fruits act as laxatives, while others, like blackberries, tend to correct troubles arising from that cause.

It is known that celery is a nervine, while onions, lettuce and some other vegetables, are not so much in the nature of nerve builders as in the fact that they quiet the nerves. Fats, sugars and starches produce heat, while water and foods heavily charged with water, tend to counteract heat, and are therefore good in fevers, so we might go on indefinitely. G. L.

## *Washington Gleanings*

Frank Warner of Southern Idaho recently paid $100 an acre for a 170-acre ranch near Garfield.

Women are now employed in making doors in Tacoma, the Buffelen Lumber and Manufacturing company has just put several of them to work.

The Great Northern railway is boosting war garden work by offering their right-of-way lands to employes and others to be made into gardens this year.

Owing to the mild weather of the last two months, the water to irrigate the 25,000 acres under the Tieton project will be turned into the main canal on April 10.

A new organization recently formed at Lynden under the name of the Producers' Warehouse company, by James D. Zylstra and Ray H. Slade, has taken over the City Feed mill.

The Chehalis Citizen's club is urging cucumber growing in that section for pickling. The prices offered for contracts are very attractive, and it is hoped to secure at least 25 acres.

As a result of the sending of samples of Yakima pink beans to the government officials, the Yakima groweres have recived an offer to take the pink beans uncleaned, in 100-pound sacks at eight cents a pound.

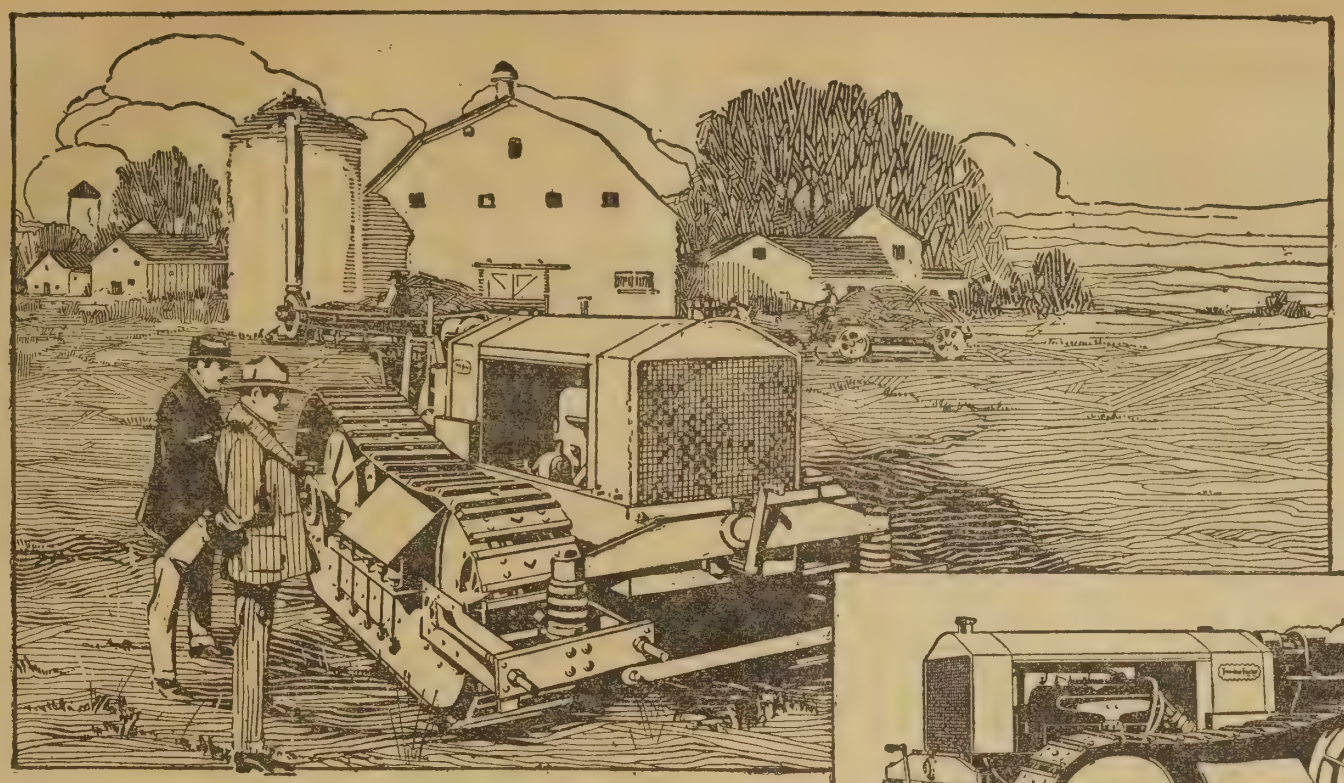
Vancouver, Clarke county, is to have an immense kiln-drying plant, which will handle between 8,500,000 and 10,000,000 feet of spruce a month. At present the unseasoned timbers have been sent to airplane works in the east.

The lumber and logging industries have been booming owing to the demand for airplane spruce and ship timbers. During the last few weeks more than 25 incorporation papers for firms just entering the lumber and logging business have been filed with the secretary of state.

A patriotic resolution has been passed by the Centralia school board permitting all high school boys 18 years of age and over to quit school in April to follow agricultural pursuits and giving them credit for a full term's work, providing they are up in their studies at the time they quit school.

District Forester George H. Cecil is urging greater carefulness and economy in forest fires this year as a war duty. Last year fires caused a loss of $1,358,600 to the government in timber, and in addition to this loss extra expenditures of $1,121,451 were entailed. This means that to hold fires down large numbers of men have to be withdrawn from productive work and much money spent for supplies.

## *A Warped Viewpoint*



(From the Country Gentleman.)

When a group of consumers, as represented by the Federation of Labor, sought to get together with a group of producers, represented in the Pennsylvania grange, they were discomfited to hear that the farmer can not guarantee cheaper food as a matter of philanthropy any more than the laboring class can give away its labor. They seemed rather amazed to learn that the farmer must either get back cost of production plus a living profit or else go out of business.

The grange members assured the labor representatives that the farmer would gladly sell food cheap to the laboring man if the cost of production, in which labor is a large item, was made sufficiently low to enable him to do so.

Such a condition can be possible only when the farmer is able to borrow money for operating expenses at a low rate of interest and is assured an adequate supply of labor. It is astounding that organized labor should remain blind to these essential facts and maintain the warped viewpoint that the farmer is a "capitalistic profiteer." Just so long as the great laboring class refuses to see, and refrains from throwing the weight of its support with the farmer, production will lag and food prices will continue on the ascent.

The farmers and organized labor constitute the two great groups who may bring about conditions that make for the prosperity of four-fifths of the people. Working together they can bring about reforms in food distribution that will stabilize prices and prevent wastes. The laboring man has the farmer's sympathy. Why doesn't labor respond to the emergency and help the farmer to guarantee an abundance of food through increased production?

*You can operate a Trundaar Tractor as a stationary power plant when it is not doing work in the field*

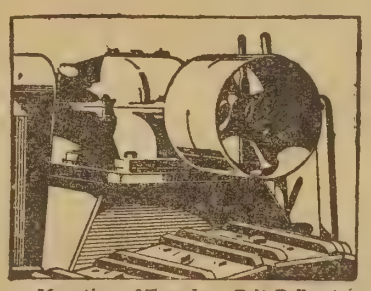
# Speed up farm production and increase your profits

## *America looks to you for bigger crops. Your business success demands reduced operating costs*

*"Speed up your farm. Grow bigger crops. Lower the cost of production."*

This is the appeal of the United States Government to *you* as a business farmer.

Already the effect of this appeal is perceptible. Probably you, like other experienced business farmers, are analyzing your operating costs, and the crop yields of your farm.



*To make* your farm a profitable business you must invest in a tractor—but you want that tractor to be *right*.

A Trundaar Tractor will pay for itself many times over by helping you speed up your farm work and by reducing your operating costs.

All the accumulated knowledge and experience of 23 years in the tractor industry have been built into the Trundaar. The result is that every part of the Trundaar Tractor gives economy of operation, reliability and maximum service.

### Not the ordinary type of tread

Positive traction is provided by the patented Trundaar Tread, which is an endless belt type, built on the same principle as a log-chain. The Trundaar Tread requires no lubrication. It is practically wear-proof, and each link and grouser plate may be detached in a moment.

*Mounting of Trundaar Belt Pulley*

Tractors frequently jar and rattle themselves to pieces traveling over uneven ground. The Trundaar Tractor can travel for days over the roughest going without damage, as the double three-point suspension absorbs all shocks and strains.

Dust is another enemy to tractors. Every vital part of the Trundaar runs in oil and is absolutely impervious to dust. Even the air intake of the carburetor is protected.

### Low-grade fuel

The Buckeye-Deppé Integrator makes low-grade fuel operate like high-grade gasoline. It is one of the exclusive features of the Trundaar Tractor.

Ample power for all field and stationary work is provided by the Buckeye-Waukesha special tractor engine, size 4¾ x 6¾.

It is easy to operate the Trundaar, because of the flexibility provided by the powerful drive clutches. It is easy-riding, due to the spring-suspended seat.

The massive transmission will give constant service for years without showing signs of wear. It requires no differential and delivers the maximum amount of power at the drawbar.

Find out about the other exclusive features that make the Trundaar the most practical tractor on the market today.

Write today to our nearest distributor for our illustrated advance catalog which describes it in detail.

# Can't Feed Calves

## So J. M. Smith Buys the Scrubs

A peculiar industry, but one of considerable importance in Tillamook county, Oregon, is the selling of baby calves. Owing to the fact that every farm in the county is a dairy farm and that, with the exception of less than half a dozen, every dairy sells its milk to a cheese factory, there is no skimmed milk on which to feed calves, nor any whole milk, for that matter; it is worth too much except for pure-bred calves. Further, the pastures are crowded with milch cows and with the high price of land and the importation of high-priced hay and grain there is no cheap feed or pasture on which to feed calves. So the average dairyman finds it cheaper to replenish his herd by buying cows than by raising them.

This situation has developed the selling of "Tillamook calves" outside of the county. J. Merrel Smith saw the opportunity to build up a business and grasped it. He offers to take all the baby calves that are brought to him, paying from $1 up, according to value. If he can make no other use of a scrub calf he skins it and sells the hide. But he gets many calves from really high-class dairy cows and I was surprised to learn that he sometimes gets bulls and once in a while heifers from pure-bred dams, while over half are by registered sires. They comprise Jerseys, Holsteins and "milk strain Durhams," of which latter there are many good ones in the county.

So Mr. Smith advertises "Tillamook calves" and has helped make the county famous by the big trade he has built up, "Smith, the calf man," being now almost a household word in the northwest. Mr. Smith shipped 3160 calves in 1917 and in the last four seasons has shipped 11,646. H. A.

## CUT OUT WASTE.

### But Do Not Cut Down Rations.

"This war is going to eliminate the man who knows no dairying, and who fails to feed and breed properly and follow other proper methods," said M. O. Maughan, instructor in dairying at the state agricultural college, speaking before the Washington State Dairymen's convention.

Continuing, Mr. Maughan called attention to the tendency on the part of some dairymen to cut down the amount eaten by their cows, rather than to eliminate waste in feeding. As the cow must supply the needs of her own body before turning anything into the milk pail, this practice is readily seen to be a mistake.

Here are some of the genuine economies in dairy feeding suggested by the state college man:

First, cut the roughage and grind the grain, thus eliminating the waste of coarse stems and undigested grains. "Not only does it pay to grind the hay, but also the straw," comments Mr. Maughan. "The cost of cutting hay is often figured at 75c per ton."

Second, "Utilize the various straws which have hitherto been wasted. They can be fed alone, but preferably with some other feed which is highly palatable." Among straws, Mr. Maughan mentioned field peas and oats as being particularly valuable.

Third, "Feed a balanced ration and a good ration. When a ration is continually fed that is not balanced its digestibility is decreased and hence increased waste results."

Fourth, "Study each individual cow and give her the best possible care. No two cows are the same. We can generally save by grooming the cow occasionally. Warm and comfortable quarters during the cold weather will also pay."

Fifth, "Build a silo.

Sixth, "Feed dry stock and young calves and bulls carefully through the winter. Too many people try to keep their growing heifers in show condition. To do this requires unnecessary feed. Baby calves can be started out on low testing whole milk and at the end of 10 days or two weeks gradually changed to separated milk, so that by three weeks of age they will be on skim milk entirely. The bulls, too, will do better work if fed only liberally."

Seventh, "Get thoroughly acquainted with your business, and know what each cow is doing. This can best be done by belonging to a cow testing association and keeping records."

# Cause of Odor in Milk

To the Editor: Can you tell me what causes a disagreeable odor in the milk of some of our cows? Is there any remedy?

Idahome, Idaho. W. O.

Freshly drawn milk from a healthy cow should have a characteristic sweetish, pleasant odor. This is probably due to the gases which it contains. Under normal conditions the odor is not pronounced and upon standing passes away entirely. But milk absorbs foreign odors quickly. These may come from feeds such as green rye, rape, leek and other feeds with pronounced aroma that the cow has eaten; it may come from dust in the air or from particles of dirt that have fallen from the udder and flanks into the milk pail. If the cow is in poor health with poor circulation there may be a lack of circulation in the udder, and this will give the milk an obnoxious odor. A. B. N.

## DAIRY CALVES.

### Does It Pay to Raise Them Now?

With whole milk selling at unusually high prices, and the possibility of getting from 60 to 75 cents per hundred for skim milk, when fed to hogs, at the present time, the question the dairy farmer must answer is: Does it pay to raise dairy calves now?

Dairymen who sell butter fat and keep their skim milk on the farm will find just as much profit in raising heifers as in raising hogs. The practice of killing the calves can not help but prove disastrous though the effects will not be felt for three or four years. The most prosperous dairymen are those that look ahead and plan for a better herd in the years to come. This better class of dairymen use a good purebred sire and save all the heifer calves from their best cows regardless of the cost of raising them. And the same argument holds true in the condensery districts, for by using a minimum of whole milk with the proper grain mixtures, the calves can be raised at a cost only slightly greater than when skim milk is available. A. B. N.

## ROOTS AND TUBERS.

### Valuable Feed for Dairy Cows.

The winter months and the early spring are the times when the dairy cow may be fed to advantage, the roots, tubers and the cull apples. They are not only much liked by the cow, but help to balance the ration, and to lessen the expense of the high priced forage. In the list of the root crops and tubers may be included the beet of different kinds, the parsnip, carrot, artichoke, and the potato. Some also like the turnip and the rutabaga, but the Idaho Farmer editor prefers the other articles, and feeds them when they are available each winter and spring. Farmers should aim to grow these crops, especially in these times of increased prices in hay and other feed. They do well with the alfalfa and with the silage, and owing to their heavy yields, make a comparatively cheap, as well as wholesome ration. As for the cull apple it is always relished by the cow and when it can not be utilized to better advantage, helps out the ration materially.

### Model Housing Expenses.

The contemplated model housing program of the government will require the expenditure of about $35,000,000.

# Silo Lifts Mortgage

O. Jorgensen of King county, Wash., declares that the silo is the mortgage lifter for dairy farmers, and says he would not take $500 for his 90-ton silo if he could not obtain another. Even during the backward weather of last summer he obtained from six acres of land enough silage corn nearly to fill the silo.

"The big thing the farmers have got to learn is how to grow more of their feed," Mr. Jorgensen commends. "There's nothing in dairying if you've got to buy everything you feed; and when it comes to this matter of producing a large quantity of milk producing food from a given acreage of land, silage corn probably comes first of all our forage crops. I grew three varieties last year, with Pride of the North coming first for productiveness and Minnesota No. 13 second. Wisconsin White Dent did not do well for me."

### Whitman-Spokane Cows.

According to Rudolph C. Johnson, tester, there were 254 cows tested in the Whitman-Spokane (Wash.) Cow Testing association during the month of January. Forty-six of these produced 40 to 49.9 pounds of fat; 25 produced 50 to 59.9 pounds; 10 produced 60 to 69.9 pounds; three produced 70 to 79.9 pounds, and one produced 80 pounds.

Jay P. Graves' pure-bred Jersey cow produced the highest per cent butter fat, 86.90 pounds.

### Welcomed to Jail.

The word "Welcome" stands out in bold letters over the door of the new concrete jail at Downieville, Cal. In pouring the cement the workmen caused the letters to be traced.

# Milk in England

## The Difficulties of Price Regulation

At a large meeting of farmers and milk producers recently held at Leeds, England, it was pointed out that a milk-shortage would cause more hardship than probably anything else. Men and women might stand an enormous amount of privation but nothing would so depress the hearts of the people as the seeing of children starving for want of milk. One of the speakers declared that he believes the dairy farmers of England would do their utmost to maintain the supply, but they could not be expected to produce it at a loss; that there was a very strong feeling in that part of England that Lord Rhondda, food controller, had been badly advised in the matter that it cost more to produce milk in the north of England than it did in the south.

That the milk problem is a complex one in England as well as in the United States seems to be indicated by the following extract of the report of the meeting in the London Livestock Journal:

"Alderman Jackson said he thought they would be able to prove to Lord Rhondda that 1 shilling per gallon for May and June, and 1 shilling 2 pence for late in the season, were quite impossible prices for the West Riding. Speaking of his own experience in a colliery district, he said the miners, being unable to get their customary supplies of meat, were now having basins of boiled milk after coming out of the pit. The cost of production varied enormously. Even in the West Riding it varied from 8 pence to 2 shilling 4 pence a gallon. It could not be produced near the large towns at anything like the lower price. For one thing, the feeding value of the land in these districts was diminishing because of the poisonous fumes from the munition works. Then the cost of labor, of feeding stuffs, and, indeed, everything on the farm, had gone up to such an extent that it was an impossibility to produce milk at the prices suggested. He worked out his own cost of production at 1 shilling 2 pence a gallon, but in May it was 1 shilling 1 pence. Yet he was asked to sell it at 1 shilling. No doubt there were many in the meeting whose cost of production worked out at 1 shilling 6 pence to 2 shilling a gallon.

"R. Garnett said if a shortage of milk occurred and brought with it social unrest, Lord Rhondda would not be able to say tferward that he was not warned in time.

"On Tuesday Lord Rhondda received a Yorkshire deputation upon the matters debated above, and promised them every consideration and the formation of a scheme that would effect fairness all round."

## LARGER ACREAGE.

### Expects Increased Production.

In answer to an inquiry sent out by the Farmer, E. C. Stone, secretary-treasurer of the American Hampshire Swine Record association, writes:

To the Editor: I do not agree with any man with a pessimistic view of things that "the actual present prospect is that acreage planted this year must be greatly reduced, with consequent short crops, meaning still higher food prices." The acreage will be increased and if we have a reasonable season our production of foodstuff will be materially increased in 1918 over that of 1917.

We have on hand now everything in the way of seed for garden vegetables, potatoes, etc., at less than half the price of a year ago. We have plenty of good corn seed and plenty of almost everything you can think of, with soil throughout almost the entire United States working easier and better than in many, many years. I have been connected with the farm and farming for the last 40 years. I have been in every state from Florida to South Dakota in the last three months, and know what I am talking about.

We do need to push more. Criticism has no place at this time. Do more and fuss less will cause more production than you have ever heard of in past history.

E. C. STONE.
Peoria, Ill.

## Cat Skins as Coat Linings.

According to an Amsterdam newspaper, skins of black cats find a market in the provoince of Friesland for 7.50 florins ($3) each.

Inquiry in Amsterdam discloses that black-skinned cats are in active demand also. The skins are used for men's fur-lined overcoats.

## MILL FEEDS

### Enforce Maximum Margins.

The food administration announces that it has set up machinery for the vigorous enforcement of the regulations on the selling price of wheat mill feeds and that federal food administrators in the various states will receive complaints and promptly investigate all cases.

A new schedule of margins has been established which should bring all feed to the consumer at a maximum of $4.50 over the mill price of the feed, which in the case of bran has already been established at 38 per cent of the cost of one ton of clean wheat at the mill, with differentials for other grades of wheat mill feed.

### Remedy for Bots.

In addressing a meeting of farmers recently Dr. S. B. Nelson of the State college of Washington recommended that during the summer months the legs and shoulders of horses should be treated with an oil of some kind, such as a mixture of raw linseed and fish oil each one part, to prevent the bot flies from placing the eggs where the horses would get them when scratching with the teeth. As a remedy for bots the doctor recommends that an animal be denied feed of all kinds for two meals and that he then be given one ounce of carbon bisulphide in a cold capsule to be followed two hours later by a quart of raw linseed oil.

## Veterinary

Dr. S. B. Nelson

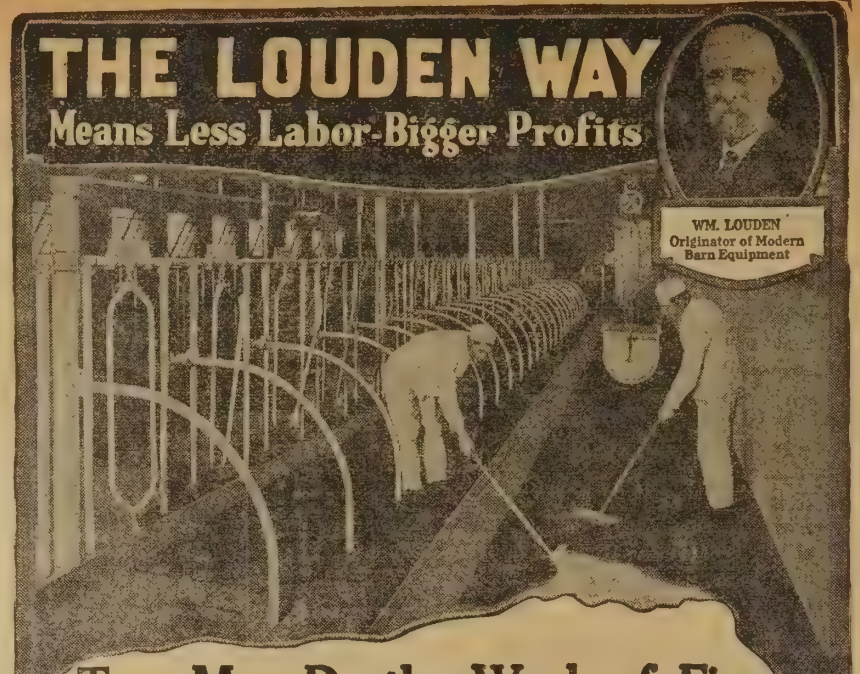
**Stringy Milk**—I have a good cow that gives stringy milk when she is about four months in calf. It doesn't matter what we do. She goes dry about four months before finding the calf. Please let me know if it can be cured, also would it be advisable to raise a heifer from her.—W. S., Agate Beach, Ore.

I do not know of any remedy which will prevent your cow going dry four months before finding the calf. Stringy milk might be changed by giving a purgative and the following day begin giving a teaspoonful of hyposulphite of soda in a pint of water once daily. I do not believe it would be advisable to raise a heifer from her at all.

**Horse Has Scratches**—I have a horse 11 years old that had a severe case of scratches about a year and a half ago. Since then his hind legs will swell at times as far as the knee. I am working him lightly all the time. Is the swelling due to the scratches and what will cure it? I have a colt also that is now about 9 or 10 months old. She has both upper and lower lips covered with warts. I bought her when she was about 6 months old. Then she had but one wart on her upper lip. Lately they spread rapidly until they are all around her mouth. Can they be taken off in any way?—P. K., Burley, Idaho.

Give your horse one ounce of Fowler's solution of arsenic morning and evening on his feed for a week or 10 days or two weeks. Then apply to the scratches on the heel an ointment of zinc oxide, one part; starch, one part; listerine sufficient to make a soft paste. Apply this ointment once daily. For the colt apply castor oil to the lips morning and evening for a week or 10 days.

**Removing Warts**—I see that W. B. asked how to remove warts on a cow's teats in your issue of February 21. I have tried several remedies which failed, but here is one that never fails. Take a pair of pincers and jerk the small ones off. They are only skin deep. Apply something to heal large warts. Tie a stout ligature around close to the base tight and repeat in three days until they drop off. Tie the cow's legs if necessary. J. M. Clarkston, Wash.



Yes, I believe that snipping the warts off with a pair of dull scissors is better and more humane than jerking them out with a pair of pincers.

**Foundered Horse.**—I have a horse used for farm work which has been foundered. One hoof does not expand. In fact, it appears to contract. Have been creasing it without any apparent results. Would you please let me know what to do for a case of this kind? W. S.
Walla Walla, Wash.

The foundered horse is such a difficult thing to treat when it has become chronic, as your letter indictaes that it has in the case of your horse, that I would suggest to you that you consult your local veterinarian, because without seeing the horse and knowing what the trouble is, it is impossible for me to give you a remedy. It may be that the horse should be blistered above the coronary band of the foot. It may be that the hoof should be creased so as to give the hoof an opportunity to be expanded. It may be that the toe should be lowered and a half shoe put on so as to make the horse walk on the frog to make the foot spread whenever she steps on the foot. According to conditions, any one or two of these treatments would be effective. For that reason I suggest consulting your local veterinarian.

**Cow Is Paralyzed**—I have a cow that freshened January 17th and a few days later she seemed as if she was paralyzed in her hind parts; had a hard time to get up and had considerable fever and she shrank up in her milk and almost dried up in one front teat and only gives a few squirts with it now. I at first thought it was milk fever and got the veterinarian. He pronounced it spinal fever and put a plaster on her back in front of the hips

THE LOUDEN WAY
Means Less Labor-Bigger Profits

Two Men Do the Work of Five

BE SURE AND MENTION THIS PAPER

and gave me some medicine to give her to cure the fever. She came out all right. That is, she feels well and eats and drinks well, but yet she does not handle herself as easy as before. Would you kindly advise a remedy for the ailment?
Goshen Wash. H. L.

I am sorry to say that I cannot prescribe a remedy for the trouble affecting your cow from the description that you give. The milk fever treatment, of course, is well known to many farmers and dairymen, but the final fever might deserve a different treatment, according to the specific symptoms manifested. I do not feel that I would be competent to give a reply to this question under those conditions, which I regret.

---

**Give Pig Carbolic Acid**—I saw a remedy in a recent issue for rheumatism in hogs. I had a pig that got awfully bad with rheumatism. Two neighbors said to give him carbolic acid. I gave one teaspoonful in feed three mornings in succession, then missed one morning and gave him one more teaspoonful and now give it twice a week. This pig will weigh about 100 pounds. One neighbor told me he had a pig weighing 200 pounds that was so bad with rheumatism that he could not get on his feet. He gave one tablespoonful twice the first day in feed and the next morning he could walk. My pig could hardly stand to lay on his belly to root and now he can run faster than I can.
Blaine, Wash. F. W.

In all the literature that I have at my command I do not mind carbolic acid described as a remedy for rheumatism. However, it may be that it has value in that respect, carbolic acid being a strong disinfectant. In therapeutic doses it is converted into phenolsulphonatis when taken into the intestinal tract, and as such as a general rule it is a pretty strong disinfectant, against the bacteria in the intestinal canal. It may be that the destruction of the bacteria causes the suspension of the formation of the poisonous toxins which sometimes is given credit for causing those painful muscular symptoms, which is known as rheumatism. It is of value to know that it has this action, and it would be of additional value if the strength of the carbolic acid used could be given.

---

**Cow Affected With Grubes**—I have a 3-year-old cow that will be in fresh the latter part of June. She has lots of hard lumps on her back with yellow tops which dry up and crumble off. It makes her look so bad and she rubs her neck till the hair comes off. She has a clean place to sleep in and plenty of straw. She has been kept in the barn a good deal during the last three months. Will you kindly advise me as to what can be done? C. H.
Colby, Wash.

Your cow is affected with grubes, which is simply the larval stage in the life history of the gad fly, as it is sometimes known. This fly may stick on the hair of the cow, generally during the latter part of June, in July and in the early part of August. Sometimes the ox warble fly may lay eggs as early as in May. The larva then gains access to the body for the next five or six months. It then takes life in the animal's body, especially in the muscular tissues and along toward spring it begins to make its way toward the back where when the grubes are ripe it breaks out and falls to the ground and burrows and passes into another stage before coming out as a wing fly. The treatment at the present time is to place a receptacle like a cup over the warble and squeeze the grubs out and then destroy them. This should be done every day as they ripen. Some authorities advise the injection of a little coal oil and a little turpentine or any other strong irritant into the sacs. Others do not. The best thing to do is to treat the animal during the summer months by painting the front legs and the neck with a composition of oil like, for instance, raw linseed oil and fish oil each one part. Some add a little bit of tar to this mixture. That means by the application of this that the eggs can not be fastened to the hair and consequently there being no place for the propagate.

---

**Cow Has Warbles**—I have a 4-year-old Jersey cow in good health, but she has warbles along her back bone. What can I put on to kill them? I feed her alfalfa hay and beet pulp and bran mixed. E. M. D.
Bremerton, Wash.
See answer to C. H.

---

**Diarrhoea:** I have a 12-year-old horse that has had dirrhoea more or less for over four months. The discharge from the bowels is watery. He also passes much wind or gas, but he never shows signs of pain or colic. When he is the worst the thirst is excessive. I feed oat hay, timothy and clover. He is fat and has not been working much all winter. J. H.
Eatonville, Wash.

Cut your horse's feed down to one-fourth of what you are feeding him at the present time. At the same time give him in his drinking water one teaspoonful of listerine morning, noon and night. Gradually increase his feed as he gets better.

# Win the War by Preparing the Land, Sowing the Seeds and Producing Bigger Crops

**Work in Joint Effort the Soil of the U. S. and Canada—Cooperative Farming in Man Power Necessary to Win the Battle for Liberty.**

The Food Controllers of United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat can be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rest the burden of supply.

**Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist.**

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operations.

**Canada's Wheat Production Last Year Was 225,000,000 Bushels; the Demand From Canada Alone, for 1918, is 400,000,000 Bushels.**

To secure this she must have assistance. She has the land, but needs the men. The Government of the United States wants every man who can effectively help to do farm work this year. It wants the land in the United States developed first, of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there. Apply to our Employment service, and we will tell where you can best serve the combined interests.

**Western Canada's help will be required not later than May 5. Wages to competent help, $50 a month and up, board and lodging.**

Those who respond to this appeal will get a warm welcome, good wages, good board, and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had, apply to

**U. S. Employment Service, Dept. of Labor**
**Seattle, Tacoma, Bellingham or Yakima, Wash.**

# Someone Sent Him a pouch of Real GRAVELY Chewing Plug

**Tobacco is about the only comfort the soldier has—and no chance to smoke on duty! But a satisfying chew of Real Gravely Plug—he can enjoy that even in a shell hole in No Man's Land.**

Give any man a chew of Real Gravely Plug, and he will tell you *that's* the kind to send. Send the best!

Ordinary plug is false economy. It costs less per week to chew Real Gravely, because a small chew of it lasts a long while.

If you smoke a pipe, slice Gravely with your knife and add a little to your smoking tobacco. It will give flavor—improve your smoke.

**SEND YOUR FRIEND IN THE U. S. SERVICE A POUCH OF GRAVELY**

Dealers all around here carry it in 10c. pouches. A 3c. stamp will put it into his hands in any Training Camp or Seaport of the U. S. A. Even "over there" a 3c. stamp will take it to him. Your dealer will supply envelope and give you official directions how to address it.

**P. B. GRAVELY TOBACCO COMPANY, Danville, Va.**

*The Patent Pouch keeps it Fresh and Clean and Good —it is not Real Gravely without this Protection Seal*

## POULTRY

Write to the Editor.

JAMES DRYDEN,
Editorial Contributor.

### EGGS TO SAVE PORK.

### They Are Valuable as a Food.

The old fashioned and ever modern dishes of ham and eggs and bacon and eggs should be, to a great degree during the war, just plain eggs without the ham and the bacon. Across the water there are hundreds of thousands of soldiers that need the bacon and the ham to sustain them in their strenuous battle against Germans and wet, cold trenches and the hardships of camp life in general.

Every farm in the northwest should be producing eggs this season and making use of them, either at home or elsewhere, as substitutes for the foods so necessary for exportation. The opportunity in the poultry line, either for the production of meat or eggs, is unprecedentedly great this year, and should be seized by every one where it is at all possible.

### Wartime Poultry Ration.

Inland Empire poultrymen have always thought that it would be impossible to successfully produce poultry without a very heavy use of wheat in the ration.

In February of this year the department of poultry husbandry of the University of Idaho started some war-time feeding experiment work and is feeding less than 9 per cent wheat in the entire ration, and indications are that the wheat could be eliminated entirely, says Pron Moore, poultry husbandman.

The scratch food or grain is:
41 pounds corn.
28 pounds oats.
15 pounds wheat.
4 pounds kaffir corn.

This mixture is fed at half ration; that is to say, four quarts per day per 100 hens. Eight quarts per day is full ration. The balance of the grain ration is made up of barley (steam rolled) and soaked in skimmed milk, or buttermilk, for 24 hours. Some time was required to arrive at a proper feeding basis, but by way of illustration we have 52 White Leghorn hens and four cockerels in one pen. These hens range in age from 2 to 4 years old. They are fed one and one-third quarts of scratch food morning and noon and five pounds of soaked barley between 3 and 4 o'clock in the afternoon. This means, then that we are feeding about four pounds of scratch food and five pounds of barley. The barley is soaked in six pounds of milk. More milk should not be used in soaking, as it makes the food too sloppy. If milk is not obtainable, use water, but by all means use milk if possible. If water is used, it would be well to soak alfalfa meal and use the water from it.

A dry mash is kept before the fowls at all times, and it is as follows:
6 pounds middlings (bran and shorts mixed).
3 pounds finely ground oats.
3 pounds finely ground corn.
2 pounds beef scrap.
1 per cent charcoal.

Grit, shell and bone are kept constantly before the fowls and green food is fed in the form of mangel wurtzels. Since the middle of February to this, the 22d day of March, this pen of fowls has averaged to lay a little better than 60 per cent, which is good laying at any time under any system of feeding for old stock.

### Knowledge of Meat Production.

At a conference of representatives of live stock producers' associations in Washington, it was decided that the food administration will select a man to be added to the staff of the chief of the meat division, who shall have practical knowledge of meat production, such person to be selected from the list of names to be submitted by the gentlemen present in Washington representing the live stock feeders in the corn belt.

Moreover, "the food administration has from its initiation, and does now, heartily subscribe to the principle that the producers of food necessary to the carrying on of the war, the feeding of our armies, the armies of the allies, our civil population and the civil population of the allies, should have, in addition to the cost of production, a fair and reasonable profit," and that the food administration will do what it properly can through the buying agencies of the government to relieve the situation by increasing the proportion of purchases of higher grades of beef and the employment of such other agencies as may be at its command.

**"In stating the principle above, it must be recognized that it is not in the practical powers of the food administration to give guarantees to producers without legislative action.**

"The food administration suggests that for demonstration of the situation and guidance of the government, an independent tribunal should determine the cost of producing meat."

### Raising Turkys Again.

Mrs. C. R. Lowry, who sold her entire stock of turkeys in Payette last spring, is now located near Boise, Idaho. She recently received a fine trio of Mammoth Bronze turkeys from a high-scoring, prize-winning flock in Tennessee. The birds are from 50-pound stock and the tom at 10 months old weighed 30 pounds.

### MAKE GRAIN FARM.

### Will Convert Great Cattle Ranch.

One of the largest cattle ranches in Montana, that of Child & Anceney in Gallatin county, will this year discontinue growing of hay with which to fatten animals and while still raising a large number of range cattle will put between 8000 and 12,000 acres of its irrigated hay lands into wheat this spring in an effort to help solve the food shortage which threatens the American people and the allied nations and armies.

#### Gigantic Aeroplane.

A gigantic military aeroplane has just been finished at the military arsesenal, Tokio. It was chiefly designed by the late Lieutenant Sawada, who met a tragic death at Tokorozawa. The machine has been a year and a half under construction, during which time vast improvement has been made in aerial navigation. This aeroplane is equipped with three 1000-horse power engines, and is capable of maintaining 80 miles an hour for six hours' continuous flight. The machine will carry five passengers.

#### Curing Elephant's Cold.

A circus man, caught in the act of curing an elephant of a cold, was dared to take his own medicine. He declined, but invited the interviewer to return the next day and see the elephant cured. And the next day the elephant was rid of the cold. The keeper placed a bucket of boiling hot vinegar in a bag and then tied the latter about the animal's trunk so that he was compelled to inhale the beneficial fumes whether he wished to or not.

#### A Large Graphophone.

A graphophone nearly eight feet high and correspondingly powerful, although only the usual records are used, has been built by a Tacoma musician for concert purposes in public parks.

Spring is Cleaning-Up Time

The garbage can, sinks, drains, closets, cesspools, all foul-smelling and disease-breeding places need attention. Get out the sprinkling can and make a liberal use of Dr. Hess Dip and Disinfectant. Do this regularly to establish health conditions—to destroy disease germs and purify the air. There is no better way to avoid contagious diseases. Use it also about the poultry house, pig pen and stables. One gallon makes 100 gallons of disinfectant. GUARANTEED.

They Win on the Roads You Drive on

AJAX TIRES
Dirt Track Champion of America

These same winning Ajax Tires, successful on dirt tracks at high speed, will be equally successful for you on your roads at your speed.

Dirt tracks are the same road-bed as the country roads surrounding them. Success on dirt tracks means service on country roads.

AJAX TIRES on proved performance, are the money-saving, mileage-giving tires for the farmer.

SHOULDERS of STRENGTH

The picture shows these supports built into Ajax Tires on both sides of the tread, giving them more tread on the road—more rubber where it should be. They give longer life to Ajax Tires because road friction is thus distributed evenly over the tread. On Ajax Tires there can be no centering of friction in one spot to wear through to the fabric.

AJAX ROAD KING
*"More Tread on the Road"*

Ajax Road King proves its superiority in competition with other tires, ON THE ROAD. Built for city streets or farm highways. Ajax Road King has "more tread on the road" than other tires. Note its triangle barb tread—an added safety factor.

97% Owners' Choice

is a practical endorsement of Ajax quality unequalled by any other large tire manufacturer. This huge percentage of Ajax output is the choice of car owners to replace other tires that came on their cars. All Ajax Tires—and Ajax Inner Tubes—give real service. Write for booklet on Ajax Shoulders of Strength.

# Pollenization

## Has Much to Do With Fruit Yield

By GRANVILLE LOWTHER.

In order to understand the subject of pollenization it is necessary to know the definitions of the terms used. I therefore give herewith a few explanations.

Self-sterility: The inability of pollen to fertilize ovules of the same variety. This does not imply that the pollen is sterile in relation to other varieties, for it may fertilize ovules of another variety; but will not fertilize the female of its own kind.

Self-fertile: A plant is said to be self fertile when the pistils will accept pollen from a plant of the same variety and the ovules become fertilized by the pollen grains.

Cross-pollenation: The union of the pollen cell and ovule of two distinct horticultural varieties, like the Lambert and Montmorency cherries, the Bartlett and the De Anjou pears, Arkansas Black and Jonathan apples, etc. In no case do horticulturists mean the transfer of pollen from flowers of the same tree nor the transfer of pollen from one tree to another of the same variety, when they use the word "cross-pollenation."

Pollenation is the act of transferring the pollen of one flower to the pistil of another; or from pollen to pistil of the same flower, depending on the nature of the flower.

Fecundation is a word used to represent the union of pollen cell and ovule. Fertilization is a term used to represent the two processes, pollenation and fecundation.

### Isolation.

Every one has probably noticed that certain kinds of fruit trees, when isolated from others of the same species, will bloom profusely but fail to bear fruit. We used to note that the mulberry was an example of this; also the "Wild Goose plum." Sometimes the fruit will set and not develop, but generally it is manifest by the dropping of the fruiting organs.

### Pollenation of Apples.

Among the early apples, the Gravenstein Oldenburg and Red Astrachan will pollenate one another. In some localities these varieties bloom late enough to pollenate other varieties also. Among the late varieties the Arkansas Black, the Baldwin, Ben Davis, Black Twig, Gano, Grimes Golden, Jonathan, McIntosh Red, Yellow Newtown, Northern Spy and Ortley will cross pollenate. The Wealthy, Yellow Transparent and Tetofski are early varieties that will cross-pollenate.

The Red-Cheek Pippin, Rome Beauty, Spitzenburg, Wagener, Willow Twig, Winesap, White Winter Pearmain and Yellow Bellflower are late varieties that will cross-pollenate.

### Pollenation of Pears.

Among the early pears that will cross pollenate are the Bartletts, Anjous and Clairgeaus. Also the Howell and the Keiffer will cross.

Among the late pears that will profitably cross are the Bosc and Comice; also the Easter Beurre, Barry and Winter Nellis will cross-pollenate.

# Skim Milk for Food

All skim milk should be used—none wasted. In this food emergency skim milk should be made to furnish the maxium of human food. It does this best when used direct or as cottage cheese, prepared buttermilk, or other by-product. Skim milk is used economically in feeding hogs for pork production, yet 100 pounds of skim milk will produce 15 pounds of cottage cheese as compared with only 4.8 of dressed pork when fed with corn.

Skim milk when made into cottage cheese furnishes nearly seven times as much protein and nearly as much energy as the pork that it will produce when fed with corn. In addition, when cottage cheese is made from skim milk, about 85 per cent of the latter remains as whey, which has about half the value of skim milk for hog feeding, a still greater increase of nutrients is returned for human food. So far as possible, therefore, skim milk should be used for human food, and only the excess fed to live stock.

A leading authority on hog feeding says: "To find the value of 100 pounds of skim milk when fed alone, multiply the market price of live hogs in cents per pound by five; if fed in combination with corn or barley multiply by six." Thus, when hogs bring 10 cents a pound, skim milk is worth 50 cents a hundredweight when fed alone, or 60 cents when fed with corn or other grain.

According to another authority, "the value of 100 pounds of skim milk, when fed along with corn for fattening hogs, is half the market price of corn per bushel." That is, when corn costs $1 a bushel, skim milk is worth 50 cents a hundredweight.

Buttermilk is equal to skim milk for feeding hogs, while whey is half as valuable. Whey, being low in protein, is not well suited for young pigs and should be fed to older animals.

Ordinary grass pasture, or green rye, oats, sorghum, rape, clover, alfalfa, peas or beans can take the place of skim milk after the little pigs get a start. Much green feed can be raised without greatly reducing the acreage of other crops.—U. S. Department of Agriculture.

## ONE WOMAN'S SUCCESS.

### Producting Tomatoes in Mexico.

The present is the fourth year devoted to the production of tomatoes in the Mazatlan consular district in Mexico for the export trade. Four years ago an enterprising Mexican woman who has agricultural lands whose soil is suitable for the growth of tomatoes conceived the idea of exporting tomatoes to the United States, and planted a trial crop, which proved to be such a success and caused a large number of others to take advantage the following year of the ready market in the United States for all they could produce. During the third year, 1917, there were 300 cars of tomatoes exported, and this year will afford about an equal quantity.

**Made in the west for western conditions**

**GIANT FARM POWDERS**
STUMPING — AGRICULTURAL

Western soils, stumps and climate need western explosives. That's why Giant Farm Powders cut the cost of clearing western land. Manufactured for more than half a century especially for the West, they naturally give better results on western farms and orchards.

Giant Farm Powders lead in economy because they go further than ordinary explosives. They break up the stumps thoroughly thereby cutting down labor cost. Money and trouble are saved because of their low freezing qualities.

*Warning:* If your work is done with any other powder or dynamites, the chances are it will not be done as well as with either of the two Giant brands: Eureka Stumping or Giant Stumping. Look for the Giant trademark on every case, and be sure of the genuine.

How to make the farm pay more money is explained in "Better Farming." This big free book, fully illustrated, will be sent you as soon as we receive this coupon.

# Must Have Team Work

## Flour Came Back When It Was Learned That Hoover Had Requested That All Over-Supply Was Needed to Relieve Shortage.

CHEHALIS, Lewis County, Wash., April 2.—The people of Lewis county are noted for their patriotic spirit. There has not been a Red Cross, Liberty loan or Y. M. C. A. fund campaign but what Lewis county has taken out more than her allotment. I feel that the same will be true regarding food production. Every farmer is bending every effort to increase crop acreage and crop yields for the year 1918. While a few farmers feel that the government has made some mistakes, they are still awake to the fact that team work is desired now more than ever, and they are willing to sacrifice now for the sake of the nation. When Herbert Hoover's order came to take back to the store all but 30 days' supply of white flour, farmers who had put a few sacks away for a "rainy day" flocked back and gladly delivered their extra flour to the merchants. In this section the season is very favorable to the seeding of a large crop acreage. The lack of seed in some instances will be a handicap, but steps are now being taken to have all available grain in this and adjoining counties used for seed rather than for feed. Taking everything into consideration the outlook for an increased food production this year is very bright. There will undoubtedly be an increase in grain, hay and stock feed in general, and as a result there will be increased stock production. A. B. NYSTROM.

### Prepare for Busy Season.

FERNDALE, Whatcom County, Wash., March 26.—After a mild, though very disagreeable, winted Ferndale and its adjacent country communities are beginning to make preparations for an unusually busy spring. The branch of the Mount Vernon Condensary company that located here three years ago is enlarging their local plant so that its present capacity will be more than doubled, a large storehouse is also in course of construction. Nor is the milk industry the only one that is growing, the Ferndale Canning company is enlarging its buildings this spring in order to handle the fruits and vegetables they expect to receive this year. A meeting of fruit growers and government officials was held at the cannery this week that was exceptionally well attended by those interested. M. L. Dean, state commissioner of horticulture and two federal officials, a pathologist and an entonologist were present and gave very interesting and instructive talks on the care of fruit trees and berry hushes, as well as the most approved methods of combating the diseases of plants that are prone to crop out at this season of the year. Mr. Carroll, county agriculturist, was also present. He deserves much credit for the many noticeable improvements that have been made in this country the last year. When a county agriculturist was first spoken of here many people regarded the office as superfluous, but Mr. Carroll's achievements have convinced even the most dubious that it is well-nigh indispensable.

MRS. JACK PLASTER.

### Install Pumping Plants.

NEPPEL, Grant County, Wash., March 26.—The labor situation at present is fairly good, as a heavy demand for labor is not here yet, but will come later in this district owing to its varied products. Power of all kinds is in demand and will be more so in the future, as wellbred heavy horses, 1300 pounds and up, are in demand and hard to find As for power for pumping water and traction power combined we are in need of improved machinery along that line. A few parties are installing pumping plants this spring, where a tractor would serve two purposes, pumping water for irrigation and hauling machinery and produce. I am in need of 25-horsepower now for that purpose, and several others could be benefitted here by a dual purpose power plant Machinery is being repaired as never before, as prices have advanced greatly. Still a tremendous amount of good machinery will be in demand here in the near future, and a great development will take place among the flats along the shore of Moses Lake, as the Moses Lake Water Users association will soon stop the unjust delegation stopping the development of this land. There will be some grass fed beef for market here this season, but hogs are not very plentiful that are fit for market. Alfalfa is our best pasture for stock and rye is next on dry land. The fishing companies are now at work loading cans of carp for the eastern market. One or more cars per week are secured from Moses Lake and packed in ice and shipped. Our greatest need here is a strong pull all toghther to settle forever the water rights, and the quick production of foodstuff to help win the war for liberty and democracy.

MARTIN PENHALLICK.

### Meat Animals Are Scarce.

COLVILLE, Stevens County, Wash., March 25.—From present indications there will be no shortage of horses for farm labor. A survey of the county indicates that there are more horses on the farms this year than at this time last year. However, logging operations during the winter have been hindered by lack of snow, and this may draw some horses from the farms for logging work this spring and summer. There have not been many sales of horses, and the few that have changed hands have done so at about the same price received last spring. Last fall horses were a drug on the market, and many were offered at about half price without any takers. After wintering them through they are now asking normal prices. I know of five tractors being placed in the county, but as yet there is much discussion as to their use on the smaller farms, largely diversified. Their usefulness is yet to be demonstrated. There have been numerous complaints regarding the high price of farm machinery, and this will tend to keep down the purchase of new machinery, where the old can possibly be repaired. In some districts the dealers have made special effort in asking the farmers to order their repairs early. No great number of meat animals will be placed on the market this spring for meat purposes. The high prices of feed during the winter have more than overbalanced the advantage of spring prices. In most cases meat animals fit for market last fall were sacriificed at the low prices, the farmers keeping only the breeding and growing animals. A few hogs will be marketed this spring.

Many farmers have practiced the seeding of burnt-over areas for pasture, and the practice is rapidly spreading. Usually some form of clover forms the basis of the pasture mixture, in most cases red clover, alsike or white sweet clover. With this is mixed timothy, orchard grass and red top. The great variations in soils prevents the widespread use of any one mixture. The farmers in general recognize their obligations and opportunities and are doing their best to increase production of crops, even under the handicap of a shortage of good seed and a previous short season. A. R. HAHNER.

**Destroys Smut**

Treat all seed grains with Formaldehyde. It positively destroys smuts of barley, oats, wheat, rye, and annihilates potato scab and black-leg. Our new big Hand Book tells how to use

**FORMALDEHYDE**
*The Farmer's Friend*

This book is free and should be read by every farmer in business for profit. Formaldehyde is approved by the U. S. Department of Agriculture. Your dealer sells Formaldehyde prepared by our laboratory, pint bottles 35 cents. Write for the valuable book to-day.

**Make Sure of a Heavy Stand**

This season when hay will be worth big money how can you be sure of the alfalfa seed you use?

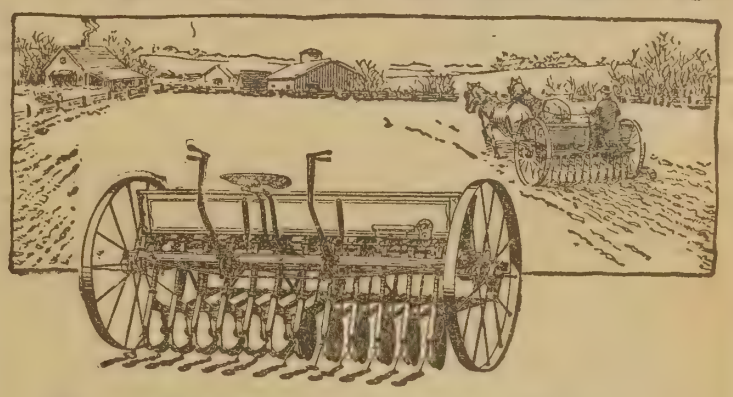
The answer is easy:

To get a heavy stand that yields extra-tonnage cuttings, plant **Morse's Seed.**

If your soil and moisture conditions are favorable, you can depend on this seed for a satisfying, big-profit stand.

Morse Alfalfa Seeds are of every standard variety. Each is government approved for purity. Each has passed a severe germination test at our seed testing station.

**Morse's Extra Recleaned**



is a big tonnage variety—not a freak—not an experiment. Long-lived, steady-yeilding, quality-proved. Produces heavily in all climates and altitudes. "Leaves" abundantly—hence is rich in food value.

Now then—

The supply of Morse's Extra Recleaned Alfalfa and other varieties is not overly large this year. Prices will advance. Get your order in now. Write for prices today.

**C. C. MORSE & CO.**
729 Front St., San Francisco

**MORSE'S Alfalfa**

**For Better Grain Crops**

DRILL planting saves seed, gives the crop a better start, increases yields, and produces grain of better quality than any other known method of planting. Drill planting pays so well, and so many farmers realize now how well it pays, that sales of **Empire Jr., Hoosier** and **Kentucky Drills** took a big jump last fall and promise a bigger one this spring. These are the years when every acre of small grain must produce every possible bushel and these are the drills that do the work.

If you are growing small grain, and are not using an **Empire Jr., Hoosier,** or **Kentucky** drill for planting, you are losing money and the world is losing grain. Buy the right drill to plant your crops this spring. Buy from your local dealer who has in stock, or can get for you, the best drill for you to use on your soil.

The dealer will show you all about feeds, furrow openers, bearings, attachments, the regulation of quantities, and all the other things you will want to know. Talk this over with him or write to us, and we will send you complete information about the **Empire Jr., Hoosier,** or **Kentucky** drill that is best for you to buy.

## Dinging Away on Tiresome "Don'ts"

By ROBERT DOUBLEDAY.

There are too many "don'ts" around the farm and in the farm neighborhoods. I honestly believe that children have had their little minds warped and soured, that young people have been made dissatisfied and that the older folks have become discouraged and embittered by the everlasting "don'ts."

There may be instances where the "don't" is well enough, of course; where it will help for the moment to avoid the hard knock. But those instances are few and far between and at best the don't is only negative advice. It is a good deal like handing a measly dime to a hungry man and saying to him, "Now, don't be recklessly extravagant, and don't go and overindulge in a lot of broiled lobsters and welch-rarebit, because they are hard on the digestion." About nine times out of 10 the fellow who is so ready and generous with his "don'ts" could not tell you a better way to save his life and would not lend you a hand on the better way if he knew it.

Dinging away on the tiresome "don't" very soon and very easily becomes a habit. It becomes, in fact, so merely habitual that if to say "don't" ever had any good influence it is utterly lost in chronic repetition.

The idea that this will not pay and that will not pay and the other will not pay is harped upon until it really appears to most people that there is nothing that will pay. There is so much insistence on the notion that this is bad and that is bad, this fellow is bad and the other fellow is bad, that even though we do it unconsciously, we easily grow into a condition of mind where everybody seems more or less evil and everything bent on going to the devil generally.

I have actualy seen communities where there was not a man, woman or child whom I did not hear berated and "talked about" by somebody in the neighborhood, and where, if you were to believe all that you heard, God must have settled a curse on that locality, covering everybody and everything. Now, an all-wise and all-loving God doesn't do things of that sort. I am forced to confess that in such communities there appeared, merely appeared, to be some grounds for much that was said, but really it was only an appearance, and even the appearance was the result of wrong state of mind, and I doubt not that the state of mind had its origin in a whole lot of promiscuous, needless, ill-natured "don'ts.'

Now, there is only about so much space in a human life, only about so much room, as we might say, in a human mind. Instead of cluttering it with a miscellaneous assortment of senseless and rancid don'ts and rubbish of evil, why not crowd out the don'ts and the evil and the misfortune with an abundance of cheerful and well thought-out do's? Why not make cheer take the place of gloom? Why slosh around in a status that you can not find anything but a grouch comment for? Why not say, let us do this other thing, that will be good for all of us.

If what we deem our good efforts do not produce the results that good efforts should, let us find out why; not by thinking evil and misfortune or by conjuring obstacles, but by looking for the open road. There is an open road to good and to comfort and to happiness and to all the so-called success that is necessary. To deny that would be to assert that there is no such thing as a dominant power of love or a central source of good, and that an all-wise creator does not, after all, know how to provide possible success and happiness and comfort for his children. Really, that would be a fine strain of nonsense, now, to put it mildly, would it not?

Whenever you bury the dismal dont's you will resurrect a fine lot of cheerful do's.

### A Valuable Hint.

If onions are put in water and allowed to stand some time before peeling, they will not smart the eyes.

## LARGEST INCOME TAXES.

### Rockefeller Pays Enormous Sum.

After the Revolutionary war George Washington was one of the wealthiest men in the United States, but his fortune did not approximate a million dollars. Even in the days of Lincoln and the civil war the United States had few millionaires. A hundred thousand dollars was then counted a handsome fortune, and men with $50,000 had great influence.

John D. Rockefeller is generally rated as the wealthiest man in America, and the most authoritative estimates put his holdings at $1,200,000,000, a sum that would make 1200 millionaires. It will be noted that Rockefeller tops the list and leads by a long way his nearest neighbor in the following tabulation giving the names, estimated yearly income and income tax based on these estimates, of the 30 wealthiest men and women in the United States:

| | Estimated Yearly Income. | Income Tax Based on This Estimate. |
|---|---|---|
| J. D. Rockefeller .. | $60,000,000 | $38,400,000 |
| H. C. Frick ..... | 11,250,000 | 7,160,000 |
| Andrew Carnegie .. | 10,000,000 | 6,400,000 |
| George F. Baker ... | 7,500,000 | 4,800,000 |
| William Rockefeller | 7,500,000 | 4,800,000 |
| Edward S. Harkness | 6,250,000 | 4,000,000 |
| J. Ogden Armour .. | 6,250,000 | 4,000,000 |
| Henry Ford ..... | 5,000,000 | 3,200,000 |
| W. K. Vanderbilt .. | 5,000,000 | 3,200,000 |
| Edward H. R. Green | 5,000,000 | 3,200,000 |
| Mrs. E. H. Harriman | 4,500,000 | 2,560,000 |
| Vincent Astor ..... | 3,750,000 | 2,400,000 |
| James Stillman .... | 3,500,000 | 2,240,000 |
| Thomas F. Ryan .. | 3,500,000 | 2,240,000 |
| Daniel Guggenheim. | 3,500,000 | 2,240,000 |
| Charles M. Schwab | 3,500,000 | 2,240,000 |
| J. P. Morgan ..... | 3,500,000 | 2,240,000 |
| Mrs. Russell Sage .. | 3,000,000 | 1,920,000 |
| C. H. McCormick .. | 3,000,000 | 1,920,000 |
| Joseph Widener ... | 3,000,000 | 1,920,000 |
| Arthur C. James ... | 3,000,000 | 1,920,000 |
| Nicholas F. Brady.. | 3,000,000 | 1,920,000 |
| Jacob H. Schiff .... | 2,500,000 | 1,600,000 |
| James B. Duke .... | 2,500,000 | 1,600,000 |
| George Eastman ... | 2,500,000 | 1,600,000 |
| Pierre S. du Pont .. | 2,500,000 | 1,600,000 |
| Louis S. Swift ..... | 2,500,000 | 1,600,000 |
| Julius Rosenwald .. | 2,500,000 | 1,600,000 |
| Mrs. Lawrence Lewis | 2,500,000 | 1,600,000 |
| Henry Phipps ..... | 2,500,000 | 1,600,000 |

### Me-e-o-ow! Me-e-o-ow!

At the banquet held following the Holstein sale at Tillamook, Ore., Tabitha Hengerveld Segis Mooie Korndyke Cornucopia Beets DeKol Watson, sired by Thomas Segis Hengerveld DeKol, was sold for the benefit of the Red Cross. Tabitha, etc., is a beautiful black and white "Holstein" cat and was donated by Cordelia Oatfield, a miss of 13 years. With a bid of $25 by the Tillamook Holstein association and $1 each or less added by many of those present, the sum realized and turned over to the local Red Cross was $52.25. H. A.

## Sidelights

### The Newest Theology.

A boy at a recent examination in scripture was asked where Cain went after he killed Abel. He replied that he went to bed. The teacher wanted to know how he made that out. He said "It's in the chapter, sir, that Cain, after he had killed Abel, went to the land of Nod."—Christian Herald.

### Related Somehow.

"You say, madam," remarked the lawyer to a woman in the witness box, "that the defendant is a sort of relation of yours. Will you please explain what you mean by that—just how you are related to the defendant?"

"Well, it's just like this: His first wife's cousin and my second husband's first wife's aunt married brothers named Jones, and they were own cousins to my mother's own aunt. Then, again, his grandfathers on my mother's side were second cousins, and his stepmother married my husband's stepfather after his father and my mother died, and his brother Joe and my husband's brother Henry married twin sisters. I ain't never figured out just how close related we are, but I've always looked on 'im as a sort of cousin."

### Echoes of the Cold Spell.

"Mercy! that clanking radiator," said Mrs. Jones, stopping her ears.

"Pr-r," shivered Jones. "It makes me think of one of Shakespeare's plays."

"'The Tempest,' I suppose."

"No; 'Much Ado About Nothing.'"—Boston Transcript.

### The French Lesson.

Military Inspecting Officer—Now, sergeant, what precautions do you take against infected water?

Sergeant—Well, sir, first we boil it.

Officer—Good!

Sergeant—Then we filter it.

Officer—Excellent!

Sergeant—Then we drink wine!—Imp.

### Grammatical Knowledge.

When General Leonard Wood was a small boy he was called up in the grammar class. The teacher said:

"Leonard, give me a sentence and we'll see if we can change it to the imperative mood."

"The horse draws the cart," said Leonard.

"Very good. Now change the sentence to an imperative."

"Get up!' said young Wood.—Christian Register.

### His Punishment.

An angler died and went to his "right place," which, of course, was also the residence of his good friend Baron Munchausen. Oodles of time skittered along, and one day as the Big Boss was going by the angler said: "Please, your santanic majesty, can't I try my luck somewhere else? I've been fishing from this blamed place for 200 years and I haven't had a bite."

"That's the hell of it," explained the Big Boss, and passed on.—Boston Transcript.

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## How the "Humors" of the Blood Depend on the Glands

Dr. Hirshberg.

"Humors in the blood" belong to the time when there were owlish discourses on phlegm, yellow bile or choler, and black bile, the cardinal humors to which distempers of the mind and the anatomy were traced and much of our language as to human dispositions, temperaments and diseases were laid at the door of an excess of the one or the other.

One person is said to be phlegmatic, another melancholic, other choleric, bilious, full of spleen or venom. Those who are sanguine are of good blood and kindhearted. The very words on your lips bespeak the physiology of yesteryear and its emphasis upon the humors of man.

Unluckily, however, a myriad of researches made by zoologists, physiologists and experimental psychologists now multiply to prove that the mental, emotional, temperamental and diseased states of man are now known to be largely controlled by and dependent upon the fluids and substances which flow along with and are dissolved in the blood.

The glands, such as the thyroid, spleen, adrenals, piuitary and lymphatics are not the only ones which make these strange humors. There is the pancreas, with a wrist-watch like channel to extend from the left side of the abdomen to the right side, where it empties into the "duodenum" or loop of intestine linked to the stomach.

### Some Glandular Duties.

This opening carries the fluids or humors to aid in the digestion. The pancreatic juice, so-called, is stirred to torrential proportions if the blood which traverses the pancreas contains particles or fluids from the pineal thyroid, pituitary, adrenals or other glands.

When a man's mood is violent and angry it is known that the thyroid gland, in contrast to the pancreas, is working overtime to pour forth its confections into the blood stream.

When the temper is overwrought with blood pressure high it is often said in jest or sarcasm that a person is "in a sweet humor." The adrenal glands, little, marshmallowlike nests of tissue above the kidneys, are in this instance the humor factories. Strange to say, the humors or hormones sent out by them actually do sweeten the blood in an effort to sweeten the disposition of the highly tense individual.

If the blood of a highly emotional person is analyzed there will be found strange humors present, sugar released from its storehouses in the liver and muscles and other commodities unleashed from the humor factories of the thyroid, spleen, bile cells, pancreas, adrenals, pineal, parathyroids, pitualtaries, lymphatics and the like.

### Other Strange Effects.

When the thyroid is absent or deficient in its output the humors necessary to buoy the individual with trembling hope and faith are gone. Depression, stupid stolidity and apathy take the place of alterness and intelligence.

When the thyroid becomes a cataract and overflows its boundaries, tremors, palpitation, bulging eyes, fear and trembling assert themselves. Enlarged anatomically, the thyroid becomes a goitre; if the eyeballs protrude also frog fashion this is called exophthalmos.

If the pituitary gland—a little torpedo-shaped gland which hangs like a pear from its stalk beneath the brain—is absent or diseased there may be a dwarf instead of a full-sized man, with a corresponding infantile disposition and demeanor. Undeveloped structures of the whole anatomy, especially the sexual glands, often accompanies this.

Giantism, on the other hand, attends reverse changes on the pituitary gland—also named the hypophysis. Jumbos of men and women, the kind pictured in fairy stories, are found to have disorders in this gland, and an excessive creation of the pituitary humors.

It is to be seen from these facts that "humors," when understood to be "hormones," or substances made in the glands, are real things with definite power over the moods, humor, dispositions, temperaments and diseases of man.

### What We Can Do.

We can buy a bond, though it take our farms,
There are boys "over there" who are giving arms.
We can give when asked to the Y. M. C. A.,
There are some giving lives who receive no pay.

We can give our time to the Red Cross work,
The boys "over there" do not think we shirk,
We can sew and knit till our eyes grow dim,
It's little enough we can do for "him."

We can eat corn bread with a cheerful face
In our own home land, in the same old place.
"Over there" are boys who are hungry and cold,
They need our wheat and they need our gold.

Some day when the yar is fought and won,
When the last heroic deed is done,
We'll eat wheat bread and we'll buy more farms,
But what of the chaps who have given arms?

Will we dare to look at an empty sleeve
When we think of the trifles that made us grieve,
Will we dare to give them a greeting gay
When we think of the little we had to pay.

—Agnes Just Reid.

Whenever in any religious faith, dark or bright, we allow our minds to dwell upon the points in which we differ from other people, we are wrong, and in the devil's power. That is the essence of the Pharisee's thanksgiving—"Lord, I thank thee that I am not as other men are." At every moment of our lives we should be trying to find out, not in what we differ with other people, but in what we agree with them; and the moment we find we can agree as to anything that should be done, kind or good (and who but fools couldn't?), then do it; push at it together; you can't quarrel in a side-by-side push; but the moment that even the best men stop pushing and begin talking they mistake their pugnacity for piety, and it's all over.—Ruskin.

# All the World's a Stage, and All the Men and Women Merely Players

## Following the American Forces in France

Com. on Public Information.

These ever-welcome field kitchens follow the American boys in France on the march. Many of the hikes are from 20 to 30 miles from seaport to training camp, and hot meals are necessary.

## Reviews Americans Testing Masks

General Pershing watching American troops braving the horrors of poisonous gas. The men, wearing gas masks, enter the gas chamber to prove that their masks are ample protection against German raids.

## Need Stevedores.

Colonel Austin, in command of a regiment of stevedores in France, has returned for recruits. He says two additional regiments are needed at once and promises that men who volunteer will be sent to France immediately.

## Three New Big League Managers

The opening of the baseball season will see three new major league managers. Barrows will manage the Boston Red Sox, Miller Huggins will act as mentor; Hendricks will handle the Cardinals.

# For Farm Service

## Government Helps With Labor

The farm service division of the United States employment service, created two months ago as a special arm of the service devoted to handling the farm-labor problem, makes the following summary of the service's plans for ascertaining the labor requirements of the farmers of the country and recruiting and distributing all available labor:

A special farm-service division is being established in most of the 100 offices of the employment service, with men in charge who have had experience with farm-labor problems. These divisions are devoting their entire time and attention to looking after the labor needs of the farmers in their respective districts and developing ways and means of meeting all calls.

Special field agents are being sent into districts in which acute farm-labor shortage exists, or where unusually large numbers of men will be needed, to study the local situation at close range and devise ways of relieving the immediately pressing needs.

Posters announcing the location of all federal and state employment offices are being hung in postoffices, railway stations, general stores and other public places, telling farmers and farm workers how and where to apply for labor or jobs.

A weekly bulletin will be issued in which all opportunities for farm employment received and the needs of particular districts for seasonable labor will be listed. This will be posted in the postoffices in all towns and cities in the country of 2000 population and more and given to the press.

By an agreement between the postoffice department and the department of labor, all third and fourth class postoffices, numbering 55,000, are authorized farm-labor employment offices. Their postmasters and rural carriers have been authorized to act as "farm-labor agents" for the United States employment service. The postmasters and their carriers cover all rural sections which are not convenient to a regular branch office of the employment service and bring every farm gate in touch with the machinery of the service and the local and distant sources of farm-labor supply. Each postmaster and rural carrier furnishes application blanks to farmers wanting help. Upon receipt of a filled application the postmaster displays a bulletin announcing the details of the call, so as to attract any local available farm labor. If the application is not promptly filled locally, the postmaster forwards it to the nearest regular office of the employment service, which has a large field from which to draw labor.

## On the Editor's Desk.

Frederick J. Drake & Co. of Chicago have issued "Farm Mechanics" by Herbert A. Shearer. This excellent little volume is fully illustrated and practical for the beginner and contains much useful information adapted to farms. It discusses the tools needed, farm shop work, mechanical power, farm machines and conveyances and farm conveniences.

Armour's Farmer's Almanac for 1918 is in the mail. It is a cleverly prepared booklet and contains much information.

The manual of industrial club work for Oregon, prepared by N. C. Maris and L. P. Harrington, has reached this office. It is one of the most inspiring things to read what the boys and girls say of their experiences, difficulties and triumphs.

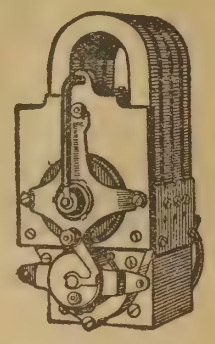
### Tried in Vain.

One afternoon two acquaintances chanced to meet, and during the gabfest that followed one of them took the other to task for the latitude in boasting that he allowed his wife.

"Say, Jim," said he, "why on earth do you permit your wife to go around telling the other women that she made a man out of you? You never hear my wife say anything life that."

"No," rejoined Jim, with a merry little chuckle, "but I have heard her say on more than one occasion that she had tried her hardest."—Philadelphia Telegraph.

### Cultivated Rubber.



British Malaya is now firmly established as the leading country in the production of cultivated rubber, and the industry has added very substantially to the prosperity of the Malay peninsula during the last nine or 10 years.

### What Is the Matter.

When one woman out of a hundred has nothing to say the other ninety-nine are asking what is the matter with her.

**Plow This additional Acreage Without Fuel Cost**

Owners of tractors equipped with K-W Magnetos find they can fire thinner mixtures and cheaper grades of fuel and still develop full horse-power, than they could by any other system of ignition.

The intense hot spark that a K-W produces gets all the power out of every drop of fuel. It turns the ordinary wasted fuel into extra work *without* cost. A

**TRADE K-W MARK High Tension MAGNETO**

will start your tractor quickly and easily regardless of how cold the weather and will operate on all the low grades of fuel. It gives continuous—no trouble ignition.

Forty tractor manufacturers pay more for K-W Magnetos because they want their users to have the best. K-W Ignition is one of your guides as to quality in your selection of a tractor. Insist that your new Tractor be K-W equipped.

If you are not using a K-W on your present tractor and wish to cut fuel cost—write us. There is a type of K-W Magneto that will do this.

TRADE THE K-W MARK IGNITION Co
2891 CHESTER AVE CLEVELAND, OHIO. U.S.A.

# Food Will Win the War

THE government says so. It is deeply in earnest. It asks you to supply the food—more food and more food—for ourselves and our allies. Your patriotic duty to your country now is to produce food.

**Modern** methods include power farming, deeper plowing, better cultivation, greater economy. The farm tractor offers the way.

**On the University Farm** at Davis, California, April 17th, 18th and 19th, there will be a tractor demonstration. On April 20th there will be the annual farm picnic, but no demonstration.

**There** will be tractors, plows and other modern and improved farm implements in actual operation. Big exhibit tents will be filled with power-operated machinery. The University will conduct scientific tests to show tractor efficiency.

**Make** reservations with the Chamber of Commerce of Sacramento or Davis, or write for information to Room 1015 Monadnock Building, San Francisco.

**The California Tractor and Implement Association**

# FLORA FLIRT GETS INTO A SPRING FLIRTATION

Flora Flirt, in spite of warning,
Went to walk on a bright spring morning.

Flora's eyes are filled with joy—
She sees a handsome college boy,

An ardent glance to her he gave,
And Flo can't make her eyes behave.

He stops and is about to speak;
A rosy flush tints up Flo's cheek.

Down comes the rain—and helter-skelter
That youth leaves Flo and runs for shelter!

Poor Flora's drenched; she hides her head—
She almost wishes she were dead.
*Moral*—On cloudy days don't flirt with fellows
Unless you both have umbrellas.

# Battle in Doubt

## *Only Leaders Know Actual Situation*

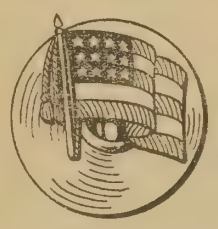
The fortune of battle on the western front is in doubt at this writing, though there are still strong indications that the Germans are unable to drive the British back and capture the railroad center, Amiens, which seems to be their present objective. Present reports indicate that the Germans have hurled their utmost strength into the fray over the short front before Amiens, intending if possible to break through by virture of force only, utterly regardless of the losses of men and munitions that the thrust costs. At this time the British are holding successfully, and British and French leaders declare that there is no occasion to fear the fall of Amiens. General Foch, in supreme command of the allied forces for the present campaign, says that Amiens will not fall. David Lloyd George, British premier, said in a published statement last week that Germany is destined to meet the surprise of her life within the next 10 days. Just what such statements may mean is problematical, but it is a general belief, possibly born of hope to some degree, that the allies are stronger than some think, and that a great offensive is soon to start that will deal a crushing blow to the invading Germans.

Throughout the last week the situation has been as doubtful as during the previous week so far as the average citizen of America has been able to size up. Indications the early part of the week were that the allied leaders were ready to make a stand and launch vigorous counter blows at the enemy. For two or three days the attacks of the Germans were reduced to such degree as to lead to the belief that the attack had spent its force. The allies in a number of occasions and at a number of points launched counter attacks which resulted in the reoccupation of some of the territory lost during the great drive of week before last, but the week passed and the counter blows by the allies were not struck as had been predicted. But instead the Germans launched a second terrific attack in the territory east and south of Amiens, the railroad center toward which the great drive had been directed as an objective. As the week closed it appeared that the attack, while still serious and menacing to allied interests, was destined to be unsuccessful. That it was a following up of the original effort not only to capture Amiens and railroad facilities there, but to break the line of the allied forces, thereby dividing the French and English, was evident on the meager reports that the censors allowed to be published. The French, English and American authorities who know conditions as they exist on the front have maintained strict silence as to all details of the fighting. No definite information has been given as to the losses suffered by the allies or the actual fighting strength. The withholding of this information, though the latter is greatly desired by the public, is considered absolutely essential for the successful prosecution of the war, as much depends upon keeping the enemy in the dark as to the forces that may be brought to bear against him.

### Enormous Expenses.

The expenses of the American government at the present time are averaging approximately a billion dollars each month. For the first year of this country's participation in the war, which ended April 6, the total expenses of the government reached the huge total of $9,000,000,000 approximately. This is not all actually expended by this country, however, as approximately half of it has gone in the form of loans to the allies and will be paid back ultimately if the allies are successful in the conduct of the war. A third of the nine billion has been spent in building up the army, a tenth of it has gone into improvement and extention of the naval service. The magnitude of these expenditures is readily understood when it is remembered that the average expense of running this government in peace times is only about three-quarters of one billion dollars.

### Complete Packing Probe.



Attorney Francis J. Heney has returned from Chicago to California following the completion of the taking of evidence in the probe of the five big packing companies under the auspices of the federal trade commission. It is announced that Victor Murdock, a member of the commission, will compile the reports from the records that have been taken in the public hearings at various cities in the east. This report will be submitted to President Wilson upon its completion. The hearing was for the purpose of discovering, if possible, the truth of the charges that had been made that the big packing companies were in control of the stockyards and railroads with a view detrimental to the best interests of the live stock industry and the public at large.

### Don't Forget

That the information bureau of this paper at Washington, D. C., has all manners of opportunities to secure the answer to any question that you might wish to ask and that it also has a large number of pamphlets and booklets that are of much value to those who take the trouble to secure them. For instance, the United States public health service has prepared a special paper telling how to combat the common everyday cold which infests every community with the breaking up of winter. Also there is a booklet obtainable on war gardens and one on the preparation of war-winning foods, according to the Hoover program. These are only a few of the things that the information bureau of this paper at Washington, D. C., will be glad to supply you. When writing for any one of these merely inclose a two-cent stamp to pay the postage. Feel free at any time to write direct to Washington and ask any question in which you are interested or for any of the booklets that have been announced. Address Washington Farmer, Information Bureau, Washington, D. C.

**Moline Four-Row Bean Planter**

**Saves Time Planting Any Kind of Seed**

For the man who has large acreages to plant, not only of beans but any other seed as well, the Moline Four-Row Bean Planter is a great time saver. It does the work just as well as the ordinary two-row planter, and twice as fast.

Any kind, shape or variety of seed ranging in size from cane seed to lima beans can be planted in the best possible manner in the shortest time by the Moline Four-Row Bean Planter.

You have the choice of using either edge or flat drop plates. Each style has its advantages—both styles are regularly furnished.

Seeds of a rounded character—such as kaffir corn, milo maize, navy beans, cranberry beans, etc., are best handled by a round hole plate, while such seed as kidney beans, lima beans and field corn the edge drop plate with cells properly fitted is better adapted.

A uniform planting depth is maintained because each furrow opener is held to the ground independently of the others by spring pressure. Rows from 24 to 36 inches apart can be planted with the Moline Four-Row Bean Planter.

It is well constructed throughout, seed cans and furrow openers being supported on a heavy, square and very stiff steel pipe.

Seed cans are easily tipped to change plates or empty them of seed.

Steel marker is easily and quickly adjusted.

The Moline Four-Row Bean Planter will save you time this year. See your Moline dealer now, or write us for further information.

## FIVE DOLLARS IN THRIFT STAMPS FOR WOMEN OF THE FARM HOME

A First Prize of $3 and a Second Prize of $2.

These prizes are for the women and girls of the farm home which has

1. An automobile, or
2. A farm lighting system, or
3. A farm water system.

A first prize of $3 and a second prize of $2 in Thrift stamps will be given for the best article written from your own experience on either of the following:

Why you would not be without an automobile, or

Why you would not be without your farm home lighting system, or

Why you would not be without your farm home water system.

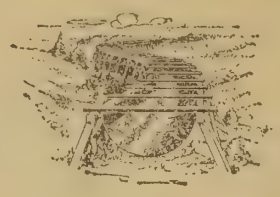
The contest will close May 1.

Write on one side of the paper and mail your article to The Editor of The Washington Farmer, Spokane, Wash.

## Specials for the Children This Week

The best and most valuable crop raised on the farms of the northwest is the boys and girls, but sometimes they do not get their fair share of consideration in the paper. Cattle and horse raisers, wheat growers and orchardists have special attention paid to their interests and it is now the children's turn. Therefore, more than the usual space is dedicated to them this week. On page 30 is a special story in addition to the regular serial story about the hunter boys. And then there are letters from the children themselves. Aunt Nellie is glad to get so many nice letters lately and hopes that every one who has written will write again and that a lot of others who have not written will do so. Besides the letters published in this issue, there is still a big pile on Aunt Nellie's desk that will be published as soon as space can be found, in the order in which they were received. They are from the following:

Ivan Graham, Geanie Amundson, Carl Allison Tubb, Blanche Hamilton, Loretta Owens, David LeRoy, Ina M. Stewart, Harold Skinner, Stella Davis, Elsie M. Ashmore, Emma Louis Mehus, Amanda Marie Johnsen, Grace Jones, Thelma Smith, Fern Daniels, Alice E. Johnson, Irene M. Larsen, Esther Bergman, Dorothy Bickel, Nina V. Anderson, Hattie Malone, Connie May, Elsie Hoglund, Willis Botsford, Levena Stone, Reta Cantrell, Ella Littlejohn, Elvin Littlejohn, Pearl Mathis, Auretta Barnes, Nellie Salvage, Effie Salvage, Emil White, Myrtle Lee, Kenneth Wallace, Hazel Defreece, Fatima O. Lowght, Hazel Saltmarsh, Florence Anderson, Lenore Fox, Bessie Charlotte McFarlane, Beulah Maud Walker, Beulah Violet Shaw, Mary Gustin, Ruth Walsh, Lilly Pederson, Wynona Tella, Ruby Warren, Virginia Gibson, Dick Engle, Vonda Boulden, Matie Burchett, Alice Pohlman, Julia Jacobson, Elna Mattson, Lucile Reinbolt, Thusnelda Kilian, Evis Erickson, Elizabeth Williams, Elvira Blyton, Violet Gray, Anna Thomson, Helen Schoenberg, Elsa Matson, Elva Nelson, Eva Friddy, Linda Anderson, Iris Billingar, Virginia Mae Rouse, Lena J. Hornibrook, Charlotte Utter, Leland Guffin, Delma Griffin, Gwen Baldwin, Rosie Wietz, Hector Mae Kinnon Davies, El Berta Cantwell, Roberta Keith, Ella Sophia Brown, Edith Mildred Tovis, Edith Tideo, Jennie Hay, Vesta Andersen, Victor Anderson, Benjamin Franklin.



Merle Holman, Elizabeth Bowen, Maveria Green, Ellen Steen, Harriet Blyton, Gladys Norman, Bessie Cheyney, Clista Casey, Edna Mattson, Wilma Little, Leta Lane, Jennie Lane, Vera Baker, Sylvia Richardson, Ora Lynch, Brooks McCain, Lucile McKinney, Ludvig Peterson, Mabel Barr, Helen Barry, Ruth Bailey, Ruth Carlson, Orris May, Barbara Hofmeister, Dora Estella Mitchell, Marie Krom, Vera Elanora Garton, Karen Pederson, Edna Peterson, Maurine Reedy, Lorena Thomson, Earl Jenkin, Harry Thomas, Mildred Jean Riley, Henry Besel, George M. # How to keep your Ford engine running like new

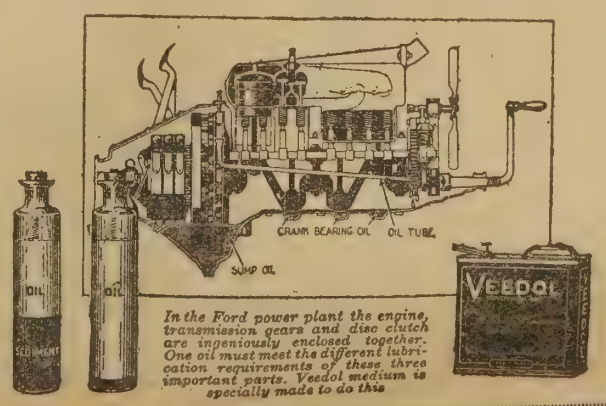
Every car has different lubricating problems. In the Ford the special problem arises from the exclusive and ingenious construction by which the disc clutch and transmission gears are enclosed with the engine.



In other makes of cars, these three parts are separate, and the oiling requirements of each are met by a different lubricant.

In the Ford, one oil must lubricate all three of these parts—the engine, transmission gears and the disc clutch.

### Faulty lubrication causes 90% of trouble

A careful analysis of the causes for trouble in the Ford engine shows that improper lubrication is to blame for 90% of them. This is largely due to the sediment formed by ordinary oil which breaks down under the heat of the engine. This sediment crowds the oil with lubricating qualities away from points where it is most needed, causing friction and rapid wear.

*The famous Sediment Test, showing how Veedol reduces the formation of sediment under engine heat 86%. The left-hand bottle contains ordinary oil and the right-hand bottle Veedol, both taken after 500 miles of running*

*In the Ford power plant the engine, transmission gears and disc clutch are ingeniously enclosed together. One oil must meet the different lubrication requirements of these three important parts. Veedol medium is specially made to do this*

### The ideal lubricant for your Ford

Ford owners are rapidly learning that Veedol Medium is the ideal lubricant for their cars.

It is heavy enough for the engine and gears, yet light enough so that the clutch does not drag.

Ordinary oil evaporates rapidly under the heat of the engine. Ford owners get 25% to 50% more mileage per gallon with Veedol, because Veedol not only resists destruction by heat and minimizes the consequent formation of sediment, but also reduces evaporation loss to a negligible quantity.

### An 80-page book on lubrication for 10c

The most complete book ever published on automobile lubrication, written by a prominent engineer. Contains Veedol Lubrication Chart, showing correct grade of Veedol for every car, winter or summer. Send 10c for a copy. It may save you many dollars.

## The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana, Now the State of Missouri.

By LEWIS B. MILLER

Copyright, 1914, 1915, by Lewis B. Miller.

**SUMMARY OF PRECEDING CHAPTERS.**

In September, 1811, two young men who lived near St. Louis, Ben Armstrong and Jodo Henderson, taking with them their two dogs and donkey Spunky, started on an all-winter's hunt in what was at that time unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination — a salt spring close to the river Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their saltmaking and hunting. After exciting experiences with a buffalo herd and with a bear in a cave, they find their first fresh sign of Indians — moccasin tracks in the snow. And then, in the dead of night, a scouting party visited them preparatory to an attack. The attack followed soon, and would have resulted in the capture of the boys by the savages had not a violent earthquake frightened them away. It was only a short time, however, till they were in the hands of the savages, led away captives.

### CHAPTER XI.

### To Be Burned at the Stake.

The two prisoners gazed about them. Through the middle of the village, and up and down the valley ran a wide, open way, or street, with wigwams arranged in straight rows on both sides of it. Back of those, however, the other wigwams were scattered around, very irregularly, through the scattering woods. There appeared to be several hundred Indians in the village, by far the greater part squaws and children. Many of them swarmed around the returning warriors, and kept staring at the white captives and at the little mule.

When the excitement of the homecoming had subsided and the crowd were dispersing to their wigwams a warrior approached the captives and made signs for them to follow him. They complied, and their guide led them to a small wigwam between the street and the river. There he drew back a buffalo-robe door and pointed inside. They stooped down and entered. The buffalo-robe fell over the doorway again, and the captives were left alone. The only things in the wigwams were a roll of buffalo robes lying at one side and a small fire burning in the center.

"Well, here we are, in a hide-and-pole house of our own! Wonder what the red people expect to do with us, now that they've got us here?"

"Who knows, Jodo? If no other way, we can find out by waiting. Their main grievance seems to be that we've taken the liberty of hunting and trapping in the Osages' hunting grounds. That's a pretty serious offense in their eyes. But I hardly think they'll be very severe with us."

"They may not. But there's some uncertainty about that. And it's the uncertainty that worries."

Some time later, after night had come on, Ben said: "I wonder if we're being guarded." Then he sprang up, pushed open the door and looked out, first to the right and then to the left. And not in the least surprised was he to see two warriors standing, one on each side of the wigwam. The night was cold, and both had their faces almost concealed in their buffalo robes. At that the captive withdrew. Then he and Jodo sat by their fire and waited—waited to see what would happen.

At length the hide door was pushed aside slightly, and an armload of wood was dropped into the wigwam. They put some of the sticks on the fire and laid the others close by. By the time the fire had got to burning well the hide door moved aside again and a fat hand was thrust through the opening. In the hand were two pieces of uncooked meat. Jodo made haste to receive the meat, and the hand disappeared. They laid the slices on the coals, and when they were broiled raked them off and ate them. There was enough to satisfy their hunger.

While the captives were still eating the same or a similar hand was thrust in again, and Jodo received a gourd.

"What comes now?" demanded Ben.

The opening was in the end of the gourd's handle. Jodo smelled of the gourd and then shook it. "Something in here that rattles." He turned the gourd up and poured a little of its contents into his hand. "Parched corn!" he exclaimed, and held out the gourd to his fellow-prisoner.

"We'll try to save at least half of this," Ben remarked.

"What for?"

"To carry with us when we escape. There's a lot of strength in parched corn. We could travel a hundred miles on a gourd full of this and a little jerked venison."

Being thirsty after eating the dry corn, Jodo thrust his head out at the door and made signs of drinking. The guards motioned him back, and he supposed that no attention had been paid to his request. But a little later a gourd of water was reached in to him.

"Whatever the Osages propose to do with us, they're not going to starve us to death," Jodo remarked, after the two had finished eating and drinking.

Later, while the were sitting by the fire discussing the situation, their own blankets were thrust in to them. They now unrolled the buffalo robes, made their beds, and were soon asleep.

From force of habit both awoke early. And when various noises told them that the Indians were astir they, too, got up and dressed and put some wood on their fire. While they were doing this that same fat hand was thrust in, and they found themselves in possession of two slices of meat for their breakfast.

"Whose is that mysterious hand, Jodo? It's fat enough to belong to old Snappy Turkle."

"Yes, it's fat enough, but it's not his, I think. My guess is that it's a squaw's hand. But no matter whose it is, it's a very, very useful hand for us. I'm tempted to give it a squeeze to let the squaw know how much we appreciate her kind attentions."

"You'd better restrain your affectionate impulses. You might frighten the hand away. Then we'd have to go hungry."

After breakfast Jodo went to the door and thrust his head out. The guards were still there—the same or some others—and they promptly motioned him back. He seated himself near the fire again.

"Now we know how it feels to be in jail," he observed.

"Hope they won't keep us in too long. This would grow monotonous in the course of a few years. But for the present we shall have to cultivate patience. Wonder where Bose and Tinker are now."

"They're back at our cabin on the Big Niangua, I'd guess. And they're wondering why we don't come home. That is, if the Osages didn't pass by there when they followed us and burn the cabin down. In any case, I'm wondering if they'll starve before we get back to them."

"I don't think so. They're both good hunters. And there are many small animals around there, such as rabbits and squirrels and 'coons and 'possums. They may not keep as fat as when they were eating after our rifles and traps, but they stave off starvation."

"Yes. And even if they found only ashes where the cabin stood they can retreat into the big cave in the worst weather."

Now the hide door was thrust aside, and a big Indian entered the prison wigwam. It was Snapping Turtle.

"How!" greeted the fat chief, in a gruff but not unpleasant way.

"Howdy! Howdy, Snapping Turtle!" returned Ben. "Have a seat here by the fire."

Without a word the Indian seated himself on the ground. He remained silent, but sat and gazed stolidly at the blazing sticks.

"I'm glad you've come to see us. We want to talk with you."

"What fur you want to talk, Strong Arm?"

"We want to find out just how long you expect to keep us penned up here, and what you're going to do with us."

The Osage gazed into the fire for a full minute. "Maybe so, chop head off."

Ben waved the suggestion away. "Don't mention it, Snapping Turtle—don't mention such a thing. You'll hurt our feelings. As I told you before, that's no way to treat people. If you came down to our country we wouldn't chop your head off. We'd say, 'Sit up to the table and eat a bite, Snapping Turtle.' And when you got ready to come home we'd tell you goodby, and invite you to stop and see us again when you were passing."

"Big chief Osages gone way off, hunt buf'lo." He pointed toward the southwest. "When big chief come back, him say what do with white mans."

"I see. But when will that big chief of yours come back?"

Snapping Turtle shook his head. "Maybe so five day, maybe so ten day, maybe so twenty day, maybe so long time. No know."

"And are you going to keep us shut up here and under guard till he comes home from the hunt? What's the use of that? Don't you know we wouldn't dare run away without our guns and a good supply of powder and ball? If we did we should soon starve to death this time of year. You couldn't drive us off without our rifles, not even if you sicked the dogs on us."

The chief looked at Ben for a few moments, and then seemed impressed with the common sense of this suggestion.

"Me see what," he soon answered. "Maybe so Strong Arm and Dodo walk about, look at Osages' town, come back here, eat, sleep."

"Of course! That's the way to treat us. No use to guard us. We haven't done anything mean. Let us out, so that we can walk around and get acquainted with your people. The whites think the Osages are pretty good Indians. If you treat us nicely, we'll them they think right."

Snapping Turtle soon got up and went away. Perhaps he wanted to consult with some of the other Indians. But he came back later and called the captives out. He had already sent their guards away; and now he told them they would be permitted to wander about the village as much as they pleased, but must not venture out of sight of the village.

The captives expressed their thanks for the liberty given them. And after the Osage had gone they went for a stroll up and down that dividing street. The children and squaws stared, and sometimes the dogs barked at them, but nobody offered to harm them. When they returned it was noon, and they found a fat squaw, who had been good-looking when not so fat, waiting at the door of their wigwam. She had seated herself in the sunshine, and was waiting patiently. But she rose as the young white men drew near. She was dressed mostly in buckskin, but had a red blanket around her shoulders.

"Hello, here! Who's this?" exclaimed Ben.

"Me Watermelon," the squaw said, by way of introducing herself. She held out a small pot of stewed venison she had brought them.

"We're glad to know you, Mrs. Watermelon," Ben answered. "I'm wondering if it was you that have been bringing us all those things to eat—meat and parched corn and water. If it was, we want to thank you. We're——"

He stopped suddenly. For the blank look on the woman's face could only mean that she understood not a word of what he was saying. Further attempts to talk with her convinced the captives that she knew little or no English.

After she had gone they took the pot inside and made a hearty meal of her stewed meat. When she came with some uncooked elk meat for their supper they gave her back her pot.

That night the captives slept without any guard. And they felt not a little relieved at the change. During he next few days they wandered about the village as much as they pleased. Later they got to going a short distance beyond the village for wood for their fire. But even with that liberty both soon grew restless.

All the Osage men and boys that were in the village—most of them had gone with their head chief to the buffalo country—started out early every morning to hunt. Long accustomed to an active, busy life, Ben and Jodo were eager to go hunting also. The fat squaw, Watermelon, who had been appointed to look after their wants, was still supplying them with meat, raw when it was to be broiled, and in a pot, and sometimes cooked, when it was for stewing. She also kept their corn gourd filled with parched corn.

One day they stopped at Snapping Turtle's wigwam, and were invited inside. They were quick to notice that their rifles and other weapons were there, and also their pack saddle. After some conversation Ben said:

"Snapping Turtle, why don't you give us back our guns and let us go hunting? We'd rather kill our own meat."

"White mens git rifle, maybe so run away."

"But you can give us just a bullet or two apiece. How could we travel all that distance home unless we had plenty of powder and lead?"

Snapping Turtle considered the matter. He seemed to think favorably of the suggestion. "You wait. Me tell you some udder time," was his answer.

Early next morning he appeared at their wigwam with their rifles, their belts and their ammunition bags. But their pistols had been taken from their belts and the bullets from their ammunition pouches. Ben thanked him, and tried to get powder and lead enough for another load apiece. But the Indian refused.

So, very glad of this improvement, the captives set off across the country to hunt. Having a suspician that they were being followed and watched they tramped toward the west—almost the opposite direction from that of their cabin camp on the Big Niangua. Soon after they had started Ben said:

"I recollect hearing Daniel Boone tell how, when he was carried away into captivity by some northern Indians, and they let him go hunting with only two bullets, he saved some lead to run away with by cutting his bullets in half and shooting a half bullet at a deer. In that way he reached home all right."

"But these Osages don't give us a chance to do that. They hand us our guns already loaded, and don't trust us with any other ammunition."

"Maybe they'll treat us better next time if we do well today."

"Then we ought to lug home some meat if it's at all possible."

Knowing that game must be both scarce and wild near the village, they tramped straight ahead for a few miles before they tried to do any hunting. Finally they caught sight of a little flock of deer browsing not far away. Putting a thicket between themselves and the game, they approached noislessly, cautiously. When near enough they whispered together for a few moments, then took careful aim.

(Continued on the following page.)

A mysterious hand feeds the captives.

# Trappers of the Ozarks

.....BY.....
LEWIS B. MILLER

(Continued from the preceding page.)

Ben's target fell dead almost as his gun cracked. Jodo's animal ran a hundred yards, then fell as suddenly. Both hunters were much elated over their success.

With their knives they opened the animals and threw away the entrails, to lighten them. Then each shouldered his deer and started for the village.

The distance was several miles, and the burdens grew heavy before the long tramp was ended. They passed through the village the longest way, and were careful to go but a few steps from Snapping Turtle's wigwam. Scarcely had they thrown their game down at the door of their own lodge when Watermelon, the fat squaw, came, promptly took possession of it, and began to remove the skins.

They tried by signs to make her understand that they could now provide for themselves and cook for themselves. But she went on with her work, finally hanging the meat on a cord stretched between two limbs of a nearby tree. They gave her half of one deer.

Snapping Turtle came over soon after the meat was hung up, and seemed well pleased with their success. Most of the Indian hunters had come in without any meat.

Next morning, when the two went to him for more ammunition, he gave them a bullet apiece and let them pour from one of their own powder horns powder enough to load their guns.

"But, Snapping Turtle, we ought to have at least one more bullet apiece, and the powder to blow it out."

"Strong Arm, me give you nudder ball nudder day. You go hunt now, fetch back deer."

"But what if we only wounded a deer, and it was getting away from us? Or what if we wounded a bear, and he was coming straight at us?"

"You got knife; you got tomahawk." He pointed to their belts.

"Yes. And you've got a knife and a tomahawk, but you don't go hunting with one arrow."

Finally the chief gave each of them his own pistol, and they set off, well pleased.

"No run away!" the Indian called after them.

"Run away! It seems to me you ought to be glad to get rid of us. What good are we here?"

"White mans run away, maybe so chop head off, maybe so roast 'um 'live."

"Now, there you go again, Snapping Turtle! And worse than ever this time! You oughtn't to talk like that. It's not nice of you. And while I thing of it, do you know what has become of our little mule? We haven't seen him of heard him for two or three days."

The savage frowned disgustedly. "Mule no good! Much kick. Heap much kick up. Run away. Heap no good. Let um go."

The hunters made no reply, but set off on their hunt.

"That means that little Spunky got disgusted with life among the Indians and has struck out for St. Louis. I wish we could do the same," Jodo remarked.

"We will—we'll do that very thing some of these fine days. This is not a good time for either mules or men to attempt such a trip. Spunky may make it through by browsing industriously. But the folks can count his ribs when he gets there. I wish now we'd let him go home last fall. And if I'd known he was going to start when he did I'd have tried to send the folks a note by him."

"Little good your trying would have done. You left Rachel's vial back there in the cliff cave, I recollect. If you'd tied a note on 'im he'd have raked it off in the brush or washed it off in some river."

A light snow had fallen the night before, and flakes were still falling. All day long the two white hunters tramped, without finding any game. Late in the day they came upon the trail of three deer. Reluctant to go back without any meat, they followed the trail as long as they could see the tracks. At last, disappointed, they turned and started for the Osage village.

But they had tramped far and wound about not a little, and the night soon grew so dark that they doubted if they could find their way back. So, having their flints and steels and some tinder in their ammunition pouches, they decided to start a fire and not try to find the village till morning.

In a sheltered spot among some bushes, and by a log, they kindled their fire. And they sat by it all night, with their backs against trees. Sitting up, they dozed and napped fitfully. But just before dawn they both fell into a sound sleep.

When they awoke day was at hand, and they were surrounded by Osage warriors. Now their hands were tied behind them and they were promptly started toward the village. Both tried to protest, but the warriors could not understand. So there was nothing to do but to submit.

Arriving at the village, they were marched on to their own lodge and pushed inside. Then their feet were tied together and a guard was left on the outside. They kept calling out that they wanted to see Snapping Turtle, and at last the chief thrust his head in at the door.

"What make Strong Arm run away? What make Dodo run away? No good run away. Now maybe so chop head off. Maybe so roast um 'live."

"But we didn't run away, chief," protested Ben, indignantly. "We only stopped and kindled a fire to——"

But the head had disappeared and Snapping Turtle was gone, without even waiting to hear their explanation.

The tightly-bound captives lay wondering what would happen next. And they had not long to wonder. The guards came in, and after untying their feet, marched them out and through the village, amid the hoots and gibes of the squaws and children that followed. Soon they came to where most of the village had assembled.

The guards held each prisoner, one by each arm. Jodo was stopped back in the crowd, but Ben was marched on to an open spot in the center of the crowd. His back was turned to the post and his hands were drawn back and tied together behind it. Then he and the post were wrapped round and round with many turns of green buffalo-hide rope. Not till the captive was unable to move either hand or foot did the Indians cease to wind the rope.

Jodo, held firmly by his two guard, and with his own hands still bound together behind him, stood staring at those savage preparations in half-stupefied horror. And when numerous squaws and boys came with armfuls of brush and dry wood, and began to pile the fuel around Ben, Jodo could scarcely keep from crying out in his terror.

Not till Ben stood waist-deep in the fagots did the squaws and boys cease their gruesome task. Then other squaws came with dry grass and blazing firebrands, and applied them at the bottom of the pile of fagots. Quickly smoke was boiling up in great clouds, as the fire seized upon the grass and the dry brush.

(To be continued.)

**SHOULD YOU ASK**

us what the advantages are we offer in

**Stevens County Logged Off Lands**

we would answer:

1. The soil is especially adapted to diversified farming and stock-raising
2. The prices are low.
3. Our payment plan is arranged to suit you, by allowing Ten years to complete the instalments.
4. The land is close to good town and to railroad.

We will gladly tell you more about the land if you will ask for our free booklet. Use the coupon.

## Fish Oils for Motor Boats.

According to "Politiken" of Copenhagen experiments have been made with motors for fishing boats to determine the practicability of using fish oils for operating motors. It is said that this has proved a success, and that it may be possible for the fishermen who now have boats equipped with kerosene motors to make some slight changes which will enable them to operate with fish oils. It is even proposed that the fishermen may make their own cod-liver oil while on the sea for use in their motors.

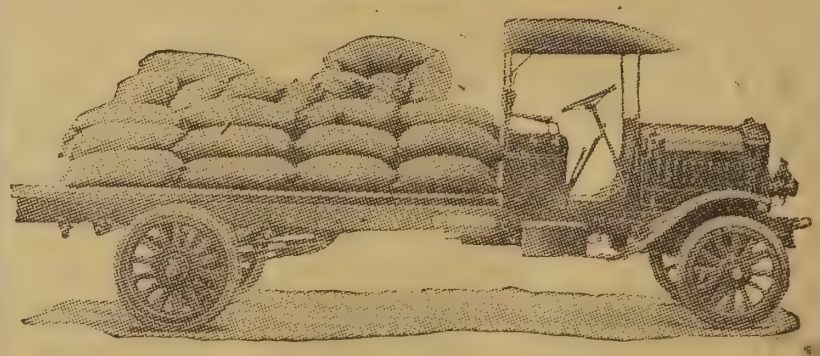
# The Tractor Replaces Work Horses

Within the past weeks letters have been received from 29 tractor owners in various parts of Washington, Oregon and Idaho. They show that the number of horses replaced by the tractor on these 29 farms averages 10. This is a pretty high average; but on some large ranches where extensive wheat growing is practiced, as high as 45 horses have been replaced with one big tractor. Many tractor owners say that their machines are proving more economical than horses on farms of from 120 acres up to 2500 acres.

Albert S. Roberts of The Dalles, Ore., says that the large 75 horsepower tractor he is using on his 2400-acre farm has taken the place of 40 to 45 head of horses and enabled him to reduce his help to the extent of six to eight men. Mr. Roberts estimates that he can plow at an average cost per acre of 70 cents—this figure taking care of distillate, lubricating oil, grease, repairs and upkeep.

"The advantage of the tractor," Mr. Roberts says, "is that it is 'multum in parvo',—much in little. Its power is wonderful and in my own case, its care and upkeep light. We feel that our great saving is in man power—which means a great deal these days of scarcity of men, also when feed is so high for teams. The tractor will stand crowding to the maximum load and speed which horses can not endure. With our tractor, my two sons did the work of about six men and 40 to 45 horses. We pulled 12 14-inch bottoms about nine inches deep and a harrow behind the whole. The harrow is a great conserver of moisture when following right afte rthe plow. Horses can't stand deep plowing."

"We have been farming with a tractor nearly two years," reports James Feeley of Rathdrum, Idaho. "We have 440 acres of rolling land and are doing with tthe tractor practically all the work on the farm that we formerly did with horses. Our tractor displaced eight horses and we can plow at least two more acres per day than we found it possible to do with horses. In that it does more work, better work and does it at a decided saving over horses, I have found the tractor in my own case decidedly superior to the horse."



## Privation and Economy.

The bread ration of the French soldiers has been cut from 25 ounces to 21 ounces, the civilian bread card allows 10 ounces per day, which is about one-third of the average bread consumption of the French peasant or workman. The manufacture of crackers and pastry has been absolutely prohibited. Consumption of sugar has been reduced 49 per cent and of rice 61 per cent. The import of dried vegetables has been reduced 52 per cent and of fats 48 per cent.

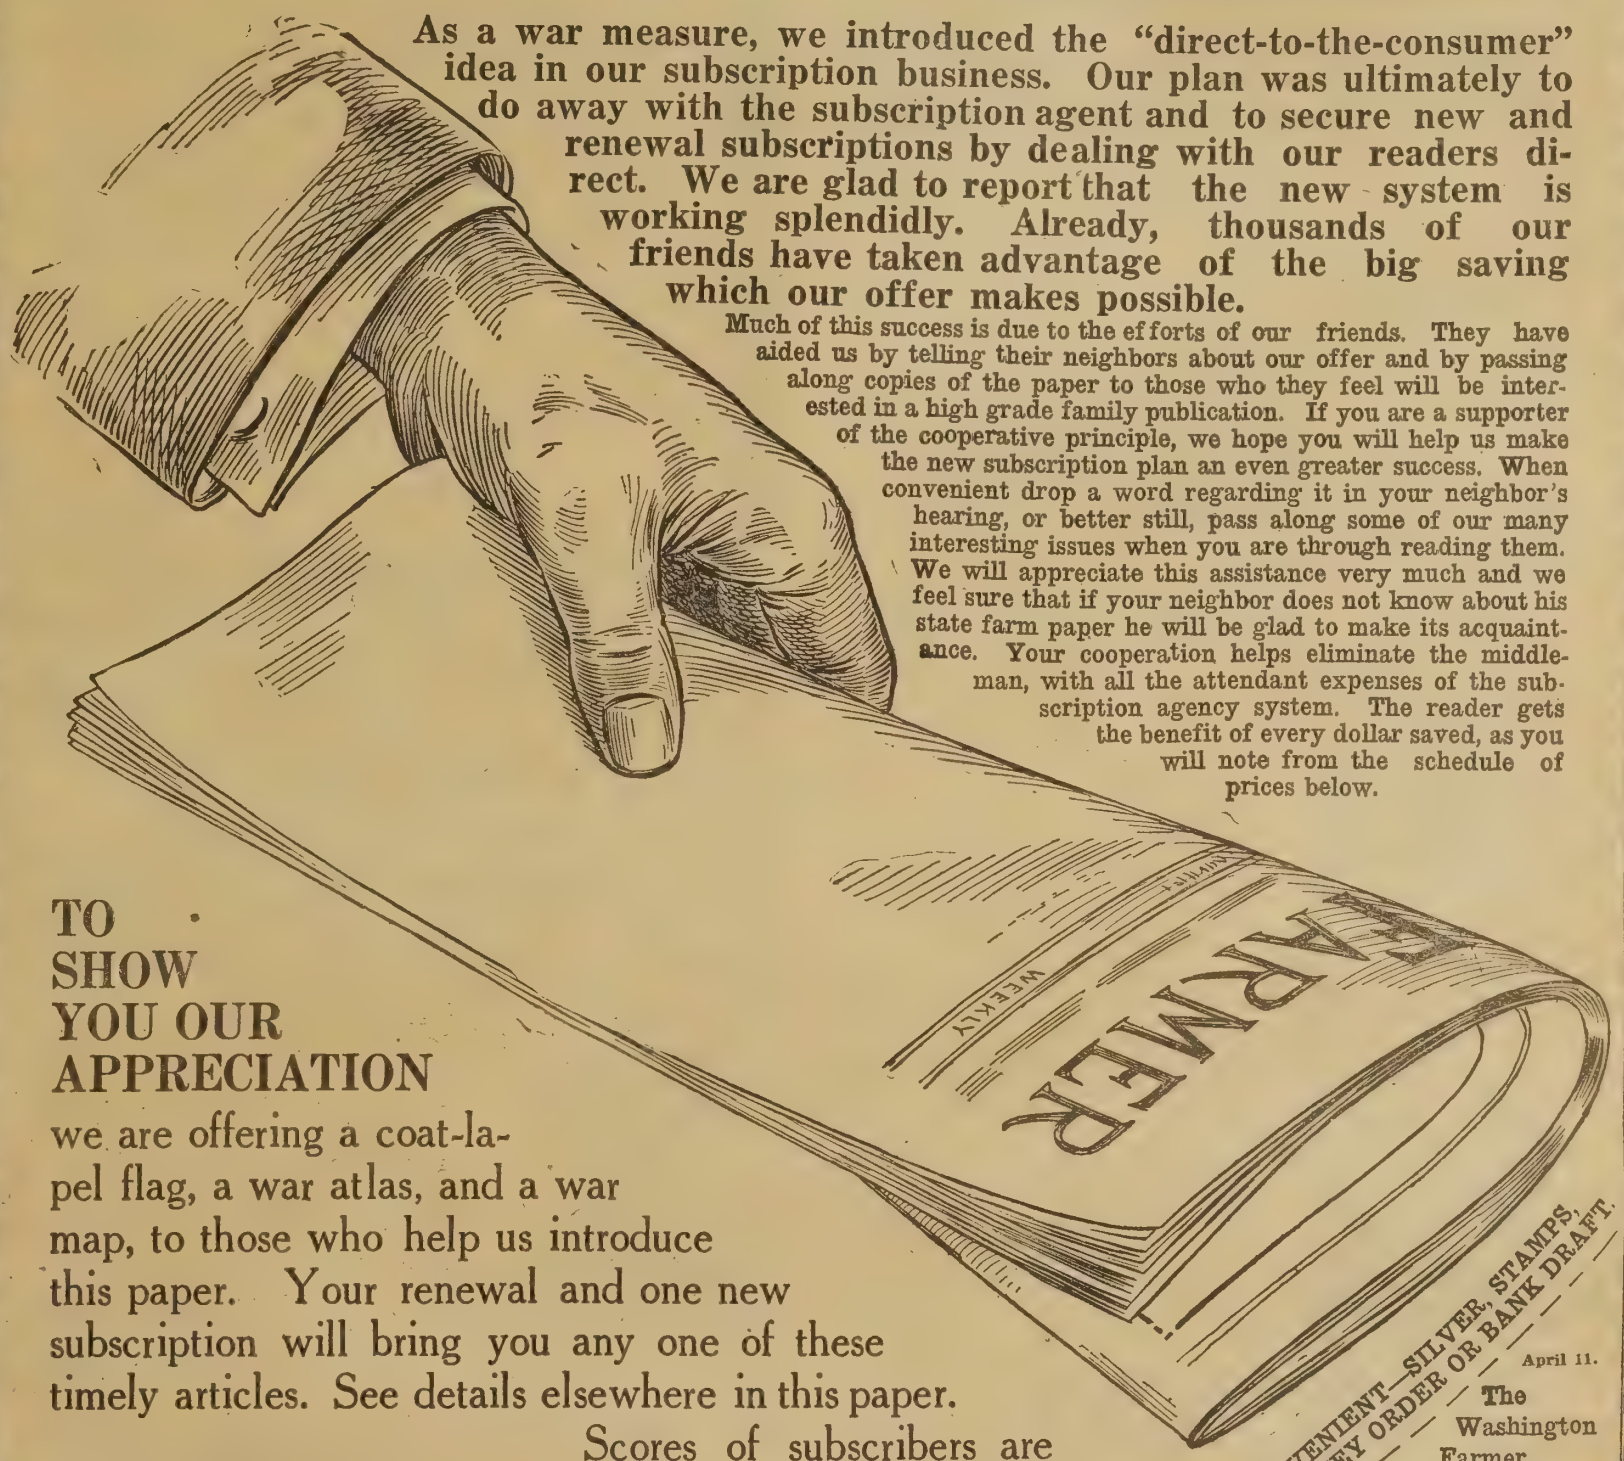
### America Is Saving.

That the American war savings drive is already running ahead of the English campaign, in volume of weekly treasury receipts, is shown by comparative figures made public by the national war savings committee.

**Velie**

**A Velie Truck Is a Paying Investment Twelve Months in the Year for the Farmer, Stockman and Fruit Grower**

**Velie Trucks make money** for you on the farm by their economy of operation, low upkeep cost and adaptability to all hauling conditions. There is a Velie truck for every purpose on the farm. It is our business to figure the usefulness of our trucks and how they can make you money.



It doesn't cost you anything to investigate, but it may mean money in your pocket. Write today to the nearest distributor for a Velie catalog.

# PLEASE PASS IT ALONG

*SCORES OF OUR FRIENDS ACTED ON OUR SUGGESTION TO PASS THEIR PAPER ON TO A NEIGHBOR WHEN THROUGH READING IT. WE TRUST THAT MANY MORE WILL DO THE SAME WITH THIS ISSUE; AND CALL ATTENTION TO OUR MONEY-SAVING OFFER*

**As a war measure, we introduced the "direct-to-the-consumer" idea in our subscription business. Our plan was ultimately to do away with the subscription agent and to secure new and renewal subscriptions by dealing with our readers direct. We are glad to report that the new system is working splendidly. Already, thousands of our friends have taken advantage of the big saving which our offer makes possible.**

Much of this success is due to the efforts of our friends. They have aided us by telling their neighbors about our offer and by passing along copies of the paper to those who they feel will be interested in a high grade family publication. If you are a supporter of the cooperative principle, we hope you will help us make the new subscription plan an even greater success. When convenient drop a word regarding it in your neighbor's hearing, or better still, pass along some of our many interesting issues when you are through reading them. We will appreciate this assistance very much and we feel sure that if your neighbor does not know about his state farm paper he will be glad to make its acquaintance. Your cooperation helps eliminate the middleman, with all the attendant expenses of the subscription agency system. The reader gets the benefit of every dollar saved, as you will note from the schedule of prices below.

**TO SHOW YOU OUR APPRECIATION**

we are offering a coat-lapel flag, a war atlas, and a war map, to those who help us introduce this paper. Your renewal and one new subscription will bring you any one of these timely articles. See details elsewhere in this paper.

Scores of subscribers are writing us how much they like this paper, and we feel sure everyone of your neighbors will want it when they once make its acquaintance.

## A Real Saving

***Following Rates Now in Effect for Subscriptions to The Washington Farmer***

***25c FOR ONE YEAR***

***50c FOR THREE YEARS***

***$1 FOR FIVE YEARS***

YOUR REMITTANCE MAY BE IN ANY FORM MOST CONVENIENT—SILVER, STAMPS, PERSONAL CHECK, POSTAL MONEY ORDER, EXPRESS MONEY ORDER OR BANK DRAFT.

April 11.

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

# Handicraft For Girls

**By Dorothy Perkins**

(Copyright by A. Neely Hall.)

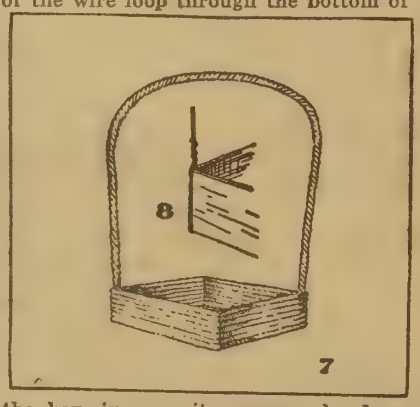
### Made With Paper Rope.

There is a brand new idea for making pretty baskets, trays and boxes, and I am going to tell you all about it because the work is very easy to do and you will find it a great deal of fun. All that you need are some cardboard boxes for the foundations of the articles, crepe paper, out of which

to twist rope strands for covering material, glue and some light wire for handles. You can buy the crepe paper at almost any stationery store. In fact strands of paper rope are sold ready twisted, but you can twist them just as well yourself and have the fun of doing it, saving money besides. Buy a roll of crepe paper of any color you may select. A chocolate brown is pretty for the articles here described.

Open the roll of crepe paper and cut the entire length into eight strips of equal width. That will make strips about two and a half inches wide. To prepare the rope strands, first take a single strip, pinch one end in a door jamb and make a loop in the opposite end through which to slip a pencil. Then twist the pencil from right to left as indicated in Fig. 1, pulling firmly as you twist to make the twists even and tight. When the strip has been tightly twisted from end to end, remove it from the door, and twist a second strip in a like manner. Then placing an end of each of the two twisted strips together, pinch them in the door jamb, slip a pencil in loops made in the opposite ends, and twist the two strands together, twisting from left to right as indicated in Fig. 2. Instead of pinching one end of the strips in the door jamb, two persons may hold the ends and do the twisting. The work can in this way be done much quicker.

### Serving Tray.



The cover to a large sized cardboard box—one having a narrow rim—is needed for the serving tray shown in Fig. 4. It requires a pair of handles, and these are made of pieces of light wire bent into loops, with the ends pierced through the ends of the rim of the box cover, bent over and twisted as shown in Fig. 5. With the handles in place, wrap them with a piece of crepe paper and then with the paper rope.

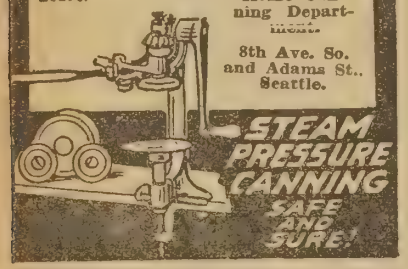
Lap and paste a strip of crepe paper over the edge of the box to conceal it. Then coat the outside surface of the rim with glue, and starting at the bottom wrap a strand of the paper rope around and around the box, pushing each row of the rope close against the preceding row (Fig 3). When the top of the rim has been reached, coat the inside surface of the rim with blue, run the rope over the rim and wind it around the inside; then coat the inside of the bottom with glue and wind the strand of rope around and around, working in from the outside rim until the center is reached. Cover the outside of the bottom in the same way, and the tray will be finished. Nothing could be simpler than this work of glueing the rope strands in place.

### Paper Covered Basket.

Select a small square cardboard box for the little basket shown in Fig. 7. Then, first of all, make its long handle out of a piece of wire, stick the ends of the wire loop through the bottom of the box, in opposite corners, bend up over the outside of the box, and twist as shown in Fig 8. Wrap the wire with a piece of crepe paper, then with the paper rope, and when the handle has been completed cover the tray inside and out with the rope, winding it around the surfaces in the manner described for covering the serving tray.

**Radium in Dew.**

An Italian university professor says he has found radium in ordinary dew.



SANITARY CANNING OUTFITS

Home canning is more necessary and more profitable this year than ever before.

Steam pressure canning is the safe, quick and easy way. Our complete outfit saves time, labor and fuel, hermetically seals the cans and sterilizes the contents.

We include instructions and a $2 book of recipes. Write for free literature.

# Patriotism

## Think, Talk, Act and Pray for It

By ALICE W. BARLAND.

Dear Sisters of the Family Circle: I find myself wondering why there is so much indifference among many, concerning war questions. I have decided it is a lack of realization of the great importance of all of us working together. This is everybody's war and every one should keep that fact in mind constantly and it is the duty of those who have a full realization of it to keep the rest remembering.

My sisters, how much do you know about what is taking place "over there?" I don't like to dwell upon the awful atrocities taking place on the other side, but it does seem that if every American fully understood what we are face to face with, this easy-going indifference would cease over night.

Listen while I tell you of what has happened to a young farmer boy who lived with his people not 40 miles from where I am sitting. This young fellow was among the first to go to France and has been taken prisoner by the Germans. A few weeks ago his parents sent him a watch. Just recently they had a letter from him, which, of course, had been censored. He said he was well and comfortable, was receiving good treatment as a prisoner of war. He said he was returning the watch as he had a wrist watch and could not use any other kind.

In the course of time the watch reached the family and as the soldier brother suggested, it was given to a young brother. The watch would not run so was taken to a jeweler for repairs. Wedged back inside the works the jeweler found a tiny piece of paper with printing so fine he read it under a magnifying glass, and here is what was printed: "I don't think I can live through this, but if I do I shall never return to you. They have cut off both my ears and my nose."

This is one, just one, instance of the heartless, worse than barbarous treatment dealt out by the world's great enemy. I could multiply them by hundreds. It seems to me I can not bear these things. Do we want these monsters across the sea to invate our country and make us bow the knee to such a government?

It seems to me I am not making my purpose clear in this letter, yet I very much desire to do so. It is, first, that every doubt be banished that this is our war, that it is a life or death struggle for the freedom of ourselves and our children from the yoke of Prussianism, which a man mad with greed for power, would saddle on the world Do you say the struggle is so far away that it will never reach our shores? Don't you believe it. That man over in Germany, crazy for power, and the glory of possession, has four sons and he plans a monarchy for each, reserving one for himself.

Would you like to see one of the kaiser's sons in the White House at Washington? When Germany conquered Belgium she needed people to till her land and work in her factories, so she drove those Belgians into Germany and made them work for her. Women who had never been trained to work were put into the fields and at the point of a bayonet were forced to dig and slave at work they were not fitted to perform and about which they knew nothing. Germany did not hate Belgium, yet see what she did to her, so small and unimportant. But Germany does hate us, with a great jealous hatred. We are so big, so wonderful in resources, she hates us and she covets our country. She has trained her army thoroughly, she has laid her plans carefully. Should we stand back, and say it is not our quarrel and leave the allies to fight alone against such odds, it would not be long until every barrier would be wiped out and we would be left to fight Germany alone and not only her, but all those whom she would conquer and force to fight with her and against us. This is not an impossibility at all. It is something we should face squarely. I have such faith in the American people that I know every one will pull together, when they fully understand. Let us not waste time. I would make the purpose of this letter revolve around one central idea, namely: Grasp beyond question, the necessity for standing by the government to the letter, in every request made. When we realize the necessity we will act.

Use the war flours, save on fats, save on sugar, buy war stamps, buy Liberty bonds—do it as if your very life and liberty depended upon it for they do, they surely do. You are all good women and will line up for victory I am sure. Pray for patriotism, think it, talk it, act it! All of us for the U. S.!

### Chinese Canals.

At what period the Chinese began to dig canals, there is no authentic record to prove. Sometimes it seems as if these remarkable people must always have had canals and other works, so long have they been familiar to them and so well established have they been as a part of the country as the men from the Occident first visited it. One thinks of the grand canal of China and the great wall of China together, although, of course, they have nothing whatever to do with each other, except that they are both ancient and remarkable works of the Chinese people.

### Ours a Splendid Burden.

"Ours is the splendid burden of feeding the world. There is no magic way of making food win the war. It can be done but one way; the way of voluntary and eager resolution and action of the whole people in every shop and every kitchen, and at every table in the land."

### Kitchen Walls.

Kitchen walls should be painted so that they may be wiped with a damp cloth, making cleanliness possible without great demand on strength and without the disarrangement caused by whitewashing or calcimining.

Field Seeds

Sweet clover, white and yellow blossom perennial, Grimm Alfalfa, Dwarf Essex Rape, Sand Vetches, Millets, Clovers and Grasses.

The Inland Seed Co., SPOKANE, WASH.

# Foods for Children

"A useful body and an alert mind are largely the factors of the problem of proper feeding. The mother who wants to make the best citizen out of her child should feed it properly," says A. Grace Johnson in a bulletin issued by the Oregon Agricultural college.

In order to do this she should know what kind of food to feed, how much to feed, and how often to feed. Children need more food in proportion to their size than adults, and it is therefore wise to give more than three meals a day; on the other hand, food must not be given so often that the stomach will have no time to rest. This can be avoided if children are fed at the same hour every day. The digestive organs of children are not strong enough to care for the hearty foods of adults; therefore, their food should not be so strong.

Milk is an important form of food in the child's diet up to the 10th or 12th year, and should be supplied at any cost. A quart a day should be provided for each child if it is at all possible.

It is important that children be taught the chewing habit. For this purpose crusts of bread and crisp crackers are introduced when the child has several teeth. Cereals, preferably from whole grains, should be a part of every day's food. Long cooking (three or four hours) is necessary for breakfast cereals. They should be served with top milk, and no sugar. The drinking of a liberal amount of water is necessary to the health of the child. Several glasses a day should be taken, preferably between meals, for if water is taken during meals the food is "washed down" before being sufficiently chewed. Candy, always the purest, or loaf sugar, ay be fed sparingly at meals, but never between meals, for that spoils the natural appetite.

Soft cooked (never fried) eggs should always be a part of the child's diet. Serving eggs in custards or soups gives variety. One egg a day is sufficient for the child. Since fruits and fresh vegetables are rich in minerals, so important in bone and muscle building, they should be fed to children. For the younger children, begin with the mild-flavored vegetables, well cooked and rubbed through a sieve. Orange juice and prune pulp are the most desirable fruits. Any mild, fresh fruit in perfect condition may be used for the older children. The sweet fruits should be cooked and served without sugar.

Provide plenty of bread and butter. The milk and eggs given to younger children take the place of some meat. After the age of 8 years children may be fed more liberally of meats with little fat, such as broiled beefsteak, stewed chicken, baked haddock, halibut or cod, roast beef or mutton.

The following foods should be avoided with children until after the 10th year: Ham, bacon, sausage, pork, fried food of any kind, hot bread, fresh rolls, pastry, all rich cakes, sirups, preserves, nuts, tea, coffee, lemonade, soda water, raw vegetables, such as cucumbers, onions, radishes, celery, and the following cooked vegetables: Corn, cabbage and lima beans.

We must remember that learning to eat the right kind of food is one of the most important parts of a child's education. The giving of this education rests upon the parents, who must therefore train the child to accept the fact that his food is different in kind from that of adults, and that, though he eats at the family table, he can not taste everything that is offered as food for the family. All bad food habits are due to the lack of knowledge or indulgence of the parents, and not to the inherited tastes of the child.

## THE OTHER FELLOW.

### His Acts Do Not Concern You.

Here is an extract taken from a letter from A. G. Avery of the law enforcement division of the food administration to Frank W. Guilbert, Spokane county food administrator:

"The people who are trying to split hairs with the food administration and who pride themselves on getting the best of it (as has been done) should blush, not exult, at their success in preventing us from sending food to the soldiers who are trying to protect them. Instead of demanding, in this heart-breaking time, every insignificant right and privilege that was accorded them before the war, they should every night, before they sleep, humbly and on bended knees thank God that they do not have to lie in a shell-swept trench with Flanders mud for a pillow. They should thank God that their morning call will not be at 5 o'clock to 'go over the top,' but to peace, comfort, a loving family and kind friends. If it is possible by speech or pen to awaken these people from their smug, self-satisfied sense of security, from their assurance that they are doing their full duty, do so.

"There is another class with which you say you may experience some trouble. I refer to those people who are so much concerned about what the 'other fellow' is doing that they lose sight of the real fellow concerned. A man of this class will say that he is very patriotic, has subscribed to the Red Cross fund, for Liberty bonds, and has done other commendable things, but he insists 'My neighbor does not adhere to the food regulations and you can not expect me to do so,' or a merchant of this class may say, 'I will follow the food regulations if my competitor does, but you can not expect me to if he does not.'

"People of this character fail utterly in their attempt to measure their so-called sacrifices. They look only at their neighbor or competitor when they should look at the men—aye boys—who have offered all to stand between them and defeat; who are giving up their lives so that these people may live in peace."

## Foods for Old People.

"As people grow older there are unavoidable changes in the circulatory and digestive organs of the body," says A. Grace Johnson, in a bulletin issued by the Oregon Agricultural college. Absorption of digested foods is less active, there is no building of muscle as in children, there is usually less bodily activity and at the same time the power to eliminate body waste is much lessened. For the above reasons the food of the aged should be restricted.

No rules can be given which can be followed in every case, for the reason that the changes incident to old age may vary greatly in different individuals. The following suggestions, however, should be the guiding principles in feeding the aged:

1. Diminish the amount of food eaten.
2. Use food in small quantities at regular intervals.
3. All food should be simple and easy of digestion.
4. The amount of muscle-building foods should be very materially decreased.

# The Steinway Piano

The Steinway is the one Piano known and used throughout the world. Wherever Pianos are sold, the Steinway is carried by the leading Piano Dealer as his leader.

The Steinway is the Piano used by all the world's greatest pianists, vocalists and instrumentalists.

The Steinway is the Piano used by the great majority of the best teachers of music throughout the world—on the Pacific Coast over a thousand teachers use the Steinway.

There must be a reason why the Steinway is so pre-eminent. Indeed, there are scores of reasons why—mere words here can not adequately express them—but if you will accord us the opportunity we will gladly show you why.

The Steinway is universally acknowledged the Standard by which all other Pianos are judged. In spite of its manifest superiority, the prices for Steinway Pianos are no higher than asked for competing makes. Convenient payment terms may be arranged if desired.

**We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.**

*We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, Etc.*

**Sherman, Clay & Co.**

Sixth and Morrison Streets, Portland.
Third Avenue at Pine Street, Seattle.

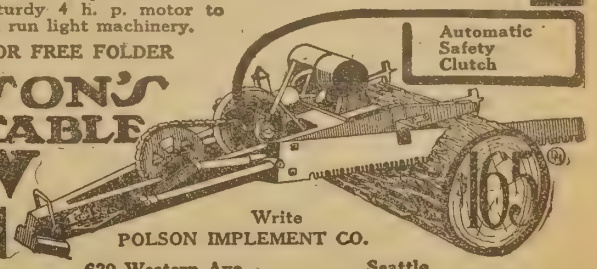
**Dependable:**

Here is a portable drag saw that you can depend upon.

Will do the work of 20 men sawing cord-wood shingle bolts, clearing land and cut from 15 to 30 cords of 4-foot wood per day.



Built especially strong for heavy duty work and backed by one of the oldest implement houses in the West.

You make no mistake when you buy the Polson.

Equipped with Safety Automatic Clutch so you can start saw independent of engine and use sturdy 4 h. p. motor to pump water and run light machinery.

# The Old Bent Tree

## *A Story for the Young Folks at Home*

Once cpon a time, in what was then the far west, there lived in the country a little flock of girls so nearly of an age and size that they were like the steps in a stair, each one just about such a height taller than the next younger. There were four—Nanny, the rosy-cheeked, being the eldest, and Jane, the little pale-face, the next. Then came Dumpling (so called because she was as round as a ball every way), and Dot, the 5-year-old "baby."

Nanny was the head and front of all mischief, merry of heart, and so sweet of temper that it was hard either ever to correct her or to punish her. Little Jane, on the other hand, was the conscience of the family, fearful of doing wrong, always ashamed of Nanny's pranks, and never of her own accord doing any forbidden thing. It must be confessed that this was far from being a merit in the eyes of the others, who often thought her opinions both tame and troublesome. Dumpling, the near-sighted, grave and droll little girl, was just as reliably correct as Jane, yet full of demure frolics and ready to follow wherever Nanny might lead. And Dot was a frail, dimpled, kittenish creature, the toy and treasure of the household.

Back of the house was a wood, and in that wood was an old tree, a stout oak, that bent from the roots in an arch, the top branches touching the ground. It was a belief with the children that the Indians had bent it, long before, though it had probably been partially upturned by the wind at some early day and had grown in that position by the weight of its own branches. This tree was the favorite resort of school children when they could go in a large party and they climbed from the root over the great trunk, either high up into its branches or directly over it to the ground again, as if it had been a bridge. Many wonderful feats were performed in way of reaching the highest limbs, and in perching upon crotches and clefts, like squirrels.

But the woods were so dense all about it that children did not usually like to go there alone to play. The stillness had something mysterious in it, and there were stories current among them of Indians and bears and wolves. One winter, when the snow was deep, the tracks of a bear had been found about it, and that forever after added a zest of real danger to the place.

So, unless their numbers warranted it, their voices were rarely heard in that leafy stillness. Moreover, some of their parents doubted the safety of letting children go there, as the height from the ground was considerable, and with a crowd of boisterous girls and boys, there was danger of falls and broken limbs.

But Nanny, true to her instinct for forbidden pleasures, liked the old bent tree better than any other playground. With her as leader it was often visited at noon and after school at night; and she was more fearless than any one in all the climbing and perching and swinging. From the ground her rosy face and little scarlet dress made her look more like an apple than anything else up among the leaves.

Our story begins with one summer day in vacation, when playhouse and swing and haymow had been exhausted by the restless Nanny and her following flock of sisters; when dolls and visiting had been voted a bore, and there yet remained many long, hot hours to be got through with before bedtime. It was 4 o'clock. What should be done?

"Let's go to the old bent tree," brightened Nanny, as with an inspiration.

"Oh! I'm afraid!" protested timid Jane, but only half above her breath, for she knew Nanny would laugh.

"I'm not afraid," put in stout little Dumpling.

"Nor I," twittered Dot, with a gambol and frisk; too much of a baby to know anything about consequences.

"You're forever afraid, Jane," said Nanny with a high scorn for such lack of spirit. "I wonder you're not afraid to come out of the house at all. What is there to be afraid of, I'd like to know?"

"The bear," said Jane, with something of a show cause on her side and bringing out the standard but stale objection.

"Nonsense!" retorted Nanny. "Bears only come in the winter. Nobody ever saw a bear in summer."

"But mother don't like us to go there," ventured Jane, as a forlorn hope.

'But she never said we mustn't," replied Nanny.

Jane had exhausted her opposition, and after the victory was won Nanny deigned to argue and persuade at length. This made the bold ones bolder and utterly silenced cowardice; and, without a word to their mother, they all started for the wood.

As soon as they reached the welcome shade of the trees, they took off their sunbonnets, the better to feel the cool breeze in thir hot faces.

They loitered, picking up now and then a pebble, here and there a flower, and made their way slowly through some hazel thickets and then through deep woods to the old bent tree. They always reached it with a shout of welcome, for its fine bent figure, so in contrast with the straight old monarchs all about, was a perpetual delight to them.

A cloud had hidden the sun, and Jane sat down to wipe her heated face with her apron, while Nanny sprang at once up the curved trunk, Dumpling and Dot toiling cautiously after. "See me!" and "See me!" were the shouts from various points along the journey. But Jane was not an enthusiastic looker-on. She was very tired; and thought she heard just now, with a thump at her heart, a distant muttering of thunder.

If there was anything that terrified her more than another, it was a thunder shower; and that, as well as the haunting and undefinable "bear" dread, made her very miserable.

"Why don't you come up, Jane?" piped the little Dot, perched like a fairy close to the first branch. Then all at once it dawned on Jane that, if a bear should come, she would be alone on the ground and probably the first victim. This was a sting to her already roused fear, and she made a wild scramble to join her laughing sisters on the tree.

Their merriment seemed to her like the most reckless defiance of near and sure danger, and, though ashamed to express her fears, for she knew that she was always foreboding alarms and troubles, she managed to say: "I—thought—it thundered."

At this, Nanny, from her high perch, burst into such a fit of laughter that she almost lost her hold, and Dumpling and Dot followed suit.

"Oh, Jane," said the little one, "don't be so 'fraid. We're all here!"

Jane made a brave effort to overcome her weakness, and followed her sisters up into their leafy bridge. It was exciting to be so far from the ground and to hear the rustle of the boughs so near her. She thought that birds in a nest might feel as she did —so high and light and breezy.

But it was true that she had heard thunder, and the black cloud could now be distinctly seen shutting out the sun. Even Nanny noticed the growing shadow; but was unwilling to yield an atom of her courage, and, though herself not overbrave in view of a storm, strove to keep up a show of indifference. Then Dot, as if to help her out, began to complain of being hungry. This offered a loophole of honorable escape, and she all at once remembered it must be near supper time.

"We'll have to go," she said; "for mother don't know where we are."

The getting down from the tree was easy work to the nimble and experienced Nanny, and, in fact, to all except to the unpracticed little Dot. She had only crawled to the first limb, and the high main arch was still to be crossed, and that involved getting round and under interfering branches, and keeping a steady head when the greatest height was reached. On the other hand, the return down the steep trunk, without twig or bough of any kind to cling to, was even more formidable. It had been easy enough to climb up, with friendly hands behind to "boost," and the rough bark to cling to, and a waiting help at the top in the form of a nimble sister, who had got up beforehand; but the getting down threatened not to be so easy.

Dot saw her strait, and had much more reason to cry than Jane had had with her imaginary fears. But she listened to Dumpling's encouraging logic —"You can't fall, Dot, for I couldn't!" and tried to do all the contradictory things that Nanny and Jane advised: "Now sit still, Dot," from Jane, who had a vague idea that presence of mind implied sitting still; and, "Now run from that branch to the next one," from Nanny, whose resources were all active. She instinctively tried to follow Nanny's advice; but the result was that she followed Jane's, and clung helplessly to the tree.

Nanny, who had got down, climbed again to where Dot was clinging, and cheered and tried to help her. She wanted Dot to go on in advance; but, failing in persuading her to that, passed her, and tried to lead her. But the height had turned Dot's little head giddy, and the consciousness that her plight was a difficult one soon set her to crying, and then she could do nothing.

What was to be done? Jane's head was full of expedients, but none of them seemed practicable. Finally, sensible Dumpling declared that they would have to go home for help; and, seeing how really hopeless it was that Dot could ever get down, it was finally decided that that must be done. But who should go and who should stay?

Their planning and parleying had occupied a good deal of time. Meanwhile the thunder grew more frequent and the air darkened. All of Jane's vague "bear" fear was lost sight of in view of the near and real distress. Either to go or to stay was dreadful—to go alone through the woods or to stay alone with Dot through the storm. She was not selfish; she clung to each little sister and wanted to share the peril of each. She had no idea of choosing; but left it all to Nanny.

Nanny was sobered in earnest, and for once the dimples relaxed in her apple cheeks and she looked almost as solemn as Jane herself. Dot settled the matter finally by saying: "Oh! Nanny, stay with me."

"Janey and Dumpling, you run home and tell father that Dot can't get down. You know I can climb better than you and Dot and I won't be one bit afraid," said Nanny.

Just then they heard the wind rising and saw it turn the white sides of the leaves uppermost; otherwise there was a deathly stillness. Jane took Dumpling's hand in her own and started, and with a parting pang looked back and saw Nanny and Dot sitting on the tree next to the great limb and watching them—Dot tearful and Nanny trying to laugh. This put wings to Jane's feet, and she dragged the helpless but willing Dumpling after. On, on, toward home, with the dense black cloud fronting them and the strong wind blowing in their faces. A flash of lightning, followed by a heavy rumble, only added to their speed. They must not wait to cry for the ones left behind in danger, but they must hurry, hurry! They were bareheaded and the thick hazel bushes scratched and hindered them, but not a word of complaint or terror from either of them—Dumpling, composed, though eager, making as rapid progress with her sturdy, heavy little body as did Jane, with her slim, slight one.

Did it sprinkle? One drop surely fell on Jane's hot cheek. But if it only needn't lighten any more, she wouldn't care for the wetting.

But it did lighten—a bright, fierce flash, and a quick heavy volley after it, and down poured the drenching drops and on they fled! Poor little girls! They had little breath or strength left when they reached the gate, at last, and found their mother nearly wild with anxiety. She had watched with dismay the coming shower, wholly ignorant as to where they were and with no idea in which direction to search for them. Their story was quickly told, and the father and brother were off at once to the rescue, with shawls and umbrellas.

And Nanny and Dot! As soon as Jane and Dumpling were out of sight little Dot's courage vanished, and Nanny began to comfort her. "Play we're the Babes in the Wood," she said; but that only made Dot cry the harder, for that had always been too sad a story for her warm little heart.

"Well," said Nanny, "play we are gipsies and live in a tent. You sit close up to the limb, Dot, and I'll make a tent of my apron." Then she kissed Dot, and said she didn't think there ever was such fun as to play gispy; and she chattered and planned, and didn't give Dot a chance to be frightened, until the flash of lightning came. When it did come, Nanny gave a great jump and grew pale; but rallied, and turned it off by drawing the apron over both their heads, and saying, "Oh, isn't it fun, Dot?"

But now she felt the wind was dangerously strong, and might blow the little girl down from the tree, in spite of herself. She thought to herself that if Jane was there she would be afraid the tree would blow over. So she placed Dot as securely as she could against the limb, and, putting one arm around her, held on with the other with all her strength. She had to sit astride the great runk in order to keep her place at all. But still she ran on with her light tongue, and wished they had something there better than an apron for a tent; and for her part she wouldn't be the least afraid to stay there all night, but thought it would be jolly.

Then the rain came, drenching them to the skin and pouring in streams down their hair and faces.

"Oh! isn't it fun?" choked Nanny; and Dot piped a feeble "Yes."

"Hold tight to me, Dot," said Nanny, catching her breath. "That's—the—way—the—gipsies—do!"

And Dot clung, and tried to laugh and feel it was having fun; but every other breath was a sob. The hand by which Nanny clung to the tree was nearly blistered; but she held fast, and when she saw Dot's quivering lip she poked her under the arm and "tickled" her, as she sometimes did in their morning frolics in bed, before they were fairly awake enough to get dressed.

The father and brother were not slow in reaching the tree; nor were they any too soon, for Nanny's strength was nearly gone. Dot dropped her dripping little body with perfect trust into her tall father's outstretched arms; and she liked that way of gipsying best—having a shawl wrapped nicely around her and being borne along under an umbrella.

Nanny scrambled down, spry as a spider, and trudged bravely along after her brother, though the storm buffeted her so that she could not keep the shelter of his umbrella; but she was very content and cheerful, notwithstanding the smarting of her torn and bleeding hand.

When they got to the house, and the little sisters met them at the door, Dot cried out, her trials all forgotten, "Oh, Dumpling, we played gipsy!"

Nanny's hand was bound up, all the wet things were removed, the hungry stomachs had their nice bread and milk, and the only rebuke they got was: "Children, never give mother another such a fright by going away without letting her know."

"It was all my fault, mama," said Nanny "and we never will." — Mrs. Clara Doty Bates, in the Independent.

### Little Freda Gnavauch.

**Little Freda Gnavauch, 5 years old, one of our corner cousins, with her little pets. She writes good letters to the other cousins of the Children's Corner. Her home is at Echo, Ore.**

### Making It Easy for Her.

It was the boss talking.

"Miss Flimmer, you are a very pretty young woman."

"Why, thank you, sir."

"You dress neatly and you have a well modulated voice. I might add that your deportment is also above reproach."

"But I don't understand why you, a man of family, pay me so many compliments of a strictly personal nature."

"For this reason. I want to put you in a cheerful frame of mind before taking up the matter of your spelling and punctuation."—Birmingham Age-Herald.

### Fifty-Fifty.

An Irishman who had walked a long distance, feeling very thirsty and seeing a milkman, asked the price of a quart of milk.

"Threepence," replied the milkman.

"Then give me a quart in pints," said Pat.

Pat, on drinking one pint, asked, "How do we stand?"

The milkman replied, "I owe ye a pint."

"And I owe you one," said Pat, "so we are quits."—Chicago Herald.

**Cook Their Lunches at School.**

Dear Aunt Nellie: I am going to join the Corner if you don't mind. I am 12 years old and in the sixth grade. My teacher's name is Mrs. Van Brocklyn. We have seven cows. Their names are Bessie, Rose, Fanny, Daisy, Jersey, Susie and Beauty. We have three heifers. Their names are Hertu, Pansy and another Suse. We have two horses, Jolly and Billy. We have one little calf. Its name is Benny. I have two thrift stamps. I think every one ought to buy them or they ought to buy war savings stamps. There is a girl whose name is Mildred Tormey. She said that her mother died when she was young. I think that is really too bad. Tell her to write to me, please. I like the story that is in the Farmer now. I wish the rest of it had been there. Dear Aunt Nellie, put some more stories in the Farmer. We have 19 pupils at school. We have an oil stove so that we can cook at school, so that we can have a hot lunch every day. I know how to milk and drive the horses, but I don't have to do very much of that kind of work. I have two brothers. Their names are John and Daniel. John goes to school. He is seven years old. In our school some children's eyeballs get all red. One of my eyes is like that. When I look at the lamp it looks like it was dark. Do you know what it is? Last time we had a big Corner. I hope to see my letter in print.—Selma Rajala, Box 24, Toledo, Wash. (We are all glad that you want to join the Corner. I know that Mildred Tormey would like to write to you. Why not write to her, yourself, and ask her? I hope your eye will soon be all right.—Aunt Nellie.)

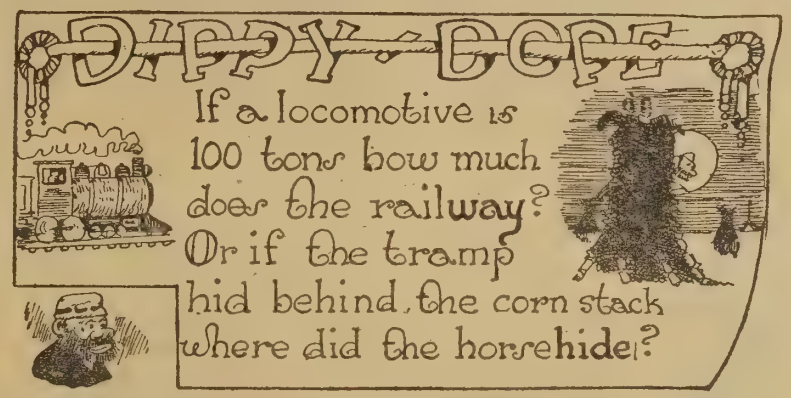
**Has Baby Ella Marie a Twin?**

Dear Aunt Nellie: It has been a long time since I wrote last to you. I've come to the conclusion of writing a few lines. I've read almost every letter in the Children's Corner and have been watching and waiting for a twin. I am 12 years old and my birthday is April 3. If I have a twin I wish she would write to me. I am in the eighth grade at school. There are eight pupils in our school. We also have a very nice teacher. His name is Mr. Smith. I will tell you about my little niece. She will be one year old March 10. She has light hair and a light complexion and has dark blue eyes. She weighs about 24 pounds and her name is Ella Marie. She can wave her hand at you and say, "Bye." She will throw kisses at you and will kiss her parents. She can also pat-a-cake, - pat-a-cake-a baker's-man. She is a very active and healthy baby and never keeps still a minute when awake. I wonder if Ella Marie would have a twin? If so, will some one please write and tell me? I have one and one-fourth miles to go to school and three of us children drive a black horse every day. I go with two of our neighbor children. We have lots of fun driving. I am living with my two brothers on a 240-acre farm. We have about 18 to 20 horses and mules and about five cows. I am corresponding with Ida Morey, Kendrick, Idaho. I was writing to Ida Dilio and Margaret Thompson, but have lost their addresses. The children in our school have joined the Red Cross. We have not yet got our work. I can crochet a little, but would rather know how to knit. I will close, hoping this will not be my last letter to the Corner. —Mary M. Brodin, Hubby, Wash.

**Three Friends Write a Letter.**

Dear Aunt Nellie: This is the first time we have written to the Children's Corner. We were all glad to see a whole page of letters last time. We are three friends. Our names are Jeanette Guist, Eulala Cosgrove and Velma Martin. Jeanette is seven years old. Her birthday is October 22. She has one sister and no brother. Eulala is 11 years old. Her birthday is January 1. She has four sisters and no brother. Velma was 12 years old November 23. She has two brothers and no sister. Jeanette's mother is sick in the hospital and she is staying with Velma. Velma is sick today and Eulala is over reading stories to her. We have good times playing together. Have we any twins? If so we wish they would write to us. Jeanette is in the third grade. We all have gardens and chickens and Jeanette has rabbits, too. We live about two miles from the business center of Aberdeen. We hope to see our letter in print soon.—Jeanette Guist, 414 Jeffries street; Eulala Cosgrove, Box 907; Velma Martin, 2222 Railroad avenue, Aberdeen, Wash.

**Glad When She Can Play Outdoors.**



Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I have blue eyes and red hair and am 5 feet and 2 inches tall. My birthday is September 21. I am 12 years old. Have I a twin? I live on a farm of 334 acres. We have 18 head of horses, three pigs, 300 chickens, six cows and 12 calves. I have a plant. It is a petunia. It is awful tall and has been blooming all winter long. I have a knitting bag. I am knitting a wash rag for myself, but as soon as I can knit good I am going to knit for the Red Cross, if mama will let me. Papa is taking the Farmer and I love to read the Children's Corner, so I thought I would write to see if my letter would be put in. My, I will be glad when spring comes, so that we can get out and play. I have been sick and missed school two days. We have three and a half miles to walk to school. Papa said that I could write this time and see if my letter was in print and if it was I could write often. I wish some of the cousins would write to me. If they do I will be glad to write to them. I am sending Aunt Nellie a picture of myself when I was a little girl.—Libbie Latimer, R. F. D. 1, Plaza, Wash. (It was dear of you to send the picture, Libbie. Aunt Nellie thanks you for it and will keep it to remember you by.—Aunt Nellie.)

**The Skagit River Runs by Their Farm.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 13 years of age and my birthday is November 22. We have 10 cows and two horses and four calves, two pigs, a dog named Flip and I have a big cat named Tom. I have one brother and no sisters. My brother is nine years old. I am in the fifth grade and my brother is in the third. The school that my brother and I go to is in a little town and it takes us 10 minutes to walk to school. My teacher's name is Miss Violet Shellhamer and my brother's teacher's name is Miss Edna Graham. My papa has 55 acres in bottom land and our house is on upland. We have two barns and the Skagit river runs by our lower barn. Our horses' names are John and Nellie. John is black and Nellie is white. There is a railroad that is in front of our house and we can see the train go by every day.—Alta Kruse, Lyman, Wash.

**Uncle and Cousin Are With Colors.**

Dear Aunt Nellie: This is the very first time I have written to the Children's Corner. I have two miles to go to school. We ride our ponies, Bill and Dolly. My teacher's name is Miss Addie Emes. I like her fine. I go to Mount View school. I am in the sixth grade and am 13 years old. My birthday is August 23. If I have a twin I would like to hear from them. I have two sisters and three brothers. My sisters' names are Mildred and Grace. They are 6 years and 3 years old. My brothers' names are Leonard, Perry and Charles. Leonard is 11 years old, Perry is 8 years old and Charles is 1 year and 1 month old. We live on a 160-acre farm. We have four horses, one cow and one calf, three cats, one dog, two hogs, 43 chickens. My father takes the Farmer and thinks it is a good paper. I read the Corner every time we get it, and enjoy the letters very much. We take the Spokesman-Review, the Farm Journal, the Rural Weekly and the Saturday Evening Post, also. I can crochet and my brother can, too. My Uncle Louis has enlisted in the navy and my cousin Charles has enlisted in the marines.—Sadie L. Olin, R. F. D. 1, Baird, Wash.

**Goes to Sterling School.**

Dear Aunt Nellie: I am going to write to you for my first time. My father has been taking the Farmer for several years and I always enjoyed reading the letters. I am 12 years old. My birthday is September 27. Have I a twin? If I have I would like to hear from her. I go to the Sterling school. My teacher's name is Miss Shidler and I like her very much. There are 32 children in my room. I am in the fourth grade. I have three sisters and three brothers. My brothers' names are Roy, Walter and Raymond. My sisters' names are Myrtle, Hazel and Alice.—Elise Martin, R. F. D. 1, Burlington, Wash.

**Belongs to the Wide-Awake Club.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old and I am in the third grade. I have a sister and a brother. Their names are Floy and Howard. I have a pet cat. It is named Brighteyes. I have a pet dog named Don. We got 11 head of cattle. I have a calf of my own and we have two horses. Their names are Dot and Babe. I joined the Red Cross and Wide-Awake club. My birthday is July 6.—Cecil H. Bartoo, Box 285, Sumas, Wash.

**Laura Has Three Little Nephews.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I surely enjoy the letters of other children. I will be 10 years old the 2d of June. Have I a twin? This has been such a lovely winter in the Big Bend. I have a dog, cow and a duck. Best of all, I have three little nephews. My oldest nephew will be three in June and his name is Freddie. My second nephew will be a year old in January and his name is William, and my last little nephew is four months old and his name is Jack. Jack and Freddie are my sister Emily's babies and William is my brother Lee's baby I have two brothers and five sisters. Just one of my sisters is married and one of my brothers is married. My sister has a cayuse and her name is Cricket. I like to ride her.—Laura D. O'Neal, R. F. D. No. 1, Box 29, Hartline, Wash.

**Stanley Writes for the First Time.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old and I am in the fourth grade. My birthday is August 18, 1918. Have I a twin? I have two brothers. Their names are Eric and Gilbert. Eric is 12 years old and Gilbert is 5 years old. We live on a farm of 160 acres. We have two horses and six cows and six calves, three cats and two dogs. The horses' names are Charlie and Queen. The cows' names are Star, Beauty, Redit, Blossom, Rose and Bud. The calves' names are Lady, Cleveland, Snowball, Buttercup, Frank and Fly.—Stanley Swanson, Waukon, Wash.

**Has Jessie a Twin?**

Dear Aunt Nellie: This is my first time to write to the Children's Corner. I am 9 years old and my birthday is in October. I am in the third grade. I have a brother. His name is Gene. His birthday is in October, too. We have six horses, their names are Fanny, Bess, Dolly, May, Nell and Jim. We have two cows. Their names are Topsy and Bossy. We have one dog. His name is Kaiser. We have one pig. We have three cats. I have a doll that is 28 inches tall. I have two miles to go to school. My teacher's name is Miss Hood. My brother's teacher's name is Miss Sisson. Have I a twin? —Jessie Duffy, Midvale, Wash.

**Has a Good Teacher.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I hope it won't be the last time. I am 12 years old and my birthday is February 1. Have I a twin? I am in the seventh grade at school. My teacher's name is D. B. Hess. He is a good teacher. My brother and I have six cats. Their names are Pussy, Tom, Bill, Blossom, Della and Rose. I have three brothers, named Walter, Arnold and Albert. I hope my letter will be in print this time.—Bertha C. Franz, Schrag, Wash.

**Evelyn Is Lydia's Friend.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner and I hope it won't be the last. Evelyn and I had a lot of fun Sunday. We did a lot of tricks. She went home at 5 o'clock and I went over to play with some other children. Mama made me a new dress. Papa is lying on the couch and when I get this written he wants me to read it to him. I got nine valentines and Evelyn got the same. I will be glad to see my letter in the paper. Evelyn is my little girl friend.—Lydia Y, Mount Vernon, Wash.

**Likes the Letters Fine.**

Dear Aunt Nellie: We take the Farmer and I like the children's letters fine. I hope I see my letter in print. I am 7 years old. My birthday is March 25. Have I a twin? We have chickens, horses, cows and pigs. I have a mule. Her name is Jessie. I have an old horse. His name is Ned. I like to ride them both. My dog's name is Boston. I harness him and haul wood in with him. He is a bull terrier. Our cat's names are Violet and Rose Queenie.—May Drew Speed, Bridgeport, Wash.

**Knitting Blocks for a Quilt.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I am in the sixth grade. I was 13 years old January 22. I have five sisters and two brothers. I have a pony named Bonny. We have two cows. Their names are Beauty and Spot. My teacher's name is Miss Jennie Peterson. I am knitting African blocks for a quilt for the Red Cross. I got several presents for Christmas.—Hazel Elsie Stoch, R. F. D. 1, Castle Rock, Wash.

**James Goes to Edgerton School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the cousins' letters. My father takes the Farmer and I always read the Children's Corner. I am going to Edgerton school and am in the fifth grade. My teacher's name is Miss Naomi Light. I will be 12 years old November 21, 1918. If I have a twin I wish he or she would write to me. I hope to see my letter in print.—James Barr, Eatonville, Wash.

**Black Chickens One Week Old.**

Dear Aunt Nellie: We have 55 head of horses. We live on a 900-acre farm and we have eight cows and calves. We have two dogs. One is 14 years old and the other one is only 2 years old. We have some little chickens They are all black. They are just about a week old. We have two cats. They try to kill the little chickens. I have three brothers. Their names are Roy, Ralph and Frank and I have three sisters, Grace, Levado and Edith. I have one brother and two sisters in high school. Our teacher's name is Miss Larson. We have 11 pupils in our school. I am going to a country school. I am in the fifth grade. My birthday is June 29. I am 9 years old. I live two and one-half miles from the nearest school. We have lots of fun at school playing games. I weigh 85 pounds and my cousin weighs 63 pounds and is 10 years old.—Myrtle Effie Jordan, Bickleton, Wash.

**Father Went to Alaska.**

Dear Aunt Nellie: I am 12 years old. My birthday is January 11. Have I a twin? If I have I wish he or she would write to me and I will gladly answer all letters received. I have two brothers. Their names are Elton and Virgil. I have two dogs, Teddy and Snookums. We have a dance hall in this community. I am in the sixth grade in school and I have been going five years. My teacher's name is Miss Goss, and I like her very well. We have 32 pupils in our school. My father went to Alaska last Tuesday. He went on the Admiral Watson. I will write some riddles for the cousins to guess. Black within and red without, four corners round about? How do you make ice water without ice? I like the Farmer better than any other paper we take. My friend, Helen Olsen, is enclosing her letter with mine.—Muriel Vetters, Bangor, Wash.

**Six at School, Counting Teachers.**

Dear Aunt Nellie: It has been a long time since I wrote to you and the cousins. I am in the fourth grade at school. I am 10 years old. My teacher's name is Miss Hamilton. I like her fine. Our school will soon be out. John and I walk two and one-half miles to school. We sometimes get a ride in our Ford. We like it just fine. I go to school No. 8. There are six of us, counting the teacher. Their names are Annie Litt, Mollie Litt, Louise Litt, Harry Wegle, John Seleen and I. Harry, Annie and I are in the fourth grade. Mollie and John are in the second grade. Louise is in the first grade. We are milking 12 cows. Their names are Dollie, Flora, Bunch, Roaney, Gugie, Nig, White Face, Daisy, Star, June, Rosie, Duffie.—Ellen Seleen, Wilson Creek, Wash.

**Tony and Chieftain Are Pets.**

Dear Aunt Nellie: I have been reading the cousins' letters and enjoy them very much. May I be a cousin? I am 10 years old and I will be 11 May 20. Have I a twin? I go to school and am in the fourth grade. My teacher's name is Miss Bur. I like to go to school. I have a kitten named Tony and a canary named Chieftain. It is raining here almost all the time. I know the answer to the second riddle Pearl Utter gave. It was the dog's name, Yeti, and he walked. I have some riddles: When is a dog's tail not a dog's tail? When is a cow not a cow? Higher than a house, higher than a tree, oh whatever can that be? I am knitting for the Red Cross. I have no brothers or sister. I would like for some of the cousins to write to me. —Bonnie Herrin, Blaine, Wash.

**Ride to School on the Train.**

Dear Aunt Nellie: I am 10 years old. My birthday is September 17. I am in the fifth grade. Have I a twin? If so, I would like to hear from her or him. We have two rabbits. Their names are Bessie and Bettie. We have two kittens. Their names are Beauty and Rosie. We live two and a half miles from school. We ride on the train most of the time. My teacher's name is Miss Newton. I like her fine. There are eight children in my grade.—Dorothy Tuten, age 10, Steptoe, Wash.

**Dorothy's in the Second Grade.**

Dear Aunt Nellie: This is my first letter to the Corner. I am 7 years old. My birthday is November 25. I am in the second grade. My teacher's name is Miss Johnson. I have one brother. His name is Ernest. My sister's name is Louise. We have four cows. Their names are Daisy, Blossom, Lady and Brindle.—Dorothy Brown, Route 1, Box 8, Tumwater, Wash.

**Doris Can Knit and Crochet.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old. I know how to knit and crochet. We have 240 acres. We have horses, geese, turkeys, cows and pigs.—Doris Decker, Toledo, Wash.

**Helps Father Dig Carrots.**

Dear Aunt Nellie: I have been reading the letters of the Corner and enjoy them very much, and I sit down and read every one before I stop. I go one-half of a mile to school and have only missed when we had the measles. My teacher is a lady and her name is Mrs. Kline and I like her very

(Continued on the following page.)

# Children's Corner

Aunt Nellie

(Continued from the preceding page.)

much. I have not been knitting for the soldiers, but I have been knitting blocks for a quilt which I am going to make this summer. I have been helping my father dig carrots, for we live on a farm and have lots of them. We have 12 cows and three horses and about 50 chickens, six geese, five little pig and six little Easter chickens.—Leona Hoskins, age 10, Elma, Wash.

**A Fruit Ranch in the Yakima Valley.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the letters, so I thought I would write. I hope my letter is in print. I am 10 years old. I will be 11, June 23. I live on a small fruit ranch in the Yakima valley. I am in the fifth grade in school. We have 36 scholars in our room. My teacher's name is Miss Marion. I have three sisters and one brother. I can crochet. I can not knit yet, but I am going to learn. My grandfather and grandmother live on a chicken ranch not far from here. I spend most all my vacation down there. I stay two or three weeks at a time. We have two horses, one cow and one pig. We have 105 chickens. We get three or four dozen eggs. We have no dogs, but one cat. He is black. My little sister is just crazy over him. Have I a twin? If I have one, will they please write.—Esther Grunden, R. F. D. 6, Box 40, Yakima, Wash.

**Herberta Writes a Good Letter.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading their letters. When I get home I read the children's letters. I walk a mile and a half to school. We have 13 chickens, one cow, two horses, one pig, two dogs and two cats. The cow's name is Jude. The horses' names are Nigger and Prince. The pig's name is Bess. The dogs' names are Cully and Sport. The cats' names are Snow and White. We live on a 40-acre farm. I go to the Montborne school, district No. 41. I am in the fifth grade. I like my teacher fine. His name is Mr. Burlingame. We have two rooms. Mrs. Burlingame teaches the other room. If I have a twin, please have them write. I am 12 years years old. I was 12 February 24. The name of the books I have read are Joe's Luck and Robinson Crusoe and Five Little Stars on a Canal Boat.—Herberta Gilpin, Montborne, Wash.

**Meowisky Is a Playful Kitten.**

Dear Aunt Nellie: I have written to all my aunts, but I have never written to you before. My little friend, Alice Brown, was writing to you. She lives across the street from me. I have a little kitten. It is very playful. When she gets mad at me she growls and bites my nose, but it does not hurt me a bit. I call her Meowisky because she meows so much. Gray Brother is her father. He is just the oposite from her. He does not meow hardly at all. He sounds like we did when we had our tonsils out. We think he must have had his out. I am 10 years old and in the fifth grade. I like to go to school. Spring is a busy time here. We have the gardening to do and two Jersey cows that will soon be fresh. Then we have Nibs, the pig, with her family, then all the little chickens and the cat with her kittens.—Marion McCormick, Nennydale, Wash.

**Myrtle Is in the Third Grade.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am nine years old. My birthday is March 19. I have two sisters and no brothers. My sisters' names are Hazel and Mary. Hazel is 12 years old and Mary is two. I am in the third grade at school. We have about 43 pupils in our school. We have two cats and one kitten, and a dog. The cats' names are Bob and Spot. The kitten's name is Dotty. The dog's name is Clide. We go a mile and a half to school. It is snowing tonight. I am writing by lamplight. We have two horses and five cows. The horses' names are Molly and Jip. The cows' names are Molly, Susie, Cherry, Nannia and Queen. We have nine calves and a few pigs also. I will close for this time.—Myrtle Webster, R. F. D. 1, Box 62, Olalla, Wash.

**Will Be Busier This Summer.**

Dear Aunt Nellie: It has been some time since I have written to the Corner. I thought I would write a few lines. I hope all the cousins are all well as everyone is down here. The teacher is reading the story of Robinson Crusoe. I think it is interesting in places. There are a lot of girls who write to me. There are just three more months of school. I will have more work to do in the summer, but I will have fun because there is lots to do that I like. I am running out of news so will close for this time.—Alice Case, Tokeland, Wash.

**Make the Things the Soldiers Need.**

Dear Aunt Nellie: My father takes the Farmer and I like to read the letters in it. May I become a Corner cousin? I am a girl of nine years and in the fifth grade at school. My teacher's name is Miss Marie Maddux; I like her fi[illegible] three brothers youngest names are Samuel [illegible]harles, Jack Augustine. I have two uncles. Their names are Charlie and Archie. Archie is in France. Charlie is a marine. I have three uncles that are not enlisted yet. We school children are knitting for Uncle Sammie's soldiers, like sweaters, caps, mittens, wristlets, quilts, napkins, handkerchiefs. We knit washrags too. Just the things that they need we make. I have many books to read and I've read a great deal of them. We live on a 10-acre farm. We have one horse, one milch cow, one calf, about 27 chickens, four pigs. I have a cat. Her name is Poor Pussy.—Iva May Day, Granger, Wash.

**Have Moved to a Large Farm.**

Dear Aunt Nellie: I suppose you think I have forgotten all about you and the cousins, but I have not. We have been so busy since we moved that I neglected to write. Then we have been very busy in school, too, because we are going to have a spelling contest with a school called Nooksack. We have a large farm over here. We have 23 cows and three horses. I like this school fine. My teacher's name is Mr. Van Der Mei. We go to Sunday school, too, every Sunday. There are about 28 pupils in this school, that is, in one room. In all the rooms there are about 150.—Enna Brune, Everson, Wash.

**Evelyn Is in a Grade by Herself.**

Dear Aunt Nellie: I am going to be 9 years old March 23. I am in the second grade. I am in a grade by myself. There are 10 children in our school. There are five boys in our school. I am going to tell you a couple of riddles: What can you hear but can not see? What has ears and can't hear? There are seven in our family. My sisters' names are Alice and Lorena and my brother' name are Johnnie, Clarence, Fred and Walter.—Evelyn Kupers, Box 34, Mohler, Wash.

**Charles Lives in the Mountains.**

Dear Aunt Nellie: The snow is about 18 inches deep. We all hope it will go off soon. We have five horses. Their names are Pet, Queen, Nellie, Dick and Ballie. Nellies is our pony we ride to school. I am 10 years of age. My birthday is July 8. I am in the fifth grade. I am 5 feet 2 inches tall and weight 103 pounds. I was sick quite a bit until we came to the mountains.—Charles Homer McCann, age 10, Boundary, Wash.

**Four Classes in School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am nine years old and in the fourth grade. There are about 30 scholars in our room. There are four classes in our school. Our teacher's name is Miss Berard. I have three sisters and one brother. Two of them go to the school that I go to. One of my sisters is in the fifth grade. Their names are Iva, Bessie nd Esther. Esther is 10 years old, Bessie is five years old and Iva is 27 months old. She is the baby. My brother's name is Andrew. He is seven years old. I hope to see my letter in print.—Glora Grunden, R. F. D. 6, Box 40, Yakima, Wash.

**Gladys Loves Her Teacher.**

Dear Aunt Nellie. May I join the Corner? My father takes the Farmer. I read the letters and would like to know something about the Corner. I am 11 years old. My birthday is the fifth of July. I have two brothers and two sisters. Their names are Wesley, Lesley, Elsie and Edith. I have two cats, a cow and pony. Their names are Red my cow and Dick my pony. I ride my pony to school every day. I live three miles from school. my teacher's name is Miss Lane. I love my teacher. I am in the fifth grade. We have 13 in my class.—Gladys Warden, Okanogan, Wash.

**Only Five Pupils at School.**

Dear Aunt Nellie: I am 12 years old and am in the sixth grade. I have three sisters and one brother. Their names are Floy, Esther, Ruth and Johnnie. There are five pupils in our school. Our teacher's name is Wilma Fuher. I have a little calf, 1 year old; her name is Rachel. We have 18 head of cattle, four horses, one sheep, 10 pigs, one dog and three cats and 21 chickens. I milk two cows. I would like to join the Corner if I may. If any of the cousins will write to me I will answer their letter.—Mabel Crofoot, Route 2, Mead, Wash.

**Helen Goes a Mile to School.**

Dear Aunt Nellie: I am 9 years old. My birthday is June 25. I like to read the Children's Corner. I am in the second grade at school. I have a mile to go to school. There are 32 pupils. I have two sisters and their names are Anna and Esther. Anna is in the second grade and she is 7 years old and Esther is 1 year old. I have two brothers and their names are Hugo and Vieno. Hugo is 6 years old and Vieno is 4 years old. Have I a twin? If so, I wish they would write to me. We live on the farm. We have 30½ acres. We have nine cows and one calf. We have one horse called Nellie. I have two cats and their names are Pussy and Dick. I have a dog and his name is Popi. We have two pigs.—Helen J. Hanhi, Box 27, Rosburg, Wash.

**Knitting Soldiers' Wristlets.**

Dear Aunt Nellie: My birthday is September 29. Have I a twin? I am 10 years of age. If I have a twin I wish she or he would write to me. I have no sisters or brothers but I have two cousins living close to me. I joined the Junior Red Cross and I am knitting wristlets for the soldiers. I have a half a mile to walk to school. My teacher's name is Mrs. Richards. I like her for a teacher, too. I have one pet and that is a white bantie. I am buying thrift stamps. I have four of them now. We are living near a logging camp and my father works in the camp. He is engineer on an engine.—Una Cumming, R. F. D. 1, New Kamilche, Wash.

**Are Doing Their Bit.**

Dear Aunt Nellie: I am in the eighth grade and am 12 years old. My birthday is April 5. Have I a twin? I have three sisters and two brothers. Their names are Alice, Frances and Flossie, Erwin and George. George is helping the U. S. Ervin tried but was exempted. We gave $4.50 to the Red Cross. A member of the U. S. food administration sold Red Cross stamps at Christmas. We raise vegetables and now are buying thrift stamps. I think we are doing our bit, don't you? We have one cow and one pig and a few chickens.—Gladys Helen Bright, R. F. D. 4, Box 93, Tacoma, Wash.

**It Is Pretty Where This Cousin Lives.**

Dear Aunt Nellie: I am 13 years of age and in the seventh grade. My teacher's name is Miss Wallace. I have nine thrift stamps and I joined the Junior Red Cross. I am making gun wipers for the soldiers. I have read Daddy Long Legs, Boy Scouts in Camp, Store Boy, Kazan and a lot of others. For Christmas I got quite a few thrift stamps. We never had a very big Christmas on account of the war. I think everybody should help Uncle Sam and win this war. I am trying to do my bit. We have only one room in our school and there is from the first grade up to the eighth. It is very pretty out here. You can go along and you will come to a little creek with big fir or maple trees all around and moss on the ground. It hasn't snowed very much out here. Fragaria is about 15 miles from Seattle. My sister, Marie, has written twice to you. We used to go and fish out of a creek close by our place and we would catch trout. They were so pretty all speckled. We have had two days holiday on account of teachers' examinations.—Lahville Fountain, Fragaria, Wash.

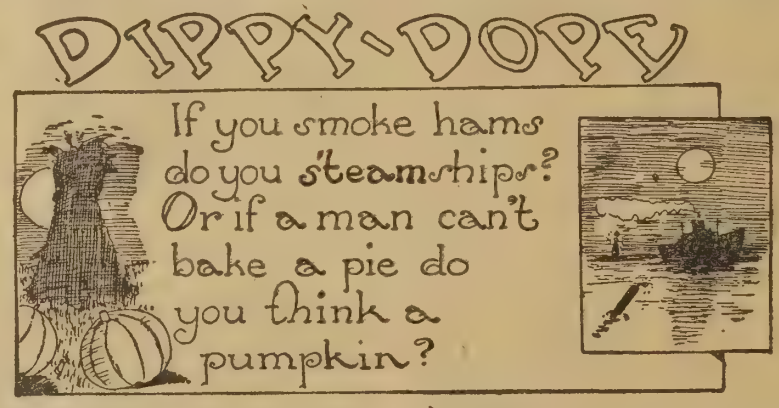
**Valmore Can Knit for Red Cross.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I was 13, March 17. I am five feet one inch tall. My hair is dark brown, my eyes are blue. I live on a 960-acre farm. We have 32 horses, 10 cows, one dog, five cats, 40 chickens and three pigs. My Aunt Ceena and Aunt Ivy are going to be at our house this Thursday to stay 10 days. Our school is not very large. We have 11 pupils. We have the first, second, fifth, seventh and eighth grades. I am in the seventh grade and eighth grade at school. I know how to play on the organ or piano. Our teacher's name is Miss Larsen. We live nine miles from town. Have I a twin? I don't care whether it is a boy or girl. I can knit for the Red Cross. I am a Junior Red Cross member.—C. Valmore McMurry, Bickleton, Wash.

**A Knitting Class Every Friday.**

I am 12 years old and am in the fifth grade at school. I like my teacher fine. Her name is Miss Canfield. I also have a knitting teacher. Her name is Miss Sutter. We have one horse. His name is Nig. We also have two cows, two cats and one dog. The cows' names are Spot and Bess. The cats' names are Jappie and Buddie. The dog's name is Prince. We live about half way between North Bend and Snoqualmie. I go to school in Snoqualmie. I know how to crochet, tat, hemstitch, crossstitch and knit. I knitted a pair of wrislets for my brother. He enlisted in the fourth engineers. We are knitting six-inch squares for the Red Cross at school now. We have to make 8 squares to make a shawl for the soldiers. I have made three squares already. There are eight girls in our knitting class at school. We have just about one and-half hours to knit every Friday before noon. I like to knit fine. I have six sisters and three brothers. I have a friend in Snoqualmie. She said she was going to write to the Children's Corner. She and I both were just waiting because we didn't know the address. Her name is Julia Winter. I had the measles this winter. May I be a Corner cousin? Have I a twin? I will certainly be glad to answer all the letters I get.—Rose Holby, North Bend, Wash.

**Soldier Boy Over in France.**



Dear Aunt Nellie: I am 11 years of age. My birthday is June 16. I have dark hair and eyes. Have I a twin? If I have I would like to have them write to me. I am learning to tat and I know how to crochet now. We have 11 horses, two of them are colts. We have two cows, two calves, about 50 chickens and I have one bantam and a dog and cat. The dog's name is Tip and the cat's name is Spart and the chick's name is Banty. My teacher's name is Miss Ivy N. Emerson. We are going to make things for the Red Cross. I have four brothers and one sister. Their names are: Zona, Arthur, Orvel, Elmer and Charley. Elmer is a soldier boy over in France.—Opal Edna Jane Cavanaugh, Ephrata, Wash.

**Lowest Grade was 90 Per Cent.**

Dear Aunt Nellie: I enjoy reading the letters very much. I am going to school and am in the fourth grade. I am nine years old. My birthday is April 5. Have I a twin? If so I wish she would write. There are 39 pupils in my room. My teacher's name is Miss Lynch. I like her fine. I have not missed a day yet nor have I been tardy. There has been 25 weeks of school. My lowest grade so far has been 90. I have missed only two words in spelling so far this terms. I live one and one-half miles from town on a wheat farm. I belong to the Red Cross and can knit, crochet, make tatting, cross stitch and make battenberg.—Ina Moller, R. F. D. 1, Davenport, Wash.

**Slide Down Hills in Winter.**

Dear Aunt Nellie: I would like to become a member of the Children's Corner. I am 13 years old, my birthday is September 23. I am in the sixth grade. There are 12 children in my class. There are seven children in our family, three girls and four boys. Dora and Lenora are my sisters' names and Herbetr, Dennis, Clifford and Keith are my brothers' names. Four of us go to school. We go three miles in a school wagon. We go to Menlo school. We live on a five-acre farm. We have two cows and also two calves. We have a pair of pigeons and two young ones. The young ones haven't any feathers on them yet. I have joined the junior and senior Red

STATEMENT OF THE OWNERSHIP, management, circulation, etc., required by the act of congress of August 24, 1912, of The Washington Farmer, published weekly at Spokane, Washington, for April 1, 1918.

State of Washington, county of Spokane, ss.

Before me, a notary public in and for the state and county aforesaid, personally appeared J. F. Young, who, having been duly sworn according to law, deposes and says that he is the vice president of The Washington Farmer, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor and business managers are:

Publisher, Cowles Publishing Company, Spokane, Washington; editor, ——; managing editor, Edwin A. Smith, Spokane, Washington; business managers, none.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.) Cowles Publishing Company (a corporation), Spokane, Washington; W. H. Cowles, Spokane, Washington; H. O. Cowles, Spokane, Washington; J. F. Young, Spokane, Washington; F. J. Whaley, Spokane, Washington.

3. That the known bondholders, mortgagees and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages or other securities are: (If there are none, so state.)

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest, direct or indirect, in the said stock, bonds or other securities than as so stated by him.

COWLES PUBLISHING COMPANY.
By J. F. YOUNG, Vice Pres.

Sworn to and subscribed before me this 28th day of March, 1918.

(Seal) F. J. WHALEY.

(My commission expires Oct. 17, 1919.)

Cross. I have four thrift stamps. My brother has seven. He is a Boy Scout. I am knitting a square for the soldiers. There are 103 children in our school. All of them belong to the Junior Red Cross. We are going to have a service flag pretty soon. We have a brown schoolhouse trimmed in green. There are six rooms, an auditorium and a library and a large basement. We have a large school ground and a large part is on the hill. The underbrush is cleared and it is fun to play in the woods. In winter we slide down hills. There are three lawn swings and four rope swings. I will write to the Corner again.—Laura Clapshaw, Willapa, Wash.

**Two Lakes on the Farm.**

Dear Aunt Nellie: I am 13 years old and my birthday is June 13. I have brown hair and brown eyes. I am in the eighth grade. Have I a twin? If so, please write. There are four of us going to school now. We have about three and one-half miles to go, but we drive our pony, Elk. We go to Rockland school. We have 25 little lambs now and 11 little calves. In the summer we go swimming, flower-picking, and on picnics. There are two lakes on our place so we can go swimming any day. I have a friend writing to the Corner. Her name is Irene Clark. We go to the same school, but are not in the same grade. We have good times together. I have five brothers and three sisters, but two of my sisters are married. I have two brothers and one sister going to school. Their names are Richard, Neil and May.—Eleanor Dickenson, Grand Dalles, Wash.

**A Chum Named Lelah.**

Dear Aunt Nellie: This is my first experience in writing to the Children's Corner. I will write again if you will accept my letter. Have I a twin? I hope so. I am 12 years old and my birthday is December 12. I am in the sixth grade at school. My teacher's name is Miss Snider. I am buying thrift stamps. I belong to the Red Cross that my mother does. She is the president of the Yelm auxiliary. I also belong to the Junior Red Cross. We sew for the Red Cross in school. I have one brother. He is 18 years old and his name is Fred. We have two horses and some cows. I have a young heifer. Her name is June. We have a dog named Pat. My grandfather is building a new house. We have a car. I have a chum. Her name is Lelah Mosman. I hope the Corner will grow, as I like to read it.—Mildred Price, Yelm, Wash.

**"Sputtermeow Spuffington."**

Dear Aunt Nellie: I like to read the Children's letters in the Farmer. May I be a cousin? I live on a farm and have lots of fun. I am nine years old and my birthday is June 10. I am in the fourth grade. Have I a twin? I have three sisters but no brothers. My sisters are younger than I. My uncle is living with us and is going to our school. He is 13 years old. I would like to have some of the cousins write to me. My sisters and I have four cats. Their names are Tommy, Betty, Polly and Spitfire. My aunt has a big blue cat and his name is Sedrick Lemuel Sput Sputtermeow Spuffington and he is some cat.—Esther Schaulks, R. F. D. 1, Box 76, Auburn, Wash.

**Have Sewing Every Wednesday.**

Dear Aunt Nellie: I hope you and all of the cousins are feeling very well. I was not feeling very well yesterday. I am 13 years old and I hope there are some cousins that are just as old as I am. My birthday was October 16. I hope I have a twin. This is the second time I have written to the Corner. My sister has been home from Seattle visiting. She is going home soon. We are going to have sewing today. We have sewing every Wednesday. We are going to make dust caps. We were knitting some washrags last time we had sewing. I am taking music lessons from Mrs. Smith. She teaches the primary room. She was my school teacher when I was in the intermediate room. I am in the grammar grade now. I am in the seventh grade. It is not so very hard. I thought seventh grade was always hard. I have a nice, good teacher. Her name is Miss Swanson. It was snowing Monday and it was blowing yesterday. There are many drifts. I hope Aunt Nellie will tell some of the cousins to write to me. I like to read the letters. My father takes the paper. I have a friend that is only two days younger than I am. I wish she was just as old as I am.—Jennie Loreen, R. 3, Everson, Wash.

**Goes to the Liberty School.**

Dear Aunt Nellie: My father takes the Farmer and I enjoy reading the letters very much. I was 12 years old March 3. I am in the sixth grade at school. I go to the Liberty school. There are 17 pupils. There are three in my grade. My teacher's name is Miss Charlotte Lang. She lets us girls take our crocheting to school. I like to crochet very well. I live on a farm of 320 acres. We have 10 horses, four colts, some cows, chickens and ducks. I have three sisters and two brothers. My oldest sister is the oldest of the family and she is 21 years old. My youngest sister is the baby of the family. She was 2 years old March 11, 1918. She and I ate our birthday dinner together.—Alice Stenson, Route 1, Spangle, Wash.

**Two Brothers Are in the Army.**

Dear Aunt Nellie: This is the first time I have written to you. I was 11 years old March 11. I am in the fourth grade at school. I have a very dear teacher. Her name is Miss Fincke. I have two brothers and three sisters. My youngest brother is in California, in the army. The other one enlisted two weeks ago. He will be in the army, too. Two of my sisters are married and the other one goes to high school. I am learning to knit. I expect most of the cousins can knit. I belong to the Red Cross at school. The high school and four grammar schools had a patriotic program two weeks ago. It was very good. I will write again.—Clara Celiz Curtis, Glen Cove, Wash.

**Will Take Music Lessons Again.**

Dear Aunt Nellie: How are you and all the cousins? I hope to find you all well. This is the second time I have written to you and hope it won't be the last. My friend, Edna Requa, wrote to you some time ago. She is just 10 months older than I. We go to the Kirby school. I have a sister older than I who goes to school with me. My sister and I took 18 music lessons last spring and got into the second grade, so this summer we are going to take them again. Have any of the cousins taken music lessons? If they haven't they ought to because it would come in handy when they get older. I have 19 nieces and nephews altogether. I have seven sisters and three brothers.—Mattie Malone, R. F. D. 2, Pomeroy, Wash.

**When Beulah's Pony Bucked.**

Dear Aunt Nellie: I am 13 years old. My birthday is June 20. Have I a twin? I have two sisters and one brother, dead. Their names are Ora, Lyman, Walker, and my sisters' that are alive are Hazel, Violet and Mildred Isabell. Hazel is 15 and Mildred is 14 months old. She is awful cute. I have a bay pony. Her name is Lady. She is hard to catch sometimes. One day when I caught her I got on her back and I had a weed caught between two of my toes and she began to buck. I first lit on her neck and then be-

(Continued on the following page.)

## Molalla Cousin Sends a Picture

Dear Aunt Nellie: I have been reading the letters in the Corner for some time and enjoy them very much, so I thought I would like to join in; the Corner is very interesting to me, and so I thought I might write something that would be of interest to others, but as I am not used to writing I hardly know how to make it interesting. Nevertheless I will try my best. We have been taking the Washington Farmer for some time and we all like it very much and I always read the letters in the Corner first.

I have a picture that I think so much of that I wish it could be printed in the Corner. I will send it with this letter. The picture on the left is of my mother, with our black cow, Nancie, which we all think so much of, and her test is 5.6. She is 6 years old. The picture on the left is of my father, with Nancie's first calf, which is 4 years old and her test is 6.8.

I have so much to tell you that I will have to save some for next time, so will close.—Evangeline Palmer, Molalla, Ore. (We all welcome you and will look for your next letter.—Aunt Nellie.)

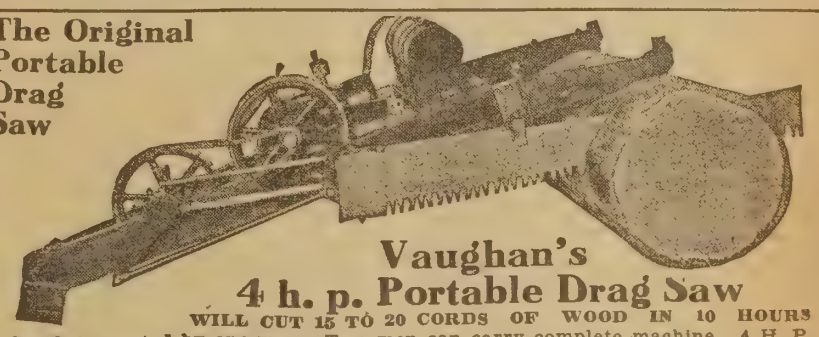
# The Spirit of War Service

Alone in the midst of war's desolation, the telephone lineman crawls to mend the broken wires.

On all sides the thunder of artillery; in the air bursting shrapnel.

He faces danger with that unconquerable spirit of war service which permits him to think only of maintaining the telephone connections.

The safety of the troops depends on these lines of communication, often used for the sentries' warnings, the carrying of official commands and the summoning of reinforcements.



In a dark hole hidden among sparse brushwood are the telephone operators, some of whom have been for months in their damp cave ceaselessly swept by shells.

And they are admirable, all these heroes of the Signal Corps, whether serving in darkness or in the all too bright light of day.

The spirit of war service, over here as well as over there, furnishes the nerves, the endurance, the morale—the stuff that wins war.

# Truth in Advertising

Nationally advertised goods may be depended upon for the reason that national advertisers know that their goods must be truthfully advertised to gain and hold popularity. A good name in advertising has to be won on merit, therefore the buyer may be sure of obtaining right value when buying widely advertised articles.

# Children's Corner

Aunt Nellie

(Continued from the preceding page.)

tween her ears and then I lit in some water. When I got up I staggered around. I caught my pony and gave her a whipping. I could hardly see out of my left eye for a long time. How many of the cousins can knit? I can not knit yet, but I am going to learn. I can crochet and make some of my dresses. I will send a puzzle: I rode to town on horseback and yet I walked. What is the answer? I can answer some of Blanch Weaver's puzzles. Two is a newspaper and the third is milk. I notice the Corner is getting larger. Our school has only nine pupils in it and we all take home credits. We all earned a half-holiday and the whole school went across the Columbia river and visited Rufus school. Even our teacher, C. M. Ryman, went.—Beulah M. Walker, Cliffs, Wash.

**Belongs to a Poultry Club.**

Dear Aunt Nellie: I wonder if there is room for one more girl to be a Cousin of the Corner? I am 13 years old. My birthday is July 23. I am 5 feet 2 inches tall and I am in the seventh grade. My teacher's name is Mrs. Davis. We like her fine. I have two brothers, but no sisters. My oldest brother is 15 years old and is in the ninth grade. My younger brother is 9 years old and is in the fourth grade. We have a half mile to go to school. There are about 31 pupils in our school and we have two teachers. I belong to the Red Cross and to a poultry club. A man from the state college came to our school and gave us a talk about the club. I have a cousin in the navy and he has been over at Gibraltar, Spain and over to Italy. He sent us some pictures that he took while he was over there and they are very interesting. He was at New York for a week, but is now on his way back to Gibraltar. I would like to correspond with Irene Clarke. I saw her letter in the Corner, but I lost her address.—Virginia Clarke, Penawawa, Wash.

**The Oldest Town in Washington.**

Dear Aunt Nellie: We have had no snow. Spring is here now. The flowers are in bloom. The birds are singing. The plants are coming up. The sun is shining. The sky is blue and pretty. We have some herring. I have a twin. She wrote to me. We are going to have a program March 8, 1918. We had examinations. I got 98 in arithmetic. I got too low in spelling to tell you what I got. I got 92 in geography. My sister got 100 in spelling. Our school and the big school got some moss for the Red Cross. We got eight sacks. We picked it in one and one-half hours. This is the second time I have written. I will describe where I live. I live between the Pacific ocean and Willapa Bay. We get our herring in the bay. I told you before that we got some herring. I live between Oysterville and Nahcotta. There are two rooms in the school at Oysterville. One is the small school and big school. Oysterville is the oldest town in Washington.—Mary Sargent, Nahcotta, Wash.

**Cousin Clara's War Garden.**

Dear Aunt Nellie: This is my fourth letter to the Children's Corner. I hope it will not be my last. I am going to write about my war garden. I have a garden of my own every year and this year I am going to have a big one. In nearly every one of my gardens I have peas, carrots, cucumbers, turnips and all different kinds of vegetables. My father said I could have a big piece of ground this year. I know how to knit, crochet and tat. Now I am knitting a pair of socks. I tatted a yoke for my sister. I am 12 years old and I am in the seventh grade. I take piano lessons and like it very much. I am in the third grade of music.—Clara Haida, R. F. D. 3, Box 164, Puyallup, Wash.

**Is in the Third Grade.**

Dear Aunt Nellie: I am in the third grade and am 8 years old. My teacher's name is Miss Cora Wilson. There are 25 scholars in the little room. I will write all the names of our family. My name is Anna. The others are Elsa, Minnie, Herbert and papa and mama. Elsa is 7 years old, Minnie is 2 years old, Herbert is 9 months old. My birthday is May 2. Elsa's birthday is December 1, Minnie's birthday is August 4. Herbert's is June 16. My mother's is July 9 and father's is February 16.—Anna Pearson, R. F. D. 3, Ferndale, Wash.

**Opal Is Six Years Old.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I am six years old July 16. I am in the first grade. I got many things for Christmas. I have one brother. His name is Earl. My teacher's name is Miss Rogers. I like to go to school. There are 11 children going to my school. It is the Pilot Rock school. We coasted with the sled on the ice. I have a little colt.—Opal Irene Jenkin, Coulee City, Wash.

**To Have a Nice New Schoolhouse.**

Dear Aunt Nellie: This is the second time that I have written to the Corner. I like to read it and wrie to it. I am a member of the Junior Red Cross. We had a program at our school the night before Washington's birthday. We sold pies, coffee and cake. We made $35.50, which goes for the benefit of the Red Cross. I know how to knit. Our teacher bought an oil stove to cook hot lunch for the children. We started to cook last Tuesday. Every day about three children have to bring something to cook. When all the children have brought something we start from the beginning again. Our teacher's name is Helen Custard. She is the best teacher we ever had. I hope she will teach us next year too. Today was school election. We will have a nice new schoolhouse. My birthday is September 23. I was 12 years old on my last birthday. Have I a twin? If I have I wish she would write to me.—Martha Arndt, R. F. D. 2, Box 14 A, Ridgefield, Wash.

**Bridge Fell Down in December.**

Dear Aunt Nellie: This is my first letter to the Corner. My father takes the Farmer. I will be 10 years old May 29. Have I a twin? If I have will they please write to me? I have one brother and his name is Hjalmer. He will be 8 years old July 13. I am in the third grade at school. My teacher's name is Miss Conover, and I like her well. I can not go to school now because the bridge fell down last December when the river was high. We have 22 head of stock. I have a cow of my own and her name is Beauty. We have two horses and their names are Queen and Nellie. We have one dog and his name is Shep. We have two cats. We live on a 100-acre farm and I like to live on a farm. I wonder if this letter will be in print before it touches Mr. Wastebasket? If I see my letter in print I will write again. I hope every one had a good Christmas last year and you, too, Aunt Nellie.—Olga Hamilton, R. F. D. 3, box 87, Arlington, Wash.

**Helped Tap Trees for Maple Syrup.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope it won't be the last. I am 10 years of age and in the fifth grade at school, and for the last two months I have had everything excellent. I have been reading the Children's letters for a while and they interest me very much, so I thought I would write one too, and I hope to see it in print. I live on a farm and we have two cats, a dog, three pigs, 49 chickens, a horse, 10 cows, and a calf. I like the farm very much. Mama made six pints of maple syrup and it is the first I ever heard of in Washington. I went and helped tap trees, too, and it was great fun. We are getting over 32 eggs a day now.—Lola Miller, Route 1, Box A, Sedro-Woolley, Wash.

**Her First Cake Turned Out Well**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I go to school. I am in the third grade. I was born on Easter Sunday. My birthday is March 27. I have six brothers but no sisters. My brothers' names are Rollo, Vernor, Warren, Robert, Wilson and Allan. Rollo just received his eighth-grade certificate. He is 14 years old. Our baby is 1 year old today. I live on the farm. I baked my first cake today. I was so surprised that it turned out so good.—Ruth Jane Fackenthall, Nine Mile Falls, Wash.

**Most Spoiled Cat She Ever Saw.**

Dear Aunt Nellie: I am 11 years old and in the sixth grade. My birthday is April 19. I live on a farm about three-quarters of a mile from Valley. We have three horses, one pig and a number of cows and chickens. I go to the Valley school. My teacher's name is Miss Burrows. I like her very much.

## Rides the Family Cow.

Dear Aunt Nellie: I wrote to the Children's Corner not long ago, and now I am sending a picture. This is the family cow. Four of us can milk her at once. As many as can get on her can ride her. This picture shows how we can ride her. We bridled and saddled her one day, and then had this picture taken. I hope some of the cousins have cows like her.—Derla McManamon, Othello, Wash.

We have a large, brick, modern schoolhouse with eight rooms and two large halls. I have two cats. Their names are Tommy and Bobby. Tommy is the one I like best. He is so cute I can't help but like him. He is the most spoiled cat I ever saw. Our house is painted brown and is trimmed in white. We have seven rooms in it. I would like to have some of the cousins write to me.—Annie Herzner, Box 315, Valley, Wash.

**Visited Relatives in Vancouver.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I enjoy reading the letters that the children write to you. My birthday is March 26. I will be 10 then. Have I a twin? I like to go to school. I am in the fourth grade this year. My teacher's name is Miss Ginger. She is very good to me. We have 27 pupils in our room this year. It snowed night before last, about four inches. I will tell you some riddles. What chops and chops and never gets a chip off Hangs and hangs and it never blossoms? I have three brothers. Their names are Harold, Willie and Edward. I was over to Vancouver with my mother and brother to visit my great-grandmother, uncles and aunts in January. I have an uncle. He is a soldier in England.—Ruth Zwaschko, Everson, Wash.

**Only Seven Pupils in School.**

Dear Aunt Nellie: I will write you a letter for I read the letters every week and I think it is very nice for all the children to write to you, but still I think the Corner could be a little larger, don't you? I go to school every day, but I missed two weeks of school before Christmas. I am 11 years old and in the seventh grade. My teacher's name is Miss Edna O'Connor. There are only seven pupils in our school, but I think it would be pleasanter if there were more. There are five boys and two girls. We have all joined the Red Cross and I think we will get our pins soon. I will now close as I am out of news.—Marie Johnson, R. F. D. 2, Anacortes, Wash.

**Likes to Make Red Cross Pillows.**

Dear Aunt Nellie: Hello there! This is the second time I have written to the Corner. I like to write to you very much. Did you have a good time Christmas, Aunt Nellie? I did, and I hope you and the cousins did, too. How many of the cousines are making Red Cross pillows? We are. I like to make them. I am 10 years old and I am in the fourth grade at school. I like my teacher. Her name is Miss Snider. I can wash and wipe dishes, sweep, make beds, dust and I can do a great many other things. I have a new brother now. He is just 12 days old. I think he is very cute. Aunt Nellie, I am very glad our Corner is growing.—Maudie Shincke, Yelm, Wash.

**Martha and Florence Are Her Playmates.**

Dear Aunt Nellie: This is the first time I have written to you. I am a little girl 10 years old. My birthday is August 4. My teacher's name is Miss Margrette Cuvey. I like her fine. I have one sister and one brother. Their names are Ruthie and Howard. I hope I will see my letter in print. If so I will write again. Have I a twin? I can knit very well. My playmates are Martha Robinson and Florence Spencer. We have three cows and 72 chickens and a pet dog and cat. My letter is getting a litle bit long so I will stop.—Evelyn McLean, R. F. D. 1, Box 39, Yelm, Wash.

**Fern Joins the Happy Cousins.**

Dear Aunt Nellie: This is the first time I have written to the Corner. My birthday is July 10. I will be 9 years old then. I have brown hair and brown eyes. I have two sister and one brother. My brother and I walk one mile to school. I am in the second grade. We have four horses and 11 little pigs. My brother and I are going to join the pig club. Aunt Nellie, I will close for this time. I hope to see my letter in print.—Fern Martin, Bossburg, Wash.

**Live on a Ranch in the Big Bend.**

Dear Aunt Nellie: I thought I would write you a letter. We live on a ranch in the Big Bend, a few miles west of the Grand coulee. We have about 60 chickens, two cows, one steer, two calves and six horses. One of the horses is mine. We have two cats and a dog. I am 10 years old. My birthday is October 13. Have I a twin? I go to school every day. I am in the fourth grade.—Anna Mae Brandt, Leahy, Wash.

**Vola Is a Clarkseon Cousin.**

Dear Aunt Nellie: This is the first time I have written to you. May I be a cousin? Have I a twin? If I have I wish they would write to me. I am 9 years old and my birthday is November 9. I am in the fourth A at school. My teacher's name is Miss Garver. I have joined the Junior Red Cross. I am going to a party this afternoon.—Viola Carlson, route 1, Clarkston, Wash.

**Will Have a Garden This Summer.**

Dear Aunt Nellie: I enjoy reading the letters that the children write very much. I live in the country on a 30-acre farm. We have one horse, five cows, two heifers, one calf and 30 chickens The horse's name is Prince, two of the cows are mine. Their names are Dolly and Pearly. We have one pet dog, but no cat. The dog's name is Teddy. I know how to tat, knit and crochet. I think I am going to have a garden this summer. I am 12 years old. My birthday is October 22. Every one asks if they have a twin so I think I will, too. I have to walk about one mile to school. At school we play hopscotch, pump, pump, pull away, and tag. There are 38 children in the room I am in. There are only three grades in the room, the fourth, fifth and sixth. There are 16 in the sixth grade. I am in the sixth grade. My teacher's name is Miss Reese. Have I a twin? If I have I wish she would write to me. I will answer her letter.—Adeline Bostedt, R. F. D. 2, Box 14A, East Stanwood, Wash.

**Brother Is at a Training Camp.**

Dear Aunt Nellie: This is the first letter I have written to the Children's Corner. I am nine years of age and my birthday is November 19. Have I a twin? I go to the same school as my cousin, Muriel Vetters, does. I have four sisters and one brother. Their names are Anna, Neva, Nora, Gladys and Samuel. My brother Samuel is in the training camp in New York. We have eight cows and calves altogether and their names are Blossom, Specky, Star, Sukey, Daisy, Nancy, Pansy and Bessy. Star is mine. I have one dog, Bobby, he is about eight months old. I will give my cousins a riddle: There is an old cow upon a hill, if you give her hay she will fly; but if you give her water she will die.—Helen Olsen, Bangor, Wash.

**Live Four Miles From Palouse.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I live on a 100-acre farm. I can knit, crochet and tat. I live one-half mile from school. I am in the sixth grade. My teacher's name is Miss Leah Smith. There are 15 pupils in our school. There are four in my class. I am 11 years old and will be 12 August 9. Have I a twin? If I have I would like to hear from her. I have one sister and one brother. My sister's name is Lillian. She is 8 years old. My brother's name is Elmer. He was a month old the first day of March. May I join the Corner? We live four miles from town.—Hazel Violet Soniville, R. F. D. 3, box 63, Palouse, Wash.

**Has a War Saving Stamp Already.**

Dear Aunt Nellie: I read some of the letters in the Farmer and I think they are just fine. I have a war saving stamp already. I am 13 years old. My birthday is December 17. Have I a twin? We are milking 11 cows now, but there is a cow coming in soon. We have three calves, one dog, four cats, 15 rabbit and about 40 chickens. We are getting about 12 eggs a day.—Robert Davis, Rainier, Wash.

**To Have a Patriotic Program.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I was 10 years old December 19. Have I a twin? If I have I wish they would write to me. I have three sisters and three brothers. Their names are Elsie, Marie and Clara, and my brothers' names are Victor, Chester and William. We each have one war saving stamp, $4.12. We joined the Red Cross. I am in the third grade. My teacher's name is Miss Haupt. My sister's teacher's

## Free War Map 64 Inches by 21 Inches in Size

A splendid four-page war map of the battle front in France, originally published in the Spokane (Wash.) Spokesman-Review will be sent free to any one who secures and mails us one new subscription to The Washington Farmer.

This map is printed in four sections and when pasted together, according to directions furnished, will give you a map 64 inches long and 21 inches wide; presenting the details of the great fighting territory in such a way that you will be able to follow every detail of the big battles which are now brewing.

Send orders for new subscription and war map to

**The Washington Farmer**

Review Bldg., Spokane, Wn.

name is Miss Argyle. We have eight work horses, four saddle ponies. Their names are Collie, Dolly, Tony, Bird, and we have three colts also. We have 30 head of cattle and four calves, 23 old sheep, 17 lambs and we have one dog named Bluche. We have three miles to go to school. We ride horseback. We are going to have a patriotic program at the schoolhouse.—Alice Ganguin, Goldendale, Wash.

**Ralph's Dog Shakes Hands With Him.**

Dear Aunt Nellie: I am 12 years old and have gray eyes and dark brown hair. I am in the eighth grade. I have a big dog. I have taught him to shake hands with me and he will chase anything you tell him to. I live on an 820-acre farm. We have 20 horses, two cats, two dogs, three cows and three calves. Here are some riddles: Upon two sticks there is a barrel, upon the barrel there is a bottle, upon the bottle there is a ball, upon the ball there grows some trees, in the trees there runs some horses. Why is a pup on ice like a kiss? Why is a pipe like a watch? Answers: 1, a man combing his hair; 2, because it is dog-on-ice; 3, because they both have stems. I belong to the Junior Red Cross and am trying to help it out.—Ralph Jordan, Bickleton, Wash.

**Teacher Is 74 Years "Young."**

Dear Aunt Nellie: I live on a farm four miles from town. I have two sisters, Jennie and Ethel. We live about a half mile from West Beach, Strait of Juan de Fuca. We see many big boats go by. I think the beach is fine. Sometimes we go camping on the beach. We live a mile from school. Our teacher's name is Mrs. Holland. She is 74 years young she wants us to say. March 7 we gave her a surprise party. She liked it very much. There

## Twinkle, Twinkle, Little Star

Twinkle, twinkle, little star,
How I wonder what you are!
Up above the world so high,
Like a diamond in the sky.

When the blazing sun is gone,
When he nothing shines upon,
Then you show your little light,
Twinkle, twinkle, all the night.

Then the traveler in the dark
Thanks you for your tiny spark;
How could he see where to go,
If you did not twinkle so?

In the dark blue sky you keep,
Often through my curtains peep,
For you never shut your eye,
Till the sun is in the sky.

How your bright and tiny spark
Lights the traveller in the dark!
Though I know not what you are
Twinkle, twinkle, little star.

are 29 children in our school. At our place we have a Shetland pony. His name is Franky. We have a little buggy for him and a saddle. His color is brown. We go to church with him nearly every Sunday. We have about 200 chickens. They are brown Leghorns. I am 16 years old. My birthday is June 8. Have I a twin?—Edith Nymeyer, Oak Harbor, Wash.

**Piano for a Christmas Gift.**

Dear Aunt Nellie: This will be my third letter to the Corner. I hope the Corner will grow. I bought $4.12 worth of war saving stamps. We have a horse. His name is Ben. I am going to join the Red Cross. We have two little pigs. One has such curly hair. All our cows come in but one. There is no school this week, for the teachers' institute is being held and our teacher has gone to it. We have a piano. We got it for a Christmas gift. Tomorrow school is going to start again. Our teacher is supposed to come home today. I have brown eyes and brown hair.—Onida Wilson, Box 102, Grays River, Wash.

**A Homestead 17 Miles From Town.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am nine years of age. My birthday is September 6. We live on a homestead. We are 17 miles from town and postoffice, also school. We do not go to school. We have a dog. His name is Bob. We have no stock. I hope I will see my letter in print.—Howard Fox, Keller, Wash.

**Play Baseball at School Noons.**

Dear Aunt Nellie: This is the second time I have written to the Corner. I am 10 years old and in the third grade. I go to the McKinley school and go three miles. My teacher's name is Miss Uler. She is a good teacher and I like her. We play baseball at noon and play tag at recess.—Rudolph Freelund, R. F. D., Box 18, Olympia, Wash.

**Eight Black and White Pigeons.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. My hair is dark and my eyes are blue. I am eight years old. Have I a twin? I am in the third grade. My teacher's name is Mrs. Ramser. I like her very well. We have four cats and one dog, named Jip. We have three horses. Their names are Billy, Polly and Bobby. We have eight pigeons. They are black and white. Some are all white. I have two sisters, Barbara and Mary. We have 100 acres of land. I go to school at Bossburg. We have 26 hens and two cocks. We have six cows and 12 calves.—Tresa Hofmeister, Bossburg, Wash.

**Likes to Tend to Her Chickens.**

Dear Aunt Nellie: This is the second time I have written to the Corner. I enjoy reading the letters. I would like to be on the Roll of Honor. My sister Vera and I go to school. We have a nine-month term. There is an average of 31 scholars. Our teacher's name is Mr. Cory. I think he is a fine teacher. We hope he will teach next year. My sister got her diploma last January and she was glad. I have 16 chickens and one old hen has a baby chicken a month old. That was all that hatched out of 13 eggs. Four other hens are sitting. One is sitting on banty eggs. I think banties are very cute. My chickens have laid all winter long. I have sold 10 dozen eggs and they brought me $4.45. I like to tend to my chickens. My sister Lillian owns a calf. When it gets larger she will sell it. I live on a farm of 97 acres. We have 23 head of cattle and four horses. I am 13 years old; my birthday is September 4. I have dark blue eyes and light gray hair and weigh 95 pounds. I am in the seventh grade. Have I a twin? There is a girl that wrote to the Corner named Agnes Laund and I lost her address and would like to write to her if I knew it. I belong to the Red Cross and have $30 worth of war savings stamps. Six of us, including grandma, belong to the Red Cross. Grandma lives a few yards from our place.—Fernie H. Park, R. F. D. 1, Box 59, Daisy, Wash.

**Wishes She Could Knit.**

Dear Aunt Nellie: This is the second time that I have written to the Children's Corner. I always read the cousins' letters and enjoy reading them very much. The weather here is fine now and I haven't missed a day in school yet and I hope I won't miss any this term. Well, what do you know about it, I have surely found a twin. Her name is Myrtle Gladys Lee, and she lives in Mt. Vernon, Wash. I was so surprised when I read her letter. My birthday is October 18. I have joined the Junior Red Cross, but I can not knit, but I wish I could. I am in the sixth grade. I live on a farm and I surely like to go horseback riding. I have about two miles to go to school and there are 13 pupils in our school. But two of the biggest boys quit school for they have to work at home. We have a Saxon car. We just have a month and a week more school. I got the most valentines in school. I got 18. We had a program at school March 16. I wish you and the cousins could have all been there. May I join the Children's Corner? I can not answer many of the riddles that the cousins sent.—May Nightengale, age 12, box 28, Schragg, Wash.

**Three Sheep Ran Away.**

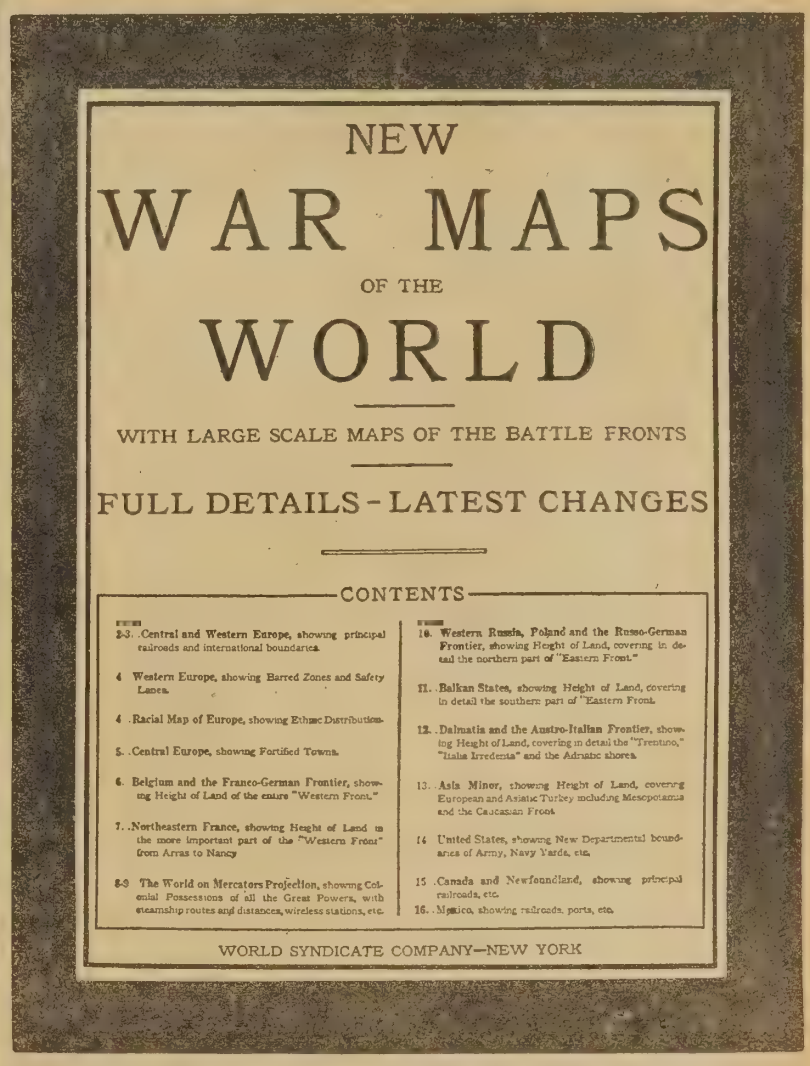
Dear Aunt Nellie: I have been reading the Children's Corner letters and I like them very much. We live on a 160-acre farm. We ride three miles to school on horseback. I have one sister named Zoa and one brother named Raphael. I am 8 years old and in the third grade. We had three sheep, but they ran away and we could not find them. One of our neighbors found them. We have had lots of fun coasting this winter, but I am glad it is coming spring. We were looking for buttercups yesterday and I caught cold so I had to stay out of school today. Last year I went to Spokane with my teacher, Miss Mason, to visit my auntie when school was out.—De Vota Shaw, box 155, Curlew, Wash.

**Hazel and Brother Play Duets.**

Dear Aunt Nellie: I am 14 years old and am five feet four inches tall. I have brown hair and hazel eyes and a medium fair complexion. I am in the eighth grade. Have I a twin? If so I should like to have her or him write to me through the Corner. I have a brother who is 12 years old. He and I play duets on the piano. We are going to take music lessons this summer. I have a baby sister 3 years old. We live on a 480-acre ranch. We have a car. We have two pet hens, Biddy and Old Bramah. Biddy is red and very large. Old Bramah is white with a collar of black feathers. We expect to have some eggs hatch soon.—Hazel Frances Long, Davenport, Wash.

**Likes to Read the Letters.**

Dear Aunt Nellie: My brother takes the Farmer. I like to read the letters. My teacher's name is Miss Rogers. I like her very much. I have five brothers and two sisters. My sisters' names are Alta and Blanche. My sister Blanche is married and has three children. My brothers' names are William, Herman, Sidney, Thomas and Glenn. There are 11 children go to my school, three boys and eight girls. We have three cats, five pigs and one dog. We have 26 cows and calves. Have I a twin? If I have I wish he or she would write to me.—Beulah Hiday, Coulee City, Wash.



**Twenty Pulpils in Harry's Room.**

Dear Aunt Nellie: I am going to school and there are 20 pupils in my room. The school teacher is Mr. More. He lets us out at 4 o'clock and I get home at 5 o'clock. We have about 25 chickens and two cows.—Harry Koppermann, Gig Harbor, Wash.

Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.

# News for Breeders

## Drop Name "Holstein"

The eighth annual meeting of the British Friesian society has just been held in London. The present membership is 660, an increase of nearly 150 during the last year. The receipts for the last year were over $3000 in excess of its expenditures. The assets of the society are over $54,000 in excess of liabilities. The following extract from the report of the London Live Stock Journal will be read with interest by the Holstein breeders of this country:

V. A. Malcolmson moved that the word "Holstein" be omitted from the name of the society. He was in close touch with agricultural and pastoral interests in many parts of the empire, and he knew that it would be very much appreciated outside this country if the word "Holstein" were dropped, if the suggestion was a feasible one.

L. Souchon seconded and, after a discussion, in which it was pointed out that the British breed had no connection with Holstein, and that the name was a complete misnomer, the motion was adopted.

A. F. Chillingworth proposed that the Holstein-Friesian Association of America be informed of the decision and asked to consider the possibility of making a similar alteration in the name of their association and breed. The meeting agreed to the suggestion.

The meeting then proceeded to consider the revised rules as submitted by the council, and, after consideration of each proposal, and amendment of certain details, they were approved and ordered to be accepted as the rules of the society. The chief alterations are (1) that the practice of electing life members is to be discontinued; (2) that the voting of the members for the election of the council shall take place in time for the results to be known at the annual general meeting; (3) that the following bulls shall not be eligible for entry in the Herd Book (a) being dun, or dun-and-white, or the son of a dun or a dun-and-white cow or heifer, (b) having a wholly white head or a white head with black ears, or being the son of a cow or heifer with a white head or a white head with black ears, (c) not having white socks on all four feet, and (4) that certain of the rules, especially those dealing with Herd Book matters, be altered to bylaws, which may be added to or altered by the council from time to time.

## AYRSHIRE CATTLE

### Edgewater Farm

Government accredited herd, headed by Peter Pan, 63d. Bull calves available.

E. M. CHANDLER, Burbank, Wash.

## HEREFORD CATTLE

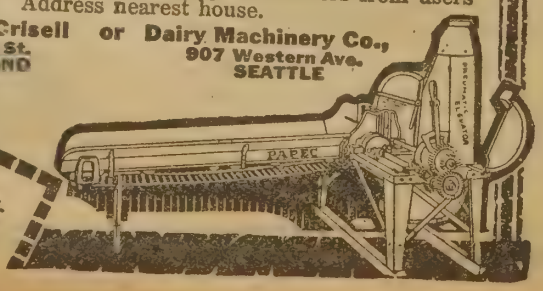
### Highland Stock Farm

offers for sale Hereford bulls, one or two years old. One or a carload.

PLATT BROS. Genesee, Idaho.

All *ready*, go ahead! No waiting for the job cutter. You can cut your silage when the fodder is *just right*—not too green or too ripe, if you have your own

PAPEC CUTTER



It runs with your own farm engine. No big, power-eating engine needed. That's because the Papec requires *25% less power* than any other cutter, *size for size.* Many 10 to 13-inch Papec cutters are satisfactorily operated by 3 to 6 h. p. gas engines.

You can profitably use your Papec for cutting and shredding straw and dry feed. Stock-raisers use many Papec machines.

Write for free Papec Catalog and copies of letters from users in the Northwest. Address nearest house.

Monroe & Crisell 91 Front St. PORTLAND or Dairy Machinery Co., 907 Western Ave. SEATTLE

A REMINDER
To write my name and address on the margin below, and mail for the Papec catalog and owners' letters. No obligation on my part.

# Breeders' Department

First Eastern Oregon
## Shorthorn Sale
At Ontario, Oregon
Thursday, April 25th

UNDER AUSPICES OF THE NORTHWEST SHORTHORN BREEDERS' ASSOCIATION.

75 Registered Shorthorns 75
Males and Females

Drawn from the following well known herds of

Day & Rothrock — A. D. Dunn.
Jas. McCroskey & Son. — W. O. Cummings
W. J. Townley. — W. W. Green.
Joe Turner. — G. W. Delay.

and Hutchinson & Sherman.

Breeders, Farmers and Rangemen will find this sale an exceptional opportunity to select a class of cattle best suited to their requirements.

Included in the offering are some of the best bulls ever entered for sale in the northwest, both as to pedigree and individuality.

The females are very high class and should draw the attention of discriminating buyers, therefore any one wishing to strengthen his herd should not overlook this opportunity.

All stock will be judged day preceding sale by F. W. Harding of Chicago, secretary American Shorthorn Breeders' Assn.

For catalogues and other information write
Joseph Turner, Manager Sales, Meyers Falls, Wash.
Or Ontario, Oregon, Moore Hotel.
Gue & Cranke, Auctioneers.

FARE AND A THIRD (on certificate plan) from all points in Oregon, Washington and Idaho on all railroads to Oregon Horse and Cattle Raisers' Convention and Shorthorn Sale, April 23, 24, 25.

## POULTRY

### TRAP-NESTED BARRED ROCKS

All hen-hatched and hen-raised. Every hen trap-nested. First pen has, I believe, for past two years highest Barred Rock av. egg record in the world. All other pens practically same blood lines.

Pen 1, 12 hens, av. over 240 eggs, crossed to yearling cock, parents av. 260 eggs, $5 setting of 15. Pen 2, 25 yearling hens, av. over 200, crossed to 2 sons of No. 44, 708 eggs in 3 yrs., $5 setting of 15. Pen 3, about 20 hens and pullets, with reserve cocks and cockerels, same breeding $3.50 per 15. A few cocks and cockerels from $5 up. IRVINE P. GARDNER. Riddle, Ore.

### Rhode Island Reds and Whites

Both combs. Stock for sale. Eggs, $6 and $3 per 100. Mammoth Toulouse geese and Mammoth Bronze turkeys. Eggs for sale. Write for mating list. No baby chicks. If you want quality and egg production, as well as vitality, get some of our stock and eggs. HIGHLAND FRUIT AND POULTRY RANCH. J. Nonnenmacher, R. F. D. 3, Yakima, Wash.

**EGGS AND BABY CHICKS**

from trap-nested and Hoganized Golden Campines, White faced Black Spanish, Barred Rocks and S. C. White Leghorns. Prices reasonable. Write for folder.

ED BRYANT, R. 2, Roseburg, Ore.

**WINNING STOCK.**

Barred Rocks, S. C. White Leghorns and S. C. Black Minorcas. Stock and eggs from exhibition and laying strains.

WILBER CLAYTON, Payette, Idaho, R. 1.

### BABY CHICKS

Rhode Island Reds, White Leghorns, $15 per 100; $12.50 per 100. All chicks now sold to May 15. If you want chicks this season, order now.

MAPLEBROOK POULTRY FARM
Southworth, Wash., Box 3.

### MY BARRED ROCKS

won this season at the Inter-State fair, 6 blues out of a possible 10; at Coeur d'Alene 1 and 2 cockerel; at Wenatchee, 1, 2 and 3 pullet, 1 and 2 cockerel and 2d cock. At Moscow, 1, 3 and 4 cockerels pullet bred. Eggs from exhibition pens $3 per 15; choice pens, $2 per 15.

J. E. BORTON, 2408 Altamont Blvd., Spokane.

**S. C. RHODE ISLAND REDS.**

Eggs for hatching from heavy winter laying stock; $1.50 per 15, $7 per 100. Young Flemish Giant hares.

W. T. WILSON, R. 3, Weiser, Idaho.

### White, Buff and Blue Orpingtons

(Capt. De Bathe Strain.)

Speckled Sussex and Anconas. All single comb. Aldrich strain Orpingtons, Sheppard Anconas. My birds took first prizes at all leading shows of Pacific Coast. Prices for stock, eggs and chicks reasonable. All from best laying birds. Finest lot of cockerels I've ever raised. A few White Holland and bronze turkey toms for sale.

IRA N. DELINE, Olympia, Wash.

## JERSEY CATTLE

### Bull Calves for Sale

Bull calves from advanced registry cows for sale. Jerseys, Holsteins and Ayrshires. Description supplied on request.

Department of Dairy Husbandry.
Oregon Agricultural College, Corvallis, Ore.

## BERKSHIRE SWINE

### Riverby Orchard Berkshires

Riverby Orchard Berkshires won 12 out of 15 first prizes at the Washington state fair, 1916, also many prizes, including grand champion sow at the Panama-Pacific world's fair. We offer for sale a few good boars and young sows.

D. C. BUNN, Prosser, Wash.

When you write to advertisers be sure to say that you saw their adverisement in this paper.

## SHORTHORN CATTLE

# Second Annual
# SHORTHORN SALE

In this sale of Shorthorns at Lewiston, Idaho, on Wednesday, May 1st, 1918, there will be sold 21 young bulls of breeding age, and 13 cows and heifers heavy in calf and with calf at foot. They are sired by our first prize and champion herd bulls, Prince Booth 377105, Cloverleaf Pride 2D 506682, a son of Maxwalton Pride and a grandson of Avondale; and Types Model 429408, a son of Cumberland Type, 36 times grand champion in that many shows. In this offering buyers will have the opportunity of securing individuals that are regarded as among the best of the breed. Therefore those wanting top specimens, either in bulls or females, should be attracted to this sale, which will be held at the NORTHWEST LIVESTOCK SHOW AND FAIR GROUNDS, at Lewiston, Idaho. The catalogue will be of value to every prospective buyer. Write for it now.

AUCTIONEERS:
Harry C. Cranke, Nez Perce, Idaho.
Geo. A. Gue, Yakima, Wash.

## HOLSTEIN CATTLE

# "THE MILKY-WAY FARM"

Federal Inspected Cattle

We have listed in the Western Holstein Breeders' sale at Kent, April 17, a few young cows just freshened or ready to freshen. These cattle are from the very best of breeding, heavy producers and will be a paying proposition right from the startoff. They have the conformation, size and breeding. Free from all diseases. And are guaranteed as represented in sales catalogue.

**The Milky-way Farm, Sumas, Wn.**
ALBERT E. SMITH, Owner
A. W. DAHLQUIST, Supt.

## HOLSTEIN CATTLE

## TILLAMOOK HOLSTEIN BULL CALF

Born Jan. 6, 1918. Well marked, good individual. Sire three-fourths same blood as Jessie Fobes Bessie Homestead, once world-record 4-year-old, and his dam's record 17,800 lbs. milk and 780 lbs. butter in a year. Calf's dam, 11,200 lbs. milk and 475 lbs. butter as a junior two-year-old, under adverse conditions. Her dam, 17,500 lbs. milk and 750 lbs. butter. Only $100 if taken at once.

**EBINGER & SON,** Tillamook, Ore.

---

## 365-DAY HOLSTEINS

24,667 lbs. milk—1026 lbs. butter—is the s. o. advanced registry, yearly, record of the dam of the yearling bull we are offering for sale. Fine individual. Good breeding. Ready for service.

THE HERD WITH YEARLY RECORDS.
WESTERNWOLD RANCH, Prineville, Ore.

---

REGISTERED HOLSTEINS.
One 30-lb. bull with grand champion sire and dam: also young bull calves. Here is production and type we hear so much about.
H. R. BOOMER, New Plymouth, Idaho.

---

MOOREHEAD RANCH.
Registered Holsteins.
Herd sire, Model Annie De Kol Segis, grandson of the famous King Segis. We have no bulls of service age, all having been sold; but we have some splendid young stuff, from 6 to 8 months old, coming on. If you are looking for real foundation stock, write us for particulars and pedigrees.

# PUBLIC SALE

## Pure Bred Percheron Stallions and Mares

### By Emmet Mulhall

23 HEAD, 10 STALLIONS, 13 MARES

SATURDAY MAY 20, 1918.

These Percherons are well bred, representing the blood of Moulinet, Carnot, Calypso, Rabelais, Etudiant, Powerful, and Seductor; well grown and well conditioned and as workers and breeders are the kind that are an asset on every farm. In this consignment is the coming three-year-old colt Minet, by Moulinet, out of a Rabelais dam who in the get of a sire group at Illinois state fair defeated the leading sires in the United States. This colt should be heard from on the Pacific coast circuit this fall. Also General Funston, a well turned coming three-year-old colt teeming with quality, possessing remarkable finish and wonderful action. These colts should head a herd of pure bred mares. Also several prize winning mares in eastern shows.

This is an opportunity to make a selection for the breeder, beginner or stallion buyer. The catalogue will interest you. Mention the Pacific Northwest Farm Trio.

Breeder and Importer. Yakima, Wash.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, April 8.—Bullish interpretation of the crop report, together with official notice that new style trading would go into effect on Thursday led to a material upturn today in the value of corn. Prices closed firm, 5-8 net higher, $1.27 1-4 for May. Oats gained 1 1-4@1 3-8 to 1 3-8@1-2, and provisions a shade to 10 cents.

Corn exhibited strength right from the outset. General belief prevailed that the May delivery would reach the maximum level of prices as soon as business in new style future deliveries began, for the change in rules makes the commercial grades of corn the contract grades.

Oats were firmer, largely in sympathy with corn. The government figures on the probable wheat yield tended also to lift the oats market, as the estimate was less favorable than had been looked for.

### Cash Quotations.

CHICAGO, April 8.—Corn—No. 2 yellow, $1.90@1.9; No. 3 yellow, $1.65@1.73; No. 4 yellow, $1.60@1.65.

Oats—No. 3 white, 92½@93c; standard, 92¾@93¼c.

Rye—No. 2, nominal.

Barley, $1.70@1.90.

Timothy, $5@8.25.

Clover, $2[illegible]@31.

Pork—Nominal.

Lard, $[illegible].65.

Ribs, $2[illegible].82@23.82.

### Chicago Futures.

| Corn— | Open. | High. | Low. | Close. |
|---|---|---|---|---|
| May | 1.26⅞ | 1.27¼ | 1.26⅞ | 1.27¼ |
| Oats— | | | | |
| April | .... | .90⅛ | .89⅛ | .90⅛ |

### Pacific Northwest Grain.

PORTLAND, Ore., April 8.—Grain, 30-day options: Oats, No. 2, $69 bid; barley, feed, $73; brewing, $80. Eastern oats and corn in bulk: Oats, No. 3 white, $64 bid; 38-pound clipped, white, $64.50; corn, No. 3 yellow, $66; No. 3 mixed, $65; oats, No. 3, $64; clipped, $65; corn, yellow, $66; mixed, $65.

### Minneapolis Grain.

MINNEAPOLIS, April 8.—Wheat—Receipts, 190 cars, compared with 201 a year ago.

Corn—No. 3 yellow, $1.55@1.65.

Oats—No. 3 white, 90¼@91¼c.

Flour—Unchanged; shipments, 52,130 barrels.

Rye, $2.91@2.92.

Barley, $1.50@1.90.

Bran, $33.14.

## Portland Wheat.

PORTLAND, Ore., April 6.—The first barley bids for several days were made at the exchange at the close of the week, $80 being offered for brewing and $73 for feed barley with no sellers. Oats are holding fairly steady at $69, but the market is very dull. No changes were recorded in the hay market at the close.

The Portland merchants' exchange has indorsed Joseph W. Ganong, vice president and general manager of the Portland Flouring Mills company for the position of chairman of the north Pacific coast milling division of the United States food administration, left vacant by the death of Theodore B. Wilcox. It is held by local grain men that the office should remain in Portland, inasmuch as the grain corporation zone agent, M. H. Houser is located here, and it is necessary for the two offices to work in common.

## Live Stock Quotations.

### At Omaha.

OMAHA, Neb., April 8.—Hogs—Receipts, 10,000; market, steady to 5c higher. Heavy, $16.30@16.70; mixed, $16.40@16.65; light, $16.40@16.90; pigs, $10@15; bulk of sales, $16.40@16.65.

## The Wool Situation.

The only condition that prevents extreme activity in all types of wool is the transportation problem, says the Columbia Basin Wool and Warehouse company in its regular news letter. Buying has been delayed somewhat because of lack of shipping facilities, it is stated. The letter further says that the sentiment favoring price fixing is changed because the manufacturers are solicitous that nothing shall be done to handicap production. Barring unusual conditions, a firm market is predicted

Cross-bred wools have been selling at prices ranging from 54c to 65c for eastern Oregon and Idaho wools. Valley wools have sold from 52c to 68c. Fine wools have been rather inactive, but can be readily moved on the scoured basis of $1.75 to $1.82 for staple fine wools, $1.60 to $1.70 for clothing. Braids, 53c to 56c in the grease.

It appears now that the establishing of prices on the present clip will be governed in a measure by the necessary arrangements that the growers have made to finance their holdings. It is evident that dealers will use great care in contracting wools, and will not do so except with absolute certainty that the wools are resold or for the account of manufacturers.

The activity of the market will depend largely upon transportation facilities, and we would not be surprised to see markets open slowly. There is no reason to expect lower prices to prevail than have been prevailing for some weeks.

BOSTON, Mass., April 5.—Trading in wool here was stopped today by vote of the trade and all the unsold stock was placed at the disposal of the government at prevailing values. The directors voted unanimously to help out in the emergency and ordered an immediate inventory of all unsold stocks.

The Commercial Bulletin will say tomorrow: "The wool market continues keen for the limited stocks available or for stocks to be imported, free of government restraint. Sales for the week were about two million pounds, including a fair proportion of territory and Cape wools of the fine and fine medium grades at fully last week's quotations. The tendency is to mark up prices on wools still on hand.

"The government is occupying more and more machinery at the mills on military fabrics and has taken over one woolen plant in its entirety. The west is still inactive."

Scoured basis: Texas fine 12 months, $1.68@1.72; fine eight months, $1.55@1.60.

California northern, $1.70@1.75; middle county, $1.55@1.60; southern, $1.45@1.50.

Oregon: Eastern No. 1 staple, $1.80@1.82; eastern clothing, $1.55@1.60; valley No. 1, $1.70.

Territory fine staple, $1.85@1.87; half blood combing, $1.75@1.78; ⅜ blood combing, $1.50@1.55; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

## Spokane Market.

**Hay**—Timothy, $32 per ton, $31 ton by carload; alfalfa, $27 ton, $26 ton by carload.

## Grain Bag Shortage.

WALLA WALLA, April 7.—There will be a shortage of fully 8,000,000 grain bags this year, and farmers must arrange to supply the deficiency either by getting other bags or by building farm bins and granaries, M. K. Snyder of the Washington State college told the farmers' union yesterday. He said the farmers had a mistaken idea that the government was going to take care of the farmers by furnishing them sacks.

Arrangements were made for 24,000,000 bags, and these have been taken, he said.

## Seattle Market.

SEATTLE, Wash., April 6.—Probably not more than 50 per cent of the potato acreage grown last year will be seeded for the coming season, according to statements by wholesalers of Western avenue and seed dealers today. While the conditions of the reduction are not quite so pronounced in eastern Washington, similar results are expected from the slow movement of seed stock in all portions of the state.

One of the features this year is the

### BUYING PRICES.

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

Eggs—Local, 35c per dozen; eastern Washington, Oregon and Idaho, 34c.

Poultry—Spring roosters, live, fat, 2½ to 5 lbs., 26@27c; old roosters, 17@20c lb.; squabs, large, $3.50 dozen; geese, fat, live, 18c lb.

Butterfat—46c lb.; dairy butter, 30@32c.

Beef—Buying prices: Prime beef, steers, 11@12c; cows, fat, 9@11c lb.; heifers, 10@11c.

Hogs—Light, 18@20c lb.; heavy, 17@18c lb.

Veal—Fancy light, 17@18c lb.; heavy, 9@16c lb.

Hides—Salted, 14c lb.; flint-dry hides, 29c lb.; salt kip, 16c lb.; green hides, 11c lb.; green calf, 23c lb.; dry calf (under 6 pounds), 29c lb.; bulls and dry salts, 4c lb. less; green bulls, 9c lb. Clean, long wool, western Washington flint dry pelts, 39c per lb.; heavy to clean eastern Washington flint dry pelts, 30@35c lb.

## Portland Market.

PORTLAND, Ore., April 6.—A 4-cent drop in butter prices was announced by city creamery men in the latter part of the week as a result of the offering of cheap butter from California. Cubes followed prints down grade. The trade does not believe that prices will go much lower.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 2 white, $69 per ton.

Millstuffs—Bran, $30 per ton; shorts, $32.

Barley—No. 1 feed, $73; brewing, $80; rolled, $77@$79.

Hay—Buying prices: Timothy, eastern Oregon, $29@30; alfalfa, $24@24.50; grain, $22.

Eggs—Oregon ranch, case count, 34@35c per dozen; candled, 36@38c.

Poultry—Hens, 26@27c; stags, 22c; ducks, 32c; turkeys, live, 26@27c; geese, 20@21c.

Butter—City creamery, prints, 44@45c per pound; cubes, extras, 39@40c.

Cheese — Tillamook triplets, 24c; Young Americas, 25c.

Dressed meats—Veal, 19c; pork, 21½@22c.

Hops—1916, nominal; 1917 crop, 14@15c.

Potatoes—Oregon, buying price, 65@75c.

Wool—Eastern Oregon, 44@65c; valley, 50@55c.

Beans—Buying prices: Oregon white navy and Lady Washington, 10¼@10½c; white kidney, 10c; colored, 9c.

**WANTED--1000 tons of mixed country scrap iron**

in carload lots of not less than 25 tons each. Write for prices if interested.

PACIFIC HIDE & FUR DEPOT.
Joseph Thiebes and C. T. Symmes.

## FARM LANDS—FOR SALE 651
Continued.

"A FARM HOME FOR YOU." IT'S FREE. Write for our attractive booklet, entitled "A Farm Home for You," containing interesting information concerning Spokane, eastern Washington, northern Idaho and western Montana, giving the earning power of our lands, ranging in value from $20 to $100 per acre, in grain, garden truck, fruits or other crops, the profit in live stock production, and complete description of each section. Mild, healthful climate; no extreme heat or cold; good schools and churches. When you write, tell us your wants. Our answer will give you just the information you wish. Farm Development Bureau, 618 Chamber of Commerce bldg., Spokane, Washington.

YOUR CHANCE IS IN CANADA—RICH lands and business opportunities offer you independence; farm lands $11 to $30 acre; irrigated lands, $35 to $50; twenty years to pay; $2000 loan in improvements; loan of live stock; taxes average under twenty cents an acre; no taxes on improvements, personal property or live stock; good markets, churches, schools, roads, telephones; excellent climate—crops and live stock prove it. Special homeseekers' fare certificates. Write for free booklets. Allan Cameron, general superintendent land branch, Canadian Pacific Ry., 30 Ninth ave., Calgary, Alberta.

LOOK HERE, MR. WORKMAN!
YOUR COUNTRY NEEDS YOU ON A FARM.
And we are offering you a 40-acre ranch at $25 per acre; 10 yearly payments; in the best agricultural part of Snohomish county; paved roads, railways, mills, factories, schools; plenty of work for the laboring man; the best proposition on the market for the man who wants a farm. Send for illustrated literature. BROWNELL LAND CO., 904 Third ave.

FULLY EQUIPPED STOCK RANCH
$2000 BELOW VALUE.
160 acres beaver dam land; all tillable except 2 acres; 80 acres in meadow; 5 head of horses, 8 head of cattle; all farm machinery; good 2-story house, barn, wagon shed, garage, blacksmith shop and other outbuildings; good well and creek. Price $5500; $4000 cash, bal. long time.
This is one of our many.
JAMES W. BOOTHE & CO.
510 FIRST AVE. SPOKANE, WASH.

IMPROVED IDAHO GRAIN FARM.

One of the best grain farms in west; 160 a. excellent land, all in cultivation; 40 a. in crop; 60 a. plowed for spring seeding; 60 a. in summer fallow; only 4 miles from Genesee; 1 mile to good school; A1 improvements; fine spring; possession November 1, 1918, with 1-3 this year's crops. $18,000. Attractive terms. C. F. Burr, Genesee, Idaho.

TWENTY-FIVE HUNDRED-ACRE WHEAT and stock ranch; western Canada; completely equipped; caterpillar tractor; thirty horses, cattle, hogs, implements, buildings; close to railway, schools and churches; settled community; telephone, rural mail, good roads; 1200 acres ready for drill. Price, $125,000; one-third cash, balance half crop payment. Western Canada Properties, Ltd., 401 Herald building, Calgary, Alberta, Canada.

A SOUTHERN OREGON FARM.
236 acres; 85 acres rich bottom land, bal. timbered pasture; an ideal place for dairying or stockraising, fruit or vegetable growing. Only 4½ miles from county seat; large farmhouse, new barn and silo. Price $14,000; $4000 cash, balance easy terms, 6 per cent interest on deferred payments. Bottom land can alone be made worth cost of farm. I. S. Kaufman & Co., Marshfield, Ore.

682-A. IMPROVED WHEAT FARM; SEVEN miles south of Hartline, Wash.; on Sunset highway; good land; all in cultivation except 15 acres; 300 a. in summer fallow; all fenced; large house, fine barn, good outbuildings; plenty water. Only $45 per acre. $6000 cash will handle. A. L. Tucker, Coulee City, Wash.

ONE OF THE BEST FARMS IN THE Boise valley, consisting of 131 acres, with free water right, fine soil, good buildings; on electric car line and state highway; 12 miles from Boise City, Idaho. Price $20,000, ½ cash, balance easy payments. Wm. G. Messersmith, P. O. Box 1206, Boise, Idaho.

CULTIVATED CANADIAN WHEAT LANDS. 3000 acres ready for drill; in quarters, halves, or sections; every convenience; easy terms or crop payment. Final payment 1937. Where can you equal it? Western Canada Properties, Ltd., 401 Herald building, Calgary, Alberta, Canada.

FOR SALE—160 ACRES.
In Grant county, 3 miles from Ephrata, county seat; good well for irrigating, 171 feet deep; 50 feet to water; fair buildings. Price $800. Will consider good auto part payment. W. S. Becker, Owner, Chelan, Wash.

GET A FARM IN TILLAMOOK CO., ORE. Famous for its grass and cheese. My 167-acre farm for sale for $5000. $1000 cash will handle it; good soil, buildings; state road; out range. Address owner, W. W. Yates, Hebo, Ore.

FOR SALE, OR WANT PARTNER — 375 acre diversified farm, Columbia river. Your own price, time, terms. Partner to take full charge, as I am too old for active life. Drawer 6, Hanford, Wn.

ALL KINDS OF STOCK RANCHES WITH hay and grazing lands; irrigated bottom, hay and seed alfalfa land; finest in state; acreage and terms to suit any buyer. Rosebud Realty Co., Rosebud, Mont.

ALFALFA, PLOW LANDS, HOP YARDS, orchards, business investments. Lum Land Co., North Yakima, Wash.

## FARM LANDS—WANTED 654

WANTED — TO HEAR FROM OWNER OF farm or unimproved land for sale. C. K. Hawley, Baldwin, Wisconsin.

## ACRE TRACTS—FOR SALE 669

FOR SALE—FIVE ACRES APPLES AND Franquette walnuts, 5 yrs. old; near Portland. Price $3000; equity $1200; will accept Liberty bonds, balance easy payments. Harry Stibbs, Box 1908, Seattle, Wash.

## FOR SALE OR EXCHANGE 702

160 ACRES IN S. IDAHO; 80 ALFALFA; no rocks; heavy soil; water and buildings; 1½ miles to school and P. O.; trade for Washington or Oregon farm. Terms. Address P. O. Box 14, Stone, Idaho.

CHEVROLET

# WHY?

*When you think of an automobile—let it be CHEVROLET*

BECAUSE—From radiator to rear axle there is built into the Chevrolet a quality of material and a soundness of construction that reflects the ideals of its makers to build the best possible car at the lowest possible price.

BECAUSE—It is the lowest priced electrically equipped automobile in the world, lowest in first cost and lowest in operating cost.

BECAUSE—It is the most powerful light car built. It is equipped with the famous Chevrolet valve-in-head motor, the most powerful, most efficient and most economical type of automobile motor made. Everybody knows "CHEVROLET" means power.

BECAUSE—With the above feature it combines a beauty of appearance, a comfort in use, a consistency of performance and a balance so perfect that the driving of it is a source of pleasure second only to the pride of ownership.

BECAUSE—Its use will double your working capacity and make your work a pleasure. And by using a Chevrolet you are practicing true economy—to the demand of the day—for the Chevrolet is the most economical car built and will give you the maximum of performance at the minimum of expenditure.

BECAUSE—It is the car for you, made in the west for western people, the largest selling electrically equipped car in the Pacific Northwest. Bear this fact in mind and remember that no car ever attained universal popularity without merit and then see the Chevrolet dealer about this wonderful car.

# Helping Farmers—

## To Save Time and Energy and Make Money

That motor cars are absolutely *necessary* for farmers as business equipment is shown by the fact—

That more than half of the Overland output is taken by farmers.

That the Overland is completely qualified to be fully *satisfactory* for farmers is proven by the fact—

That more than half of all Overland cars built are taken by farmers.

You need a car and that car should be an Overland.

It is not necessary to pay more than the Overland price—and complete satisfaction cannot be bought for less.

At a low cost and for economical maintenance, Model 90 gives power, prodigious power, from its perfected frugal-with-fuel motor.

It is simple to handle, has narrow turning radius, and easily operating clutch.

It is comfortable, with spacious interior, wide seats, deep upholstery, rear cantilever springs, 106-inch wheelbase, and large tires, non-skid rear.

It has Auto-Lite starting and lighting and vacuum fuel system.

To pay less is to risk the loss of efficiency, comfort, modernized improvements, beauty of design or long-lived service.

Order your Model 90 now.

Sunday is no longer dull for the farmer's family with an Overland

## Italian Bees Best for Northwest

### *Start in on Small Scale and Learn Business as You Go*

Article 2, By GEORGE W. YORK.

Like most other domesticated animals, such as cattle, poultry, etc., there are several varieties or breeds of bees from which to select. I might mention Carniolans, from Carniola, Austria; the Cyprians from the Island of Cyprus; Holy Lands, from Palestine, and the Italians, from Italy. The latter are considered the best all-purpose bees in this country, and so they are recommended by all who make anything of a business of beekeeping. They were first brought to this country about the years 1860, and have continued to prove their worth as they have been handlled and bred from year to year.

Italian Bee.

The native bees are a kind of black or dark-colored small bee, very irritable, and do not stick to their combs very well. But the Italians are comparatively quiet, docile, hardy, excellent workers, and more likely not to tolerate the presence of the bee moth in their hives. The bee moths are very destructive to honey combs, and when they are not opposed strenuously they soon make havoc of a colony of bees.

**Start on Small Scale.**

So I advise getting Italian bees. But don't make the grievous mistake of starting with more than two or three colonies. Let them increase with your increase of experience in handling them and studying their nature and characteristics.

If possible to do so, get your first bees from some bee-keeping neighbor. But if none are to be had nearby then you will need to send your order to some bee-keeper who offers bees for sale.

In case you send away for bees, do not order full colonies, as the express charges might be rather high, especially if they have to be shipped a long distance. In that case order two or three three-frame nuclei with a queen bee in each nucleus. These nuclei can be boxed together with a thin partition between them, so that the bees and queen of each nucleus will be kept separate while on the journey.

A three-frame nucleus of bees with good queen should not cost over $4.50 at the shipping point, and with proper care and sufficient flowers to work on such nucleus should not only increase into a strong eight or ten frame colony, but should store a surplus of from 40 to 50 pounds of honey during the season. Here in the northwest such nucleus should be received not later than May 15 in order to yield the surplus mentioned. Of course, the size of the return in honey from either a nucleus or a full colony will depend upon the kind of season, abundance of nectar-yielding flowers in the vicinity, and also upon the care and attention given the bees at the proper time by the beekeeper.

Now for a few simple directions to be followed upon the receipt of a nucleus of bees: We will suppose that a hive has been secured in advance to receive the bees when they arrive by express. The bees will have been enclosed very securely with wire cloth, which is to be removed very gently from the top of the crate or box containing the frames of comb and bees. Before opening, a little smoke from burning wood or rags should be blown upon the bees through the wire cloth from the top of the box, which will have the effect of slightly stupefying them, thus rendering them less likely to sting the operator.

There are several styles of bellows bee smokers on the market, any one of

Bee Smoker.

which will answer the purpose very well indeed. (See cut herewith of one style.)

Having subdued the bees, and with the wire-cloth removed as directed, lift each frame separately and place it at one side in the hive. Do the same thing with the other two frames of the nucleus, having the three frames hanging side by side in the hive just as they were in the light shipping box in which they were received. They should be spaced about 3-8 of an inch between the combs.

If your hive is an eight-frame one, then fill in the rest of the hive with five empty frames; or if a 10-frame hive, then fill in the seven empty frames. Of course, if one could have these five or seven frames filled with empty honeycomb it would be a great help to the new colony of bees; but next to that would be to have the frames filled with comb foundation, which will be described in the next article. You see, one can not tell about everything in one article or in two. There are really so many details about the management of bees that it will require quite a few articles the length of this one in order to familiarize the reader with the whole subject, if he has had no previous understanding of it.

In the next article I will expect to have a picture of a modern beehive and several other illustrations that will help the reader to a better understanding of what I am trying to write. You will be surprised to find that there is so much of interest connected with the little busy bee and its profitable management.

## Farm Gardens

### Please Answer These Questions

Farmers are paying more attention to their gardens this year than ever before. This means that one farm family is more interested than ever before in information regarding how other farm families are managing their gardens this year. If you will supply this information by answering the following questions and giving any other suggestions we will be glad to pass it on through the columns of the Farmer:

How large is your farm garden?

Is it larger or smaller than last year?

What vegetables do you raise, and to what extent do you practice successive planting for fresh vegetables throughout the season?

How is your garden coming on this season?

How much of your year's supply of food is furnished by your garden?

Who is the best gardener in your family

Please mail your letter to the Editor of The Washington Farmer, Spokane.

**Crusty.**

There are two kinds of Victory loafs. One is bread and the other is a slacker. The slacker has the most crust.—San Francisco Bulletin.

## Don't Cease Effort

### Third Liberty Loan May Win War

If your community is one of the many throughout the nation that went over the top the first week of the third Liberty loan campaign it doesn't mean that the effort should be stopped or even allowed to slacken. Unceasing work should be continued until the largest amount of subscriptions possible are taken, even though it means an oversubscription of the loan by several times.

The northwest claims the honor of having the first state to reach its minimum quota, Oregon, which went over the top with a bound long before the first week was finished. While neither Washington nor Idaho reached its quota during the first week the subscriptions came in rapidly and loyally, indicating that before the month's campaign is over their minimum will have been far oversubscribed.

There are some commendable features and some perhaps not so commendable about the results of the first week over the nation as a whole. Indications are that the rural districts, especially in the northwest, subscribed with greater speed than did the cities. It is also shown that far more individuals with small subscriptions are being recorded than in either of the two previous loans. This is as the government desires it. The government has urged that 20,000,000 people take bonds of from $50 to as high as possible.

The end of the first week saw official totals reaching nearly $573,000,000, but this, large as it seems, is only little more than one-sixth of the minimum that must be sold. It is remembered, however, that the latter weeks of the first and second campaigns brought in floods of subscriptions, and it is anticipated that the $3,000,000,000 minimum will be greatly oversubscribed before the close of the month's campaign.

### Outlet to Columbia River.

Work has begun on a survey of the state road between Goldendale and Marys Hill, in Klickitat county. This is to be graded this spring and when completed will give Goldendale and vicinity a fine outlet to the Columbia river for auto trucks with a minimum grade. Much of the product of the Klickitat valley can be hauled for shipment through the Celilo locks to Portland.

### Hens No Longer Exempt.

After Saturday, April 20, the hen will not be a privileged character in this country, as she has been for the last couple of months. The food administration has announced that on that date the regulation that has prohibited the slaughter of hens for market would be withdrawn.

THE WASHINGTON FARMER believes that the speeding up of food production is a war measure of the first importance. The Washington Farmer believes that every farm, as well as every farmer, every farmer's wife and every farm boy or girl actively speeding up food production, is entitled to a star of honor on the **FARM SERVICE WAR FLAG,** a reduced design of which, in colors, will be found on page 7 of this issue. The central star in the flag stands for the farm, and small stars may be added to represent every farm worker in the family. With this belief in the loyalty of the farmers and their families, The WASHington Farmer has designed a Farm Service War Flag distinct from the War Service Flag. This design is dedicated to the farmers of the Northwest and of the entire nation.

The U. S. Department of Agriculture, to whom the Farm Service War Flag was submitted, declares it "appropriate" and "attractive." The design of this flag was submitted to the U. S. Commissioner of Patents in person by the editor of The Farmer, who offered to donate to the United States any and all rights in this design. The commissioner assured the editor that the rights of the farmers to the exclusive use of this design could be amply protected by an application for a patent until the patent office reached decision in the matter.

# Raise a Garden; Raise a Garden

## *Failure Last Year Should Spur On to Greater Effort*

By GRANVILLE LOWTHER.

After the experiences of last year, I know it is not popular to urge people to grow gardens; but listen! The people who succeed are those who rise above a few disappointments and keep at it until they learn by study and experience the best methods. They keep patiently, persistently, determinedly at it. They eliminate from their vocabulary words that express failure, and from their minds thoughts that lead to defeat. If the soldiers in the trenches do not whip the Germans in the first skirmish they will keep at it until they have a battle, and if they do not win in the first battle, they will keep at it until their enemies are defeated. If we do not succeed as we had hoped in our first effort at food production, we will try again, for it is true now, as it was last year when every one was trying to add something to the food supply, that the need for food is great, in order that we win the war.

One cause of failure was the inexperience of many persons who undertook to grow vegetables. It could not reasonably have been expected that everybody would succeed, more especially those who are not accustomed to the work. It would be better for persons without experience to plant small areas of land, until they learn something about it.

In so far as the potato crop was concerned, there was an over-supply for home consumption and for our evaporators. The shipping facilities were also inadequate to the demands. Some cast the blame for this situation on the government, and say that after it had taken over the railroads it failed on account of inefficient management and therefore did not supply the people with cars. These persons forget that there was a shortage of cars the year before, under circumstances in which the demands for cars were less than they are now. Some blame Mr. Hoover, the food administrator, for recommending that the people plant so many potatoes. We must consider that war on a large scale is something to which this generation of Americans is wholly unaccustomed, something for which we were not prepared, something that a great many believed we would never have to meet, and something to which a democratic form of government is not adapted.

In Germany, the government would command the growing of gardens if the authorities believed that that would contribute to military success, and the people have no choice about it. In this country, the authorities do not command; they recommend the growing of gardens, and the people do as they please about it.

**The Same Needs as Before.**

There are today the same needs for the growing of gardens as last year, when it was urged with so much vigor by the food administrators. In fact, there is greater need, for the war has taken on larger proportions. We will have before another crop can be marketed, a million men in Europe, whom we must feed and at the same time, furnish food in considerable quantities for the allies.

When we consider our boys in the trenches and the needs likely to arise out of the present situation it seems selfish to appeal to the profit side of the question. It is like appealing to a father to feed his child and keep it alive because when it grows up he can make money out of its labor. Generally, men keep their stock in good condition because it is profitable to do so, but in the feeding of their children, they generally act from higher motives. However, there is the profit side to be considered by those who are not sufficiently enthused with patriotic principles to act without it. I would call attention to the following crops that I think might be planted with profit, cultivated at odd times when it would not interfere with other work, and furnish food for the family and perhaps others besides.

Notwithstanding the losses which some incurred last year in the planting of potatoes, I would recommend planting this year the same crops. I do so in harmony with the general rule that I have followed with but few exceptions. That rule is: "Plant when the seed is cheap." Last year I violated that rule and planted potatoes when the seed cost me $6 a bushel. I did so because I felt that perhaps the war conditions would justify the planting. Now I would follow the rule again. This year seed can be bought at very reasonable prices. Because the seed is cheap it looks to the masses as if there was no profit in potatoes, therefore, tens of thousands of people will not plant as much as they

(Continued on page fourteen.)

# Trappers of the Ozarks

Since February 28, when the opening chapters of the serial story now running in the Farmer were published, so many new readers have joined the Farmer family that it has become necessary to give a comprehensive summary of the chapters of this story that have been published up to this time. While each chapter is in itself virtually a short story, the interest of each is greatly increased by knowledge on the part of the reader of those stirring incidents of adventure narrated in the previous chapters. With the purpose therefore of giving our new subscribers an equal chance at the enjoyment in the succeeding chapters of this story, "Trappers of the Ozarks," a summary of the first 11 chapters follows:

ONE September afternoon nearly 107 years ago, Benoni Armstrong and Jodo Henderson, two young fellows living near a little fur trading post on the Mississippi river, now the city of St. Louis, left their homes for a winter of adventure and profit seeking in the wilds of the Ozark mountains of Missouri. With them, carrying their provisions and keeping them company, were their little donkey, appropriately named Spunky, and their two dogs.

The experiences through which the lads were to go were not new to Benoni, the older of the two, but this was the first trip that Jodo had ever made so far from home and little did he dream of the hardships and dangers through which they were to pass before the coming of spring, when they could return to their homes in the more nearly civilized district about St. Louis. It was with happy prospect for a winter of successful hunting and the enjoyment of camp experiences that the two bade their parents and brothers and sisters goodby. "Risk us to keep a sharp lookout for all redskins and all kinds of redskins," Ben replied lightly when Rachael Henderson, Jodo's sister and Ben's sweetheart, warned him solicitously as they prepared to depart.

During the succeeding months they did keep a sharp lookout for the redskins and the redskins kept a sharp lookout for them. But this was not all. Earthquakes, enraged buffalo, turbulent mountain streams, ravenous wolves, bear and other trouble makers, in addition to wild and savage tribes of Indians, made the winter one of danger and terror to them.

THOUGH numerous dangers were encountered on their trip westward the first notable incident occurred shortly after they had established camp on the Big Niangua river, miles and miles from the habitation of any human beings save hostile Indians. With a view to securing both meat and robes, the boys undertook the capture of part of a herd of buffaloes. Unable to approach them on foot within firing distance, Jodo mounted the little pack donkey and bore down upon the herd at full speed. A shot from his pistol wounded the shaggy bull of the herd, which, infuriated by the injury, turned upon Jodo and the donkey and charged with head lowered and hoofs clattering. Without waiting to be urged, the donkey turned and ran for dear life. Escape would have been easy had not his forefeet broken through into a badger hole causing him to fall, throwing both himself and Jodo headlong with the infuriated buffalo bull but a few paces behind. Fortunate, indeed, was it that Jodo's partner was nearby to send a ball from his trusty rifle into the heart of the beast, thus bring to a happy end their first dangerous experience.

Ben and Jodo had pitched their camp near the mouth of a cave out of which a clear, cold stream of water gurgled down the ravine to join the Niangua. In this sheltered spot they built their cabin of logs, with a stone chimney, while they were waiting for the winter to set in, when the furs would be prime. As the sun was setting one evening they went to the mouth of the big cave, attracted by a roaring sound from within, as of the rushing of the wind. For a moment they stood wondering what it might be, when suddenly from the mouth of the cave fluttered a swarm of bats, hundreds of thousands of them, a veritable cloud, increasing the darkness that was settling over the wild region in which their winter was to be spent. The great flock of bats were starting out on their nightly hunt for food, the cave serving as their shelter from both enemies and the light during the day time.

THE spirit of adventure was uppermost in the minds of the young hunters and they determined to investigate the cavernous interior of the cave next day. In a little dugout canoe which they had hewn from a log they ventured into the cave, finding a great subterranean sea of cold, clear water. For hours they paddled about, exploring by the light of their torches until, knowing that night must be approaching, they turned about and sailed and paddled to their winter home under the cliff.

One cold night as the boys were sitting about the fire in their cabin a growl from one of their dogs startled them. With keen ears they listened and what they heard was a crunching of snow about their cabin. Quietly and quickly they extinguished their lights and as they listened in the darkness they became sure that savage red men were walking about their cabin, seeking means to enter, but the bolted door would not give way before their stealthy attack and after a bit all became quiet. The next morning investigation of the tracks revealed the fact that two Indians had been their visitors and the boys knew that sooner or later their savage companions would return for the purpose of capturing the young hunters.

THE return visit came soon enough. Only a few nights later the boys became aware of the fact that their cabin was surrounded by enemies, but they had prepared themselves for the attack. The door was firmly fastened on the inside so that it could not be opened without demolishing the door or its fastenings, but the Indians were not to be defeated in this way. Seizing a heavy log that had been left over from the building of the cabin, a dozen of them made of it a battering ram and began an onslaught on the stone chimney, which soon began to crumble under the attack. Inside, the boys prepared to defend themselves with their weapons, ready at any minute to send a rifle ball into the first Indian who appeared before the opening when the chimney came down.

But nature did not intend that they should be captured or that they should defend themselves in this way that night. Suddenly the boys realized that there was a commotion about their cabin not made by the savages' attack. The whole cabin, the whole earth about it and the stone cliff above it were trembling and shaking. Through the opening in the half-demolished chimney they could see their Indian visitors terror stricken and ready for flight.

Realizing the cause of the violent commotion, which was nothing else than an earthquake in the dead of night, the boys unfastened the door and while the Indians fled in one direction, they fled in another, to get from under the cliff that was sending down about their cabin tons and tons of rock and boulders. From the dangers of that night they escape, and the experience of the earthquake was so terrifying to the ignorant natives of the Niangua that they did not molest the boys again for several weeks.

The winter slipped by rapidly, busy days and weeks for Ben and Jodo attending their traps, hunting and boiling down salt water from a salt spring that they had discovered. One morning in February Jodo came hurrying down from the top of the cliff above the cabin to announce breathlessly to his partner that the smoke of a campfire could be seen two or three miles down the river, indicating for sure that the Osages were again in the community and probably would be seeking the capture of the hunter boys. Fearing further trouble with the Indians, they had cached most of their camp equipment in a small cave well up the side of the cliff, not far from their cabin.

ONE day in this month they were out visiting their traps and while they were eating their lunch at noontime the bushes in front of them suddenly parted and a savage warrior stood before them, tomahawk in hand. Instinctively the boys turned to reach their rifles, only to find that other red men had approached from behind and had already secured possession of their weapons. They were helpless in the hands of their captors and were led away to the Osage village. Time and again on the trip Chief Snapping Turtle boasted to the boys hoy they might have their heads chopped off, be burned alive or be scalped alive and sent home to their people as a warning against further invasion of the Osage territory by the palefaces.

But the boys behaved in such manner that upon arrival at the Osage village they were accorded better treatment than they had dared to hope for. Not only were they given a teepee of their own to live in, but every day during the early part of their captivity a big, fat hand parted the door flap and furnished them with cooked venison and parched corn. At first the teepee was constantly surrounded by warrior guards, but after a time Chief Snapping Turtle became so trustful of the boys that he not only took away the guard but allowed them to go on short hunting trips in the neighboring country. It was not until the boys, on one of their hunting trips, became lost in the forest and failed to return to the village one night that they lost the confidence of the savage chief. From that instant began their real danger at the hands of the savages.

(Chapter 12 of this story, which appears on page 27 of this week's issue, contains the story of perhaps the most fearful experience of the boys on their whole western expedition.)

## Live Day-Old Chicks May be Sent by Mail.

Order No. 1177.

Office of Postmaster General, Washington, March 8, 1918.—Effective March 15, 1918, section 476 of the postal laws and regulations is amended by the addition of the following as paragraph 2:

"2. Live day-old chicks shall be accepted for mailing, without insurance or C. O. D. privileges, when the package in which they are contained is properly prepared and can be delivered to the addressee within 72 hours from the time of mailing."

A. S. BURLESON,
Postmaster General.

## Beet Workers in Yakima.

As an assurance for those who contemplate planting sugar beets in the Yakima valley this year Manager T. R. Horne of the Utah-Idaho Sugar company announces that 600 workers employed in the Montana beet fields last year already have arrived in the valley and several hundred more will be furnished.

## P. R. Clark Appointed.

P. R. Clark has been appointed federal food administrator for Adams county.

# Grain Bag Supply Causes Concern

## *Food Administration Urges Farmers to Place Orders Without Delay*

**How are you going to handle your grain this season, bulk or sacks?. If in bulk, have you your storage and handling facilities prepared?. If in sacks, have you ordered your needed supply? Not one bushel of wheat must be allowed to go to waste in the northwest this year for lack of preparedness on the part of the producer or handler. The problem of how to handle it is exceedingly complicated, but every farmer should prepare, by one method or another, to guarantee himself and the country against the loss of any part of his crops. Soldiers can not fight on empty stomachs.**

"Anything you can do to get the consumer to place his orders quickly for any bags required will be a helpful service to the consumer, to the bag importers and to the food administration."

This is the closing sentence in a telegram from the national food administration at Washington to The Washington Farmer in response to an inquiry made by this paper relative to the grain bag situation.

The advice that farmers who need grain bags should order them at once appears to be based on the facts that a considerable number of bags must yet be imported from India; that it is extremely difficult to secure vessels in which to import them, and that the cost of importation even when vessels are secured is so great that importers will not take the risk unless guaranteed of the sale of such bags after they are received in this country.

Some time ago the largest importers in this country and the food administration entered into an agreement whereby bags were to be sold for 25 cents f. o. b. tidewater. Under that agreement, which was entered into by five of the largest companies, approximately 24,000,000 bags were included. Including prison bags those in the hands of importers who were not parties to the 25-cent agreement and other miscellaneous lots here and there, it is estimated by the food administration that 42,000,000 bags are available for this year's crop. Estimates of the grain crop for the west, which territory uses about all the sacks that are used, indicate a bag shortage of anywhere from 5,000,000 to 10,000,000, according to some of the best grain authorities. M. K. Snyder, of the State College of Washington, estimates the shortage at 8,000,000 sacks.

**More Than Twenty-Five Cents.**

When the announcement was made a few weeks ago that the agreement had been made for 25-cent bags the erroneous impression was spread abroad that this meant that the farmers would only have to pay 25 cents each for their bags. The truth about it is that this 25 cents is the price at tidewater points, and that the price to be paid by the farmers for the 24,000,000 bags under the agreement is 25 cents plus freight and handling charges from the coast to interior distribution points. Bags under the agreement have been selling to the farmers at something like 27 cents each on an average, it being understood between the importers and the food administration that the 25-cent price would mean about 27-cent sacks in the interior.

Bags not included under the agreement, but which are yet to be secured by the importers from India or elsewhere, will cost the farmers more than 27 cents, according to the best information obtainable. This paper has taken the question up with all four of the big bag concerns in the northwest and has found only one of them stating a definite price on bags that are yet to be imported. The Balfour-Guthrie company, with northwestern headquarters at Portland, Ore., states that they will accept orders for grain bags now at 28 1-2 cents f. o. b. tidewater or 3 1-2 cents higher than the agreement made with the food administration covering sacks that were on hand at the time of the agreement. This latter price, however, is subject to change without notice, the company stated, and may, in fact, be changed before this article reaches the readers of this paper. The Ames-Harris-Neville company, with northwestern headquarters in Portland, declined to state a price on bags not now on hand, but made it clear that they could not sell at the 25-cent price under present conditions. The Bemis Bag company, with headquarters at Seattle, Wash., and the Mitsui Bag company, with headquarters at the same place, stated that they were unable to quote prices on bags that were not included under the food administration agreement.

"The government food officials asked the grain bag importers to meet in Washington February 26," said D. W. La MacGregor, speaking for Balfour, Guthrie & Co., "and we did so. At that time we were asked not to charge more than 25 cents on bags available. That included sacks on hand and ordered. This we agreed to, provided the government would raise the differential on sacked grain to 9c per bu., which was done. We sold these sacks at the price agreed or at least until the available supply reported was exhausted. The price, you understand, was 25c f. o. b. at tidewater.

"At present we have been sold out, but we accept orders. However, we can not accept them for 25 cents, as the cost has risen very considerably. We will take orders for grain bags now at 28 1-2 cents f. o. b. tidewater. This price is not for any stated time, and is subject to change without notice. It is my opinion that the farmer who needs sacks would do well to buy them even at this advanced price, for I think they will go higher."

A representative of the Ames-Harris-Neville company said:

"We reported 8,000,000 bags of the 23,000,000 reported to the authorities. We agreed not to sell them for more than 25 cents, provided no extra expense was incurred. As a matter of fact, some of the sacks cost us more, but we stayed by the agreement. The 8,000,000 sacks are all sold, and we certainly could not sell more at the same price under the present conditions. We would not accept orders at present, at all events."

Although the Bemis Bag company were unable to quote prices at the present time on bags yet to be ordered, a few days ago they did issue a statement urging farmers to order bags at once, assuring them that the price would go up to an amount considerably in excess of the 25-cent agreement. This statement was made while there were yet sacks to be distributed under the 25-cent agreement, and it is stated by importers and by the food administration that the supply under the agreement is now exhausted. The Bemis company stated that farmers who did not have their orders placed prior to the exhaustion of the supply under agreement would probably have to pay 29 or 30 cents each for their bags.

**Situation Complicated.**

Many factors enter to make it impossible to calculate the exact number of grain bags that will be required this season. The yield is altogether problematical; the amount that may be handled in bulk is likewise yet to be determined; the double service that can be rendered by bags being used, emptied and reused during the season is likewise a factor.

With crop prospects favorable as they have been with the opening of spring in the northwest it has been estimated by parties familiar with the situation that the yield of Washington, Oregon and Idaho will approximate 60,000,000 bushels of wheat. It is likewise estimated, though it is extremely difficult to get accurate information on the problem, that 10,000,000 bushels will be handled in bulk, leaving 50,000,000 bushels or thereabout to be handled by the sack method. This should require some 22,500,000 bags. The California crop of wheat and barley, together with the northwestern barley and oat crops, brings the total of sacks needed up well toward the 50,000,000 mark. The use of bags for handling peas, beans and the like adds another doubtful feature in the supply needed.

Many are of the opinion that the decision of the food administration to make a differential value of 9 cents per bushel between grain in bulk and grain sacked is doing much to stimulate the farmers to again handle their grain in sacks. Bags which cost the farmer 27 cents, as they did on an average under the 25-cent price agreement would, if filled with two and one-quarter bushels of wheat, return to the grower about 20 cents, leaving a net cost of something like 7 cents per bag, or 3 1-2 cents per bushel. This does not include the usual dockage of half a pound or more for the sack in the weight when selling the wheat.

On the other hand, many believe that the terminal bulk handling facilities will be taxed to their limit regardless of the sack price question.

L. M. Jeffers, whose address is 310 Worcester building, Portland, Ore., a representative of the United States department of agriculture, has sent out notice that the department has placed men in the northwest thoroughly prepared from the practical standpoint to give advice and assistance regarding bulk elevator construction and equipment for farm elevators to those who desire such advice and assistance. These men, says Mr. Jeffers, will be glad to meet with individuals, organizations or committees to map out plans for this work.

The following is the telegram sent by The Farmer to the food administration and the latter's reply:

"Experts in northwest predict grain bag shortage and increased price. Please wire indicating number of bags under 25-cent agreement, number available not under agreement, possibility of increased price on latter and prospects of adequate supply or shortage for northwest."

**Administration's Reply.**

"The new bag supply was estimated at 42,000,000, of which 24,000,000 were in the hands of four importers, Bemis, Ames, Balfour and Mitsui, who agreed to sell all the bags they had unsold at that time at 25 cents. About 4,000,000 prison bags would be sold at prices fixed as usual. The other bags, estimated at 14,000,000, were made up of all the importations other than the four mentioned, and although not included in the food administration agreement, they could not be sold higher than 25 cents so long as bags were being offered at that price by others. It was estimated that there would probably be 3,000,000 to 5,000,000 second-hand bags good enough for grain, and by all means should be used to the utmost extent; that some part of the crop would be handled in bulk, also that some wheat could be sacked and dumped into bulk cars at railway stations and empty sacks returned immediately to be used again. The size of the crop was still unknown. These various factors made it very difficult to tell whether the supply of bags would be sufficient or not, and on account of high prices and risk of loss importers were unwilling to import additional supplies without being sure of demand at the high price. Of the 25-cent bags covered by food administration agreement, Bemis, Balfour and Mitsui are sold out and at last reports Ames had only a small quantity remaining unsold. No information is available as to number of bags unsold in other hands. We understand a few million additional bags, perhaps three or four million, are now obtainable at about 28 1-2 cents. Further supplies may be difficult to arrange. The question of shortage still remains undetermined, and if there is a shortage it is important to know of it as soon as possible, so that steps may be taken to do whatever can be done. All consumers who have not yet bought their bags should buy as quickly as possible in order that the requirements may be known. Consumers are warned to look out for their requirements and not to trust to luck, as bags may not be obtainable later on in the season.

"It is getting late to import bags from Calcutta under present difficult ocean freight and slow cable conditions. Consumers should not expect the food administration to accomplish the impossible, not to arrange for the importation of large quantities of high-priced bags without positive knowledge that the bags are required. Anything you can do to get consumers to place their orders quickly for any bags required will be a helpful service to the consumers, to the bag importers and to the food administration."

After discussing the great need of bags for war fortification purposes, another statement by the food administration says:

"Unless the bag dealers can determine now what the shortage of bags, if any, is to be, they can not incur the risk of more imports at present prices. The only way that this shortage can be ascertained is by the prompt placing of all orders for 1918 requirements. Bag buyers who do not book their orders while the 25-cent bags are available may have to pay from 28 to 30 cents or more. Recent quotations for importing additional bags from Calcutta, if freight space is obtainable, were about 27 to 29 cents.

"In addition to ordering all new bags needed, farmers are strongly advised to prepare for use all bags which can be made serviceable and to store them where damage from weather and rodents will be reduced to a minimum. The entire matter is one from which little relief is in sight until the shipping situation is greatly improved."

# Too Many Idle Men

That this is no time for loafing or the waiting for something to turn up is a sentiment which will meet with general indorsement. The Farmer is glad to publish the following letter from S. M. Cleaver, secretary-treasurer of the American and Delaine-Merino Record association:

To the Editor: In answer to your communication would say that I think it of special importance for this government to not only retain all the farmer boys, but if necessary, draft help from the ranks of idle loafers to force the greatest production in America for 1918 that the world ever knew. It is possible to double that of 1917 if the force is intelligently handled. Our country is full of idleness that should be forced in to work under a suitable manager, either in tilling the soil or handling the musket after a sufficient number is selected to work the saw and hammer.

We have too many idle men, too many that are waiting for something to turn up that will make them easy money. These are not easy times, they are times that every man should be proud of his action towards helping the government each day. S. M. CLEAVER.

# Spring Grain

## Whitman to Plant Big Acreage

By J. S. NESSLY.

An immense amount of spring work has been done in Whitman county already and the indications are that the acreage of spring grain will be the largest in the history of the county. In the western part much seeding has been done. In the northern and eastern sections, where the soil is heavier and the rainfall was greater, much of the low land is yet too wet to plow.

In the vicinity of St. John report is made that the ground has been drying out too fast and rain is needed. The soil is crusted on top and rain is needed to soften it. About St. John there was little wheat sown last fall, owing to the extreme dry weather, no rain falling from June until December. Much land was summerfallowed preparatory to planting it to fall wheat, but the dry fall prevented this and it was planned to plant it to spring wheat and a good portion ot it has been planted, but the grain needs rain. If weather conditions are favorable a large acreage of wheat will be planted in that locality.

The farmers are crowding every hour of daylight to get the crop in as early as possible. There is some scarcity of farm labor, but almost enough for all purposes, although a few are short handed. Good wages are being paid and at $60 per month, with board and room, the farm laborer is believed to be getting more than the man in town who gets $100 to $125 per month.

Crops are "spotted" in the Palouse country this year. Some winter wheat looks well and some fields are thin and there are many places where the ground is almost bare. Some of the wheat was winter killed. In some fields, sown late last fall, only a portion of the seed grew and there are bare spots and much of it is thin. The condition is generally below normal for this time of year.

But the ground is generally in good condition for spring seeding and farmers are depending largely on spring wheat, the acreage of which will be the largest since fall wheat became the staple crop of the Palouse country. Marquis will predominate, with Red chaff and Baart and club following in the order named, in the eastern and northern parts of the county, but in the western part there will be a big acreage of bluestem, which has been a standard crop in that section for many years.

Farmers are turning their attention more to sheep and the number of farms with a small band of sheep on them show a marked increase over a few years ago, but there is a marked and noticeable decrease in the number both of hogs and cattle. A prominent retired farmer who has been buying and shipping cattle and hogs and grain for several years, says there is not more than 10 per cent as many hogs in the Palouse country as there were two years ago and that there are fewer cattle than ever before. Farmers are taking more interest in horses and are preparing to raise more and better horses in the future.

**New Hosiery.**

New hosiery is made in "rights" and "lefts" to fit the feet and ankles more snugly.

## *Force Must Combat Force*

That peace-loving America is fast realizing that the day when the lion and the lamb shall lie down together is not yet here is indicated by two outstanding incidents of the last few days. One of these incidents was the declaration of President Wilson, whose patience with Prussian violation of human right has been almost past the understanding of the American people, that "force, force to the utmost, force without stint or limit" must be exerted to meet the war methods of Germany. The other is the whole-hearted way in which the people of this country have responded and are responding to the call of the third Liberty loan.

The president's words as he opened the campaign for the third Liberty loan were the words of the American people, and from across the sea has come back the answer that they were the words of America's allies, the words of the civilized world. Germany has proved beyond further question that her word is not to be accepted as truth, that her actions are based solely upon selfish and unholy purposes and not upon the fundamentals of right as between man and man and nation and nation. Germany has made no pledge to any people that has not been ruthlessly broken the hour that it became to her advantage to break it. Germany's war tactics and war methods have been practiced without regard for any of the rules of right for which the allied nations of the world are now fighting the world's greatest war. Humanity and liberty, even with regard to her own people, she has trampled under foot with utter disdain. She has proved herself in all respects a beast totally incapable of being reasoned with.

Against such a nation no argument can be presented effectively save the argument of physical force. As that historic patriot of '76 put it, "An appeal to arms and to the God of Hosts is all that is left us." As President Wilson put it on that world anniversary, April 6, and as the American people have put it through their liberal subscriptions to the Liberty loan bond issue, "There is, therefore, but one response possible from us: Force, force to the utmost, force without stint or limit, the righteous and triumphant force which shall make right the law of the world and crush every selfish dominion down in the dust."

## *Open Your Mouth, Shut Your Eyes*

Recently I have been making some investigations in reference to certain organizations or companies doing a commission business in the northwest and appealing to fruit growers for patronage. After getting some information in reference to the reliability of these companies I have come to the conclusion that quite a percentage of us in the northwest have been a little like the old proverb, "Open your mouth and shut your eyes, and I'll give you something to make you wise." When I was a small child and my mother used to say, "Open your mouth and shut your eyes, and I'll give you something to make you wise," I always knew that I would get something desirable in my mouth; but when I grew to be a little older, and the boys on the school ground would say, "Open your mouth and shut your eyes," I learned that I generally got something undesirable.

So it is in all the affairs of life. It is not farmers alone that must keep their eyes open to all the conditions that surround them and the probable results of their actions, but all classes of people must do the same thing. We can not afford to shut our eyes to the consequences of any action or course of conduct, because there is some relation between everything we do and the results that follow.

The recent action of the Russian people in turning their government over to the kaiser is an illustration where a whole nation has acted in the manner described. Germany made them certain promises, which they trusted Germany to fulfil Germany has not, and will not, fulfil her promises and is now requiring 60 to 80 per cent of their food products, besides requiring possession of the most strategical positions in the country. G. L.

## *A Meritorious Bill*

Representative Baer of North Dakota, the only representative of the Nonpartizan league in congress, is author of a meritorious bill to loan $7,500,000 to grain farmers who lack the money necessary to buy seed wheat. This measure was made the text in the house the other day for bitter assaults on the league. The spirit of such attacks is wrong. The bill should have been discussed on its merits.

The measure finally passed the house by the decisive vote of 251 to 67, but an amendment was tacked on that the president must investigate the food situation and determine that the appropriation is necessary before any funds can be paid out. Opponents of the bill are reported to be confident that this amendment will delay the operation of the measure until the planting season is over. They count also on delay in the senate. But Congressman Baer seems confident that the bill will become a law in time to provide needed relief in several sections of the west where farmers are suffering from crops failure or short yields last year. After the bill had passed the house he said:

"I hope the president will decide that he has enough information on the food situation to be able to conclude his investigation very shortly. I am confident that unless the old guardsters, who see no objection to loaning millions to munitions plants and broken down railways, but regard similar loans to farmers as socialistic, succeed in stalling off action in the senate, this bill will become law in time to be of real aid. I am confident the president will finish his investigation in ten minutes and issue the necessary proclamation."

## *Damage to Fruit Exaggerated*

People should not be stampeded by early reports of damage or heavy losses from sharp weather. With each recurring season the alarmist is heard in the land, and too often either sends out premature or greatly exaggerated reports about damage from unseasonable cold. The fact that "when the returns are all in" the reserve and uninjured fruit buds usually show plenty of fruit the average season seems to make no difference with those forecasters.

Doubtless considerable injury to early apricots and peaches has been done by the sharp nights that marked the first week in April, and quite likely the damage to those and other tender fruits that were in bloom during this weather will prove more serious in some localities than others. But there is nothing yet to show, with any degree of certainty, that there has been any extensive injury to the commercial orchards of the Pacific northwest. Should this prove the case, there will be time enough to proclaim it when the facts are definitely known. In the meantime why not wait and claim the benefit of the doubt, if there is doubt? In any event, it is safer "not to know so much than to know so much that isn't so." A. E. G.

## *Law-Making Needs "Revising"*

The conviction seems to be steadily growing that present day methods of making public laws are becoming a good deal of a farce. Have we outgrown the prevailing system? It sometimes looks very much that way, and the same may be said of our election system. Do we get service and efficiency under our present methods? Under the theory of our government, and the traditions that we foster, every citizen is supposed to be eligible to seek public position, no matter how responsible. While the "theory" is all right and should probably not be abridged, should it not presuppose reasonable preparation and fitness for such position?

Whatever the food administration may do about price regulation, however hard some order may hit us, let us not for one day shirk our duty of adding our utmost to the food production of the world, even though we have to make actual sacrifice to do it.

## *Washington Gleanings*

Many millions feet of lumber are being shipped from Washington mills to South American and Australian ports.

E. G. Harsh has been appointed deputy horticulturist of Columbia county, to succeed J. Davis of Huntsville, resigned.

Recently 63,900 trout fry from the Spokane hatchery were released into the small streams of Columbia and Garfield counties.

Frank Wattle of Seattle has been superintending the remodeling of the creamery at Twisp into an up-to-date cheese factory.

Chehalis has declared war on the loafers. The business men have asked the city commission to see that the loafers either get busy or leave the city.

The sale of the Ernest Weld farm of 280 acres, six miles south of Goldendale, to Columbus Barnes of Goldendale is reported. Consideration was $14,000.

Governor Lister has appointed Judge Kenneth Mackintosh of the King county superior court to succeed the late Justice George E. Morris upon the supreme court bench of this state.

Beet growers of Walla Walla, Sunnyside, Toppenish, Yakima and Ellensburg districts have been offered $10 a ton for the 1918 crop if they will increase their acreage to 18,000 for the coming season.

The farmers of Garfield county have agreed to pay $60 per calendar month for steady work, and $3.50 per day and board for married men, and $3 per day for single men for short employment of not over 15 days.

The new tractor and grader recently purchased by Klickitat county commissioners are grading and smoothing 15 miles of good road per day, at a cost of less than $1.50 per mile, including overhauling and all.

Work has begun on a 60,000-bushel concrete elevator at Mondovi for the Davenport Farmers' union. The company is also changing its new warehouse in Davenuort, giving it additional storage room for 50,000 bushels of bulk grain.

A. C. Bush, representing the Northrup King Seed company of Minneapolis, has been investigating the Upper Columbia country, as to suitability of that region for seed growing. He is recommending to his firm that seeds be furnished to enable the ranchers to make a thorough test this season.

Stevens county has purchased two motor trucks, which are to be utilized exclusively for road repairing. A tryout was made recently with one of these vehicles, which accomplished the surfacing of 1200 feet of road on a two-mile haul with a crew of five men, including the driver.

The Walla Walla agricultural and stock fair was recently organized, with the following officers: President, Oscar Drumheller; vice president, F. S. Dement; Trustees, Oscar Drumheller, F. S. Dement, Matt Ennis, J. A. McLean, Wess Lloyd, Waitsburg; F. J. Aldrich, Waitsburg, and H. H. Hanson, Touchet.

# THE WASHINGTON FARMER'S FARM SERVICE WAR FLAG

For

# Everybody Works Patriotically

## Farmers Show Patriotism in Production of Foods and in Purchase of War Stamps; Permit No Pro-Germanism

MONTESANO, Grays Harbor County, Wash., April 3.—The great majority of farmers in this community are decidedly patriotic. I know of no cases where persons are intentionally neglecting to produce as much foodstuffs as is possible on their farms. Of course, we have a few persons who are against any move our government makes, but I suppose this type is found in every community. A few of these people are native born Americans, but there is still another class of which we have fortunately only a few representatives, who came to this country with little or no money in their pockets, that have now become well to do, from the farmer's standpoint. Some of these people are buying Liberty bonds and assist the government in such ways, but at heart they are still pro-German, which can be found out by conversation with them. It seems unfortunate that there is no way to rid our community of such people, but in a few cases I am sure they are finding that their sentiments do not meet with the approval they had hoped for.

The spring season is opening a little earlier than for the last two years. From all indications there still will be an increased acreage of the cereal crops and silage crops. There will be some decrease in acreage devoted to hay and root crops. All classes of live stock except beef cattle show an increase.

As yet lack of labor and machinery are not proving serious handicaps to the earlier spring work. A few farmers have purchased tractors in order to speed up the spring plowing. Four free farm labor agencies have been established in the strictly agricultural section of the county. It is hoped they will prove of service in making better use of local labor and in bringing in outside labor as conditions warrant.

C. F. MONROE.

### Farmers Cooperate.

PORT ANGELES, Clallam County, Wash., April 1.—I can assure you that Clallam county is among the foremost counties as measured by the standard of patriotism, and the statement is evidenced by the record of war savings stamps sold here and patriotic outbursts in the way of compelling pro-Germans to respect the flag. Our farmers are doing their utmost in the way of increasing the crops and dairy products. Of noteworthy features I may mention that the farmers here consolidated in bidding for the sale of a large quantity of potatoes to the government to be used at Camp Lewis, the delivery of which terminated successfully and distributed considerable money among them. Another feature of cooperation of the farmers here was the purchase by them of Glendale's creamery plant here from the Ladd & Tilton interests. The creamery under local management has been in operation two months, and they are encouraged at the success very much. Live stock is short here, but what there is is in very good condition after wintering.

J. P. CHRISTENSEN.

### Is Dairying Center.

CHEHALIS, Lewis County, Wash., April 2.—The Pacific northwest is as intensely and practically patriotic and loyal with its best young men, with all it takes to feed, clothe and equip them, with its ships to carry them across the waters, and horses to carry them to the front, as any part of the United States. The slogan is "we must win this war" and exact peace for all the world for all future time. Untold thousands of brave women and girls are donning overalls and doing yeoman service in gardens, fields, factories and mills. There enough older men can not be found to make three shifts to speed the big saws every moment men are offering to work 12 hours a day at straight pay so two shifts can keep a steady hum without any extra bonus for overtime. Stockmen, farmers and dairymen are all determined to keep their end up. This is the center of a great and growing dairy section. A Lewis county milk producers' association is being formed that will probably be a unit in a strong state association that can and will aid in securing stable prices, so when a dairyman equips a big drove of cows, sells all his pigs and calves and contracts steady men to run his dairy he may at least exact cost for his milk. Lewis is one of the leading diversified farming counties of the state and produces big crops of good wheat and buys many carloads from sister counties.

L. K. COGSWELL.

### Will Raise Peas.

MARIETTA, Whatcom County, Wash., April 1.—Farmers hereabouts seem to be well satisfied with the government's handling of the food situation and seem ready to cooperate in any way. Only one case has come to my knowledge of dissatisfaction, and he probably wishes by now that he had held his tongue. Seeding has just got started, and much more grain will be planted. The weather the last week has been ideal, and I think with this extra hour farmers hereabouts can find plenty of use for it. Plenty of farm machinery on hand, and there seems to be no trouble anticipated in regard to securing labor. Very little wheat is raised in this section, mostly oats, barley and peas. Considerable peas will probably be planted, as a factory is being built at Sumas in this county to handle them and it will be very easy for the farmers to find a ready market for their crop.

S. B. MAYHEW.

### Will Increase Output.

LACROSSE, Whitman County, Wash., April 1.—There is no lack of patriotism in Lacrosse community. Farmers are bending every effort to produce maximum crops, and no expense is spared to put soil in as good condition as possible. The weather has been very favorable for field work and nearly 80 per cent of seeding is completed with early seeding coming up nicely. In another week seeding should be practically finished in western Whitman county. A good rain would be most welcome at this time. Live stock is in good condition and pasture is better than in years at this time of the year. Fall wheat wintered well, and a few fields seeded last July are certainly in best of condition. No doubt with normal conditions, crops ought to be better than average.

M. E. SCHRECK.

### Will Do Their Share.

CASTLE ROCK, Cowlitz County, Wash., March 31.—The season is hardly advanced enough to get accurate information on the crop situation, but the indications are that there will be a supreme effort put forth by our loyal farmers to raise as much on their ground as possible for the home demand as well as the outside calls for food. Prices are so high for good horses that few will be able to buy what they need, and a few are going to try out the tractor, which seems to be

Get the Weeds

Weeds and profits cannot grow in the same orchard. Weeds sap moisture and steal plant food. Destroy them with the fast-working, light-running

Use the Moline Mower for Tough Heavy Cutting

On the rear of the Moline Mower you will notice a bell shaped gear. When this gear gets into motion it has the same effect on the sickle as a fly wheel on any machine and carries the mower through heavy and difficult cutting where other mowers fail. You can always depend on the Moline.

This is the same principle that was used on the old Adriance Buckeye Mower 60 years ago, and you won't find it on any other mower on the market. In fact, this mower is the old original Buckeye, now called the Moline Mower, and is greatly improved. Every user of a Moline Mower profits by these years of service and knows his Moline Mower will not fail him in a "pinch."

MOLINE LINE

Other features such as, one-piece main frame; cold rolled steel axle and shaft; pawls and ratchets in plain view; coupling frame hinges which will not bind; five-inch driving wheels, extra heavy cutting parts; removable wearing plates; alignment device for the cutter bar; spring draft; forward acting foot lever and many other distinctive features, carry the Moline Mower through tough cutting year after year.

It will be worth a whole lot to you to have a Moline Mower at work on your farm. Remember when you get a Moline Mower you get the product of one of the oldest and most reliable concerns in the business. This means that you can always get repairs for a Moline Mower.

Your Moline dealer will be glad to show you the Moline Mower or if there is no Moline dealer in your locality write us for full information. Address Dept. 50.

MOLINE PLOW CO. MOLINE, ILLINOIS

MANUFACTURERS OF QUALITY FARM IMPLEMENTS SINCE 1865

meeting with favor. None are so narrow in their views as to become disgruntled over mistakes made by the government and hesitate in planning to put forth their best efforts to grow all the food supplies that their limited farm help will stand. All are awake to the situation, willing to overlook hardships, and do their utmost even to the extent of personal sacrifices. Already there are long hours and strenuous times, for their best help has gone and even though a man is willing, when he gets to the age of 60 years, he can not stand the long grinding hours on the farm as he did at 25. Old men are hiring out for the farm, but the result is the same—the head is willing, but the flesh is weak. In this section diversified farming gives the best results, but little wheat is grown compared with the wheat growers east of the mountains; so it means long hours hand labor with team around the stumps and logs. If the soil was not of the best there would be but little farming in this locality. The outlook for live stock is bright for the coming season and crops above the average at this time of year. Despite the slump in the potato market it has been the sentiment of the growers to put in as large an acreage as last season and get in shape to avail themselves of the first market that they have in the fall. This is where a great many over-estimated the demand there would be for spring deliveries. If there could be some kind of a guarantee put on the potatoes the same as wheat they would know just what to expect. Eggs have dropped down to 30 cents; butter down to 48 cents. Scratch food is $4.25 per hundred weight. The dairymen are feeding shorts and bran mixed, two parts bran and one part shorts. The grass has started up on the lowlands, but not enough to keep the stock from needing some hay. Weather conditions are fine for plowing and other spring work and some seeding has been done. There will be a large list of "war gardens," mostly in the towns and small farms, but the help will come mostly from the women. Our coun has been well organized by the county agriculturist, and a man has been appointed in each one of the towns in the county to take care of the labor shortage; that will help in a measure to get the capital and laborers together. As a rule it takes some time to break in the raw recruits. It has been suggested that the stores close up two days in a week to help put in the crop, but the farmer looks at it with a squint in his eye, and says that the majority will come out for a big feed, work themselves up into a sweat, sit down, take cold, have lung fever, putting themselves out of commission for anything else. There is one thing very commendable among the farmers. They are saving and using all the manure around the barns that have in past years been allowed to accumulate and leach off in the wet weather, making mud, slop and filth in the barnyard. Silos will be utilized this year to better advantage than ever before, and a considerable number of new ones will be built. Beef animals have been pretty well picked up. None is being offered for the market. Pastures will be utilized to the fullest extent in raising the stock as grain is high and hard to get. C. C. BROWN.

### Will Raise Sugar Beets.

GRANDVIEW, Yakima County, Wash., March 22.—There are plenty of horses for farm purposes and some to sell. Good horses are bringing a fair price. There is only one tractor in the community, most of the farms peing too small for tractors. I think most of the old machinery will have to do this year, for the price of new is too high. There are not many fat cattle in this community and only a few hogs, for feed is scarce. I think there will be quite a lot of sugar beets raised this year for the new sugar factory at Sunnyside. Spring work is well along and nearly all pruning is done, and some have sprayed, but not many.

E. H. FAULKNER.

### Community Plan Favored.

FORT ORCHARD, Kitsap County, Wash., March 28.—There will be for this section, as well as in many other sections of our state, a shortage of farm labor and the farmers will have to resort to more community work of exchanging help with their neighbors. Farm power, both horse and engine, are at a minimum in this county. The supply of horsepower is low at the present time, and very few farmers are raising any horses. Community ownership of farm tractors should be taken advantage of here in this county. No place lends itself more easily to this kind of power. The farms are all small and close together, and I think could be very easily arranged to get the maximum amount of work out of a tractor with very little trouble in planning ahead. The community ownership of some farm machinery is being successfully worked out but not enough of it. More farm implements of all kinds could be very well used. But farmers are not buying farm machinery. They are striving to get along with what they have at the present time. Old machinery has been pretty well repaired and in readiness for the season's work.

There will not be very many meat animals put on the market this spring from this county. They are not to be had. The dairymen are culling their herds closely, and any cow that is not thought to be paying her way is fed and fitted for the market.

C. B. SPRAGUE.

### Conditions About Normal.

METHOW, Okanogan County, Wash., March 29.—There are enough horses for farming here, but no more than the community needs. No tractors here so far, the farms being rather small, I think, for tractors. There is enough machinery to do this season, not very much is being bought. About the same number of meat animals as usual will be marketed. Alfalfa is the pasture most generally used here.

CHARLES GRANT.

# Difficult Churning

## Too Many Potatoes in Ration

I have a 3-year-old cow with first calf, in perfect health, gives good quantity and quality of milk, but the cream will not churn. We sometimes churn from an hour to an hour and a half, the butter seems to break, but the granules will not stick together but remain as fine grains in the milk. The cow is fed on the best of hay (alfalfa), beet pulp, bran and shorts and potatoes. The milk is kept in a cool place and we use an old-fashioned dash churn. What is the cause and the remedy? S. T. K. Hillyard.

**Answer.**

Cows fed potatoes usually produce butterfat made up of extremely small fat globules. They are also very hard. These do not stick together readily during churning. This is probably the cause of the difficult churning. If succulence other than potatoes is given or if the amount of potatoes is cut down this property of the fat is not so pronounced. Adding some oil meal to the grain ration will also have the effect of softening up the fat and making larger globules. Difficult churning may also result if the cow is fed dry feeds and is well along in her lactation period. Stripper's milk, especially in early spring before grass comes, contains small, hard fat globules that do not churn readily.

Usually the proper ripening of the cream and modification of the churning temperature will overcome the difficulty. In many cases it will be found necessary to modify the ration as suggested above. This simply means to feed such feeds that produce soft rather than hard fats. A. B. N.

## CARE OF COW.

### Feed Her Well Before Calving.

To the Editor: I would like your advice on feeding and getting the most profitable results from five cows which are now soon to come fresh.

My practice has been just feeding hay and turning them on the pasture to eat grass. I would have to buy everything but hay; have no green feed. Cows are Jerseys. Please advise me on feeding while they are carrying their calves. Is it advisable to feed just turnips and hay? W. B.

Willamina, Ore.

**The Answer.**

The above question was referred to L. W. Wing Jr., instructor in dairy husbandry at the Oregon Agricultural college whose reply follows:

The first thing in the handling of your cows is to get them in good condition before calving. Feed them well, for the cow will return product in her next lactation period for any extra feed while dry.

To meet the food requirements for milch cows, some grain is generally necessary. This depends on the productive capacity of the animal. For dairy animals of medium production 200 to 225 pounds of fat a year the most economical ration may be either legume hay and silage, legume hay and pasture, or legume and roots.

As a grain mixture, would use the following: Brain, 200 pounds; shorts, 100 pounds; ail meal, 25 pounds. Some of these concentrates may be quite hard to obtain on your market so you might in place of shorts, make it 300 pounds of bran and in place of the 25 pounds of oil meal, substitute either soy bean or cotton seed meal. Should any of the cows produce as much as two and one-half to three gallons of milk a day, 20 to 25 pounds, feed one pound of the grain mixture per day for each half gallon of milk produced per day. Allow the cow all the hay she will eat. Feed each cow as an individual and according to her productive capacity. One gallon of the grain mixture given weighs two and one-half pounds.

During the time before calving, would supply the cow with some of the grain mixture. Feed from one and one-half to two pounds a day. The day of calving, instead of feeding the grain mixture, feed a warm bran mash.

The hay best adapted for dairy cattle is that either from a legume plant or from the small grain and a legume plant combined, such as alfalfa, clover, oats and vetch, etc.

It is advisable to feed only turnips and hay when you are able to supply sufficient nutrients to the cow to meet the requirements for her maintenance and for the milk she is producing.

## Milk and Dairy Exposition.

New York will be the mecca for thousands of dairymen and others directly interested in the milk industry who will come from all parts of the country to attend the National Milk and Dairy Farm exposition which is to be held in Grand Central palace the week of May 20.

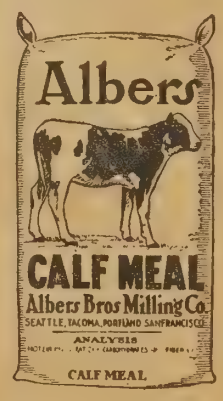
Three floors of the huge building will be devoted to the exposition, during which a series of important conferences will be held. There will be exhibits and practical demonstrations of all forms of milk foods and milk products, processes of milking, handling, machinery and equipment, and all manner of things relating to the dairy farm and its allied interests. One of its chief purposes will be to demonstrate the fact that milk is one of nature's most valuable, as well as one of the cheapest, of foods.

Dr. Charles E. North, managing director, is arranging a series of contests in which prizes are offered for milk dealers for the cleanest and best put-up milk; cheese now being made in quantities by American dairymen in varieties that were formerly imported; butter, pot-cheese, condensed milk, ice cream, milk chocolate, evaporated cream, milk powder, etc.

Model dairy farms, live cows milked by electricity and by quaintly attired milkmaids, will be among the exhibits in addition to educational features relating to all processes of milk culture. The keynote of the entire exposition will be that the conservation of dairy farm products will help win the war.

**Standing Timber in U. S.**

Revised estimates place the amount of standing merchantable timber in the United States at approximately 2,767,000,000,000 board feet. Of this amount 1,464,000,000,000 board feet, or 53 per cent of the total, is in California, Oregon, Washington, Idaho and Montana.



Calves thrive on Albers Meal

and the farmer who is feeding this Calf Meal in place of milk is taking advantage of the present big milk prices and is enlarging his profits, as Albers Calf Meal does the work of milk and costs a great deal less.

Albers Calf Meal

is made from a splendid assortment of meals, including ground Oatmeal, the most valuable body builder known. All ingredients used are easily digested, and assists the farmer to build up a strong, sturdy herd. Successful farmers substitute Albers Calf Meal for milk, because, like other brands of Albers Feeds, it brings the results expected and it is practicing economy. # The Tractor Question

A great number of farmers in the Pacific northwest are asking themselves whether or not they should buy tractors, along with other questions that the possible purchase of a tractor brings up.

Among these, here are some of the points that most frequently come up: How many acres per day will a tractor average? What is the cost per acre for tractor plowing? What size of tractor would be best for my farm?

The best way to answer such queries is to pass along the experiences of those who are "tractor farming" in this section of the country.

On his 900-acre ranch near Pullman, Wash. Reade M. Young is using a 45-horsepower caterpillar tractor. Speaking of his work with the tractor, Mr. Young says: "My farm is 100 per cent hill land, the soil being a heavy black volcanic ash. My tractor does excellent hillside work. I use it for disking harrowing, hauling grain, etc., and find it does my work better, easier and much faster than I could do with 18 head of good horses. As compared with horse farming, it is far superior and a money saver as well. At present I am disking stubble land, pulling two eight-foot discs and covering 30 acres of hilly land a day at a cost of 25 cents an acre. This does not include cost of operating machine, as I do that myself and did not figure it in. Engineers get about $4 here."

From Baker county, Oregon, E. H. Homer writes his experience on a 400-acre rolling farm, where he has used a 40-horsepower tractor for two years. "I have no difficulty pulling six plows and consider I can do the work of 12 horses and four men per day. Last fall I plowed 300 acres of sagebrush

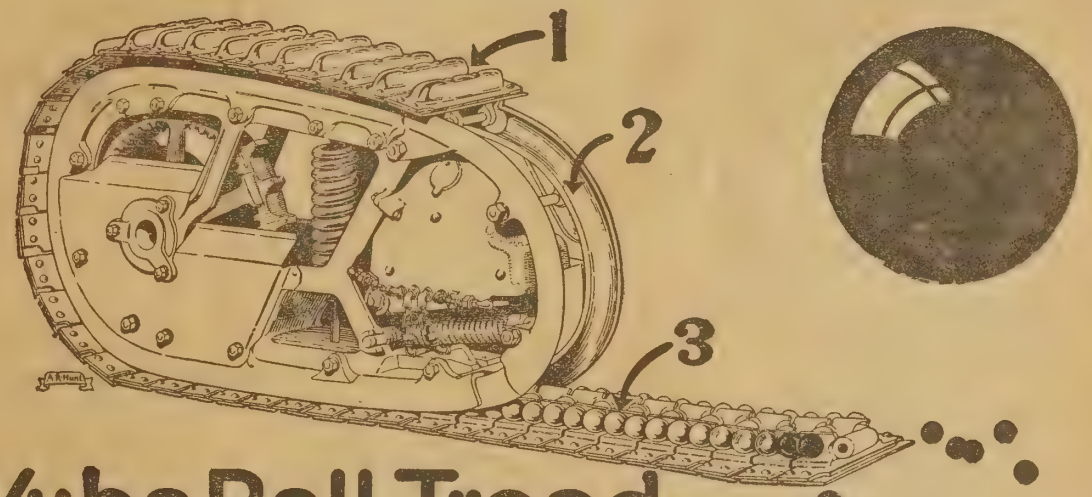
**Sowing the Seed With Tractor Power.**

land and 100 acres alfalfa sod. Pulled four 14-inch plows six inches deep in sod and averaged one and one-fourth acres an hour, at a cost of $11.50 for nine-hour day—allowing $5 for driver and $2 for wear on machine. I consider a tractor a good investment on a farm of 300 acres or more, but think it means too much money invested for small farms. Every owner should be able to operate his tractor by all means, as it is very hard to get competent men."

A. T. Sandquist of Troy, Idaho, has been using a small 8-16 h. p. tractor on his 200 acres for two seasons. "I use my machine mostly for disking," he writes. "It has taken the place of five horses, but it hasn't saved me any labor on account of its being too small. I use six head of horses and the tractor in farming my 200 acres. The advantage of the tractor is that it doesn't cost anything to keep during the winter and between working seasons, and again a tractor doesn't get tired like a horse. The only disadvantages I know of would come from trying to work on ground too wet or too steep."

G. W. Berrier of Rathdrum, Idaho, says of the advantages of the tractor as compared with horses on a 200-acre farm: "It works without tiring and does many things well. I use my small 9-18 tractor for threshing and breaking sod among stumps, etc. Weather conditions do not cause one to lay up and with my tractor I can break sod for just one-fourth what it would cost with horses. To keep it in good working order requires about the same work as caring for five horses, but, on the other hand, it takes the place of nine horses and an extra man, so I think it a good investment."

If there is any particular question any one wishes to ask about the tractor, the editor of this paper will be glad to give what information is available upon it.



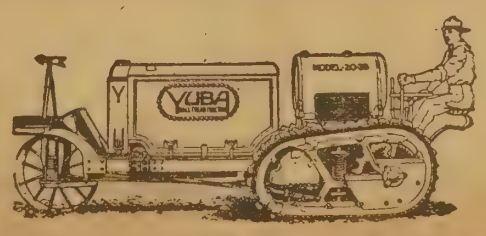
### Women Shipbuilders.

In nearly all the shipbuilding plants in England and Scotland women are employed in large numbers. One plant alone employs more than 6000 women.

In answering advertisements don't fail to mention this paper.

# Yuba Ball Tread

There are three features to the "Yuba Ball Tread" to make it superior to all others:



[1] The Tread
[2] The Solid Inner Base
[3] The Polished Steel Balls

The tread lies on the ground; it does n't move, the rolling balls carry the machine over it. It is tightly drawn over the ball race—no slack to take up—no power wasted—the power generated by the engine is mostly delivered at the draw-bar.

The solid inner base prevents slack.

The steel balls carry the load, and roll easily.

Ball-bearing machines of all kinds are replacing those which consume more power to propel their own mechanism. The less *friction* the less FUEL; the less *friction* the less OIL; the less *friction* the less WEAR & TEAR—*economy in power is money in your pocket.*

# Potatoes for Hog Feed

The animal husbandry department of the Oregon Agricultural college sometime ago purchased eight tons of cull potatoes to be used in feeding hogs, paying $10 a ton for them, delivered at the barn. Professor Fjelstad, who is in immediate charge of the hog department, calls attention to their value as a cheap hog feed. He thinks they might well be used much more than they are. To get the best results they must not only be cooked, but cooked thoroughly. If half cooked, the pigs will not eat them clean, but will waste considerable; while if they are cooked to a complete mush every particle will be eaten. If cooked just right, the amount of potatoes that a hog will eat is enormous and they are good either for fattening hogs or for brood sows. The college steams its potatoes, but where they are cooked in water, care must be taken that too much water is not used or the hogs will not eat them clean.

The past winter every brood sow at the college has been on pasture every day, rain, snow, or shine; and they traveled 20 rods to reach it. Now they are farrowing successfully and bringing good litters of fine, strong pigs, nearly all of which live. Professor Fjelstad is a strong advocate of regular exercise for brood sows and points to the college sows as examples of its effects. H. A.

## Farm Trio Cup.

STATE COLLEGE OF WASHINGTON.—To the Editor: It is with pleasure that I receive your letter of April 1, announcing that the Pacific Northwest Farm Trio will award its silver cup to the students' judging team receiving the highest average at the Pacific International Live Stock show at Portland, Ore., this fall.

If the conditions will permit it and if we have enough students in the department next fall to justify us in selecting a team, we will be very glad indeed to take part in the contest. I want to thank you very cordially for offering this silver cup and am sure it will be of great value in giving the boys a greater incentive to do better judging work.—C. E HOWELL, instructor in animal husbandry. April 8, 1918.

# Veterinary
Dr. S. B. Nelson

**Mare Dead on Her Feet**—I have a mare 4 years old that has always run on the range until about a month ago I took her up and broke her to work. The last week or so she has been falling off and seems dead on her feet. After driving about seven miles she gave out entirely. She is with foal. I have been feeding timothy hay straight. Do you think that has anything to do with her illness?

E. M. N.

Boles, Idaho.

I do not believe that timothy hay contains sufficient nourishment for a mare with foal to work on. She should have grain. I would judge that she should have approximately a pound to a pound and a quarter of grain per hundred pound weight per day.

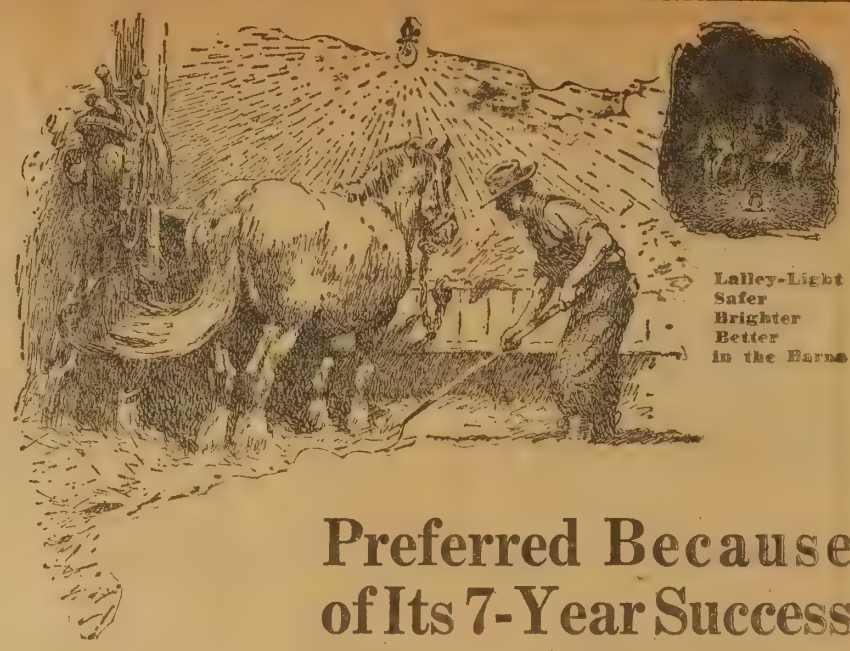
**May Not Get Enough Milk.**—I purchased 15 ewes last October and they were not in very good condition at the time, as the party that I bought from had a band of a thousand head and they were not getting the proper feed. Those that I got I gave good care for the winter and fed them on alfalfa and housed them, but there are five in the bunch that don't seem to pick up or do well. Two of them had lambs, one had a single lamb and one had twins. When the single lamb was a week old it died and now one of the twins has died. I am thinking that those sheep may have some disease, as I am not posted on the diseases of sheep. Any information you can give me will be kindly received.

P. J. H., Rice, Wash.

Watch very carefully and see whether or not the ewe is giving milk. It is quite possible that the lack of milk may be the trouble. If the ewe is not giving milk you will have to raise the lambs on the bottle. In that case dilute cow's milk about one-third to one-half and add a little sugar.

**Cows Have Cowpox.**—I am writing to find out what is the matter with my milch cow's teats. They get a hard lump on the teats and it gets dark color under the skin on these lumps and then the skin breaks and it forms a scab on it. They get one and then it seems to spread and some of them come up on the udder. One cow had it first and now three have it and the first cow still has some of them. They get well in a short time and then more come on. If they come where your hand rubs them when milking they are hard to heal up. They look like boils, only they don't run and scabs come where a boil would run and on the largest ones when you pull the scab of it is a pretty deep sore.

E. C. R., Freewater, Ore.



It is quite possible that your cows are affected with cowpox. The symptoms that you give indicate that this is the disease. For treatment be sure to milk the cow that is affected last of all the cows. Then when you milk the rest of the cows wash the udder before milking with a 2 per cent solution of lysol. Rub it dry. When you milk the affected cow wash the udder with the disinfectant both before and after milking, and then after that has been done after milking apply to the sores a small amount of benzoated zinc oxide ointment.

**Mare Lame in Left Hind Leg.**—I have a 5-year-old mare which has been lame in the left hind leg for two months. She walks on the point of her hoof mostly and is sure to over rough places. Walks a whole lot better in plowed ground. There is nothing in her foot unless it is a gravel. I have examined it often. The frog has a bad odor. The mare eats and feels well. She runs in a rocky hillside pasture.

W. G. A.

Grangeville, Idaho.

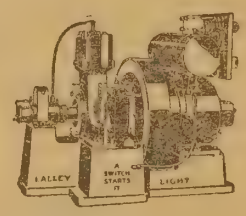
The fact that the mare walks better on plowed ground than on rough ground indicates that the trouble is in or near the bottom of the foot. The fact that she walks on her toes on rough ground indicates that it is in the posterior part of the foot. Since you

Preferred Because of Its 7-Year Success

In the past year Lalley-Light has won distinct preference among electric light plant buyers, because of its more than seven-year record of success.

This success has been registered in practical, everyday use on thousands of busy farms.

Since the first Lalley-Light plant was sold, down to the present time, we do not know of one that has worn out in normal service. We do not know of a single dissatisfied owner.



Lalley-Light stands high because it is scientifically designed and built, primarily and expressly, to furnish electric light and power for farm use.

It has proved its low cost, its absolute safety, its reliability, wherever it has gone.

It has brought new comfort, convenience and cheer to every farm family that has installed it. It saves time and work.

Now, more than ever, Lalley-Light is needed to help the farmer in the extra work made necessary by the increased production of war-time.

Write to us today for complete information, cost of the complete plant delivered to you, and name of nearest dealer prepared to show you Lalley-Light in actual operation.

Generating Plant is 27 inches long, 14 inches wide, 21 inches high. Storage battery is included in complete outfit.

Lalley Electro-Lighting Corporation
1850 Mt. Elliott Avenue. Detroit, Michigan.

LALLEY-LIGHT
"Always runs at full night"

Win the War by Preparing the Land, Sowing the Seeds and Producing Bigger Crops

Work in Joint Effort the Soil of the U. S. and Canada—Cooperative Farming in Man Power Necessary to Win the Battle for Liberty.

The Food Controllers of United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat can be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rest the burden of supply.

Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist.

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operations.

Canada's Wheat Production Last Year Was 225,000,000 Bushels; the Demand From Canada Alone, for 1918, is 400,000,000 Bushels.

To secure this she must have assistance. She has the land, but needs the men. The Government of the United States wants every man who can effectively help to do farm work this year. It wants the land in the United States developed first, of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there. Apply to our Employment service, and we will tell where you can best serve the combined interests.

Western Canada's help will be required not later than May 5. Wages to competent help, $50 a month and up, board and lodging.

Those who respond to this appeal will get a warm welcome, good wages, good board, and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had, apply to

U. S. Employment Service, Dept. of Labor
Seattle, Tacoma, Bellingham or Yakima, Wash.

# Cutter's

*Germ Free*

## Blackleg Filtrate

*and*

## Blackleg Tissue Aggressin

***The New, Safe and Efficient Agents for Protecting Calves from Blackleg.***

**Cutter's Blackleg Filtrate positively protects** against Blackleg.

**Cutter's Blackleg Aggressin,** made directly from animal tissues, **affords even greater protection** and is recommended for Pure Breds.

**Neither the Filtrate nor the Aggressin can possibly produce Blackleg** in even the most susceptible animals since **both are germ free.**

**Both have given 100% protection** wherever used.

**Prices—**

10 dose pkge. Filtrate....$2.00
50 " " " .... 8.00
100 " " " ....15.00
10 dose pkge. Tissue Aggressin ..... 4.00

**N. B.**—Cutter's Filtrate (a "cultural product" aggressin) is full 5 c.c. to the dose, as we believe that smaller doses, whether concentrated or not, afford less protection.

**Write for booklet** telling what germ free vaccines are and wherein **"cultural product" Aggressins differ from Cutter's Aggressin** made from animal tissues.

**While these new "germ free vaccines" have advantages** that should be known to every stockraiser, we see no reason for a quick change to them by stockraisers who have had satisfactory results from the use of

## CUTTER'S BLACKLEG PILLS

**"California's Favorite" for nearly 20 years**

## ONE PURE BRED HOLSTEIN EQUALS 3 ORDINARY COWS

Why feed three cows when you need feed only one? Look at these figures. **All Holstein tested semi-officially average 7000 Quarts of milk and 504 lbs of fat a year.** **All cows in the U. S. average 1823. Quarts of milk and 166 lbs. of fat a year.**

Pure bred Holstein cows have given as high as 15,000 quarts of milk and 1500 lbs. of butter in a year.

You can make money with pure bred Holsteins. Write for free information.

**The Holstein-Friesian Association of America, Box 205, Brattleboro, Vt.**

**The department editors of this paper are anxious to be of service to you. Do not fail to write to us if they can be of help to you.**

say there is a bad odor at the frog. I suggest to you that you take a paring knife and clean the foot out completely between the frog and the hoof, and all over until everything is perfectly white. You do not have to go very deep to do this. It is quite possible that just at the edge of the frog you will find a little cut. In case you do pour on to that part of the frog after cleaning a little tincture of iron, after which pack that part of the foot well with calomel. Repeat the dressing of calomel daily for a few days.

**Infection of Mucus Membrane.**—In the fall of 1916 I had a 2-year-old Guernsey heifer to drop a calf. I broke her and milked her for about two months when there was a marked increase in the flow of milk from her left front eat, increasing until double the flow of the other teats. After a couple of weeks there appeared small clots of blood in her milk. These increased in size and number until six months ago when the milk from this teat became bloody. In a couple of weeks the teat became swollen and very sore and when the milk was forced out it was thick like library paste. Soon after the teat ulcerated close up to the udder and ran large quantities of puss. After a couple of weeks the teat healed up the swelling left, but the teat remained hard and tender. After a few weeks the teat became swollen again and ulcerated as before. This was repeated three times during the summer and fall of 1917. In January, 1918, I turned the cow dry, the teat still being hard and tender. The teat behind it gives as much as the two did formerly; I am afraid of her losing this teat also when she freshens again in April. Kindly inform me what is the trouble and the best thing to do.
SUBSCRIBER.
Fenn, Idaho.

Your cow suffers from an infection of the mucus membrane of the milk well, this infection being caused by one of the pus producing bacilla, probably a strepticuccus. I doubt whether there is any remedy to restore this affected quarter to production again. If the abcess is still running, I would recommend the washing out of the abscess with a 2 per cent solution of lysol followed with the injection of a 1 per cent solution of Lugols solution of iodine once daily.

**Milk Has Disagreeable Taste.**—I bought a cow two weeks ago that is to be fresh April 7. She is still giving about six quarts of milk per day, which has such a disagreeable taste that we can not use it for any purpose. As near as I can describe the taste that it has, it is old and strong. Also, we tried to churn some cream at different temperatures and we could not get any butter, nothing but foam. I am feeding her all the alfalfa and straw she will eat, with a mash night and morning of about one and one-half gallons made of bran middlings and a few raw potatoes. Her appetite is very good. I have started leaving a little milk in her udder to try to dry her up to some extent. She seems to have caught a cold since I got her. At least, she has a cough, but it is getting better. Do you think the condition of her milk is anything to worry over, or is it a natural condition with some cows at that period? What would you recommend for her?—W. S. N., Kellogg, Idaho.

No, I do not think you need to worry over the condition of her milk. Dry her up as fast as you can, and give her a rest before she calves.

**Mare Is Stiff.**—I have a mare which took cold working in the rain and took a touch of distemper. I smoked her with feathers and sulphur and got the cold out of her head, but she is stiff all over her body, and when walking staggers so she can hardly walk. She eats and drinks well and has no fever. Can you tell me what to do for her?—W. B., Dalkena, Wash.

I would suggest that you give the following in one ounce of the following liquid; this is to the mare morning, noon and night for a few days:

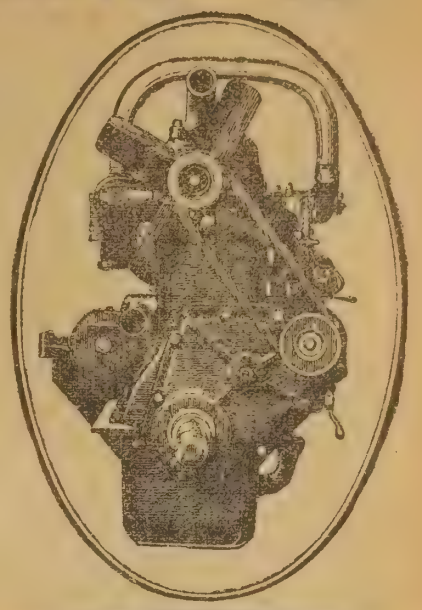
Fluid extract of digitallis, one-half ounce; fluid extract of belladonna, one ounce; alcohol, eight ounces, and water enough to make a pint. Take one ounce of this and give in a pint of water three times a day.

**Hard Lump on Udder.**—Can you tell me what is wrong with my cow? About a week ago a hard lump started to come on the udder by the right front teat and now there are several on that quarter of udder. One is just starting on the right hind quarter. They start about the size of a half dollar and then spread. There is no fever in udder, but it is swollen some, is not sore and gives her milk down good. Should we use the milk or not? Cow was fresh the 7th of March.
O. E., Colville, Wash.

I am not able to tell what is the trouble with your cow, except that it is probably some form of infection. I suggest that you consult your local veterinarian. He may be able to give you advice regarding her after he has made a careful examination of the animal.

**Curved Ladder Prevents Drowning.**
A curvey ladder has been invented on which drowning persons can be placed and drawn into boat without danger of capsizing it.

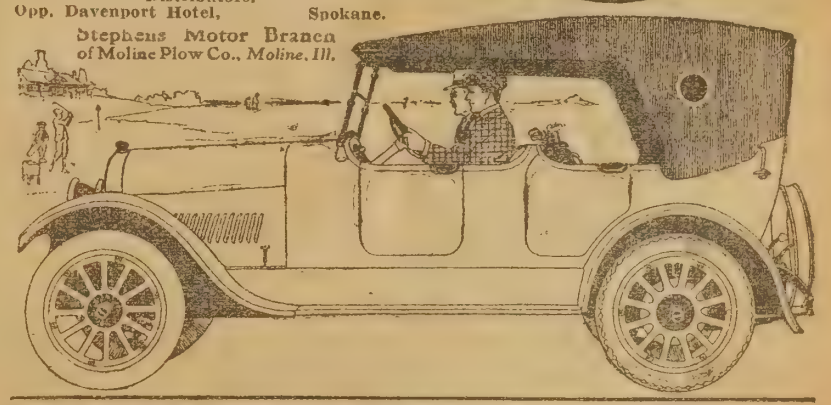
# STEPHENS *Salient Six*



## WHY THE NAME?

Take any five definitions of the word "Salient." The Stephens Salient Six fulfills them all. For instance:

1. Shooting out, projecting—fulfilled by quick acceleration and excess power through scientific gas handling.
2. Attention commanding—met by perfection of detail you cannot forget.
3. Prominent—obvious, through being built by the Moline Plow Company, an organization of globe-wide influence and 53 years' successful operation.
4. Conspicuous—fulfilled by a conservatively different, quietly individual body design.
5. Noticeable—an obviously better engine, burning all the gasoline of today and the still poorer grades of tomorrow, with no waste.



Five models; each a masterpiece of the coach builder's art, with superb upholstery and finish.

*We hope for the pleasure of a demonstration.*

## For Contagious Abortion

Thorough use of B-K as outlined in our Bulletin 52, "Contagious Abortion," is the surest means known of controlling Contagious Abortion, preventing Barrenness, and removing Retained Afterbirth.

Complete irrigation of the uterus and vaginal tract is easy with B-K. B-K kills the infecting germs and foul odors—heals the uterus—removes the slime and acid—no irritation—no straining. B-K is much more effective and safer to use than lysol, carbolic acid, Lugol's solution or coal-tar disinfectants, which do not cleanse the uterus, but make it more acid.

If your dealer does not have B-K, send us his name.

FREE BULLETINS: Send for complete information—"Special trial offer" and bulletins No. 52, "Contagious Abortion," and No. 136, "Calf Scours."

# Cull the Flock

## Let the Fittest Always Survive

The dairyman has long since realized that he must eliminate the boarder cow from his herd if he is to make a profit. Why not the poultryman eliminate the boarder hen from his flock? Feed costs too much these days, and it takes too much trouble to house and care for the bird that does not produce returns.

H. L. Kempster of the University of Missouri has urged upon poultrymen that they study their fowls from the day they are hatched with a view to eliminating those that are least fitted to produce. Speaking of the selection of breeders, he says:

"The time to begin to select breeders for the next season is when the chicks are hatched. Those birds that show a tendency toward weakness should be marked at the time that this weakness is noticed in order that they may never find their way into the breeding pens."

He urges that any bird that is ever found to possess weakness, even though it appear to be only a temporary illness of some kind, be forever excluded from the breeding flock. He argues for nothing but a strong-constitutioned bird for breeding, and holds that illness of even a minor and temporary kind is a sign of constitutional weakness.

"A good constitution is indicated by a broad, deep chest, long body, active disposition, keen, bright eye, a broad head and bright, broad comb, glossy plumage and a well-curved neck. Birds which have any tendency toward an elongated head, commonly known as "crow heads," should be eliminated from the breeding pens. Females that have heavy abdomens and excessive fat so that they bag down behind should be sent to market, for they are generally poor breeders and always poor producers. The bird which is first off the roost in the morning and last to go onto the roost at night should be used.

"The worst faults of the usual methods of breeding are: (1) the use of inferior males; (2) the breeding immature or poorly developed stock, (3) the breeding from the entire flock, poor as well as good, and (4) the selection of hatching eggs from the general basket.

"The farmer should select a few of the best females and then mate them with a good, vigorous male. A few hens properly handled will produce all the eggs needed for hatching and will produce much better progeny."

# Raise a Garden

(Continued from page four.)

would plant if seed cost five or 10 times more than it will cost this year.

There is no place in the United States where potatoes grow to better advantage and where they make a finer quality than in the volcanic ash soil of the northwest. This soil lacks humus and without fertilization is not as well adapted to some crops as the richer soil of the valleys in some of the humid sections, but it is especially well adapted to potatoes. They should not be planted in alkali soil, nor where the soil is too heavily manured.

The early varieties of potatoes that seem well adapted to the northwest art the Early Rose and Early Ohio. The late varieties that seem well adapted to our soil are Netted Gems, Burbanks and Rural New Yorker.

When early vegetables are grown on a certain tract of land with proper selection, late vegetables may be grown on the same land after the early vegetables are taken off. Some varieties of early cabbages are Early Jersey Wakefield and Early Charleston. Late varieties are Flat Dutch, Autumn King, Wingstadt, Danish Ball Head, and Danish Round Head. The late varieties of cabbage may follow the early varieties of potatoes on the same ground, or late potatoes may be grown on the same ground occupied by early radishes, beets and peas. Turnips may follow either early potatoes or early cabbages, but it is not well to raise an early crop of potatoes and a late crop of potatoes on the same ground.

### Plant Small Areas.

Some think that because they can not plant large areas, they will not plant at all. This I believe to be a mistake. If you will plant a small piece of land and give it close attention at times when you are not otherwise engaged, you will be surprised how much you can produce. I have carefully watched gardeners who have learned the art in the old countries, Danes, Swedes, Russians, Germans, Italians, Japs and Chinese. I have been astonished at the amount they can produce on a 50-foot lot or on the back part of a 50-foot lot, or on any small area of land. I have seen a garden of just one square rod of land produce more than some people would produce on 10 times the area. I have watched in the suburbs of some of our towns and cities how people grow vegetables on small areas immediately surrounding the houses in which they live, where every available foot of land is utilized, leaving only enough for walks, and these persons can teach us some valuable lessons in land economy. In the United States we are so accustomed to large farms and large areas that we do do not know how to utilize land as is done in some of the more densely populated countries. Our fence corners, strips of land adjacent to the roadways and other portions are left to grow up in weeds, where they might be utilized for the production of profitable crops. Of course, I know that this requires labor, and that labor is the principal asset in this country, especially since our boys, so many of them, are going to the war, but I am presuming that much of this gardening work will be done by persons not able to do regular work, and that it will be done at times that will not interfere greatly with other enterprises, and if it is it will be an economy of time, labor and food production that will greatly help our conflict.

### Reelect Fair Officers.

The Columbia county fair board met in St. Helens and reelected W. J. Fullerton president and J. W. Alles secretary of the association. The county fair will be held September 18, 19 and 20.

# Wider Use of School Plan

## *Rural District School Coming Into Its Own*

The national government after searching everywhere for the best means of promoting its war-time activities, the food conservation campaign, the Liberty bond campaign, the thrift campaign, the Red Cross campaign and every patriotic movement, is forced back to the little neighborhood and community as the primal source of influence in American life. Through the council of defense and the Red Cross especially have there been made efforts to effect neighborhood organization naturally center around the school district.

The rural district school is coming into its own. The common school system of the United States is built upon the rock of community and neighborhood interest.

To do this the Washington school law provides for the "wide use of the school plant," that school districts of the second and third class

May employ special supervisors;
May erect teachers' cottages;
May provide themselves with community halls,

and in general may acquire real and personal property to carry out the objects named in the act.

In carrying out these extraordinary powers the school district must obtain the approval of a commission headed by the state department of education, and including the heads of the extension departments of the state college and the state university. These three members are supplemented by the county school superintendent and a fifth member from the county together with two members representing the school district desiring to make the improvement, one of the latter being a woman.

Something of what the public school system can do, the wideness of its field, may be seen in this law passed by the state legislature of Washington in 1913. This act made it easy for rural school districts to promote frequent meetings of the people for study and recreation. It empowered the little school district to acquire and house material for the dissemination of information of any use and interest to

The farm,
The home,
The community,

and to assemble facilities for experiment and study, especially in matters pertaining to

The growing of crops,
The improvement and handling of live stock,
Marketing of farm products,
Plan construction of farm buildings,
Subjects of household economy,
Good roads,
Home industry,

as well as community vocations and industries in general.

When the government in its war-time activities was driven to arouse the interest of every neighborhood in the nation, it found the state of Washington had already provided to do this under the law for the "Wider Use of the School Plants." Not only this, but Mrs. Preston, the superintendent of public instruction, has been for many years persistently pushing rural community center movements by means of the school system. Mrs. Preston now reports that 22 counties in the state of Washington have been thoroughly organized and are 100 per cent efficient for community activities. Many of the other counties are well organized and organization work is progressing satisfactorily in others.

The common school system is the one organization supported by taxation and free to every citizen, which lends itself to the widest development of community life in every neighborhood of the state and nation. There is probably no law in any other state which sanctions such breadth of opportunity for community growth as does this law in the state of Washington in its "Wider Use of the School Plant."

Already there are 186 teachers' cottages furnished by the school districts in this state; 10 other properties rented for instructors, and 27 new cottages are planned.

A principal occupying a teacher's cottage in an eastern Washington school district writes that he is the leader in the pig and garden clubs of his community, he raises a model garden each year, promotes interest in poultry clubs, takes an active part in the grange work, cares for the school building and plant at all times, conducts declamation contests and spelling bees, and teaches in the community Sunday school. His wife, who teaches in the same school, helps in these activities, directs sewing and canning clubs, drills pupils for neighborhood entertainments, prepares patriotic programs, heads the Red Cross auxiliary, serves a warm lunch each noon to the pupils in the little two-room school and teaches a Sunday school class for the girls.

This principal and his wife live in a teacher's cottage within a stone's throw of the school building. They are 12 months in the year with rural community activities and rural school education. They declare the cottage they occupy is largely responsible for the success of their work in the community because it gives them the opportunity to devote their time to community activity.

### Hennequen Accumulates.

Lack of shipping to move the hennequen has caused that product to accumulate in the ports at Yucatan. Reports from Merdia say the hennequen is even being stored in churches.

A dab of Mica Axle Grease spreads evenly and forms a cool, slippery coating on the spindle—no hot boxes—no lost time—even with big loads. The powdered mica, a natural lubricant, makes the grease last twice as long. Get a can from your dealer today.

Performance is the best answer

"Standing the gaff"—keeping *always* on the job—not eating up profits by high cost of operation—those are the *big* things your tractor must deliver. And actual work in the field over a period of years is the only *real* test.

Ten years ago the first OilPull tractors were put on the market. They went into the Northwest and Canada—breaking prairie sod—going against the toughest conditions a tractor can meet.

Did they make good? The best answer is that over 7000 OilPulls are now in use, those sold ten years ago delivering the same *sure* service as this year's machines. *Ask any owner—anywhere.*

14-28 H. P. 18-35 H. P. 30-60 H. P.

### They Stand Up to the Work

Strong frame and wheel construction—heavy gearing—oil burning, oil cooled, heavy duty motor—from the ground up the OilPull is built to deliver day in and day out *continuous* service. Always ready when you are—no laying down on the "pinches."

### Guaranteed Oil Burner

Oil burning was a fundamental in designing the OilPull. Not one of the 7000 OilPulls in use today but is using kerosene or lower grade oil for fuel. To make it *sure*, every OilPull carries a *written guarantee* that protects the owner without time limit.

### Cooled by Oil

Did you ever hear of radiator trouble in the OilPull? No—because it is oil cooled. No danger of freezing—no evaporation—no refilling as with water cooled engines—no fan to give trouble—a more even temperature for the cylinders.

### Closest Speed Regulation

Watch the OilPull on the belt—for close regulation it is without equal. Adjustment of engine speed to changes in the load must be as quick as a flash. The hand can't control it, but the governor in the OilPull does—*instant* regulation of power to every variation in the load.

### A Standard Design

Every OilPull is built the same. The new, small 14-28 carries the same guarantee of continuous service and low cost of operation that the 18-35 and 30-60 have earned in ten years in the field.

A special catalog tells you all about the construction and operation of the OilPull. Ask any of our 22 branch offices, that make the strong service organization that we maintain for the benefit of our customers.

# Orchard Diseases

## Easy to Cure If Causes Are Known

It is easy to cure diseases anywhere, in any form of life, if we know the causes and can remove them. This proposition needs no proof, for it is common observation that the tendency of all forms of life is in the direction of repair and growth. Disease is abnormal and grows out of two general causes:

First, the conditions of the organism.

Second, the nature of the environment as related to the needs of the organism.

An illustration of the first cause is the fact that a flesh wound will heal much more readily if there are few toxins in the blood—such as alcohol, nicotine, uric acid, etc. In the sap of a tree also there may be enzymatic conditions which tend to hinder a return to normal health. Conditions of environment, on the other hand, can be illustrated by removing a plant having large and porous leaves capable of evaporating a large amount of water, and therefore adapted to a humid climate, into an arid region. Trees planted in an unsuitable environment soon sicken and die.

With these conditions in mind, let us consider a specific instance of plant disease. Apple rosette has been assigned to at least 20 different causes by many intelligent and observing persons. Let us see if there is not a larger cause which includes all of the smaller causes observed by these various observers. One man found rosette where the trees had been injured by gophers. He killed the gophers and the trees recovered. Another found rosette where there was a lack of water. He put on more water, and the trees recovered. Another found that his trees were rosetted where there was too much water. He put in drains and the trees recovered. Rosette has been observed also where there was an excess of fertilizer, where the land is strong in alkali, where there was woolly aphis on the roots. More orchards have been cured of rosette by sowing alfalfa among the trees than by perhaps all other methods combined. This doubtless points to the fact that in the northwest the soil tends to puddle under the process of irrigation, while the alfalfa roots, penetrating the puddled section, aerate the soil and drain off the surplus moisture.

All of the causes named are contributory, while back of them is the primary cause, which includes the rest. I base my claim that there is such a primary cause on the fact that I have examined more than 600 trees, the roots of which were diseased or injured, and the tops rosetted. I think so further because of the nature of the organism.

The root system of a tree has millions of little stomata, too small to be seen by the naked eye. These suck the food from the soil and supply the top system. Now suppose something destroys these organs, what results? The result must be lack of food; that means lack of growth and energy, and that, in turn, is just what has occurred in the case of a tree that has apple rosette. The tree is starving because its organs for extracting food from the soil are injured or destroyed.

The only reason for the above remarks is that a great many people are still inquiring what to do to cure their orchards of apple rosette. My answer is that the best general cure is alfalfa, but that there are causes which alfalfa will not reach, so that we have to study local conditions for contributory causes and remove the latter if we can.

# Old Grape Vine

## Was Planted in the Year 1775

At San Gabriel, Cal., is an old grape vine that is reported to have been planted in 1775. It is, therefore, 143 years old. Last year, after having visited in El Paso, Texas, and made some observations in the Rio Grande valley, I discovered an old pear tree that was said to be 300 years old. Up to that time I had supposed that a pear tree, still healthy and growing in West Virginia, and that has now reached the age of 125 years or more, was the oldest in the United States, but in the Rio Grande valley is one that is more than twice as old as the West Virginia tree. Now I am going to be too cautious to say that this old grape vine is the oldest in the United States, but it is the oldest with which I have any acquaintance, and I desire to draw a lesson from these old trees. It has been my privilege to visit the principal orchard sections of the United States and to observe the conditions under which orchards are grown. There are a great many sections in the older states where the apple trees are some of them more than 100 years old. In every case where fruit trees have reached the century mark or more there have been peculiar soil conditions.

**What Are the Soil Conditions?**

It is of exceeding importance to know the conditions under which trees may be made to live more than twice the usual period of time, and to bear profitably during that longer period. In every case there have been a rich loam generally mixed with sand and humus. This gives plenty of food for whatever grows upon the surface. In every case there has been plenty of water, generally from a substratum that percolates through the soil several feet below the surface or from seepage from the hillsides above. It is important that this water shall not stand on the surface of the soil or near the surface so as to submerge the roots, but it must moisten the earth from which the roost take their food substances and drain away, leaving the earth moist, but not saturated. To my mind there is an important lesson here in regard to the drainage of irrigated soils. Sometimes the subsoil is of such a character as to hold the water near the surface. In many cases in the northwest if trees reach an old age it will become necessary to build drainage systems to carry off the underground water.

KEEP BEES!

HONEY IS THE BEST SUBSTITUTE FOR SUGAR
*and is more Wholesome and Delicious*

If you own an orchard or keep bees, you should have a copy of our Catalog. It lists everything for the successful handling of bees and the production of honey.

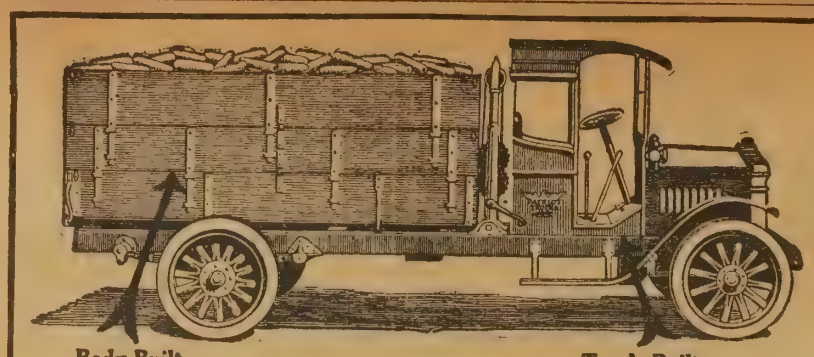
We are pioneers in the bee supply business in the Northwest, are thoroughly familiar with local requirements and carry a large and complete stock.

**Ask for Catalog No. 183**

*You can keep bees any place where they can forage within a mile.*

PORTLAND SEED CO.

A PROLIFIC GROWER
CORY'S THORNLESS BLACKBERRY



Every garden, every farm, every ranch should have these berries planted this season. Do your bit and aid in food production to win the war. No berry compares with Cory's Thornless Mammoth Blackberries as a prolific bearer. They are earlier, larger, have fewer seeds, better flavor for jams or canning, and will sell more rapidly when crated for the market than any other berry. The canes are as free from thorns as the grape vine. They are a great discovery. Buy yours now. Individual plants have produced 15 ¾-pound baskets at one picking.

Body Built for Country Loads

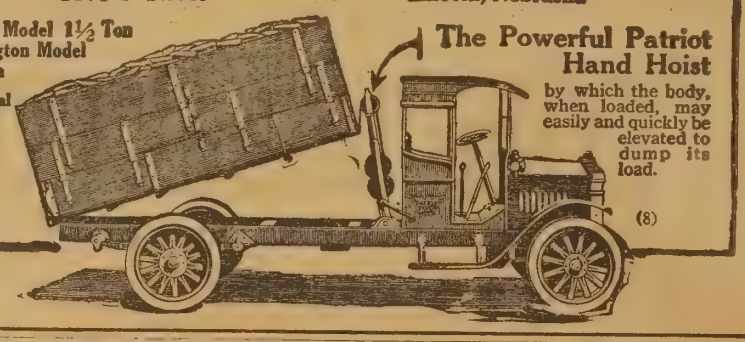
Truck Built for Country Roads

Patriot Farm Truck

The farmers of America now have what they have been waiting for—

A truck built for farm conditions and farm work.

No intelligent farmer questions the superiority of truck service over horse service for general transportation. The only question has been whether the trucks built for service over the paved streets of cities, with bodies designed for city haulage, were the proper trucks for farm use, and most farmers have felt they were not.



The Patriot Farm Truck affords the farmer economy, convenience and certainty of transportation of his crops and live stock.

The Patriot will double or treble your load capacity and cut the time of delivery in two. It makes you master of weather and roads, and cuts the distance to your market town to one-fourth.

The Patriot will increase the value of your farm $10 an acre by bringing larger and better markets within your reach. It will pay for itself within one year. Write for full information and prices.

Yes, Sir, the Twice-a-Week Gives Me All the War News.

# COMPLETE NEWS ABOUT THE WAR

## Twice-a-Week Spokesman-Review, 1 Year The Washington Farmer 3 Years, Both for $1.00

**EVERY week there are important developments in the great war. Do you know as much about them as you would like to? Get a reliable, complete review of the war by subscribing for The Twice-a-Week Spokesman-Review.**

Being a member of the Associated Press, the important happenings are flashed to it without delay from every capital and village, and from every far flung battle line where the history of our day is being enacted. It pays particular attention to the war news of special interest to the people of the Pacific Northwest. It reports the progress of the draft; and from its pages you will learn who among your friends and neighbors have joined the colors.

If any of the young men you know are killed, injured, or taken prisoner on any of the battle fronts, you will be given the information in The Twice-a-Week Spokesman-Review as soon as it is issued by the military officials.

In addition to this intensely interesting and important war news, the Twice-a-Week brings you an accurate summary of local, state, national and international events. It is published every Tuesday and Friday. Purchased in any other way it costs $1.00 per year. Certainly an offer so liberal should appeal to every one of our readers. Every issue contains important news. If you have not acted already, send in your dollar now.

# Battle Still Rages

## *Crisis in Conflict Seems Reached*

At the end of another week the fighting along the northern front in Europe continues unabated and with no victory for either side. More than three weeks have passed since the stupendous assault was launched by the Germans. They have gained much territory, but its strategic value is somewhat doubtful. But it appears that now the allied leaders realize that they have retreated as far as safe, and are preparing to make a stand and fight it out with the invading forces. During the fighting up to this time it has been apparent that General Haig, commanding the British forces, has preferred to retreat slowly rather than stand firm against the well-planned and powerful German attack, and thereby lose heavily in men and munitions. It is believed that by this retreat he not only has saved his own men and equipment for use in the counter attack that seems imminent as this is written, but that he has wrought unprecedented havoc with the enemy. Cold-blooded as it may seem, the ferocious assaults by the German armies under their reckless leaders has led the allies to a purpose of killing as many of the enemy as possible, and the German leaders seem to have been sacrificing them wholesale in the hope of being able to win a great victory over the armies of England and France before American forces could be prepared in large numbers.

The attacks have all been centered against the British forces in the north, for the apparent two-fold purpose: First, the cutting off of the British from the French and dealing them a crushing blow that would virtually put them out of the fighting for the next year if not for all time to come, and second, the capture of the ports on the English channel, through which English armies and supplies have been coming to France.

Kaiser William and his war leaders seem determined upon victory now, regardless of the cost in men and means. That he will not cease his tactics until thoroughly whipped or his goal attained is a general belief. The war critic on the Paris Times gives this paragraph, which reads like a reasonable explanation of the reckless continuance of the German attack:

> In a struggle of this character a blow missed can become singularly dangerous for the one who attempted it, and we have the feeling that the success obtained up till now by the adversary is of doubtful result. He has gained advantages, but they have placed him in an unstable situation, which can become perilous. Completely engaged, he is obliged to pursue his plan to the end.

A week ago it was Amiens, the railroad center of the allies in the northern territory, that appeared to be in particular jeopardy. The invaders had reached to within 10 miles of it, and their most vigorous attacks were made with the apparent view to capturing it. It was of strategic value, and the British stiffened and prevented its capture. Then the German attack was moved farther north, and in that region the British retreated, leaving Armentieres and other places, some insignificant and some with some strategic value, in the hands of the enemy. But at the close of the week the British appeared to be making a stand with a view to preventing the further advance of the Germans, as was done before Amiens, farther south. A statement by General Haig to the British army indicated this purpose. The statement said:

"Three weeks ago today the enemy began his terrific attacks on a 50-mile front. His objects are to separate us from the French, to take the channel ports and to destroy the British army.

"In spite of throwing already 106 divisions into the battle and enduring the most reckless sacrifice of human life, he has yet made little progress toward his goals.

"We owe this to the determined fighting and self-sacrifice of our troops. Words fail to express the admiration which I feel for the splendid resistance offered by all ranks of our army under the most trying circumstances.

"Many among us now are tired. To those I would say that victory will belong to the side which holds out the longest. The French army is moving rapidly and in great force to our support. There is no other course open to us but to fight it out.

"Every position must be held to the last man. There must be no retirement. With our backs to the wall and believing in the justice of our cause each one of us must fight to the end. The safety of our homes and the freedom of mankind alike depend upon the conduct of each one of us at this critical moment."

The full significance of General Haig's statement that the French were moving to the support of the British is not easily understood, but it is not improbable that the fighting on the front before this reaches the readers of this paper will have explained it. It was believed in many circles to indicate that the promised counter blows were soon to be struck. It did not necessarily mean that the French were moving northward to the point of strongest attack against the British, but might as well have meant that they were ready to strike a blow farther south, probably on the flank southeast of Amiens, that would compel the Germans to divert their attention from the British to the southern point.

In the view of some officers the German front as it now stands places the Germans in jeopardy in two places. The wide salient driven toward Amiens appears to them susceptible of flank assault by the French from the south and southwest, while in Flanders the narrow salient driven into the British lines leaves the Teutonic flanks exposed.

To what extent the American forces are in the actual fighting is not revealed in the reports coming from the battle front, but it is known that they are at the service of General Foch, supreme commander for all the allies during the present drive. Some of them are known to be on the front lines. One regiment from the northwest is known to be taking part. Not only is it not known how many are in the fighting, but it is still a military secret how many are actually in Europe. While no figures are available as to how fast they are being transported to Europe, it is stated that they are now leaving three times as fast as at any previous time. It is likewise stated that troops now in this country, but nearly ready to sail, will see service in Europe within 60 days.

The British have issued a statement showing that since the opening of the war more than 13,000,000 troops have been transported over the seas with a loss from enemy submarines or other attacks of less than 3000. It is interesting to note that no Canadian troops have been lost while en route to Europe, the only transport vessel from America to be lost being the Tuscania, when nearly 200 out of 2500 aboard, mostly American soldiers, were lost.

## Advice on How to Get It Is Free

Among the booklets that the information bureau, conducted by this paper in Washington, D. C., is offering its readers is one prepared by the federal public health service on the matter of pure water supply. It is recognized everywhere that pure water is one of the best guarantees of good health that can be had and that on the other hand impure water is one of the greatest dangers to health. This book tells how to purify and protect the home water supply.

Other booklets that may be secured from the information bureau include the famous Hoover cook book, the war garden book and the booklet on how to combat spring colds. Inclose a 2-cent stamp for postage when writing for any one of these booklets.

Any question on any subject that you wish information on will be answered by our bureau in Washington. Address all communications to the Washington Farmer Information Bureau, Washington, D. C.

# LIVE STOCK REPORT.

## Washington Reports Improvemen

The condition of live stock in Washington is much better than a year ago, according to report issued by E. T. Marchetti, field agent of the bureau of crop estimates. The Washington statistics follow:

| | 1918. | 1917. | 10-Yr. Ave. |
|---|---|---|---|
| Mortality— | | | |
| Horses | 15 | 16 | 20 |
| Cattle, disease | 12 | 15 | 16 |
| Cattle, exposure | 5 | 11 | 14 |
| Sheep, disease | 7 | 13 | 17 |
| Sheep, exposure | 5 | 25 | 22 |
| Lambs, disease | 20 | 39 | 41 |
| Swine | 14 | 16 | 19 |
| Condition— | | | |
| Horses | 98 | 97 | 98 |
| Cattle | 98 | 96 | 97 |
| Sheep | 100 | 97 | 98 |
| Swine | 99 | 98 | 98 |
| Brood sows | 98 | 90 | .. |

There has been considerable improvement, says Mr. Marchetti, in the condition of live stock and losses from disease have decreased throughout the entire state on account of improvement in grade of all classes of stock, better care, ability of stock to resist disease due to the open favorable winter, adequate provisions for feed on account of severe losses sustained the last two years through lack of forage, and vaccination of hogs for cholera, calves for black leg and milk cows for tuberculosis, which has resulted in only occasional losses and no extensive epidemics. There have been noticeable decreases in the loss of swine from cholera in the southeastern counties and in the Yakima valley, where cholera has prevaailed in preceding years and has been practically eliminated this year. Lambing is progressing under favorable conditions and the percentage is greater with few exceptions than during the last two years and in many instances greater than in the average year.

The state reports for Oregon, Idaho and Montana also show like improvements as regard conditions and mortality.

### United States.

The following table gives the mortality per 1000, and the condition of live stock throughout the United States for the last two years, together with 10-year average as compiled by the bureau of crop estimates:

| | 1918. | 1917. | 10-Yr. Ave. |
|---|---|---|---|
| Mortality— | | | |
| Horses | 16.5 | 16.9 | 19.4 |
| Cattle, disease | 18.2 | 19.4 | 20.0 |
| Cattle, exposure | 13.3 | 14.6 | 14.3 |
| Sheep, disease | 19.8 | 21.8 | 24.4 |
| Sheep, exposure | 20.0 | 32.4 | 30.2 |
| Lambs | 49.3 | 60.2 | 58.8 |
| Swine | 42.1 | 48.6 | 67.5 |
| Brood sows | 109.5 | 96.5 | .. |
| Condition— | | | |
| Horses | 96.2 | 95.8 | 96.2 |
| Cattle | 95.6 | 94.4 | 95.2 |
| Swine | 96.3 | 95.0 | 93.7 |

## Ranch Storage Plants.

Practical assistance right on their ranches will be given the orchardists in the Wenatchee valley by an expert from the United States department of agriculture in the construction of ranch storage plants.

## Winter Wheat Condition.

The department of agriculture rates the conditions of Washington winter wheat at 93, as against 70 this time last year and a 10-year average of 92 on April 1.

## Farmers and Advertising.

Advertising has played a mighty important part tin the agricultural development of America.

The tillers of the soil have benefited from advertising in innumerable ways. Through this agency they have learned of countless improved methods for cultivating their farms and of many conveniences for their homes. Advertising has been the good friend which has introduced the silo, the telephone, the harvester, the incubator, the cream separator, water and lighting systems and dozens of other useful articles.

It is an almost invariable rule that the manufacturer does not advertise until his product is thoroughly perfected. If the new implement or machine is advertised farmers can depend on it.

Without this widespread confidence in advertising modern "machine" farming would certainly not have advanced as it has in America.

Advertising will continue to perform a useful service. It will pay you to read and investigate the advertisements in every issue of your state farm paper.

*Your Guide To True Tire Service*

On every road you see Racine Country Road and Multi-Mile Cord tires. Always they're doing their bit—users satisfied and happy.

These tires are Extra Tested in Racine Rubber Company factories. Because they *are* Extra Tested, you can expect *extra* wear—better service than from other tires.

**RACINE Country Road *and* Multi-Mile Cord TIRES**

Extra Tested is more than a phrase. Much more. It reflects the *extra* care in the factory that results in *extra* wear on the road.

Take the Extra Test for rubber fitness, for example: rubber is blended and re-blended until the supreme degree of toughness is obtained. Out on the road you can see the extra mileage this Extra Test gives.

*Racine Country Road Tires*—scientifically built and Extra Tested for hard daily service over country roads. 5000 Mile Guarantee.

*Racine Multi-Mile Cord Tires*—cord quality proved in actual use, and bonded by the many Extra Tests.

Also red and gray inner tubes—Extra Tested.

It will pay you to know the dealer who sells them.

*For Your Own Protection Be Certain Every Racine Tire You Buy Bears The Name*

# Have You Become Thoroughly Acquainted With Your Camera?

By PAUL E. TRIEM

When the average amateur photographer sees a snapshot which is decidedly better than his own average he is pretty apt to say, "The man who took that picture had a better lens than mine." The truth of the matter is, however, that good photographs can be taken with any camera on the market, and that picture making is nine-tenths "know how" and one-tenth equipment. It is to supply this "know how," particularly in reference to picture making about the farm, that the present series of talks on photography has been undertaken.

The very first thing to do, on purchasing a camera, is to get acquainted with it. Every camera consists essentially of three parts: First, the box or body, at the rear of which is an arrangement for holding films or plates; second, the lens, or "eye" of the camera, which directs the rays of light falling upon it in such a way that they form upon the sensitive film or plate an inverted picture of the object or scene in front of the camera; and third, the shutter, which controls the length of the exposure, or the time which this image is allowed to rest upon the film.

Most cameras have an adjustable opening in connection with the lens called the "diaphragm." Below the lens, usually, is an indicator connected to this diaphragm in such a way that as the latter is closed the indicator points to successively larger numbers. Perhaps the numbers will read "4 8 16 31," or they may read "f-8 11 16 22." In either case the amount of light admitted into the camera to form the picture decreases as the pointer is moved to the larger numbers, and because of this decrease in quantity the exposure must be lengthened.

If the diaphragm scale is marked with the numbers "4 8 16," etc., in which each number is just double that of its predecessor, the uniform system, or U. S. is being used. If the scale reads "8 11 16 22," the f system is used. The important thing to remember in either case is that as the pointer is moved to successively larger numbers the opening in the diaphragm is made smaller and the exposure must be increased. The 16 stop is the same in both systems, and this is the one which will be most used in taking pictures of buildings, cattle, etc., where sharpness and detail are wanted.

The shutter which controls the length of the exposure, is usually marked "T B I (or M)," these abbreviations standing for "time," "bulb" and "instantaneous" exposures. In making a time exposure one motion of the shutter release or "trigger" opens the shutter and the next closes it. In a bulb exposure the shutter remains open as long as the release is pressed. An instantaneous exposure is made by pressing the release, when the shutter quickly opens and closes. If but one speed of instantaneous exposure is provided, this will be about one-twenty-fifth of a second.

All of these details sound rather forbidding to begin with, but they are soon mastered. A few practical suggestions made at this time will enable the beginner to undertake his or her work with the new camera with less uncertainty and with fewer failures than usually fall to the amateur's lot. In the first place, never try to make an instantaneous exposure or "snapshot" on a dull day; rather, place the camera on a firm support and give a quick bulb or time exposure—with the diaphragm indicator pointing to sixteen this should be about one second. Second, learn to hold the camera very steady when making snapshot exposures, and never try to hold it for anything longer. Third, keep a record of your exposures, jotting down the size of the diaphragm, length of exposure, time of day and condition of weather as to cloudiness. When your films are developed study them in connection with this record and you will soon learn to judge exposure almost instinctively. In another issue we will describe the appearance of under-timed and over-timed exposures, so that you will be able to tell by looking at your films on which side, if either, you erred; also, we will give you an exposure table which will enable you largely to eliminate these mistakes.

Ninety-nine per cent of all amateur pictures are snapshots, while probably 99 per cent of all professional work is made by the time exposure method. This one little fact, so often overlooked by the camera enthusiast, accounts for much of the annual waste of films and plates, carloads of which are sacrificed in the effort to make good pictures by an impossible method.

Sometimes a picture must be a snap-shot or nothing. That is because there are many instances when only a very brief exposure will "stop the motion" in a scene. Suppose, for instance, that you wish to photograph a group of youngsters playing in the front yard. You adjust your camera for the estimated distance between yourself and the children (unless you have a camera working at universal focus, when this adjustment for distance is unnecessary). Then you locate the group in your finder and wait till they fall into a pose which seems desirable, when you press the release—and the picture is made. A very short or "snap-shot" exposure was necessary because of the movement of the subject you were photographing.

In cases of this kind, of course, the snap-shot is justifiable; but in the many cases where there is no need of speed, it is a mistake to limit yourself to an instantaneous exposure. Even where there is the likelihood of some slight motion, as in photographing chickens or cattle or even children who are more or less at rest, a time exposure is possible, by watching your chance, and the quality of the resulting picture will pay for the added trouble. For a time exposure outdoors, turn the indicator of your diaphragm to 16 and place your camera on a steady support. This will allow of the longer exposure required without motion on the part of the camera, which would blur the picture. With this sort of exposure, you will gain sharpness and detail in your picture and will also secure greater depth of field, which means that objects near the camera and at a considerable distance from it will appear sharp, rather than fuzzy.

Now as to the time of exposure: First, in those cases where you must make a snap-shot, or nothing, working anywhere in the northwestern states in the late spring, summer or early fall, between the hours of 10 and 4, with no heavy shadows close to the camera, turn your diaphragm indicator so that it points to 4, if you have the U. S. system (see last week's article for explanation) or to 8 if you have the f system, and give 1-25 of a second. If your camera has but one instantaneous exposure, that will be about 1-25. Remember that this is a very short time for the light to act upon the film, and unless conditions are favorable, the result will not be pleasing.

For time exposures: First, be sure your camera is rigidly supported—use a tripod or a box or a fence-post for this; second, turn the indicator to 16, either system; third, be sure your finder includes the view you wish to photograph and that the distance between the camera and the object to be photographed corresponds to the distance indicated on the focusing scale, if your camera is fitted with one; and, fourth, give one-half second exposure on bright days, with no heavy shadows close to the camera, or one second on cloudy days or where there are heavy shadows within 30 feet. Between the hours of 8 in the morning and 5 in the evening you will find these exposures about correct.

Remember to keep a record of your exposures, as advised in the first article in this series, and to study your results. Remember, too, that if you photograph a scene which lacks both high lights and shadows, your resulting picture will be "flat"—will lack snap and contrast.

**The next article will take up the matter of what to photograph, and of how to choose the correct "point of view."**

## Rural Life Conferences.

Beginning with Clarke county on April 10, rural life conferences are being held in every county of the state. These have been called by Mrs. Josephine Corliss Preston, state superintendent of public instruction. In calling the conferences the state superintendent has asked a large number of organizations to be represented, like the granges, bankers, good roads, labor organizations, ministerial associations, community center leaders and commercial bodies. Of course rural teachers are in the forefront of those who will attend.

The rural life conferences in every county will be preliminary to the state rural life conference, which will meet at Yakima during June. The state department of education is working in cooperation with the normal schools in promoting these conferences. In a circular announcing the conferences, Mrs. Preston says: "While this entire system of county conferences is right in line with the work of like character suggested by the United States government, it goes considerably farther than the government plan for the reason that the state of Washington has made such rapid progress in community organization."

The law enacted by the state legislature in 1913 for the wider use of the schoolhouse and grounds furnishes authority for doing many things which school directors have not been able to do heretofore. Every reader of The Farmer will be interested in an article describing what may be done by school districts under this law, which will appear soon in its columns.

### Algeria's Wine Crop.

The wine crop of Algeria for 1917 is distinctly inferior to that of a year ago. The official statistics of the vintage will not be issued for several weeks; but, according to the general estimate, the yield approximates 6,000,000 hectoliteres (158,502,300 gallons), compared with 8,781,266 hectoliters (231,975,100 gallons) in 1916.

## Columbia Farm Survey.

M. J. Newhouse, county agriculturist, has just made an agricultural survey of Clarke county. It was learned by the survey that wheat acreage is much increased and potato acreage decreased, caused, no doubt, by the low price of potatoes this year.

### Peterhof Founded in 1711.

The town of Peterhof, 18 miles from Petrograd, was founded in 1711 by Peter the Great. The imperial palace there is built in imitation of the famous palace of Versailles.

## Twisp Gets Busy.

At a rousing community meeting the people of Twisp, Okanogan county, have decided to go into the boys' and girls' club business. Miss Mazie Wilson, emergency district club leader for northeastern Washington, explained the purpose and results of club work. Miss Myrtle Witt of Witte, a member of the Twisp canning club two years ago, will act as assistant for Mrs. F. M. Fulton who will lead the canning club. W. G. Hughes of the Twisp bank will lead the pig club and will be assisted by George W. Sprouse. The Rev. M. R. Brown will lead the garden club. R. E. Sacket will have charge of the poultry club. There will be meetings held once a month and there will be field trips and club members will visit each other's projects and a club fair will finish the year's work in the fall.

# Forty Years as a Day

## *Official Washington Apt to Take Its Time*

Forty years ago or thereabouts I happened in the city of Cologne, Germany, and, of course, had no difficulty in recognizing its marvelous cathedral, as it is one of the noted models of church architecture in Europe. Plenty of time had been taken to build the Cologne cathedral. The foundations had been laid 600 years before and, in common with the continuous procession of visitors, I contributed my coin toward its completion.

Two or three years after this visit to Europe I was in Washington. Finding a room I was eager to see the sights of the national capital. Thought I would take in a "morning" session of congress. Reaching the house of representatives about 10:30 I found the "morning" session consisted of janitors mopping the floors and dusting the desks. There were, however, many attractions to engross my attention. I was taking in the sights going from the hall of the house of representatives into the rotunda under the big dome. Looking up to the lofty ceiling I saw a rude chair made out of lumber and suspended by ropes. The chair was vacant and I learned that the famous artist, Constantino Brumidi, had fallen from this chair a day or two before, from the effects of which he died shortly after.

Nearly 40 years later on my next visit to Washington you may imagine my surprise on entering the rotunda of the capitol and looking up at the high ceiling to see another chair suspended and to be told that the work of completing the fresco on the frieze was on again. Of course, if it takes 600 years to build a cathedral in Europe no one should complain if it takes 40 years to decorate the frieze around the dome of the national capitol. Americans may think that governmental affairs at Washington are a little slow, but they are as the passing of the ships in the night as compared with certain European dates.

The father of Brumidi, painter of the fresco in the capitol dome, was a Greek and his mother an Italian. He learned the art in Rome. Brumidi was a captain of the papal guards during the revolutionary times in Rome before Rossi was assassinated. Refusing to execute commands to turn the guns of his company upon the oppressed, Brumidi's house was surrounded by soldiers in the dead of night and he himself arrested and thrown into prison where he lay for 13 months. He was released at the intervention of the pope, whose friendship he had won by the execution of two paintings of his eminence, upon condition that he immediately leave Italy.

Brumidi first landed in New York, but finding little demand for his art departed for Mexico in the hope of richer patronage. He returned after three years to Washington, which he had previously visited, to enter upon his life work at the capitol.

The ceiling of the rotunda was finished by Brumidi in 1865. The fresco of the frieze upon which Brumidi was engaged and the larger part of which he himself completed represented scenes in the history of the new world from the time of its discovery. Following the landing of Columbus in 1492 were:

**The entry of Cortez into the halls of Montezuma in 1521.**

**Pizarro's conquest of Peru in 1533.**

**The midnight burial of De Soto in the Mississippi in 1541.**

**Pocahontas saving the life of Captain John Smith in 1606.**

**The landing of the Pilgrims at Plymouth in 1620.**

**Penn's treaty of peace with the Indians in 1682.**

**From Brumidi's death Filippo Costaggini was engaged to continue the frieze according to Brumidi's designs. These represent:**

**A scene in the earliest days of Plymouth colony.**

**The treaty of peace between Governor Oglethorpe and the Indians in 1732.**

**The battle of Lexington in 1775.**

**The reading of the Declaration of Independence in 1776.**

**The surrender of Lord Cornwallis in Yorktown in 1781.**

**The death of Tecumseh at the battle of the Thames in 1813.**

**General Scott's entry into the City of Mexico in 1847.**

**The discovery of gold in California in 1848.**

Here are a series of events in the history of America which might well serve the young folks of the family circle, as a test in American history.

In May 1889 work upon this frieze was suspended and what was my surprise to find a larger chair suspended in the place of the one I had seen nearly 40 years ago and the work just resumed after a cessation of about 30 years.

It may be of interest to be reminded that the art of fresco, which has long flourished in Italy, was known and practiced by the Egyptians, Greeks and Romans. Fresco is the Italian word for fresh. The process is so called because the plaster is wet when the colors are applied. The colors are liquefied with water and so naturally sink into the prepared background and become a part of it. As the wet plaster is much darker than the dry it is an art so to apply the colors which change materially in drying that the tone is preserved harmonious throughout. Mineral or earth colors only can be used, as the lime in the plaster which is used for white eats and destroys all other paints. The artist in fresco must produce his flesh tints by clever combinations with light and Indian reds.

**A prize of $1 in thrift stamps will be given by The Farmer to any school boy or girl for the best description in 200 words of any one of the historic incidents pictured in the frieze around the dome of the capitol in Washington enumerated in the above article. These articles must be accompanied by the name and postoffice address of the writer and the name of the teacher and the number of the school district must be added.**

## Stock and Stock

### Live, Purebred, Grade and Watered

At a meeting of farmers not so very long ago, one of them expressed great suspicion of the dairy organization of which the meeting was representative.

"Their rules are not fair," he declared.

"What, for instance?" asked one of the members.

"Why, you can't even sell a cow unless you offer her to your organization first, at its price, too."

"I never heard of any such rule. Where did you hear that?"

"It's right in our bylaws," shouted the suspicious one.

"Show me!"

"I'll do it. Listen to this: 'No stockholder of this company shall sell or transfer his stock to any person, firm or corporation without giving the——"

But the rest of his quotation was drowned in a roar of laughter.

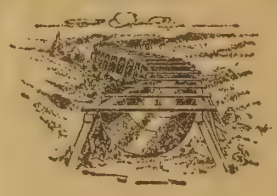
The difference between shares of stock and live stock has confused more than one man, however.

### Fine Pasture Is a Creation.

"Fine pasture is a creation, not an accident," says a writer in "The Shorthorn in America." "One achieves a good pasture only by patient endeavor and by prudent restraint in its use, one secures a good pasture through eternal vigilance in guarding its herbage from the encroachment of weeds and by welcoming a variety of grasses; one maintains its luxuriance by generous treatment in the matter of enriching the soil through frequent dressings of fertilizing material. This making of a pasture is an undertaking that succeeds best on a home farm under the master's eye."

### Educate Blind Soldiers.

The ablest educators of the blind in the country are cooperating with the government in its plans for the most complete system of reeducation for blinded soldiers that has ever been undertaken. When their education has been perfected the committee will find employment for soldiers and aid them in filling their old places in the community. Mrs. T. Harrison Garrett has offered her Baltimore estate of 99 acres to serve as a hospital school for the blinded officers and men.



**Superfluous.**

"I say, my man," said the nervous tourist in the Alps, "this seems to be a very dangerous precipice. I wonder why they don't put up a notice board?"

"They did once," said the guide. "It was up for two years and then, as nobody fell over, they took it down again."

# Trappers of the Ozarks

## The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana, Now the State of Missouri.

By LEWIS B. MILLER

Copyright, 1914, 1915, by Lewis B. Miller.

**SUMMARY OF PRECEDING CHAPTERS.**

On another page in this issue is given a comprehensive summary of the 11 chapters that have gone before, so that all new readers may get the main points of the early part of the story.

## CHAPTER XII.

### After the Manner of Pocahontas.

The horror of what was taking place before his very eyes so affected Jodo that he found himself growing faint and weak in the knees. Utterly helpless himself, there was nothing he could do to stop the fearful deed about to be committed. Doubtless, too, his own turn would come next. Ben, perhaps realizing the uselessness of words, had not uttered a sound. But as the smoke and flames began to mount upward around the victim at the stake Jodo, with drops of cold sweat on his face, glanced around. In the crowd, and scarcely a dozen feet away, he noticed the fat figure of the chief.

"Snapping Turtle, what does this mean?" he cried out, in his distress and desperation. "You have no right to do such a cruel thing! We didn't run away at all! And we've never harmed you! Why don't you order that stopped?"

All eyes were turned toward the young white man. Soon Snapping Turtle answered:

"Dodo, you make too much big noise. Maybe so roast um you nudder time!"

"But you have no right to do such a horrible thing! The Osages have always claimed to be friendly to white people! This will be known back at the settlements! And when it does become known you savages can look out! The whites will make you pay dearly for this day's work! You'll stand a fine chance——"

The chief had been edging nearer. "Dodo, you make big noise!" Then he added, in a whisper: "You wait, you see what!"

Something in the way those words were uttered caused the young fellow to hold his peace. But he stood staring at his friend tied to the stake, who could scarcely be discerned through the veil of smoke. For perhaps five minutes, as the fire climbed up through the pile of fuel, he watched and waited and wondered.

Then forth from the crowd suddenly rushed Watermelon, the fat squaw, with a long knife in her hand. For a few moments Jodo believed she was about to put the victim out of his misery. But instead of using the knife she began to scatter the burning sticks furiously, hurling them right and left, some of them among the spectators!

Nor did she pause for a moment till the last stick had been cleared away. Then she promptly attacked the buffalo-hide rope with her knife, severing strand after strand, and the cords that bound Ben's hands, till he stood entirely free.

Now there were many cries from the crowd, which sounded to Jodo like cries of satisfaction at the way the matter had ended. At the same time his own arms were released and his hands untied. Promptly he rushed forward.

"Benoni, are you hurt?"

"No, only smoked a little."

"But you had a narrow escape."

"I certainly had."

Watermelon was still standing close to Ben. And she smiled benignly upon him as she said:

"Me cookee your meat allee time. Me your squaw now."

Ben stared at her, and then his face flushed. "The mischief you are!" he blurted out.

Here all the crowd pressed together till the captives and Watermelon were completely surrounded, and Snapping Turtle explained to Ben:

"Watermelon save Strong Arm, no roast um. Now Watermelon your squaw. Cook your meat all time now. Strong Arm Watermelon's man."

Ben's face reddened, and he almost gasped. But at first he uttered not a word. Finally he turned to his friend:

"Jodo, do you know what these red folks are up to?"

"If I understand, Ben, Watermelon has kept you from being burnt at the stake, and for that reason she claims that you belong to her. And to me that seems a reasonable claim."

"It does, eh?"

"Why, yes. Don't you think so?"

"But what if I refuse to agree to any such arrangement?"

"I don't know—unless they tie you to that stake again and go on with the torture. But I'd advise you to accept and make the best of it, Ben. It's a horrible thing to be burnt to death. I know you're thinking of Rachel. But she can get plenty of fellows. And of course you wouldn't make much of a husband for her after you're—reduced to ashes. I'll explain to her that it was Hobson's choice with you. And I'll tell her just how——"

"Tell her that I loved her devotedly till the last, and that the only reason I gave her up was that she had such a fool brother!" answered Ben, turning away angrily, disgustedly.

The crowd soon began to break up. Nobody interfering, the two captives walked away to their own wigwam. And scarcely had they arrived there when Watermelon came carrying their two rifles, their ammunition pouches and their belts with their knives, tomahawks and pistols in them. And close behind her followed Snapping Turtle, to explain that the squaw was a widow, her husband having been killed in a fight with some Pottawatomies, and that because of her having saved Ben's life she had a good claim on him.

"But, Snapping Turtle, don't you see—see how the matter stands? I've got one—one squaw back at home, near St. Louis. Of course I can't take another."

The Indian merely shrugged his shoulders in an unconvinced way. "Huh! Me got five squaw. Want nudder squaw, too." Then the fat fellow turned and deliberately winked at Jodo.

Something in that wink convinced Jodo that the whole performance of burning Ben at the stake had been arranged for the purpose of enabling Watermelon to capture a husband. Smarting under Ben's mention of himself as Rachel's "fool brother," Jodo promptly decided not to tell his fellow-captive of that wink.

"And so you want another squaw, do you, Snapping Turtle?" Ben was saying, eagerly. "All right! You just—just tie yourself to the Widow Watermelon, and let me out of this little business."

The chief shook his head decidedly. "Watermelon Strong Arm's squaw. You her man. Watermelon too fat. Snappy Turkle no like fat squaw." And without more words he turned and stalked away.

Watermelon was still standing patiently by. "Me cookee your meat all time. Me your squaw now." She started to enter the wigwam.

But Ben stepped in front of her. "Not much you don't, my red beauty! We're first-class cooks and housekeepers ourselves! You take yourself off to where you're wanted!" He pointed back the way she had come.

The squaw went meekly, obediently. Jodo watched her. "Nice way for you to treat your Pocahontas!"

"Well, I'm glad to have our weapons back. That means, I suppose, that we're at liberty to go hunting again whenever we please."

Watermelon rushes to Ben's rescue.

Not that afternoon did the two go out again in quest of game. They had slept but little the night before, and wanted to get some sleep. But late in the day they were awakened by a voice at their wigwam door:

"Me cookee your meat allee time. Me your squaw now."

Watermelon started to enter, but Ben sat up quickly and waved her back.

"None of that—none of that, if you please, ma'am! We appreciate all you've done for us, but we can't use any cooks here!"

The woman turned obediently and went away. Jodo looked after her and remarked:

"That's what I've always heard. If there's anything a squaw ever learns it's to obey when her husband commands. But that's a pretty way for you to trifle with the affections of that poor Indian, just because she's red. I shall have to tell Rachel of your heartlessness—if we ever get home."

"If you don't promise not to mention any of this foolishness to Rachel, at least till after I get the law on her, I'm likely to dump you into the Missouri river before we reach home."

Scarcely had they got their fire to burning next morning when the buffalo hide was thrust aside and a familiar voice announced:

"Me cookee your meat allee time. Me your squaw now."

Ben started up impatiently. "Out with you, you everlasting nuisance! Clear out, I tell you! If we want any cooke we'll send for you!"

The red woman darted away. But Jodo sprang to the door and called after her:

"Don't be discouraged, Pocahontas! Ben's affections are turning toward you, slowly but surely. You just keep out courting him, and he'll learn to love you yet!"

"Shut up there, will you?" ordered Ben. He reached for a stick of wood, and Jodo dodged away from the door.

Next morning the captives went hunting, starting out with the Indian hunters. Late in the day they returned, carrying one deer between them. And scarcely had they thrown the game down when Watermelon appeared.

"Me cookee your meat allee time. Me your squaw now."

"Well, for mercy's sake! Shall I ever hear the last of that? Jodo, look after this deer!" Ben ducked into the lodge and disappeared.

Jodo permitted the squaw to help him skin the deer, and gave her part of the meat. After that she went away, apparently satisfied.

"Pocahontas is certainly not going to forget you, Ben."

Ben sighed miserably. "This Pocahontas business will be the death of me yet! I'm ready to run. What do you say to escaping, Jodo?"

"When?"

"Right away. As soon as we possibly can."

"And how shall we escape?"

"That we've got to decide. I don't know yet whether it's better to start hunting and keep going or to slip away soon after dark some night."

"But how are we to get a supply of powder and bullets? They give us only a load at a time?"

"I see no possible way to obtain ammunition here. But if we can start out with food enough to eat on the way we ought to reach the Big Niangua without firing a shot. And when we once arrive there, we can soon supply ourselves with powder and lead."

"How, Ben?"

"You recollect that little three-pound bag of sulphur I brought from St. Louis? I wanted to experiment at making gunpowder, but we couldn't find time. There's some saltpeter in that little cliff cave, you know. And it's not hard to burn charcoal. Those three things are all that are needed to make gunpowder. I helped to make some while I was working for Colonel Moses Austin, down there at Potosi. And I know just how it's made."

"But we couldn't shoot with powder alone. What could we do for balls?"

"That's the easy part. I recollect seeing some lead ore over there on a hillside—some blossom of lead, as miners call it. I'm pretty sure I can find the place again. And with that it won't take us long to melt plenty of bullets. True we both left our bullet molds at home. But I can soon make some."

"If we can manufacture all the ammunition we need, I'm ready to start whenever you say the word, Ben."

"Now the question is, how shall we go? If we start— If there isn't that pesky squaw out there again! See what she wants, Jodo. She'll drive me to desperation yet!"

Jodo went out, and soon came back, laughing, with something in each hand.

"You needn't be so afraid of your Pocahontas. See what she brought us—a pot of stewed meat and a gourdful of parched corn."

"That's not so bad," admitted Ben. "We'll live on the stewed meat, and jerk all of our venison to carry with us. And I'm glad of the corn. There's a lot of strength in that. We'll save every grain of it to travel on."

"I believe I can coax Watermelon to bring us some more. That is, if I can make her understand that you're fond of parched corn. She'd do anything for you. You have that poor woman completely infatuated."

Ben made an impatient gesture. "Let up on that, will you? But get all the corn you can. Pay her for it in deerskins. We don't need those. Now the question is, how shall we escape?"

"With the snow on the ground the Osages could easily trail us."

"They could—and they would. Our only hope would be to get as long a start as possible, and then outtravel them."

"A hard thing to do, I imagine."

"Undoubtedly. But, Jodo boy, we've got to do hard things to regain our liberty. These red people seem determined to hold us in captivity. It occurs to me that we might borrow one of their numerous canoes and paddle back to our trapping headquarters. The river is about clear of ice now. And the water leaves no trail."

"But when they missed a canoe wouldn't they guess how and where we'd gone, and post off down the river after us?"

"They certainly would. And what's more, they'd overtake us, too. So that plan wouldn't be any safer than escaping by land."

Jodo sat thinking. "Ben, how would it do to borrow a canoe and then paddle up the Osage instead of down? We could hide somewhere for a few days, till the Indians got tired of hunting for us below. After that we could paddle down the Osage, taking care to pass here in the night, and then paddle up the Niangua to our camp among the cliffe."

"Jodo, I believe that plan will work. There's some little danger of severe weather that would freeze the river over. But we shall have to risk that. We'll think about it, and if we decide we can make good our escape we won't lose any time getting started."

For an hour or two they sat over their fire, half cooking and half drying strips of venisan and discussing Jodo's plan. They were not long in agreeing to make the attempt.

"I'm tired of hanging around this gang," Ben told his companion. "We're not making a red cent here. And we didn't come all the way out to this country to amuse ourselves. If the redskins won't let us do any more trapping in peace we'll load our furs and our salt into canoes and drift away toward St. Louis."

(Continued on the following page.)

# Trappers of the Ozarks

(Continued from the preceding page.)

"What do you s'pose the Osages would do with us if we stayed here?"

"That's more than I can even guess. One thing's sure: They won't let us leave the country with anything but our lives if they can help themselves."

Before going to bed the two made a bag of one of their dry deerskins and emptied the parched corn into it. When morning came Jodo succeeded in getting another gourd of corn from Watermelon, giving her a deerskin for pay. During the forenoon Ben walked over to Sapping Turtle's lodge, and after a time back, carrying their pack-saddle.

"I blarneyed the chief into turning this over to me," he said.

Jodo stared at him. "What in the round world did you want with that, now that Spunky's gone? Do you expect to take it in the boat with us?"

"No, I don't. I didn't really want the saddle. What I did want I was afraid to ask for, lest I should arouse suspicion. That was this." He touched the hair-lariat, which had been coiled up and tied to the pack saddle. "We shall need this to reach our things in the cliff cave when we get back to headquarters."

"Yes, it's all right to take the lariat with us. We can't do much without it."

In the afternoon the two prisoners went hunting. They did not go far, however, and came home rather early, without any game. They could have shot some smaller animals, but thought it safer not to do so. If they asked for powder and bullets to reload their rifles before morning the chief's suspicions might be aroused. Then they would either have to go with empty rifles or wait till the following night to start. And they were both impatient to get started without delay. The approaching night was the time set.

Knowing that they would have to be up most of the night, both lay down after returning from their hunt, and slept till sunset. When they awoke and went outside to look around they were well pleased to note that the night was going to be cloudy. With thick darkness to favor them, they were very hopeful of making good their escape. For all that, Jodo found himself growing somewhat nervous when the time to start drew nigh.

As the captives well knew, sentinels were stationed around the village at night. But that was on the land side. No watch was kept along the river bank. As their wigwam stood not far from the river, they hoped to reach a canoe and paddle away without being discovered. They were in the habit of visiting the river often, sometimes to wash their hands and faces, and sometimes to fill their water gourd.

Just before dusk they took their gourd and went down there. While washing they picked out, from the numerous dugout canoes tied along the bank, the one that seemed best suited for their purposes. And they were careful to make sure that there were two paddles in it.

On returning to their wigwam they ate their supper, and then began their preparations to escape. Into the deerskin bag with their parched corn they thrust all the jerked venison they had been preparing. After that they covered their fire with ashes and made a roll of two of their blankets and of two buffalo robes. The other blankets they would wear, as they were accustomed to do when the weather was raw. Now they sat in the dark and waited for the Osages to go to sleep.

(To be continued.)

# Red Cross Next Month

It was the original intention to begin raising the $100,000,000 needed for the Red Cross on May 6, but fear that it might detract even slightly from the forthcoming Liberty loan campaign, prompted the war council of the Red Cross to postpone the date for two weeks. This action fixes the date for the second war fund campaign 11 months after the first, which was carried on the week of June 18, 1917.

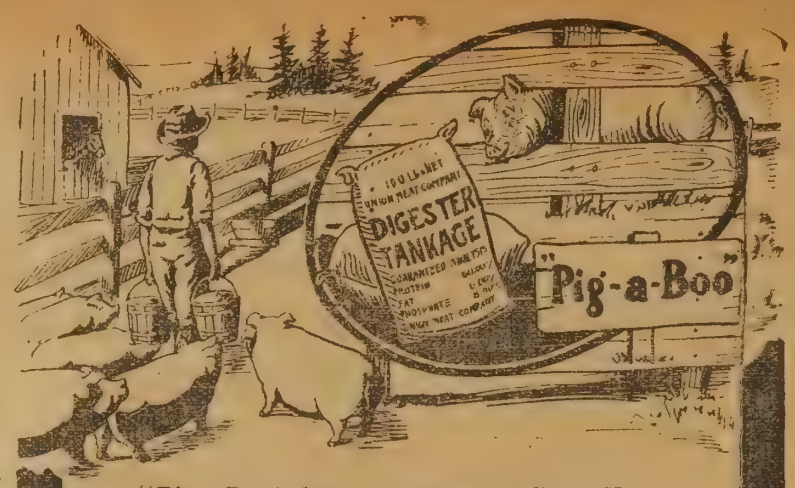
The war council had been appointed by President Wilson five weeks prior to the start of the first money-raising campaign, and the first great task was to provide the means of carrying on relief work on a scale commensurate with the military operations.

More than $100,000,000 was contributed in response to the first call for financial aid and the contributions, plus interest, brought the total receipts from the first drive to $105,099,257. Of this amount $17,006,121 was refunded to chapters for local relief work. Of the balance $77,721,918 has been appropriated, leaving a balance available for appropriations of $10,371,217. France has been the beneficiary of American Red Cross appropriations in the sum of more than $30,000,000.

During the week preceding Christmas the American Red Cross conducted a membership drive which resulted in the enrolment of approximately 22,000,000 new members. This was followed last month by a campaign conducted by the junior membership of the American Red Cross, which resulted in the enrolment in that collateral organization of virtually all the school children in America.

## BRITISH FOOD SITUATION.

That great grain trade authority, George Broomhall's Corn Trade News of Liverpool, in its issue of March 5, says:



"The developments of the last week as regards supply have certainly done nothing to induce any modification of the statements of Lord Rhondda and Sir John Beale that our difficulties with regard to food in the coming months will be very great."

A little later a more hopeful view is taken:

"Looking farther ahead to prospective supplies in the new season we are pleased to be able to say that the outlook is becoming distinctly brighter."

### Spain's Exports to United States.

Total declared exports from Spain to United States and possessions during 1917 were valued as follows: To United States, $35,733,492 against $33,768,822 in 1916; Philipines, $985,330 against $1,022,757; Porto Rico, $887,583 against $851,601; total, $37,606,415 against $35,643,180.

"Pig-a-Boo" Means Greater Profit to You.

"Pig-a-Boo"
DIGESTER TANKAGE

is a most profitable and satisfactory hog food. It is made from fresh, wholesome pieces of meat and its high percentage of concentrated animal protein, in meal form, develops bone and muscle and makes pigs grow.

CUT OUT HIGH FEEDING COSTS

Feeding a straight cereal ration cuts down your profit. The addition of "Pig-a-Boo" balances the ration, saves costly grain and puts more pork on your hogs per pound of feed fed than can be otherwise attained.

Get Your Share of Pork Profits

You Can Depend on "Pig-a-Boo" to Help You.

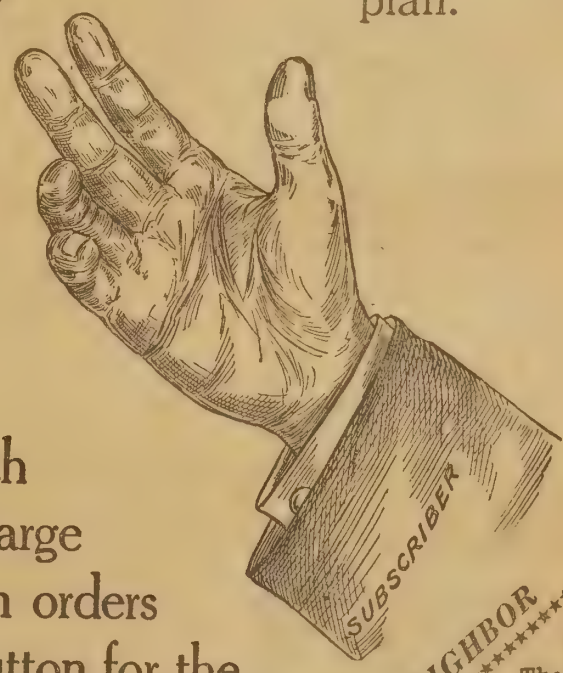
# A POPULAR PLAN

**Our present subscription plan aims to eliminate the subscription agent entirely and to give the reader the benefit.**



We are glad to say that our new plan is being supported wholeheartedly by hundreds who believe in the cooperative principle. We said to our friends—"Send your subscription orders direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, if you believe in eliminating the middleman, help us make our experiment a success. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

## SEND US TWO SUBSCRIPTIONS AND GET A PRIZE

Scores of friends are sending in subscriptions to us without thought of reward.

However, to show our appreciation for such cooperation, we are offering to send free of charge to any one who mails us *two* new subscription orders choice between a fine war atlas and a flag button for the coat lapel. To any one who secures *one* new subscription we will send a copy of the big war map originally published in the columns of The Spokesman-Review of Spokane

### A Real Saving

*Following Rates Now in Effect for Subscriptions to The Washington Farmer*

**25c** *FOR ONE YEAR*

**50c** *FOR THREE YEARS*

**$1** *FOR FIVE YEARS*

IF YOU'VE ANSWERED, PLEASE PASS TO A NEIGHBOR

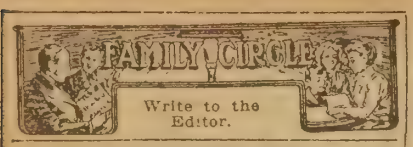
Apr. 18.

The Washington Farmer, Review Bldg., Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

Enclosed is $..... for ..... years subscription.

In Canada add 1 cent per copy for extra postage.



If you are already paid in advance your subscription will be set forward from the date to which you are paid.

## Save Wool Waste

Every one who has traveled along a road where sheep have been driven or across sagebrush land where they have grazed has noticed the tufts of wool left on the fence wires and the sagebrush. Wool is worth money now—a lot of money, and the state of Idaho is setting the pace in the movement to prevent the waste of these tufts of wool that are stolen by the brush and wire. It has organized what is known as the Liberty Service Volunteers, having its headquarters at Mountainhome, and will make any one a member who will pluck from the sagebrush and fences one pound of wool, left there when the grazing sheep have it rubbed from their sides, and forward it to headquarters. After the first pound the organization will pay the going price for wool in thrift stamps for every additional pound of wool forwarded. The sale of the first pound will be used to defray expenses. The organization will dispose of all the wool later and use the money raised from it for some war cause. Thousands of pounds are lost annually on the sagebrush as the great flocks graze back and forth. Wool is worth money.

## A Serious Condition

In reply to a letter urging that the food production campaign be put upon a more energetic basis Governor Holcomb of Connecticut writes: Your letter is received. I agree with you that the growing of food is one of the serious problems of this country, and much more serious under the present conditions than it ever has been, because the laborers are being absorbed in the army, and the price paid, especially in the east, in manufacturing industries are much more than the farmers can afford to pay. It is a serious condition, and growing more and more so. We are doing what we can in this state to stimulate agricultural production, but as you know, Connecticut is a manufacturing state, and the most profitable agricultural pursuit here, outside of tobacco growing, is truck farming, and that does not add much to the permanent food supply. MARCUS H. HOLCOMB.

## Greens as Food

The word "greens" is used to designate the leaves and stems of certain varietise of young plants used as food. These plants are generally boiled, sometimes with a piece of bacon, and when cooked are eaten with salt and vinegar. Rather a large list of plants is used in this way, among them the following:

California peppergrass.
Cardoon, the prickly artichoke, native of the Mediterranean region.
Chard, a variety of white beets, cultivated for its large leaves, leaf stalks and midribs.

Chervil, a garden herb, native of Europe, of the parsley family, the young leaves of which are used for greens, soups and salads.

Chicory, a perennial herb of the aster family, native of Europe and Asia, naturalized in the United States, has a dandelion-like roots and heads of bright blue flowers.
Chinese amaranth.
Chinese artichoke.
Chinese cabbage.
Chinese mustard.

Chives, small perennial herb of the lily family, allied to the leek and onion.

Corn-salad, called also lamb's lettuce.
Cress.

Dandelion, a perennial or a biennial herb of the aster family with a large yellow flower, the leaves sometimes used for food.

Dock, of which there are many varieties or species, but it is the leaves of the yellow dock which are used for food.

Endive, of which there are numerous varieties, forming two grops, viz., the curled and narrow leaved, and the Batavian or broad leaved.
Globe artichoke.
Goosefoot, called also lamb's quarters, pigweed.

Ice plant, a creeping plant of the fig-marigold family.

Kale, a variety of headless cabbage, yielding curled and wrinkled leaves.
Lettuce.
Malabar nightshade, a slender climbing plant of the goosefoot family—care should be used in nightshade, for some varieties are poisonous.
Mustard.
Nasturtiums.
Orache, the garden orache or mountain spinach.

Parsley, much used in garnishing dishes and flavoring soups.
Peppergrass.
Pigweed, a plant that belongs to the goosefoot family and the variety used for greens is sometimes called "lamb's quarter."

Pokeweed, a stout, smooth, perennial herb with large, tender leaves, sometimes used as green, but the root is more or less poisonous, is purgative, emetic and somewhat narcotic—the leaves should be used when they are young and tender.

Sorrels, of which there are several varieties, having a sour, acid, pleasant taste, used as pot herbs, and in the making of pies.
Spinach.
Turnip.
Purslane, familarly known as "pusley," a prostrate fleshy annual of the gardens and waste places of both the old and new world, with thick and reddish-green leaves and stems.

G. L.

## Boys' Calf Club.

The Illinois Shorthorn Breeders' Association has taken steps to cooperate with banks or anyone interested in organizing calf clubs. They offer their services in the selection of kinds and ages of calves desired, and in other ways.

## Sidelights

**How It Happened.**

Two young employes of a florist in Philadelphia, who are supposed to be variously employed in the rear of the establishment while the boss looks after things in the front, were recently startled by the appearance of an "old man" while they were engrossed in a game of checkers.

The proprietor was justly indignant. "How is it," he demanded, "that I hardly ever find you fellows at work when I come out here?"

"I know," volunteered one of the youths, "it's on account of those rubber heels you insist on wearing."

**Outranked in the Kitchen.**

The son of the well-to-do family had recently joined up as a private, and was spending his Christmas leave at home.

Returning from a walk, his mother espied a figure in the kitchen with the housemaid.

"Clarence," she called to her son, "Mary's got some one in the kitchen. She knows perfectly well that I don't allow followers. I wish you'd go and tell the man to leave the house at once."

Clarence duly departed to the kitchen, but returned in about half a minute.

"Sorry, mother, but I can't turn him out."

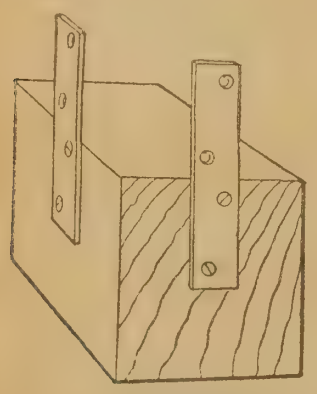
"Can't turn him out? Why on earth not?"

"He's my sergeant!" — Saturday Night.

**The Good Old Times.**

Think of the great age we live in! Think of the marvels of rapid transit.

That's what I am thinking of. And I am thinging also of the days when a good old canal boat would bring down all the coal you wanted in less than a week.—Washington Star.

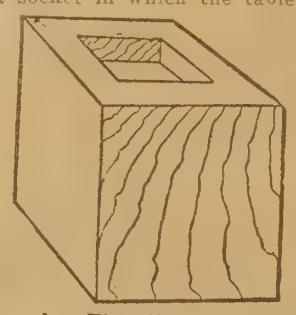


**Not That Kind of Woman.**

Doctor—You should be constantly at your husband's side, as you will need every little while to hand him something.

Mrs. Casey—Niver, doctor! Sure, O'im not the woman to hit a man whin he's down.—Boston Transcript.

## Kitchen Tables Usually Too Low



Kitchen tables and the bottom of sinks are usually too low for working surfaces when the housekeeper is standing, says Farmers' Bulletin 927. Low working surfaces are often responsible for tired backs and rounded shoulders because of the undue stooping and the strain on the arms and shoulders. The following figures show

the proper level of working surfaces for the height of the housekeeper:

| Height of Woman. | Proper Height of Working Surface. Inches. |
|---|---|
| 4 feet 10 inches | 27 |
| 5 feet | 28 |
| 5 feet 2 inches | 29 |
| 5 feet 4 inches | 30 |
| 5 feet 6 inches | 31 |

The kitchen table can be raised to the proper height by the use of blocks of wood. Different types of blocks for raising the height of tables are shown herewith. The one is a block of wood with a socket in which the table leg

fits securely. The other is a block of wood with metal strips and screws or nails for fastening the table legs or the cabinet table.

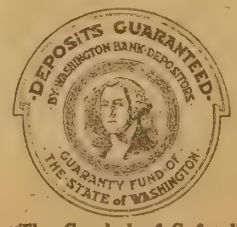
### Date Pudding.

Following is a good pudding, substituting syrup and sweet fruit for sugar.

Two cups milk.
One-half cup corn or maple syrup.
Twelve seeded dates cut up small.
Three tablespoons cornstarch.
One-half teaspoon salt.
One teaspoon vanilla.

Mix the cornstarch with one-fourth cup milk. Heat the remaining milk in a double boiler. Add the cornstarch, syrup, dates and salt, and stir until thick, cover and cook for 20 minutes. Add the vanilla and pour into a dish to cool. Serves five people. Prunes are good instead of dates.

# Is Your Bank Account Guaranteed?



Do you know that at the last session of the legislature a law was passed that gives absolute protection to money deposited in certain designated banks of the State of Washington? And that this protection is limited to banks that are members of what is now known as the Washington Bank Depositors' Guaranty Fund?

Have you been told by YOUR banker that there is such a law? And that it does not cost the depositor anything for this legal assurance that his money is absolutely secure against loss?

A large number of the most carefully conducted banks in Washington, with combined resources of approximately FIFTY MILLION DOLLARS, have been admitted to membership in the Washington Bank Depositors' Guaranty Fund.

The Washington Bank Depositors' Guaranty Fund is positive protection, plus faith and trust in the honesty and integrity of your banker.

Guaranty Fund banks are designated by the official Symbol of Safety, a sign that means careful, conservative banking.

The following banks are guaranty Banks, offering absolute protection to their thousands of depositors under the rigid provisions of the State Guaranty Law---insuring your money at not one penny of cost to you:

**"The Symbol of Safety"**

## Some Uses of Baking Soda.

Good for insect sting: Moisten a pinch of soda with water and apply to the wound.

For pimples, fever blisters, burns, poison from ivy: Mix one teaspoonful of soda with one-half glass of water and apply with a soft cloth.

To remove sunburn: Mix one teaspoonful of soda to one-half glass of vinegar and apply with cloth to face and hands just before retiring.

For bathing: Add a little to the water.

For sore throat: Hold a small quantity in the mouth, or mix a little with water and gargle frequently with it.

For cuts and barb-wire fence wounds: Mix one dessert spoonful of soda to one cup of boiling water and apply with a soft rag as it can be endured.

## Popcorn.

The following is a simple recipe for popcorn balls:

Pop the dried corn in a regular popper or a covered iron frying pan, shaking vigorously and taking care not to let it burn. A cup of dried corn will make three quarts when popped. It is good mixed with a little salt or melted butter and salt.

To make a sweet of it combine with syrup. Boil together 1 cup corn syrup, and 1 tablespoon vinegar until a few drops harden in water. Pour over the popped corn while the syrup is hot. This amount of syrup will cover three quarts of popped corn. As soon as the mass is cool enough to handle grease the hands well and form into balls.

## Gingerbread.

For a wholesome and inexpensive gingerbread recipe try the following:

1 cup cornmeal.
1 cup wheat flour.
2 teaspoons cinnamon.
2 teaspoons ginger.
1-2 teaspoon salt.
1 teaspoon baking powder.
1 teaspoon baking soda.
1 cup molasses.
1 cup sour milk or buttermilk.
2 tablespoons fat.

Sift the dry ingredients and add molasses, milk and fat. Beat well and pour into a greased pan. Bake 25 minutes. Notice that this recipe uses cornmeal for half the wheat flour ordinarily used.

### Motor Accidents.

More than 2000 motorists who failed to stop, look and listen, were killed at grade crossings in 1916, and many more were injured. The number of the killed and injured in these accidents is increasing 25 per cent a year.

# Prosperity Hits Western Canada

Big crops with war-time prices have put western Canada farmers on a prosperity footing that was undreamed of in pre-war days.

54 bushels of wheat and 90 bushels of oats to the acre were not uncommon yields last year; the average being 30 bushels of wheat and 53 1-3 bushels of oats. With wheat at $2.20, government set price, it is scarcely to be wondered that probably more western Canada farmers are wintering in California than ever before.

As another evidence of their prosperity more than sixteen thousand motor cars were bought in Saskatchewan during the year, which was a greater number than the total number of cars in Saskatchewan up to 1917. Oversubscription to the Victory Loans and large contributions to various war relief organizations also point vividly to the wealth of the country.

Many of our neighbors' richest farmers acquired their land free, while still others bought their land from the Canadian Northern railway at $15 to $25 per acre.

Canada still has 128,000 [illegible] farms to give free to settlers, and [illegible] other farms for sale at low prices. Descriptive information and FREE Booklet may be had by writing F. P. Brosseau, D. P. A., 805 Hastings st., Vancouver, B. C. Adv.

THE SELF-OILING WINDMILL
has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load. We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

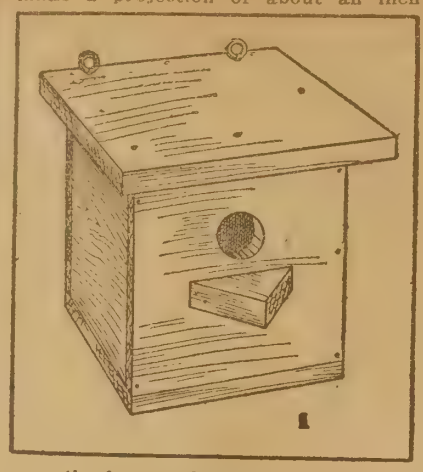
# Handicraft For Boys



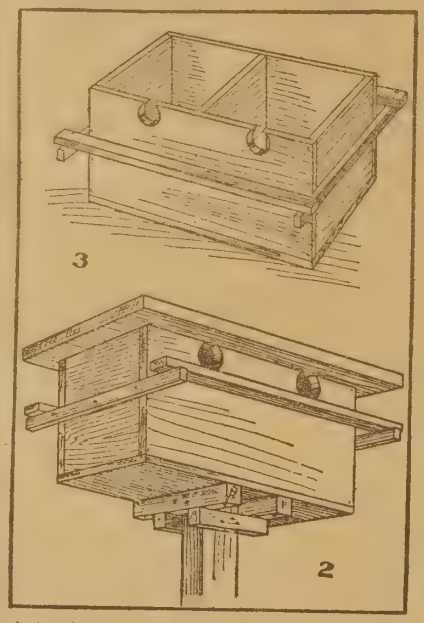
By A. Neely Hall

(Copyright by A. Neely Hall.)

## Home Made Bird Houses.

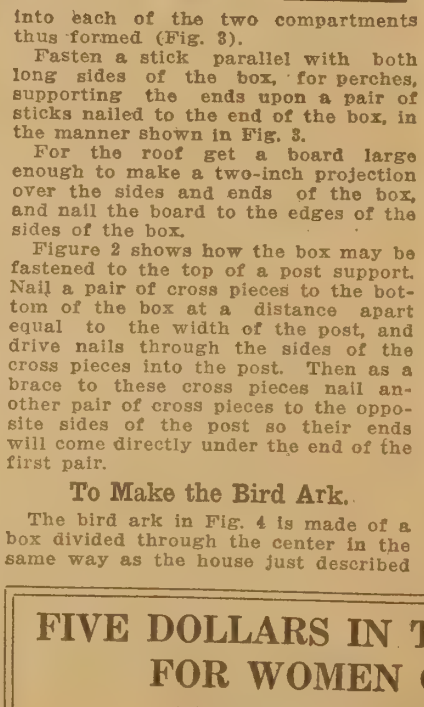
A bird house need not be elaborately constructed. In fact houses of good simple designs are much better suited to the purpose of providing homes for bird tenants and certainly in better taste than houses adorned with meaningless jig-sawed brackets and carvings. So when you build bird shelters remember to make them plain.

The cube-shaped house in Fig. 1 may be hung upon a wall. That is why a pair of screw-eyes are screwed into the top (see illustration). A box measuring eight inches in width, depth and length is plenty large enough. Cut a hole one inch in diameter in one side of the box near the top for a doorway. If you haven't a bit-and-bitstock with which to bore the hole, you can make a small hole with a nail or screw-eye, and then enlarge it to the right size with a sharp knife or small compass saw. Make the perch below the opening triangular in shape, and fasten it to the box with short nails. For the roof cut a piece of board of the right measurements to make a projection of about an inch



1

over the front and sides of the box, and nail it to the top edges.



## Two-Compartment House.

The two-compartment house in Fig. 2 is made of a box about 12 inches long, eight inches wide and six inches deep.

The box is divided in the center of its length by a partition, and a doorway is cut through one side of the box

3

2

into each of the two compartments thus formed (Fig. 3).

Fasten a stick parallel with both long sides of the box, for perches, supporting the ends upon a pair of sticks nailed to the end of the box, in the manner shown in Fig. 3.

For the roof get a board large enough to make a two-inch projection over the sides and ends of the box, and nail the board to the edges of the sides of the box.

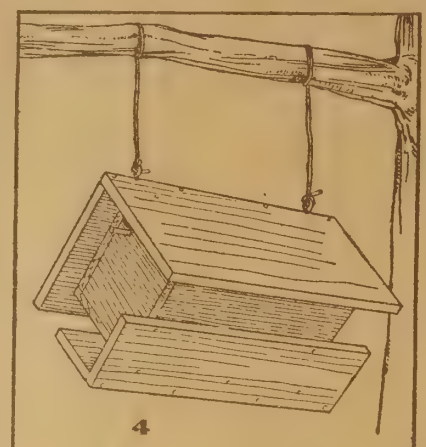


Figure 2 shows how the box may be fastened to the top of a post support. Nail a pair of cross pieces to the bottom of the box at a distance apart equal to the width of the post, and drive nails through the sides of the cross pieces into the post. Then as a brace to these cross pieces nail another pair of cross pieces to the opposite sides of the post so their ends will come directly under the end of the first pair.

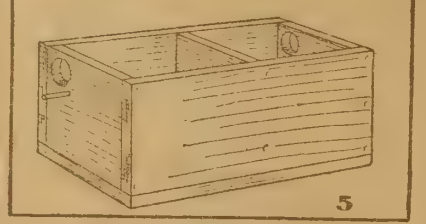
## To Make the Bird Ark.



The bird ark in Fig. 4 is made of a box divided through the center in the same way as the house just described was divided, but instead of cutting the doorways through the sides, make one through each end near the corner (Fig. 5). When the box is turned on edge in the position shown in Fig. 4, the openings will come directly below the peak of the roof. Fasten a short peg into a hole below each doorway for perches.

Make the roof boards large enough to form two-inch projections over the sides and ends of the box.

The base or hull of the ark is made of two boards of the length of the

4

5

roof pieces and one-half as wide. Nail an edge of one to an edge of the other; then nail to the box.

Screw a pair of screw-eyes into the peak of the roof, and suspend the ark with ropes from the limb of a tree, or from a bracket fastened to the side of a wall.

## Get the Thrift Habit

On another page of this issue will be found a coupon by means of which any reader of this paper can secure thrift stamps or war savings stamps by merely filling it out and mailing it to the office of the paper.

If you are in position to invest considerable sums, the Liberty bond is your opportunity. But this war stamp scheme is ideal for the safe investment of amounts from 25 cents up to a few dollars and investments of this kind are of real value to the government in the conduct of the present war.

## Girl Farms for Soldier Boys.

Elizabeth Miller of Lake Basin, near Billings, Montana, is plowing and seeding 40 acres of oats in the Golden valley, near Broadview. Last week she drove six miles to ask the chairman of the Golden Valley Red Cross auxiliary if she would accept the proceeds from one acre of oats from that crop. The offer was gratefully accepted by Mrs. J. L. Forkner, chairman.

### Children Need Milk.

The housewife must not practice economy at the expense of the health of her family. Growing children must have good milk to drink, as well as other nourishing food.

## FIVE DOLLARS IN THRIFT STAMPS FOR WOMEN OF THE FARM HOME

A First Prize of $3 and a Second Prize of $2.

These prizes are for the women and girls of the farm home which has

1. An automobile, or
2. A farm lighting system, or
3. A farm water system.

A first prize of $3 and a second prize of $2 in Thrift stamps will be given for the best article written from your own experience on either of the following:

Why you would not be without an automobile, or

Why you would not be without your farm home lighting system, or

Why you would not be without your farm home water system.

The contest will close May 1.

Write on one side of the paper and mail your article to The Editor of The Washington Farmer, Spokane, Wash.

### Won Eight Thrift Stamps.

Dear Aunt Nellie: This is my first letter to the Corner and I hope it will not be my last. I am 12 years old and was born August 4, 1905. I was born in Spokane. Have I a twin? I have bought one war savings stamp and have enough thrift stamps for another. I won the first prize at a masquerade. The prize was eight thrift stamps. I haven't got any brothers or sisters. My papa is dead, but I still have my mama. There is a little girl of the same age and who was born in the same month who says she lives on a 118-acre farm. I do wish she would write me. I was going to write to her, but I lost the paper. I am in the sixth grade. I love horses. I have one on the mountain. I have a dog named Taft and a cat named Muffins.—Marie Driscoll, 15 North E street, Wenatchee, Wash.

### Will Join a Thrift Stamp Club.

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner, and I hope it won't be the last. I am 10 years old and I will be 11 December 7. Have I a twin? I am in the fifth grade at school. I live on a farm. I enjoy reading the Children's Corner very much. We have four cows. Their names are Bess, Blackie, Linnie, Pansy, and two calves named Nellie and Queen. I am the only child in the family. I have five pets, a cat, a dog and three hens. My cat is a white Angora and my dog is a collie. I bought one war saving certificate, and I think I will join a thrift stamp club.—Doris Miller, Wickersham, Wash.

### Brother Helps to End the War.

Dear Aunt Nellie: I am 9 years of age and in the fourth grade. I have five brothers. One of my brothers is in the navy. He has been in the navy eight months. He is trying to end this awful war. I wish he would. We have three cows and one calf. We have three horses. Their names are Queen, Nell and Prince. We have a pet cat. She is gray and white. At night she stays at the barn and in the daytime stays at the house. I am going to school now. Our teacher's name is Miss Nero. I like my teacher.—Beryl Boyce, Friday Harbor, Wash.

### Had a Contest at School.

Dear Aunt Nellie: This is the first time I have written to the Corner and I hope it will not be the last. We have one horse and his name is Billy, one cow named Spotty and about 30 chickens. I have two kittens and their names are Pet and Blackey. We had a contest at school between the upper and lower room and the upper room beat. I bought $4 worth. I have dark blue eyes and dark brown hair. My birthday is September 20. Have I a twin? I go to Buena Vista school and I like it fine.—Laurella Farthing, R. R. 1, Prosser, Wash.

### A Consolidated District.

Dear Aunt Nellie: I am writing to ask if you would like to have me tell you about my visit to the Spokane and Eastern Trust company's bank. W. T. Trinieli, my teacher's brother, who is secretary of the bank, took us through and then gave us lunch. When I say us I mean the fourth, fifth, sixth and seventh grades of Normandie school, which is seven miles west of Spokane on the Sunset boulevard. We have a consolidated district. There are four schools that have the first seven grades, and the high school, which has eighth, ninth and tenth grades, and then they go to the Cheney normal. The last week in February we formed a Junior Red Cross. I am knitting a sweater now and I have knit a pair of wristlets, a water bottle cover and a wash cloth already. I was 13 the 15th of last October. I would like to correspond with any cousin who is my age and in the seventh grade. There is a boy at school in my class who is the same age as I am and his birthday comes on the same day as mine. Please let me know if you wish me to write about my trip to the bank. —Selena Elizabeth Deno, age 13, R. F. D. 1, Spokane, Wash. (I know the cousins would be glad to hear about your trip and I am sure that I would, too. Write about it soon, Selena, and we will watch for your letter.—Aunt Nellie.)

## ON WHEATLESS DAYS

USE NO BREAD, CRACKERS, PASTRY OR BREAKFAST FOODS CONTAINING WHEAT.

### Wheatless Sponge Cakes.

It happened one day late in March. A conference was on at the United States food administration and the subject was wheat. In the midst of solemn debate a triumphant cook entered the room. She bore a tray with the evidences of her triumph—three sponge cakes, one of corn flour, one of rice flour and one of barley flour.

Not a dust of wheat flour was used in these cakes and again the American woman had triumphed.

Here they are: Proceed carefully; either weigh materials, following the old-fashioned rule for sponge cake, or use a measuring cup. Sift flour before measuring and measure lightly.

### Barley Sponge Cake.

Barley flour, one and one-third cups; sugar, one cup; eggs, four; lemon juice, one tablespoon; salt, one-eighth teaspoon.

### Corn Flour Sponge Cake.

Corn flour, one cup; sugar, one cup; eggs, four; lemon juice, two tablespoons; salt, one-eighth teaspoon.

### Rice Sponge Cake.

Rice flour, three-fourths cup; sugar, one cup; eggs, four; lemon juice, two tablespoons; salt, one-eighth teaspoon.

### Directions for Mixing.

Separate the yolks and whites of the eggs. Beat the yolks until light, add the sugar, the salt and the lemon juice. Fold in alternately the flour and the stiffly beaten whites.

### A Little Fair for the Children.

Dear Aunt Nellie: This is the first time I have written to the Corner; and I enjoyed reading the letters. I am 10 years old. My birthday was March 10, and my brother's was March 11. He was 21 years old. I live on a farm. I have one little Bantam; she has laid four eggs already this year. I have four brothers and two sisters. Their names are Ray, John, Virgil and Marion. These are my brothers' names. Grace and Delia are my sisters' names. I go to school; my brother goes, too. I have about two miles to go to school. There are 22 children in my room. There are three rooms and three teachers. My teacher's name is Miss McDough. I like her fine. I am in the second grade. I haven't been absent or tardy yet this year. We have every year a little fair for the children; last year for prizes I got 50 cents for making a basket and paper beads, and the year before that I got a doily for sewing. This year I have taken gardening and canning.—Lucille DeLong, Vancouver, Wash., R. F. D. No. 3, Box 132.

### Grandmother Knits for Red Cross.

Dear Aunt Nellie: There were so many letters that I have seen in the Farmer that I thought I would write. I am going to be 11 years old September 9. There are 11 children in our school. We have two and a half miles to go to school. There are seven children in our family, three girls and four boys. Five of us go to school. Every night when I get home from school I have to milk. We have three cows to milk. I like to tie up colts. There are eight colts to tie up. We have not very many chickens. I do not like this war. None of my brothers have to go to the war. My grandmother is knitting for the Red Cross. I am going to see who can answer my riddles: A riddle, a riddle, as I suppose, a hundred eyes and never a nose. I went to the wood and got it; I sat me down to look at it; the more I looked at it the less I liked it, and I brought it home because I could not help it? Why is Uncle Sam Red, White and Blue?—Alice Kupers, Mohler, Wash.

### Cousin Elizabeth Can Knit.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. May I become a member? I am 13 years old and I am in the seventh grade. I am about five feet and three inches tall and have blue eyes and light brown hair. I can knit and crochet. I helped mama and my sister knit some socks for the soldiers, and I also knitted a part of a quilt block. I belong to the Junior Red Cross. We knit every Friday afternoon at school from 2:45 until 3:30. I like to knit. We have three horses, one cow, one cat and one dog. Our horses' names are Nig, Ben and Prince. Our cow's name is Daisy. Our cat's name is Patrick and our dog's name is Pete. I have a big doll. She is two feet four inches tall. She has four teeth and dark brown hair. Her name is Marian Helen. I have had her since I was 8 years old. I hope I have a twin? My birthday is September 7.—Elizabeth M. Dorn, Box 46, Naches, Wash.

### Columbia River Is Beautiful.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. Peach is located on the Columbia river, which is very beautiful. Peach consists of about 360 acres. It is almost all a large fruit ranch. I am a girl with brown hair and eyes of the same color. I have two sisters and one brother, the latter is going to school at Cheney. My father and mother own a fruit ranch. We have some live stock. My pet is a large dog which we have raised. I am hoping to hear from some one who has written to the Children's Corner.—Yula Pugh, Peach, Wash.

### Harry Thomas Joins the Corner.

Dear Aunt Nellie: I was looking over the Farmer tonight and I happened to run on to the Corner. I read it and now I want to become a cousin. I am 12 years old now and my birthday is September 11. Have I a twin? I go to school every day. I have two miles to walk. My brother and sister go to school, too. I live on a fruit ranch near Ephrata. There is 36 acres of orchard and four acres in a hill that runs through our place and 10 acres across the road. I have a third interest in a heifer calf, a pig and chicken, and a half interest in a turkey. We have two horses, two cows, three heifer calves, and four pigs and about 30 chickens. I am in the seventh grade now and my teacher says that I will pass. This is my fourth term in school. My brother is in the fifth grade and my sister in the second.—Harry Thomas, Ephrata, Wash.

### Buttercups Are Blooming.

Dear Aunt Nellie: I have been reading the letters in the Children's Corner for a long time so at last I decided to write too. There are buttercups blooming. I go to Kirby school and I am in the eighth grade. I walk almost two and one-half miles to school. Miss Lexie B. Adams is my teacher and I like her very much. There are 19 pupils going to my school and we have a fine time playing at noon and recesses. One of my little playmates has written before. Her name is Ellen Elsensohn. Lydia Lowery is almost my twin. Her birthday is May 25, and she is 14 years old, while my birthday is May 23 and I am 13 years old. Have I a twin? If I have I would like to correspond with her. I would like to hear from Lydia Lowery and Alice Clinesmith. I have one sister seven years old. Her name is Maurene. I sends lots of my love to you, Aunt Nellie, and to all of the cousins.—Mildred Jean Riley, R. F. D. 2, Pomeroy, Wash.

### Two Pairs of Twin Cousins.

Dear Aunt Nellie: I will be 12 years old May 9. I am in the fifth grade. Have I a twin? I see Lila Smith is 12 May 7. She is almost a twin. I hope she will write to me. We live 10 miles from Seattle on Vashon island. We like the fruit out here, as in Dakota, where we came from, there was not much fruit. My teacher's name is Mrs. Copeland. We have 19 pupils in our school. I live half a mile from school right up a hill all the way. I live with my grandma and grandpa. We have two pair of twins, my cousins. They are 8 years old and 3 years old. Their names are Lillie and William, which are a boy and girl, and Minnie and Linnie, two girls. Their mama is dead. My grandpa has a cow and about 60 chickens, two rabbits, one pig and two cats. When we go to Seattle or Tacoma we have to take a boat. We like the Farmer very much.—Minnie Meloy, Box 55, Lisabeula, Wash.

### Call Their Farm "Idlewild."

Dear Aunt Nellie: I am 11 years old December 6. If I have a twin I wish he or she would write to me. I live on a farm of 640 acres. We have 16 horses and two colts. We have three cows and five calves. I am in the sixth grade. I like to go to school. The name of our farm is Idlewild. We have water works in our house. There is a stream running by our place that runs about eight miles. I have two cousins in the army, one drafted, the other volunteered. I have knitted two wash cloths and might knit more for the soldiers. I will be glad when spring comes so I can pick flowers and play outdoors. I have one dog. His name is Towser. We have about 90 chickens. Mama and papa got my sister and I a $5 war saving stamp each. I hope this war will soon end.—Earl Jenkin, Coulee City, Wash.

### A Little Sorrel Pony to Ride.

Dear Aunt Nellie: I have a brother and one sister. Their names are Anna and Johnnie. I have been reading the letters of the Corner. My father takes the Farmer and I read all the letters. I am 11 years old and will be 12 August 14. We live 12 miles from Goldendale out east. I have joined the Red Cross and my sister has too. I live on a 600-acre farm. I like to go riding horse back in summer. I have a little pony to ride. It is sorrel and has a white spot in its face. Its name is Tip. I go to school in Pleasant Valley. We go one mile and one-half to school. My father has six horses. We have two cats. My brother is trying to pull my hair tonight. He will be two years old June 22. My teachers' names are Lillian Houpt and Miss Helen Argyle. We have a new building in Pleasant Valley. It has two rooms. Have I a twin? If I have I wish they would write.—Lorena Thomson, Goldendale, Wash.

### Sister Is in College.

Dear Aunt Nellie: This is my second letter to the Corner. I like to read the letters in the Corner. They are very interesting. I like them very much. I go to school most every day. I like school very much. We have about 38 pupils in our school. I am in the third grade. My sister is in the fourth grade at college. She is 13 years old. Her name is Hazel. She has written to the Corner before. We have two horses, five cows, seven calves, 15 pigs, one dog, three cats and seven chickens. The horses' names are Molly and Jip. The cows' names are Molly, Susy, Cherry, Nanny, Queen.—Myrtle Webster, Route 1, R. F. D., box 62, Olalla, Wash.

### A Member of the Red Cross.

Dear Aunt Nellie: This is the first time I have written to the Corner, but I hope it will not be the last. I am in the seventh grade and am 13 years old. My teacher's name is Mrs. Prigemore. We live on a 20-acre farm and have five cows and four calves. We have a horse, a pig and about 30 chickens. We also have a dog and two kittens. I walk two and one-half miles to school every morning. I am a member of the Red Cross and am knitting. I have three sisters and two brothers, Elvira, Signa and Elna, Edwin and Sigfried. Have I a twin? If so I wish they would write. My birthday is March 2.—Nina Nordquist, Winlock, Wash.

### All Have Red Cross Buttons.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old and will be 11 July 21. Have I a twin? My teacher's name is Mr. Pence. I like him fine. I have four sisters. Their names are Selma, Emma, Alta, Ebba. I have no brother. We have started a Junior Red Cross. We all got a Red Cross button. There has not been very much snow this year. I have a cat. It is white and gray. We made some paper beads in school like those in the Farmer. I got the first prize in them. I will close for this time.—Christina Jasperson, St. Andrews, Wash.

### Can Run the Caterpillar.

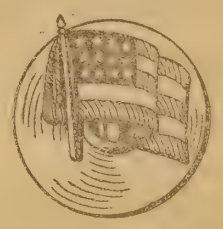
Dear Aunt Nellie: This is the first time I have written to you. I am 11 years old and I am in the fifth grade. My birthday is December 2. My teacher's name is Nellie Balch. I like her fine. Have I a twin? If I have I wish they would write to me. We have a caterpillar. I know how to run it too. I have two sisters and two brothers. My sisters' names are Rosa, age 18, and Vena, age 16. My brothers are Jake, age 23, and William, age 14. We have nine horses and two colts. We have four milk cows and five calves.—Henry Besel, Farmer, Wash.

### George Walks Two Miles to School.

Dear Aunt Nellie: I enjoy reading the cousins' letters so I thought I would write one to see if I had a twin? If I have I wish she or he would write to me. My birthday is December 16. I am nine years old. I have one sister. Her name is Olivida. I have two cats. I live on a 20-acre farm. I go to the Zillah school. I have to walk about two miles. My teacher's name is Miss Dorothy Williams. I am in the fifth grade.—George M. Brown, R. F. D. 1, Zillah, Wash.

### George Rides Horseback to School.

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 10 years old and in the fourth grade at school. My teacher's name is Miss Root. I have six brothers and six sisters. I ride horseback to school. We have a mile and a half to go to school. My father takes the Farmer and I like the letters in the Corner very much.—George W. Bentley, R. F. D. 1, Reardan, Wash.



### Wishes the Corner Would Increase.

Dear Aunt Nellie: I am 10, almost 11 years old, for my birthday is June 4. I have one twin whose name is Marion Hagon and her birthday is the exact day mine is. I am in the fifth grade and my teacher's name is Miss

(Continued on the following page.)

# Children's Corner

Aunt Nellie

(Continued from the preceding page.)

Goddard. I go to the Harvard school. We live in Midland out in the country. We own one acre. We have one cow named Beauty and we have some chickens. I have two sisters, whose names are Gertrude, 9 years old, and Bernice, 6 years old. I know how to knit, tat and crochet. I like to read the letters of the cousins and I wish the Corner would increase a bit.—Violet Georgia Waech, R. F. D. 94, Route 4, Midland, Wash.

**Roger's First Letter to the Corner.**

Dear Aunt Nellie: I am seven years old. My birthday is May 2. I will be eight then. Have I a twin? I am in the second grade at school. I am sick in bed, so don't go to school now. I have three brothers and three sisters. We live on an 80-acre farm. We have two horses, two colts, two cows, and two calves. We also have 30 hens and two roosters. We have on dog. Her name is Ring. She is black and white. This s my frst letter to the Farmer.—Roger Naythan Tarbert, Deer Park, Wash. (We are glad to have you write to us, Roger. We want a lot of boys to write so the Corner will be more interesting for them. We hope you will soon be able to be back at your school again. Aunt Nellie.)

**Goes to a Small Country School.**

Dear Aunt Nellie: I have been reading the letters in the Corner for some time, but this is the first time I have written, but it shall not be the last if I see this letter in print. I am 13 years old and in the eighth grade. My father has some land in Montana and I am saying in Walla Walla with my uncle and aunt. I have light hair and blue eyes and am five feet four inches tall and weigh 120 pounds. I go to a small country school in district seven, Walla Walla county. I have to walk about one-fourth of a mile to school with my cousins. I shall not write any more now, but shall write more if I see my letter in print. I should like to correspond with some of the cousins.—Hope Ferguson, Route 3, Walla Walla, Wash.

**Brown Hair and Light Blue Eyes.**

Dear Aunt Nellie: This is the first time I have written to the Corner and I hope it will not be the last. I have dark brown hair and light blue eyes. I am 9 years old. Have I a twin? We have a farm of 100 acres. We have three horses. Their names are Billy, Polly and Bob. We have six cows and 12 calves. I have two sisters, Tresa and Mary.—Barbara Hofmeister, Bossburg, Wash.

**Effie Likes to Go to School.**

Dear Aunt Nellie: This is my first time to write and I hope it won't be the last time. I am 9 years old and in the third grade. I have two brothers and two sisters. My youngest brother is 1 year old. My birthday is August 31. My sisters' names are Rhoda and Viola. I hope to see my letter in print. I have a cat and a dog. We have a cow and a calf, a horse and a colt. I like to go to school. I go a mile and a half to school. I will close for this time.—Effie Borden, R. F. D. 1, Box 17, Pateros, Wash.

**Wishes Her Twin Would Write to Her.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, but hope it won't be the last. We live on a rented farm of 50 acres. I like to go to school. My teacher's name is Mrs. Morrow. There are three rooms and 11 grades in our school. I have to go about one-fourth of a mile to school. We come home for our dinner when the weather is nice. I have two brothers and two sisters. My oldest brother is 17 and he is in the 11th grade. We have three pigs, about 75 chickens, six calves, four cows and 21 horses. I hope to see my letter in print. My birthday is Septemebr 13. Have I a twin? If I have I wish she would write to me.—Iva R. Cook, Box 66, Cloverland, Wash.

**Let Each One Do His Part.**

Dear Aunt Nellie: We live one mile from town on an apple orchard tract. I am in the seven A class. My teachers' names are Miss Newberg and Mrs. White. The pupls of our school are joining the Junior Red Cross. Thirty-nine out of 47 have joined in our room. We have organized a Red Cross society on our street. We have met three times. We have made 1700 gun wads, 139 comfort blocks, 16 triangles, and cut one and three-fourths of a pound of moss. This is the second time I have wrtten to the Corner. I would like to see it grow. Let each one do his part. —Eunice Pool, Box 134, Wenatchee, Wash.

**Has Hattie a Twin Cousin?**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old. My birthday is December 11. I have one sister and three brothers. My sister's name is Gertrude and my brothers' names are Orvil, Carl and Walter. I am in the third grade in school. I like to go to school. We have to go about two miles. We have two cats and one dog. The dog's name is Queen. We have two horses. Their names are Maud and Bill. Have I a twin? I would like to see my letter in print.—Hattie Van Der Yacht, Linden, Wash., R. F. D. 1, box 61.

**Have Lots of Fun at School.**

Dear Aunt Nellie: I enjoy reading the letters from the Corner and I think I would like to write to them all the time. I think I will tell you about our school. I am in the third grade and I like my teacher. Her name is Miss Larson. There are 22 in our room. We have lots of fun at our school. I am staying at my grandfather's and grandmother's house. My mother is dead and the last time I heard from my father he was in Idaho. My grandmother died when I was in the first grade.—Frances Rena Patterson, R. F. D. 4, Box 93, Tacoma, Wash.

**Has a Farm in Montana.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 8 years old. My birthday is June 16. I have a twin brother. His. name is Elton Bentley. We have had the whooping cough. But we are all over it now. We have three cows and one calf. Their names are Blossom and Reddy, June and the calf's name is Sally. My father takes the Farmer. My father has a farm in Montana. My sister is married. She is in Montana. My teacher's name is Miss Root. I go to the Spring Creek school.—Esther Elsie Bentley, Reardan, Wash.

**Lewis Has a Dog Named Rover.**

Dear Aunt Nellie: I am 10 years old. My birthday is August 20. We have five horses, and their names are Bell, Babe, Nellie, Dan and Nell. Our cows' names are Bird, Star and Dick. My dog's name is Rover.—Lewis F. Kime, Deer Park, Wash. (We are surely glad to welcome another boy to our Corner for one boy's letter will interest other boys and then perhaps some day we will have as many boys in the Children's Corner as girls. Write to us again soon, won't you, Lewis? Aunt Nellie.)

**Blanche Is in the Eighth Grade.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 13 years old and will be 14 next January 9. I am in the eighth grade at school. I was operated on for appendicitis the first of February and came home from the hospital February 25. I have seven brothers and five sisters, so I have lots of playmates. I wish Thelma Hazel Owens would write to me as we are nearly the same age and if I have a twin I wish he or she would write to me.—Blanche J. Bentley, R. F. D. 1, Reardan, Wash.

**Hilda Is a Busy Little Girl.**

Dear Aunt Nellie: I am 10 years old. My birthday is March 2. Have I a twin? If so, would like to hear from them. I have no brothers or sisters. I live on a 160-acre farm. My papa has four mules and I have a pony named Dick that I ride to school. My schoolteacher's name is Miss Buchers. I have been missing school. I have been sick for some time. I am in the third grade. There are 10 scholars in our school. The name of the school is Sage Hill. I live six miles from school. I got three chickens for a Christmas present, and lots of candy and nuts. I do like to read the farm paper. It has such interesting stories. I suppose all like to read interesting stories. I have been reading "Black Beauty" and am going to read "Beautiful Joe." "Beautiful Joe" is more interesting than "Black Beauty." When I get started to read, you can't make me stop until I get through. I am going to join the Red Cross. I found a twin, Thelma Hazel Owens, Oakesdale, Wash. I have a dog and a cat. My dog's name is Tippy and my cat is Pattie. My dog is a bird dog. I can crochet and do little fancy things. My mama is going to show me how to do embroidery work and tatting. I help mama wash dishes and sweep and get dinner and make baking powder biscuits and sew aprons. I help fix gardens, and get my own eggs in. Sometimes I get two eggs, sometimes one. I got one rooster for my birthday present and two hens. I will have to set my hen pretty soon. I think little chicks are very pretty when they are tiny. I will be glad when the little chicks come. We have taken the farm paper for some time. My papa is seeding with his four mules. —Hilda Knutson, Ringold, Wash.

**Has Knitted Eight Squares.**

Dear Aunt Nellie: This is my second letter to the Corner. I was 8 years old March 15. I will soon finish my second reader. There is only one more story to read. I have eight squares done and I am on my first wash cloth. Harriet has four squares done and she is going to knit a wash cloth. She wishes that she had brought the cotton home last night so that she could knit today. Tiger is sitting on the chair by me.—Elizabeth Cook, R. F. D. route 2, box 46, Mansfield, Wash.

**Mazie Has Two Brothers.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am eight years old. I have two brothers. Their names are Delmar and Claude. We have two horses and two cows and two calves. The horses' names are Queen and Bell. Our cows' names are Daisy and Rosie. The calves' names are Bill and March. My teacher's name is Miss Clack.—Mazie Lea

**A French Officer at Their School.**

Dear Aunt Nellie: This is my first letter to the Corner. I live on a 24-acre farm. I am 11 years old. My birthday is November 18. I have one brother His name is Robert. I am in the sixth grade. I have a cat. Our dog got killed last Saturday. I have several thrift stamps. There was a French officer at our school yesterday. —Jennie Stewart, Sumner, Wash.

**About Their Washington Program.**

Dear Aunt Nellie: This is the fourth time I have written to the Children's corner. I am going to tell you about our Washington program. We had two songs and we had a tea party by three girls and the colors by the same girls—Alice, Gertrude and Tracy. There were eight people there. They all said it was fine. I went to school every day. I was never late.—Tracy Germont, rout 1, Greenacres, Wash.

**The Way Helen Does Her Bit.**

Dear Aunt Nellie: I have just been looking over the list of prizewinners and have just read that long, beautiful letter you wrote. I read Alice Clinesmith's letter the week before. It was surely a lovely letter; so interesting. We surely, surely are Hooverizing here. Eat cornbread once a day, and observe meatless day and wheatless day. I have one brother in the navy and one sister in the Red Cross service. I have written to you before and inquired about a twin, and found two—James Sanders and Edna Reinbold. I got one letter from each. I answered them both, but got no reply. I have joined the boys' and girls' gardening club. I have received some literature on gardening and expect to put my garden out in a little while. I am going to try to do my bit by having a garden. One of my neighbors has two children, and when she goes out at night she does not like to take them along, so she hires me to come and stay with them. She pays me 25 cents for staying and helping her with the work in the morning. I am going to buy thrift stamps with that which I have saved, after buying seeds for my garden. There are four birds building nests in our house, one over the porch door and one in some vines and one on the east side of our house. I take lessons on the violin and my sister takes piano lessons. My schoolteacher gives me lessons, with four others; one plays the flute, one the clarinet, one the trombone and one the cornet. We want an orchestra and are doing our best to have one. The girls of our school have organized a Red Cross society. Our teachers are at the head of it. We have made one quilt already. I am knitting a muffler for one of my soldier friends.—Helen Calkins, Age 13, R. F. D. 1, Sunnyside, Wash.

**Oris Stays with Grandmother.**

Dear Aunt Nellie: This is the first letter to the Children's Corner. I am eight years old and I go to school. I stay with my grandmother. I am in the frst grade and like it fine. I have one brother. His name is Lee. I go home on Friday to see the little lambs and three pigs. I am going to join the Red Cross. My brother is four years old. I wish good luck to the Children's Corner.—Oris May, Dxe, Wash.

**Will Write More Next Time.**

Dear Aunt Nellie: This is the first time I have written to the Corner and I hope it won't be the last time. I have two brothers and two sisters. We have a cow, calf, a horse and colts. I will not write much this time and if I see my letter in print I will try and write more next time.—Rhoda Barden, R. F. D. 1, box 17, Pateros, Wash.

**Birthday Comes in February.**

Dear Aunt Nellie: I am 8 years old. I have one sister and one brother. My sister's name is Evelyn. My brother's name is Harold. My teacher's name is Miss Wagoner. We have six horses, four cows, two cats and two dogs. I am in the third grade. My birthday is February 10.—Lucile McKinney, R. F. D. 1, Rockford, Wash.

## Big War Map for Two Subscription Orders

A splendid four-page war map of the battle front in France, originally published in the Spokane (Wash.) Spokesman-Review, will be sent to any one who secures and mails us one new subscription to The Washington Farmer.

This map is printed in four sections and when pasted together, according to directions furnished, will give you a map 64 inches long and 21 inches wide; presenting the details of the great fighting territory in such a way that you will be able to follow every detail of the big battles which are now brewing.

Send orders for new subscription and war map to

# Shorthorn Sale

## At Ontario, Oregon

**Thursday, April 25th**

UNDER AUSPICES OF THE NORTHWEST SHORTHORN BREEDERS' ASSOCIATION.

**75 Registered Shorthorns 75**

**Males and Females**

Drawn from the following well known herds of

Day & Rothrock
Jas. McCroskey & Son.
W. J. Townley.
Joe Turner.
A. D. Dunn.
W. O. Cummings
W. W. Green.
G. W. Delay.

and Hutchinson & Sherman.

**Breeders, Farmers and Rangemen** will find this sale an exceptional opportunity to select a class of cattle best suited to their requirements.

Included in the offering are some of the best bulls ever entered for sale in the northwest, both as to pedigree and individuality.

The females are very high class and should draw the attention of discriminating buyers, therefore any one wishing to strengthen his herd should not overlook this opportunity.

All stock will be judged day preceding sale by F. W. Harding of Chicago, secretary American Shorthorn Breeders' Assn.

**For catalogues and other information write**
**Joseph Turner, Manager Sales, Meyers Falls, Wash.**
**Or Ontario, Oregon, Moore Hotel.**
**Gue & Cranke, Auctioneers.**

**FARE AND A THIRD (on certificate plan) from all points in Oregon, Washington and Idaho on all railroads to Oregon Horse and Cattle Raisers' Convention and Shorthorn Sale, April 23, 24, 25.**

## News for Breeders

S. F. Zysset of Scio, Ore., reports that he has already sheared his Angoras and that the fleeces were heavier than ever before. His does are dropping their kids early, some of them before shearing. Goats generally over the county have done well and are coming onto spring pasture in fine condition, which Mr. Zysset attributes to the open winter, with exceptionally good feeding conditions.

A. E. Wescott of Banks, Ore., recently sold to A. W. Cope of Langlois, Ore., his herd bull, Oneida's Oregon Pogis, by Merry Miss' Son and out of Pogis Oneida. The bull bred by William Ladd has headed Mr. Westcott's herd several years and is a proven sire of good producers. Mr. Cope also took four females from Mr. Westcott all of them bred by William Schulmerick. Two are mature cows, one with a 550-pound official record and two are heifers by Monmouth Noble, with records made with first calf. Mr. Cope, who has two big dairy ranches in Curry county, is thus making a good start in pure bred Jerseys.

### Record Breaking Sales.

"Surely it is unusual for us to publish in our columns the results of the public sales of three different breeds of purebred stock in the same week whereat the averages far exceed those of any previously recorded," says the London Live Stock Journal. "At Mr. Oakey's sale the Guernseys realized over £64 ($312) each, and must have almost made as much as the freehold value of the little 135-acre farm where they were reared. Mr. Hiscock's average of £35, 15 shillings 3 pence ($174.11) for 43 Berkshire pigs was more than double that of Mr. Hudson's often-quoted 'highest average' of £16 ($77.92) and the £27 7 shillings 8 pence ($123.33) for the Middle White pigs far exceeded any previous figure, and, compared with the average for the 1851 head of purebred Shorthorn cattle, sold at 40 different sales in 1892 for £23 12 shillings 9 pence ($115.07) each, is a strange sign of the times."

### Another 40-Pounder.

Minnesota has now the honor of having a 40-pound cow. The purebred Holstein, Bess Burke Ormsby 203801, recently completed her test with the production of 42.31 pounds of butter in seven days. With this record Bess Burke Ormsby becomes the 28th purebred Holstein cow that has yielded more than 40 pounds of butter in a week. Her sire is Sir Pietertje Ormsby Mercedes 186784. Her dam is Spring Brook Bess Burke 98734. She was bred and is now owned by E. C. Schroeder, Moorhead, Minn.

### A Young Jersey Breeder.

G. O. Swales, the Duroc Jersey breeder of Johnson, Wash., who is also quite a wheat farmer, reports securing a new farm manager. The boy was born March 27; weight, seven and a half pounds, and is somewhat autocratic in the authority he exercises. Swales also reports 11 pigs from his grand champion sow at the Spokane Interstate fair last fall; 15 from the first prize gilt in 1915, and 11 from the fine sow he bought in the east. These are all by his herd boar, Burke's Cherry King.

H. A.

### Long Dispersal Sale.

C. E. Long, well-known Jersey breeder, of Buhl, Idaho, is announcing a dispersion sale of his herd, together with a consignment of fine stock from the Rose Lawn herd, S. H. Kayler of Twin Falls and C. D. Irwin of Kimberly Mr. Long promises a collection of Jerseys of unusual merit. The sale date is May 2 and the place is Buhl. Colonel Walters of Filer and Colonel Hughes of Forest Grove, Ore., will have charge of the sale ring. Both are well known stock men and auctioneers.

## BROWN SWISS CATTLE

North Yakima, Wash.

**ASHBURN FARM**

REGISTER OF MERIT JERSEYS.
In nearly 13 years we have yet to get our first poor heifer or dissatisfied customer. We have the best of the Golden Glow's Chief and St. Mawes strains, with the cross of our great Kentucky bull, Valentine's Ashburn Baronet.
J. M. DICKSON & SON, Shedd, Ore.

GOLDEN GLOW HERD
Winner of 1st and 2d prize in butter test, Oregon State Fair, 1917, (all breeds, 20 entries); breeder and owner of grand champion cow in show ring, 1916; breeder of grand champion cow, 1917. Breeder and owner of world's champion 3-year-old, with 1115 lbs. butter, 80 per cent fat. Every female a daughter, granddaughter or great granddaughter of Golden Glow's Chief, sire of 34; 14 over 700 lbs.; 32 over 600 lbs..
PICKARD BROS., Marion, Ore.

BREEDER OF
GOLDEN GLOW'S CHIEF 61460
35 daughters average 533.9 lbs. fat. Sire of world record Junior three-year-old. Two of his sons heading our herd. Some choice bull calves out of cows with records up to 856 pounds for sale. Sold out of bulls over six months old.
LADD FARM, Oswego, Ore.

**All High Record Blood**

Bull calf out of Lucy of P. V., full sister to St. Mawes Susie; 936 lbs. butter in a year; to St. Mawes Blossom 823 lbs., and to Susie's Twin Maiden, 642 lbs. Sire, Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs.
ED CARY, Carlton, Ore.
Station, La Fayette, Ore.

**BUY A REAL SIRE**

We are offering a choice bull calf by St. Mawes of Ashwood and out of a daughter of the great Holger. This youngster carries the best blood in Jerseydom and is fit to lead any herd. Price on application, but don't delay, as he will cost more after his dam completes her present register of merit test.
M'ARTHUR & STAUFF, Rickreal, Ore.

**LAST BULL SOLD**

Three register of merit cows, freshen in March, two in April. Baby bulls are sold so reasonably you can't afford to buy a bull of service age. Raise your own bull and save money. Prices, pedigrees, photos, etc., sent on request. Can spare a few good register of merit cows.
JOHN B. STUMP & SON, Monmouth, Ore.

**WAIKIKI FARM**

Register of Merit Jerseys. Largest Jersay herd in the northwest. Young stock for sale.
IRA P. WHITNEY, Manager.
Route 7, Spokane, Wash.

TWO GOOD YOUNG BULLS
One dropped February, 1917, sire, Minna's Baronet, whose dam made 480 lbs. butter in a year as senior yearling. Young bull's dam now on official test, will make about 60 lbs. fat (70 lbs. butter) third month and good record for year; milked twice a day. The other bull by St. Mawes of Ashburn. Full particulars of either on request. Bargain prices.
GEO. H. BREWER, Stayton, Ore.

**We Have a Herd Average of 700 Lbs.**

85 per cent BUTTER for 11 head. Sold six bull calves in the past 4 mos.; 3 of the last ones brought $250 each. These were sons of our herd bull, G. P. St. Mawes; just one bull calf left.
F. A. DOERFLER, Silverton, Ore.

**ANOKA FARM JERSEY**

We are offering a nine months' old bull from a young cow that is making good. His sire is a grandson of St. Mawes Poppy, with record of 1120 lbs. in one year. Priced low for quick sale.
R. B. SEELY, P. O. Sherwood, Ore.
R. R. Station, Wilsonville, on Oregon Elec.

**OAK RIDGE JERSEY FARM**

Thirty years breeding Jersey cattle. Young bulls from Register of Merit dams. Also a few choice females.
RILEY E. HULBURT, Albany, Ore.

**LA CREOLE FARM**

Oxford You'll Do Jr., R. of M., A. J. C. C. Jerseys, under U. S. Government control for health. No t. b. or abortion ever in herd, we are offering you your choice of a bull sired by the above bull, 30 months old. A full sister now on test produced in 159 days 271½ pounds butter fat; the dam, Morrow's Select, 198788, 828 pounds butter. Oxford You'll Do Jr.'s half sisters have records up to 933 pounds butter. Or we will sell you a calf from the same dam, sired by Golden Cicero, daughters' records up to 783 pounds butter. These sires are fit to head any herd.
W. O. MORROW, Independence, Oregon.

**He Needs Somebody to Send Him another pouch of Real GRAVELY Chewing Plug**

Uncle Sam's Boys don't ask for much in the way of comforts—*but good tobacco* they must have.

A few cents spent for Real Gravely will buy *more tobacco satisfaction* than many times the money in ordinary plug.

Give any man a chew of Real Gravely Plug, and he will tell you *that's* the kind to send. Send the best!

Ordinary plug is false economy. It costs less per week to chew Real Gravely, because a small chew of it lasts a long while.

If you smoke a pipe, slice Gravely with your knife and add a little to your smoking tobacco. It will give flavor—improve your smoke.

SEND YOUR FRIEND IN THE U. S. SERVICE A POUCH OF GRAVELY

Dealers all around here carry it in 10c. pouches. A 3c. stamp will put it into his hands in any Training Camp or Seaport of the U. S. A. Even "over there" a 3c. stamp will take it to him. Your dealer will supply envelope and give you official directions how to address it.

**P. B. GRAVELY TOBACCO CO., Danville, Va.**

*The Patent Pouch keeps it Fresh and Clean and Good it is not Real Gravely without this Protection Seal*

Established 1831

# Second Annual SHORTHORN SALE

In this sale of Shorthorns at Lewiston, Idaho, on Wednesday, May 1st, 1918, there will be sold 21 young bulls of breeding age, and 13 cows and heifers heavy in calf and with calf at foot. They are sired by our first prize and champion herd bulls, Prince Booth 377105, Cloverleaf Pride 2D 506682, a son of Maxwalton Pride and a grandson of Avondale; and Types Model 429408, a son of Cumberland Type, 36 times grand champion in that many shows. In this offering buyers will have the opportunity of securing individuals that are regarded as among the best of the breed. Therefore those wanting top specimens, either in bulls or females, should be attracted to this sale, which will be held at the NORTHWEST LIVESTOCK SHOW AND FAIR GROUNDS, at Lewiston, Idaho. The catalogue will be of value to every prospective buyer. Write for it now.

### 20 Head——Jacks and Jennets For Sale——20 Head

For forty years we have been breeding them. For twenty-eight years they have won every premium offered through Oregon and Washington, with one exception. They are native-bred, and all of them make good. They are all registered in Standard Jack and Jennet Register of America. We have mules to show from them, and we make prices that are lower than importers can meet. Come and see them, or write.

B. F. Swaggart, Prop. EASTERN OREGON JACK FARM. Lexington, Ore.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, April 15.—Increased receipts had much to do with weakness today which characterized the corn market. Prices closed unsettled at $1.27 1-8 for May and $1.49 5-8 to $1.49 3-4 for July, with the market as a whole 7-8 off to 1-8 advance, compared with Saturday's finish. Oats gained 1-4 to 1-2, and provisions 5 to 15c.

Notwithstanding rallies due to profit-taking by shorts, the corn market averaged decidedly lower the greater part of the day. In addition to the liberal supplies which crowded the sample tables, country advices of shipments appeared to indicate a continued free movement to terminal markets.

Buying on the part of houses that last week were thought to have made sales to the government gave strength to oats. No export bids were in evidence.

Provisions responded to announcement that exports for the week were the largest ever known. Big supplies of hogs had only a transient depressing influence.

### Cash Quotations.

Sheep—Receipts, 12,000; strong. Sheep, 13@17.85; lambs, $16.50@21.

## Condition of Winter Wheat.

The crop reporting board of the bureau of crop estimates, United States department of agriculture, takes the following estimates from reports of correspondents and agents:

The average condition of winter wheat on April 1 was 78.6 per cent of a normal, against 63.4 on April 1, 1917, 78.3 on April 1, 1916, and 83.6, the average condition for the last 10 years on April 1. There was a decrease in condition from December 1, 1917, to April 1, 1918, of 0.7 points, as compared with an average decline in the last 10 years of 5.7 points between these dates. Upon the assumption of average abandonment of acreage and average influences on the crop to harvest, condition April 1 forecasts a production of about 560,000,000 bushels, which compares with 418,070,000 bushels, the estimated production in 1917, and 480,553,000 in 1916.

The average condition of rye on April 1 was 85.8 per cent of a normal, against 86 on April 1, 1917, 87.8 on April 1, 1916, and 89, the average condition for the last 10 years on April 1.

For the four northwestern states the winter wheat and the rye prospects, as compared to normal, are given as follows: Washington, winter wheat 90 per cent as against 70 per cent last year and a 10-year average of 92 per cent; rye 94 per cent as against 86 per cent last year and a 10-year average of 96 per cent. Oregon—Winter wheat 97 per cent as against 84 per cent last year and a 10-year average of 95 per cent. Idaho—Winter wheat 97 per cent as against 99 per cent last year and a 10-year average of 96 per cent; rye 97 per cent as against 92 per cent last year and a 10-year average of 96 per cent. Montana—Winter wheat 94 per cent as against 93 per cent last year and the same for a 10-year average; rye 95 per cent as against 96 per cent last year and 95 per cent for a 10-year average.

## Portland Market.

PORTLAND, Ore., April 16.—Butter prices have been reduced 2 cents by local creamery men and the buying price of butterfat has been cut 3 cents. This brought down the price of cube butter. At the decline the market has become steadier with a better movement.

Eggs are sluggish, with receipts rather large, but prices are on a steady basis and the large handlers do not think the market will go lower.

Demand for poultry is very strong, as receipts are far under local requirements. Dressed pork is also higher. Veal is about holding its own.

Green produce jobbers expect to receive the first Walla Walla asparagus in a few days. Rhubarb from that point is more plentiful and has displaced the California article, selling readily at $2.25 a box. Walla Walla spinach is also in good supply and moving at $1.25 a crate.

The potato market is lifeless, with practically no sales in the country, where 60@75 cents are the nominal quotations. On the street Burbanks are jobbing in a small way at 75c@1 for No. 1 grade.

Between 500 and 600 bales of Oregon hops were sold in the latter half of the week at $15@16 cents and there was a fair demand for contracts at around 17 cents, but growers would not consider business.

All wool contracting has been halted pending the closing of the government deal in spot wools in the east.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 2 white, $68 per ton.

Millstuffs—Bran, $30 per ton; shorts, $32.

Barley—No. 1 feed, nominal; brewing, nominal; rolled, $77@79.

Hay—Buying prices: Timothy, eastern Oregon, $29@30; alfalfa, $24@24.50; grain, $22.

Eggs—Oregon ranch, case count, 33@33½c per dozen; candled, 35@36c.

Poultry—Hens, 27@28c; stags, 22c; ducks, 32c; turkeys, live, 26@27c; geese, 20@21c.

Butter—City creamery, prints, 42@43c per pound; cubes, extras, 37½@38c.

Cheese — Tillamook triplets, 24c; Young Americas, 25c.

Dressed meats—Veal, 19c; pork, 22½@23c.

Hops—1916, nominal; 1917 crop, 15@16c.

Potatoes—Oregon, buying price, 65@75c.

Wool—Eastern Oregon, 44@65c; valley, 50@55c.

Beans—Buying prices: Oregon white navy and Lady Washington, 10¼@10½c; white kidney, 10c; colored, 9c.

## Seattle Market.

SEATTLE, April 16.—The apple season, so far as further shipments to this market are concerned, is practically closed. It is estimated that there are no cars excepting what has been sold for eastern account in Wenatchee, and a few at Yakima. Less than 20 cars, it is stated, remain unsold in the state. The cleanup has been about two to three weeks earlier than last year. Closing prices, Winesap basis, are $2 f. o. b. for 175s and larger, of which 10 per cent is to be 188s or smaller, to each car.

Butter, which threatened during the week to break, has strengthened perceptibly. California distributors are not as willing to ship as formerly, indicating that the surplus there to some extent has been marketed. Local production is barely sufficient to meet the demand. Much will depend upon what price condenseries name next Tuesday for the ensuing two weeks for sweet milk.

Oregon is shipping new cheese into this market. Western Washington manufacturers have been discussing resumption of business if the price of milk falls to or below $2.50 per hundred pounds, but actual operations have not yet been started.

### BUYING PRICES.

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

Eggs—Local, 35c per dozen; eastern Washington, Oregon and Idaho, 33c.

Poultry—Spring roosters, live, fat, 2½ to 5 lbs., 26@27c; old roosters, 17@20c lb.; squabs, large, $3.50 dozen; geese, fat, live, 18c lb.

Butterfat—46c lb.; dairy butter, 30@32c.

Beef—Buying prices: Prime beef, steers, 11@16c; cows, fat, 9@11c lb.; heifers, 10@14c.

Hogs—Light, 18@20c lb.; heavy, 17@18c lb.

Veal—Fancy light, 13@19c lb.; heavy, 10@17c lb.

Hides—Salted, 14c lb.; flint-dry hides, 29c lb.; salt kip, 16c lb.; green hides, 11c lb.; green calf, 23c lb.; dry calf (under 6 pounds), 29c lb.; bulls and dry salts, 4c lb. less; green bulls, 9c lb. Clean, long wool, western Washington flint dry pelts, 39c per lb.; heavy to clean eastern Washington flint dry pelts, 30@35c lb.

### SELLING PRICES.

Feed—Scratch, $80 per ton; all grain chop, $77 per ton; oats, $76 per ton; rolled oats, $78 per ton; bran, $34 per ton; shorts, $33.50 per ton; whole corn, $79 per ton; cracked corn, $81 per ton; alfalfa meal, $36; rolled barley, $85 per ton; Milo maize, $75 per ton.

Hay—Eastern Washington timothy, $36@37 per ton; alfalfa, double compressed, $40@41 per ton; alfalfa, $29 per ton; Puget sound, $27@28 per ton; straw, $15 per ton.

Butter—Washington creamery extras, cubes, 43c lb.; do bricks, 44c lb.

Eggs—Fresh ranch, 40c dozen.

Potatoes—Puget sound, $17@20 per ton; eastern Washington, $18@25 per ton.

## Spokane Market.

### WHOLESALE.

**Vegetables**—Cabbage, $4@5 cwt; carrots, $2 cwt; bunch carrots, 75@90c doz; bunch beets, 75@90c doz; beets, $1.50 cwt; rutabagas, $1.75 cwt; parsnips, $1.75 cwt; hothouse lettuce, 60c 5-lb box; head lettuce, 80c doz, $2.75@3 crate; turnips, $1.50@1.75 cwt; bunch turnips, 75@90c; California new turnips, $2 cwt; red bell peppers, $1.25 box; chilli peppers, 25c lb; green peppers, 11c lb; Florida tomatoes, $5 6-basket crate; celery, $1@1.10 doz; hothouse cucumbers, $2 doz; cauliflower, $2.25@2.50 crate; new garlic, 10½@12½c lb; parsely, 40c doz bunches; horseradish root, 12½c lb; brussels sprouts, 12½c lb; radishes, 40c lb; brussels sprouts, barb, $2 box, 10c lb; spinach, $1 crate; asparagus, 15c lb; new peas, 15c lb; artichokes, $1.80 doz.

# CHEVROLET

Stands the Principle of

## VALVE-IN-HEAD

Motor Construction

*CHEVROLET "490" Touring Car $765 Pacific Coast Terminals*

*CHEVROLET Delivery Car $780 Pacific Coast Terminals*

Valve-in-head means responsive motor power.

There is no waste whatever. The gasoline vapor is introduced directly to the combustion chamber where the explosion takes place.

CHEVROLET passenger cars are bringing town and ranch so close together as to entirely eliminate all the inconveniences of out-of-the-city residence.

CHEVROLET light delivery cars have brought the market to the farmer's very barnyard. They are used for many purposes in farm work—and always they do their tasks like thoroughbreds.

# WAR NEWS

Battles of a magnitude hitherto unknown in the history of the world are being fought on the battle front in France. Every week new developments of the utmost importance are recorded. It is certain that the American army will play an important part in the big campaigns of spring and summer. You and your family will want to keep in close touch with what is happening at the front, and will also want to learn of what is taking place in our own country. Subscribe for

## *The Twice-a-Week Spokesman-Review*

This is a splendid semi-weekly home newspaper which brings you every Tuesday and Friday a complete, accurate, condensed review of local, national and world events. It gives you a reliable narrative of history in the making. Being a member of the Associated Press, the important happenings are flashed to it instantly from every capital and village, and from every far-flung battle line.

We are very glad to be in a position to offer THE TWICE-A-WEEK SPOKESMAN-REVIEW at a big saving when taken in combination with THE WASHINGTON FARMER. It is a paper especially appropriate for our subscribers because it is a paper primarily designed for busy readers.

## *A REMARKABLE CLUBBING OFFER*

***Twice-a-Week Spokesman-Review, 1 Year***
***The Washington Farmer 3 Years, Both for $1.00***

These are days of high and rapidly rising costs in the publishing business. Clubbing offers are rare. This fact makes the clubbing proposition of The Twice-a-Week Spokesman-Review with your state farm paper especially noteworthy. Our advice is not to delay but to accept this liberal offer at once.

# Ring the Bell With a Liberty Bond

## *Save the Blood of American Soldiers With American Dollars; Tomorrow Is Liberty Day*

Tomorrow, April 26, just one year and twenty days after the formal entrance of this country into the war, has been designated by President Wilson as Liberty Day. At the president's call there will be meetings of citizens in thousands of communities and cities throughout the land tomorrow afternoon, the object being to make it the red-letter day in Liberty bond subscriptions.

The first half of the campaign, taking the nation as a whole, did not appear as satisfactory as had been anticipated, the subscriptions received not exceeding half of the minimum total to be obtained, though the northwest has succeeded well. It is planned by the authorities in charge of the campaign to make a sweeping drive during the closing days with a view to securing a huge subscription over the $3,000,000,000 minimum planned for the issue. The following is President Wilson's proclamation setting aside tomorrow as Liberty Day:

"By the President of the United States of America:

"A PROCLAMATION.

"An enemy who has grossly abused the power of organized government and who seeks to dominate the world by the might of the sword challenges the rights of America and the liberty and life of all the free nations of the earth. Our brave sons are facing the fire of battle in defense of the honor and rights of America and the liberty of nations. To sustain them and to assist our gallant associates in the war a generous and patriotic people have been called upon to subscribe to the third Liberty loan.

"Now, therefore, I Woodrow Wilson, president of the United States of America, do appoint Friday, the 26th day of April, 1918, as Liberty day. On the afternoon of that day I request the people of the United States to assemble in their respective communities and liberally pledge anew their financial support to sustain the nation's cause. Patriotic demonstrations should be held in every city, town and hamlet throughout the land under the general direction of the secretary of the treasury and the immediate direction of the liberty loan committees organized by the federal reserve banks. Let the nation's response to the third Liberty loan express in unmistakable terms the determination of America to fight for peace, the permanent peace of justice.

"For the purpose of participating in Liberty day celebrations all employes of the federal government throughout the country whose services can be spared may be excused from 12 o'clock, noon, Friday, the 26th of April."

## Women of the Farm

You have had a bit of a heartache with all your pride as you saw that tall, husky farm boy of yours start off for the training camp. You have snatched the time from home duties for a day at the Red Cross headquarters, rolling bandages or making pajamas, that some mother's boy will wear during the weary days and nights in some hospital over there. You have reached down into the hiding place for your savings, and have taken out those hard-earned dollars from your savings to subscribe for the various war work that has called for help.

The government—your government—has sent out another call for help, the third Liberty loan appeals to you.

## Lend It or Lose It

—Birmingham Age-Herald.

## Big Job in a Big Way

With a big job which has to be done in a big way on its hands, the United States government will go to the farmers and stockraisers in the third Liberty loan for their help. To accomplish this the general executive board of the Liberty loan for the states of Washington, Oregon, Idaho, California, Utah, Nevada and Arizona, under orders from Secretary of the Treasury McAdoo, has created the agricultural division, with D. O. Lively, president of the California Practical Farmers' association, as director.

The other day a California farmer said to Mr. Lively: "We farmers are doing our part. Wheatmen, sheepman, cattle man, beanman, orchard man, all of us are doing our part to increase our production. Prices are high, but so are expenditures, and we are making no more than we did before the war. I don't see why the government should expect us to buy bonds."

"You are right," said Lively. "I'm a farmer and I know. But we farmers are no better than the men of our army and navy. The government has gone to them to lend their savings. And those soldiers and sailors came through with millions of dollars. Those soldiers and sailors who offered their lives when they donned uniforms didn't say, 'I don't see why the government should expect us to buy bonds.' No! They bought more than the government could, with fairness, sell them. And when you consider that the average pay of these boys who are giving up their homes and lives for their country is only $30 a month, we farmers haven't a leg to stand on in our plea that we are doing our part."

"You're right, Lively; I hadn't thought about it that way before. This is not a question of prosperity. It's just a question of lending what we have and can make to Uncle Sam. I don't see how I can afford it, but I'm going to subscribe for $1000 worth of bonds April 6, if I have to buy them on the instalment plan."

What Lively said to that farmer he wants to say to every rancher and stockraiser in the west.

He asks you, Mr. Wheatman; you, Mr. Stockman; you, Mr. Orchardist; you, Mr. Poultry man; you, Mr. General Farmer, to see your banker today about buying Liberty bonds.

# Federal Farm Loan System

## *Figures of the First Year Show Increasing Interest*

According to statistics compiled from the United States census bureau, farms of the United States are mortgaged for a total of $4,000,000,000. Probably a fifth of this stupendous sum is maturing yearly, so new mortgages must be written annually to an amount of $800,000,000.

The Farm Mortgage Bankers' association of America calculates that every minute of the day and night $418.56 in interest accrues on farm land debts in the United States. This is $25,114 every hour or $602,739 every day. This is for every day in the year, not excepting Sundays or holidays, and this daily payment would make $220,000,000 in a year, the annual interest on $4,000,000,000 at an assumed average rate of 5 1-2 per cent, which is probably under the real mark.

This gigantic business is still almost wholly in private hands, for the federal farm loan system, while showing gratifying growth, has only begun as yet to nibble at the country's farm mortgage loans.

That there is increasing interest in the system is shown by the statistics of operations. The first charter was granted to a federal land bank on March 1, 1917, and the first charter to a national farm loan association on March 27, 1917. At the end of the month of February, 1918, statistics showed that, since the system was started, 75,924 loans had been approved, to the amount of $154,054,349, and for the same period 28,495 loans had been closed, to the amount of $64,532,343.

In other words, the business actually closed in the first year of operation of the federal system amounted in principal to less than a third of the total annual interest payments made by farmers of the United States.

Or, considered in another way, the total of loans approved up to March 1, $153,054,349 (the approvals are always ahead of the loans actually closed), amounted to less than 4 per cent of the total volume of farm mortgages in the United States.

As we have previously pointed out, the greatest development of the federal farm loan system has been in the northwest, and according to the Wall Street Journal, the largest amount of loans has been made by the banks at Spokane. The smallest development has been in New England.

The cities in which the banks are located, with the districts they serve, are as follows:

Springfield—Main, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York and New Jersey.

Baltimore—Pennsylvania, West Virginia, Virginia, Delaware, Maryland and District of Columbia.

Columbia—North Carolina, South Carolina, Georgia and Florida.

Louisville—Tennessee, Kentucky, Indiana and Ohio.

New Orleans—Alabama, Mississippi and Louisiana.

St. Louis—Illinois, Missouri and Arkansas.

St. Paul—North Dakota, Minnesota, Wisconsin and Michigan.

Omaha—Iowa, Nebraska, Wyoming and South Dakota.

Wichita—Kansas, Oklahoma, Colorado and New Mexico.

Houston—Texas.

Berkeley—California, Utah, Nevada and Arizona.

Spokane—Idaho, Montana, Oregon and Washington.

### Clawson Is Field Manager.

O. T. Clawson, who recently returned from a year's work in Brazil where he had been engaged by the Brazilian government on agricultural experiment work, has accepted the position of field manager of the Skookum Packers' association.

# Advisory Committee of Farmers

## *To Consult With Secretary Houston and Food Administrator Hoover*

A committee of representative citizens identified with agriculture in its various phases has been organized by Hon. D. F. Houston, secretary of agriculture, and Hon. Herbert Hoover, food administrator, to meet in Washington on call from time to time to advise with the department of agriculture and the food administration concerning agricultural and food problems as they arise. The first meeting was held on March 28. The members of the committee are as follows:

**Henry C. Stuart, Virginia.**

Henry C. Stuart is one of the leading farmers of Virginia; operates a tenant system and 35,000 acres of land. He is a cattle breeder and feeder and interested especially in the development of the live stock industry on southern cut-over lands of the coastal plains region. Mr. Stuart has served as governor of Virginia.

**W. L. Brown, Kansas.**

W. L. Brown is a wheat grower. He went to Kansas in 1876, proved a claim, taught school, and farmed. He has served for three sessions as a member of the state legislature. He was the first man in his state to enlist in the Spanish war, and raised a regiment and was commissioned as major. Mr. Brown is a member of the state board of agriculture and is on the executive committee of the State Cattlemen's association. He has had a wide experience in breeding of pure bred cattle and hogs, and his farming experience has also included the raising and production of many kinds of grains and fruit.

**David R. Coker, South Carolina.**

David R. Coker is one of the most successful farmers in South Carolina, and is especially interested in cotton growing. The long staple cotton developed by Mr. Coker now displaces 75 to 90 per cent of the short staple cotton formerly marketed in his county. He operates one of the most extensive seed and experimental farms in the south. He is president of a pedigreed seed company and operates a plant breeding, live stock and seed business. Mr. Coker is president of the South Carolina Plant Breeders' association. He is chairman of the South Carolina Council of National Defense, and director of the Richmond Reserve bank.

**Elbert S. Brigham, Vermont.**

Elbert S. Brigham has specialized in dairying and has developed an excellent dairy herd. He is also an extensive bean and potato grower, developing a special market for seed potatoes. For a number of years he has served as institute worker in Vermont, and during the last four or five years Mr. Brigham has been commissioner of agriculture for the state.

**Milo D. Campbell, Michigan.**

Milo B. Campbell is a native of Michigan, born in 1851. His chief vocation is farming and his specialty dairying. He is now president of the National Milk Producers' federation. He has held other public offices, and taught school.

**C. S. Barrett, Georgia.**

C. S. Barrett for several years has been president of the National Farmers' union, one of the largest farmers' organizations in the United States. He is an experienced and successful farmer and has long been identified in his state and in the south with agricultural progress.

**Eugene Funk, Illinois.**

Eugene Funk is one of the foremost producers of seeds in the United States. During the last several years he has conducted a seed business at Bloomington, distributing numerous varieties of seeds, but specializing in seed corn. He operates a large farm, and during the last two years has cultivated approximately 20,000 acres of grain and corn. He also is a feeder of cattle and hogs. He is ex-president of the National Grain association, charter member and president of the National Corn association, and a member of the Illinois Seed Corn Growers' association. He represented the producing interests in the preparation of rules and regulations for the enforcement of the United States grain standards act.

**W. R. Dodson, Louisiana.**

W. R. Dodson lives on his large farm near Baton Rouge, La. He is thoroughly informed regarding the cotton, sugar, rice, truck and live stock farming of the lower Mississippi valley. He received his university training at the Universities of Missouri, Michigan and Harvard. For many years he has been director of the Louisiana agricultural experiment station and dean of the College of Agriculture of Louisiana State university. He is a member of the State Council of National Defense.

**N. H. Gentry, Missouri.**

N. H. Gentry, farmer and hog breeder, has done a great deal to improve the Berkshire breed of hogs. His herds have often taken the blue ribbons at the International Live Stock exposition and at state fairs. He has represented the agricultural interests and especially the swine industry on many occasions.

**Wesley G. Gordon, Tennessee.**

Wesley G. Gordon is a successful farmer in Gibson county, Tennessee. He has demonstrated improved agricultural methods on his own farm, and with other leading farmers he has exerted an influence for the improvement of the agriculture of his county, especially in introducing crimson clover and other legumes. He is interested in live stock and general farming in his region.

**John Grattan, Colorado.**

John Grattan has been farming for the last 10 years near Broomfield, Colo. He is a cattle feeder and grain and alfalfa grower. Mr. Grattan is a member of the grange, the Farmers' union and a member of the board of directors of the American National Live Stock association and of the farmers' congress. Mr. Grattan was in the banking business near Medford, Okla., for four years, and during the last five years has been a member of the board of directors of the Stockyards bank at Denver, Colo. He has been editor of the live stock department of Ranch and Range, a Western agricultural paper.

**J. N. Hagan, North Dakota.**

J. N. Hagan has spent 17 of his 45 years in farming. He grows spring wheat on a large scale. In 1916 he was elected to the office of commissioner of agriculture and labor of North Dakota.

**Isaac Lincoln, South Dakota.**

Isaac Lincoln is one of the most prominent growers of special varieties of seed grains in South Dakota. On his large stock ranch of 1760 acres near Aberdeen he personally superintends the growing of choice stocks of wheat, oats, barley, flax, emmer and corn. He is a strong advocate of better quality grain and seed. Mr. Lincoln went to the Dakotas in the eighties and became the owner of large tracts of farm land. He has given much attention to forwarding the development of the country, particularly about Aberdeen. Mr. Lincoln is president of the State Savings bank at Aberdeen, and director of the Scandinavian-American National bank at Minneapolis. As vice president of the state fair he has been instrumental in developing it to its present successful status.

**Frank J. Hagenbarth, Idaho.**

Frank J. Hagenbarth is heavily interested in sheep and wool growing and in cattle raising. He has encouraged modern methods of range and forest development in the west. Formerly he operated large ranches in Mexico. For many years he has been president of the National Wool Growers' association.

**W. W. Harrah, Oregon.**

W. W. Harrah is known as one of the largest wheat growers in the Pacific northwest. He is a director of the Oregon seed stocks committee and has devoted much energy to increasing the acreage of wheat and distributing seed wheat. He is a director of a large terminal warehouse company of Seattle, a director of the Farmers' union grain agency of Pendleton, and a member of the Farmers' Educational Cooperative union.

**C. W. Hunt, Iowa.**

C. W. Hunt and his sons are engaged in general farming, but give special emphasis to swine production and cattle feeding. They produce large corn crops. Mr. Hunt has served in the Iowa state legislature and in other ways has been honored by his community and state.

**H. W. Jeffers, New Jersey.**

H. W. Jeffers is manager of a large and successful dairy enterprise, including several farms. On one farm between 400 and 500 dairy cows are kept for the production of high grade market milk. Alfalfa and potatoes are major crops. Recently he was made president of the Walker-Gordon Laboratory company. He is a member of the New Jersey state board of agriculture and interested in a broad way in all agricultural activities.

**D. O. Mahoney, Wisconsin.**

D. O. Mahoney is a farmer specializing in cigar leaf tobacco in Vernon county, Wisconsin. He has devoted much time to the organization of the tobacco growers in his state for the collective selling of their crops. He is a graduate of the University of Wisconsin, and has served the public in many ways. For several years he was county judge. He has been president of both the state branch and of the national organization of the American Society of Equity.

**David M. Massie, Ohio.**

David M. Massie is a business man with large farm interests. He gives much attention to practical farm questions, and is interested in agricultural problems in relation one to another and from a standpoint of their relation to other lines of business.

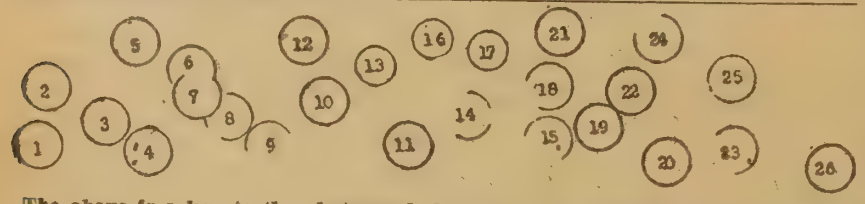
**William F. Pratt, New York.**

William F. Pratt is a successful farmer in western New York. He is engaged in general farming and has given considerable attention to feeding lambs. For a long period he has been an agricultural representative on the board of trustees of Cornell university. He is a member of the state farm and markets council.

**Oliver Wilson, Illinois.**

Oliver Wilson has been prominent for some time as a farmer, and especially as an officer of the national grange. He was editor in chief of the National Grange Monthly for many years. Prior to 1911 he filled the office of master of the state grange of Illinois, and was lecturer for the national grange. In November, 1911, he was elected master of the national grange, which office he has held since.

**C. J. Tyson, Pennsylvania.**



C. J. Tyson is widely known as a general farmer and fruit grower, specializing in apple production and marketing. For many years he was an active worker in the Adams County Horticultural society and the State Horticultural association of Pennsylvania, of which he was secretary for several years and president in 1914.

**Marion Sansom, Texas.**

Marion Sansom has been identified with the live stock industry in the southwest for the last 40 years as farmer, feeder and breeder. Formerly he was a live stock commission merchant. He is a director of the Federal Reserve bank, Dallas, Texas.

**George C. Roeding, California.**

George C. Roeding is a fruit grower, nurseryman and irrigation farmer. He has been especially active in the development of raisin, fig and olive production in California. Mr. Roeding is president of the agricultural society of his state.

**The above is a key to the photograph herewith, the numbered circles representing the members of the advisory committee in the positions in the photograph. They are:**

**1, David M. Massie, Chillicothe, Ohio; 2, Clarence Ousley, assistant secretary of agriculture; 3, H. W. Jeffers, Plainsboro, N. J.; 4, J. N. Hagan, Deering, N. D.; 5, F. R. Harrison, assistant to the secretary; 6, Marion Sansom, Fort Worth, Tex.; 7, C. J. Tyson, Floradale, Pa.; 8, Elbert S. Brigham, St. Albans, Vt.; 9, D. F. Houston, secretary of agriculture; 10, Oliver Wilson, Peoria, Ill.; 11, Henry C. Stuart, chairman, Elk Garden, Va.; 12, N. H. Gentry, Sedalia, Mo.; 13, Milo D. Campbell, Coldwater, Mich.; 14, Eugene Funk, Bloomington, Ill.; 15, Wesley G. Gordom, Humboldt, Tenn.; 16, Isaac Lincoln, Aberdeen, S. D.; 17, Frank J. Hagenbarth, Spencer, Idaho; 18, George C. Roeding, Fresno, Cal.; 19, W. R. Dodson, Baton Rouge, La.; 20, C. S. Barrett, Union City, Ga.; 21, C. W. Hunt, Logan, Iowa; 22, W. L. Brown, Kingman, Kan.; 23, R. A. Pearson, assistant secretary of agriculture; 24, D O. Mahoney, Viroqua, Wis.; 25, W. W. Harrah, Pendleton, Ore.; 26, H. L. Russell, U. S. food administration.**

# Bee Handling Equipment

## *Smoker Is One of the First Essentials*

ARTICLE 3, BY GEORGE W. YORK.

Owing to an unavoidable delay in getting the illustrations that I wanted for use in this series of articles, I was compelled to use one or two cuts in the preceding articles that were not as desirable as might be. But from now on I will be able to have most of the pictures that I want.

**The Bee-Smoker.**

The cut of the bee-smoker shown herewith is one of the very best made. The hinged nozzle is a very great convenience, as it is not constantly falling off and dropping to the ground. It sometimes becomes rather hot, making

**A modern bee smoker.**

it hard to adjust were it not hinged to the fire barrel, which prevents the fuel from closing the opening or draft through which the air is forced by the bellows, which is worked with the hand when in use.

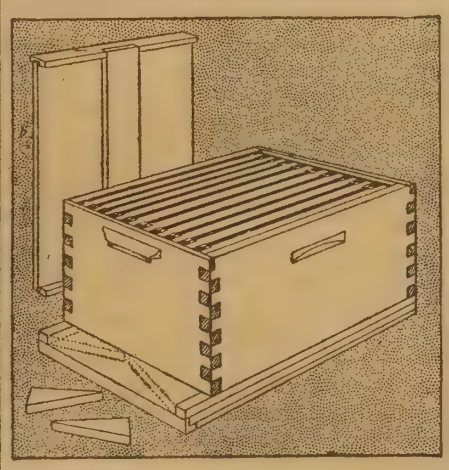
The fuel most commonly used in bee-smokers is such as will make the greatest amount of smoke—old rags, worn-out gunny sacking, or wood of almost any kind. The idea is to make a dense smoke, and not a blaze, as the latter, when blown on the bees, would singe their wings.

I would not think of handling bees, opening hives or anything connected with their manipulation without using a bee-smoker. While its usual price is about $1, I would not be without it even if it cost $5 or even $10. But in getting a bee-smoker do not make the mistake of getting a toy one, but be sure that the fire barrel is three or more inches in diameter, otherwise it will not hold enough fuel, and thus burn out too soon—go out at just the critical moment.

The original direct draft, and possibly the best bee-smoker ever invented, was the one made by the late T. F. Bingham of Michigan, as long ago as 1878. It is still manufactured in large quantities and sold all over the world, or wherever bees are kept.

By the way, one of the bee supply dealers some 40 years ago offered as a gift a fairly good bee-smoker to any beekeeper who was addicted to the use of tobacco if he would promise to discontinue its use. If he ever broke his promise and returned to the use of tobacco he was to refund the price of the bee-smoker. I think something like 20,000 of those bee-smokers were thus given away. Occasionally one of the recipients would go back to the use of the weed, and then refund the 50 cents, which I believe was the price of the smoker.

**Comb Foundation.**



In the preceding article I mentioned the use of comb foundation, an illustration of which is shown herewith. This is made of pure beeswax, which by a patented process is rolled into sheets say about eight inches wide and any length desired. These smooth, long sheets are then run between metal rollers, not unlike a clothes wringer in appearance, except instead of the rolls being smooth, one roller has short metal pins sticking out of it, each with a blunt, six-sided end, and the other roller has depressions in it to receive the pins of the other roller. When the beeswax sheets are then run between the two rolls it comes out in appearance like the foundation or midrib of a honey-comb.

These waxen sheets are then cut into proper lengths to fit into the hive frames which hold the combs. Most modern brood frames are made with two sawkerfs in the under side of the top bar. One kerf is a trifle wider than the other, and the two are about a thirty-second of an inch apart. The edge of the comb foundation is placed in the larger kerf, and then a small wedge the length of the inside of the frame is pressed into the other kerf. The sheet of comb foundation is thus held firmly. Sometimes the bottom bar of the frame is made of two narrow strips of wood, between which the lower edge of the sheet of comb foundation is placed when nailing on the bottom bar. This, however, is not a common practice.

There are two kinds of combs in a beehive, one being what is called "brood comb" and the other "surplus-honey comb." The former is usually in the lower part of the hive, called the "brood chamber," as there is where the queen lays her eggs for the rearing of the brood to populate the hive. The other comb is usually above the brood chamber, in what is called a "super," which holds the little square boxes or "sections" in which is stored the honey that is sold in the market.

The standard brood combs, or frames, are 9 1-8x17 5-8 inches, outside measure, four of which are shown in the picture herewith; also the ends, which indicate how they are self-spaced by the end bars having projections near their tops, or being wider at the bottom. The spacing is thus very accurate, being 1 3-8 to 1 1-2 inches from center to center, which gives the proper space between the waxen combs.

The value of comb foundation to the bees is very great, though it usually sells at about 75 cents per pound. It not only aids the bees in building straight combs, but also saves them much labor, for they at once go to work to draw out their cells on both sides of the sheet on comb foundation in each frame. It also saves much honey, for honeycomb is all made out of honey which is used by bees in elaborating their wax for comb construction. It has been found by careful experimentation that it requires from eight to 10 pounds of honey for the bees to make one pound of honey-

**Dovetailed, or lock-cornered hive.**

comb. So it will readily be seen that comb foundation is both an economical and wonderful thing in practical beekeeping. It may surprise the uninitiated (but it is nevertheless the fact) to learn that hundreds of tons of beeswax are used annually in the manufacture of comb foundation in the United States alone.

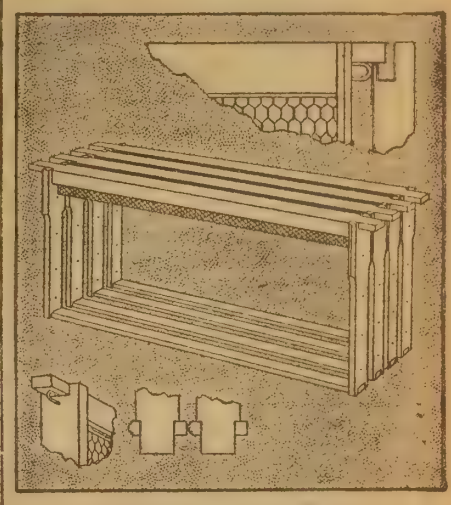
**The Beehive.**

While bees would store just as much honey (and just as good and sweet honey) in a barrel or any old box, still

**Comb foundation.**

it is very desirable to use the modern beehive.

As mentioned in a preceding article, beehives are usually of the sizes taking either eight or 10 frames in the brood chamber.



A complete hive consists of the bottom or floor board; upon it the brood chamber; above that the super for holding the surplus or commercial honey, and on that the hive cover. Around three edges of the bottom board are narrow cleats which raise the brood chamber say 3-8 of an inch or more, so that the bees can go in and out at the front, thus forming the hive entrance in a very simple manner.

One of the illustrations herewith shows what is popularly known as the dovetailed or lock-cornered hive. While it is not a true "dovetail," it does make a very neat and strong corner. Still, the halved-corner is also very good, and more easily made by the ordinary carpenter, or by the use of simpler machinery than that required to make the "dovetailed" hive corner.

The question is often asked if the amateur or beginner can not make his own hives just as well as to buy them from the regular bee-supply dealer or manufacturer. Yes, he can make them, but as all the measurements should be very accurate it is advisable to get at lease a sample complete hive ready made, as then, if the prospective beekeeper is something of an expert carpenter or cabinet maker, he will be more likely to make additional hives more nearly as they should be made in order to give the best satisfaction.

Referring again to the use of comb foundation, I may say that it is used both as full sheets and as narrow starters in the frames. Full sheets are better, as the bees will be more likely to build straight and even combs than if compelled to work downward in the frame from only a starter say an inch deep. And then, if only a starter is used, the bees might be inclined to build more drone-comb, which is very undesirable. Practically all comb foundation is made in worker cell size, so that the bees must go to quite a little extra work if they want to change it to drone size in order to rear the few drones that are necessary in a colony.

Let me add here that while I may be able to give the reader quite a few points in this series of brief articles, every one who desires to make a real success of the bee business should not only secure one of the standard bee books, but should also have one or more of the excellent bee periodicals that are issued monthly. Doubtless the publisher of the Oregon Farmer can supply you with whatever current bee literature you may desire. I can only

**Self-spacing brood frames.**

hope to "whet your appetite" for more information about bees and their profitable management. It is a wonderful subject, and also worthy of close investigation as well as actual practice, especially in these times of shortage of sugar.

Produce your own honey, and help lick the kaiser!

# Red Cross Bull $2035

## *Western Washington Holstein Breeders' Sale*

By PAUL E. TRIEM.

Abnormally high prices in the feed and labor market, together with the general uncertainty of all farming conditions, produced an unmistakable effect in lowering prices at the seventh semi-annual sale of the Western Washington Holstein Breeders' association, held in Kent April 17. This was the first sale held in the new home of the association, and aside from the drawback of extremely low prices for the grade of cattle offered everything went off in apple-pie order.

Colonel George A. Gue, the auctioneer, referred in his opening remarks to the difficulty of farming at a profit under present conditions, but predicted that with the closing of the war the tables would be turned, so that dairy farmers and stockmen would have all the advantage over those who are going into grain and hay exclusively. Colonel Gue explained the present price of hay by saying that government contracts have kept the market from breaking, even though there is much unsold hay in eastern Washington.

William Bishop, in his talk, referred to the old rumor that the association had been formed to dispose of the culls from the breeders' herds. As a matter of fact, the Chimacum dairymen explained, many of the breeders had stretched a point and had done more than could reasonably be expected of them in their determination to see that every patron of the sales was satisfied.

One of the amusing features of the sale was the unconscious attempt of a prominent West Side breeder to bid in one of his own heifers. When his attention was called to the fact that he was bidding on his own property he met the jokes which were leveled at him by commenting: "Well, I showed that I knew good breeding when I saw it, at any rate."

The Red Cross bull donated by E. A. Stuart was bid in successively by Carnation Stock farms, Hollywood farms, Mr. Fisher, Dr. Taylor, Mr. Keda and J. F. Benson, the last of whom retained the animal after it had brought the good cause a total of $2035.

The average for the sale was slightly under $250 per head, including the various sums received for the Red Cross bull. Francy Hartog, a grand young animal consigned by J. von Herberg and probably without a superior in breeding on the Coast, went to E. B. Marks of North Yakima for the bargain price of $675. This was the top of the sale, and apparently justified the comment of H. C. Davis of Granger.

"I don't know that I ever saw cattle of this class go so cheap," said Mr. Davis. "No, I don't pretend to understand it. When good grades are bringing $200 and better a head, I can't get at the logic of purebred cows like these going at these prices. It is true that it is difficult to make a profit on dairying at this time even with the best of cows—I have found that it costs me better than 70 cents a pound to produce butterfat on my farm, which is perfectly adapted for the purpose; but if it can't be done with purebreds it certainly can't be done with grades!"

**THE SALES.**

Canary Oak DeKol, No. 160084, born November 17, 1910; H. Zenkert, Renton, $200.

Jeannie Pontiac of Greenbank, No. 274311, born January 3, 1915; J. von Herberg, $300.

Mary Pledge Rag Apple, No. 345112, born February 17, 1914; J. C. Bush, Chehalis, $230.

Fay Pontiac Burke of Greenbank, No. 290512, born April 1, 1915; G. Weda, Kent, $205.

Star Hengerveld Cornucopia, No. 335907, born April 16, 1916; Thomas Yarr, $155.

Duchess Homestead De Kol, No. 139533, born September 9, 1909; Thomas McGee, $160.

Skykomish Belle, born July 25, 1916; John B. Mullen, $130.

Lady Marie Von Count Korndyke, No. 244036, born June 16, 1913, C. H. Fisher, $250.

Whatcom Elgin Beets, No. 244032, born November 7, 1912; John B. Mullen, $190.

Zozo Katherine De Kol, No. 294273, born October 29, 1914, G. Keda, $180.

Nudine Katherine De Kol, No. 394981, born January 9, 1917; John Binzzell, Clipper, Wash., $170.

Dame Pontiac Nudine Burke, No. 394979, born October 1, 1916; Charles Eldridge, Chimacum, $115.

Lady Marie De Kol Burke, No. 594980, born October 2, 1916; W. E. Harbert, Mount Vernon, $105.

Whatcom Elgin Burke, No. 340282, born February 10, 1916; G. Keda, $180.

Mondamin Pietertje Burke, No. 340281, born May 12, 1916; G. Keda, $200.

Donnybrok Nudine De Kol, No. 264443, born December 27, 1914; E. J. Rounds, Seattle, $355.

Laura Colantha of Donnybrook, No. 392164, born November 21, 1916; J. C. Bush, $180.

Jewess Johanna Mechthilde, No. 157921, born March 14, 1911; Mrs. F. C. Baker, Olympia, $340.

Schillaard Fayne of Donnybrook, born August 4, 1917; T. G. Bowen, $165.

Aaggie Fayne of Donnybrook, born July 20, 1917, J. C. Bush, $110.

Donnybrook Hariet Waldorf, No. 298041, born March 22, 1915; James Chamberlin, Ceres, Wash., $300.

Donnybrook Cornelia 2d, No. 298040, born March 22, 1915, H. Zankert, $205.

Ormsby Waldorf of Donnybrook, born May 23, 1917, John C. Chamberlain, $130.

Sophie Ormsby of Donnybrook, born May 13, 1917, J. C. Bush, $125.

Donnybrook Segis Fayne, born August 30, 1917, J. C. Paulsen, Stillwater, $110

Hollywood Bessie Howtje Fayne, No. 384872, born July 5, 1916, Carnation Stock Farms, $155.

Hollywood Spring Brook Elzevere, No. 460492, born November 18, 1916, Carnation Stock Farms, $200.

Hollywood Bessie Pearl, No. 295832,

(Continued on page seven.)

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## *Will We Be Blameless?*

Some day our boys will come back from France; but not all will return. Some will lie there forever, and all too many of those who do return will come home to America with mutilated bodies as a constant reminder of their high sacrifice to duty's call.

When that time comes can we search our conscience and say with an unfaltering voice and unfalling eye that we, too, did our duty, as best those left at home can meet their duty, to give them the support that is always due the men who fight and the men who fall in their country's cause? Shall we so fulfil our duties now that we can confidently say: "Blame not us that so many of your comrades lie in distant graves. Blame not us that you come home with grievous wounds."

When the war is over shall we be able to say, with serene conscience, to the mothers and fathers in mourning and the sisters and wives in brief: "All that was humanly possible to save your brave boys from death we have done faithfully and well."

Not unless we buy Liberty bonds to the last dollar we can afford to yield. Not unless we shall have responded to every call of the Red Cross. Not unless we shall have responded with patriotic fire to every authorized appeal that our government shall make.

An army that is not supported by its people at home is an army lost. Every dollar given to our country's call, every additional hour of labor given to the production of food, will tend to make our armies safer over there.

These are the times that test the souls of men and try the hearts of the women of this land. Let us so face our duty now that no bitter remorse will sup with us when this dreadful war is done and lie down with us at night to troubled sleep.

## *Use but Do Not Misuse Furlough*

By act of congress it is now possible to secure the furlough of soldiers in the training camps for farm work under certain conditions. Applications must be made by those desiring the service of the soldier or soldiers, and the local exemption board, and later higher authorities, must be satisfied of the justice of the application.

Where there is an actual shortage of labor this provision will be of much service. It should be used by farmers who need help. To allow acres to go unfarmed this season because of shortage of help when the work could be done through the temporary use of soldiers from the training camps would be poor economy.

But on the other hand, it would be equally poor economy to take soldiers from the camps unless their services were genuinely needed. Soldiers require training. They must have training of the most strenuous and persistent sort. Boys from the farm or elsewhere can not be transformed into soldiers in a day or a week or a month. Right now and for the next few months, at least, there is urgent demand for putting trained soldiers into the battlefields with the utmost speed. It is, therefore, an act against the best interests of the allied cause to withdraw a single individual from training unless there is actual need of his service on the farm.

## *Religion as Taught By War*

Major C. W. Gordon, better known to the world as the author of "The Sky Pilot," "Black Rock" and other books, has temporarily returned from the battle lines to his home country, Canada, and the United States to tell of conditions on the front and inspire those of us at home to do our utmost. He was a famous Canadian preacher of one of the orthodox churches, but he says that the experiences of war have wiped from his religious creed everything except two fundamentals: God and duty.

"As a man leaves behind him all superfluous baggage when he goes over the top and across no man's land, just so does the man when he goes into the vicissitudes of battle leave behind him all the superfluous baggage of religion and take with him just God and a profound sense of duty," I heard the major say as he thrilled the audience in a crowded Congregational church in Spokane.

Then he told a story. A young man, little known even in his home community, was in the trenches. A shell landed among his comrades, likely at any moment to burst and scatter death along the trench. The young fellow grasped the situation instantly, leaped upon the shell and hugged it to himself as it exploded. He saved his comrades, but gave his own life.

With a sweep of his hand toward heaven, Major Gordon brought cheers from his audience when he said:

"I care not what that young man's past may have been; I am willing to take my chances with the like of him before Almighty God."

F. W. C.

An army officer from one of the allied armies, a man who left a wife and six children at home to enter the service of his country, said recently: "We do not pray for our boys to be kept safe and brought back home to us. We want them back, but we have learned to pray only that they may be able to do their duty."

There's nothing so wonderful about it—it's just plain ability patriotically expressed—but travelers in Columbia county, Washington, report seeing two women in the fields, each driving a six-horse team on a gang plow. Isn't it true, after all, that women are equal to a greater number of emergencies than men?

A. B. Nystrom, county agriculturist for Lewis county, who is listing every man who can spare all or part of his time in food production, reports a hearty response from every town in the county. Close to 100 names have been secured in Chehalis alone, and four or five times that many are expected in the county.

The trial of more than 100 I. W. W. leaders on charges of disloyal conduct is opening in Chicago. Great difficulty is being experienced, according to reports, to get a jury to hear the cases. The trial will determine in considerable degree the future status of the I. W. W. propaganda in this country.

The war has thrown another opportunity before the women and girls of the land. They can now become rural mail carriers, and appointment of the first for this service has been announced.

Work—good, hard, manual labor—is one of the finest things for a man that can be given. Indulged in in moderation, it cures many of his bodily ailments, and it keeps his mind occupied and his hands out of mischief.

The day for any old seed planted over a great acreage is going fast. Selected seed that will produce more, perfect preparation of soil and thorough cultivation will lessen our work and increase our profits.

## *Washington Gleanings*

The Snohomish County Fruit Growers' association has decided to do a strictly cash business.

A farm of 320 acres, six miles east of Palouse, was recently purchased by S. I. West for $32,000 cash.

The W. V. Ewing farm of 480 acres west of Palouse has been purchased by Harry Linden for $48,000.

The annual picnic of the pioneers of Lincoln and Adams counties will be held this year at Crab creek, on June 18-20.

The Grays Harbor commissioners recently decided to build only needed roads this year, and invest the road money in Liberty bonds.

The old Slade homestead landmark, consisting of three acres, with its log house, near Lynden, has been sold to F. P. Cheney for $2000.

Plans are being drawn for a new high school in the Boisfort consolidated district near Klaber. The new school will cost between $15,000 and $20,000.

A new two-story warehouse and factory building that will cost with equipment $20,000, has been authorized by the Lewis County Canning association for the Chehalis cannery.

The milling plant of the F. M. Martin Grain and Milling company at Cheney was destroyed by fire April 14. The loss, including buildings, wheat, flour and feed, amounts to $150,000.

Governor Ernest Lister has appointed Joe Stingle of Spokane as chief deputy game warden for eastern Washington. Mr. Stingle succeeds R. B. Wales, who has held the office since 1913.

During the last year there has been an increase of 151 industrial plants in the state of Washington. It is also reported that there are 44,000 more men and 2500 women employes in the state industries.

At a recent meeting the Okanogan County Stockmen's association elected J. E. Ford of Oroville, president; Bert Hart, Chesaw, vice president; Hugh Miller of Riverside, secretary-treasurer.

A. G. Avery, head of the law enforcement division of the state food administration, has been appointed assistant to State Administrator Hebberd. He will be in charge of the office during Mr. Hebberd's absence.

Fire, supposedly set by incendiaries, destroyed a barn on the W. H. Gross farm near Walla Walla. The blaze destroyed grain, 18 horses and mules, two cows, several sets of harness, as well as hay and feed. The loss was about $10,000.

An appeal is to be made to the game commission of Thurston county to allow the soldiers to fish in that county without procuring regulation hunting and fishing licenses. Pierce county has permitted the soldiers the freedom of her streams and lakes for some time.

Three thousand bushels of choice seed wheat from the wheat belt of the Big Bend country has been distributed among the farmers of the Okanogan valley by one concern. Of this amount, practically 2800 bushels has gone to homesteaders on the reservation, which represents the planting of 3000 acres of land.

Canning operations at the Yardley plant of the Puyallup and Sumner Canning company in the Spokane valley will not begin before the middle of May, according to Sheldon B. Coon, manager of the plant. The first canning will consist of spinach, and the early fruits and vegetables will follow.

The stockmen of southeast Benton county have organized themselves into a protective association against stock rustlers. Although the stealing has not been so pronounced lately as a few years ago, nevertheless it is sufficient to demand action, and so cooperating with the county commissioners they are offering a reward of $500 for the apprehension and conviction of the cattle thieves.

Plans for completing the organization of the Lewis County, Wash., Dairymen's association, are in the hands of a committee, of which J. A. Scollard of Chehalis, Wash., is chairman. The report may be submitted before this is printed, the general idea being to formulate a plan by which the dairymen may have a voice in setting the price of milk and butterfat. Over 350 dairymen attended the first meeting and the prospect seems good for united action.

## SPRING WHEAT.

### Ten Per Cent Acreage Increase.

Spring wheat will show a 10-per cent increase in acreage in this state, according to State Grain Inspector P. J. Sweeney of Seattle.

The natural shortage of labor has been overcome in part by the use of tractors and the state will attempt to produce a record-breaking crop.

It is estimated this state has on hand 4,000,000 bushels of last year's crop as compared with 10,000,000 bushels of old wheat on hand at the same period last year.

### Control of Smut Explosion.

The harvesting season in the wheat areas of eastern Washington will be preceded by a series of meetings at 14 wheat centers, given over to lectures and illustrated talks on the control of smut explosion by representatives of the United States department of agriculture and the state college, as follows: Walla Walla, April 27; Dayton, April 29; Pomeroy, April 30; Pullman, May 9; Lacrosse, May 10; Colfax, May 11; Rosalia, May 13; Oakesdale, May 14; Garfield, May 15; Tekoa, May 16; Waverly, May 17; Ritzville, May 20; Palouse, May 21; Uniontown, May 22.

### Topping Bull Sales.

A news item from Chicago says that to the Pacific northwest has come the honor of "topping" the annual bull sales of the American Aberdeen Angus association held this year at St. Louis, Chicago, Sioux City, Omaha and St. Joseph. Not only did Knight of Rosemere, a great show bull of the Congdon and Battles herd of the Yakima Valley sell for $1000, but his younger brother, Knight of Rosemere 2d, brought $900 and his still younger brother sold for $650. The $1000 bull went to Iowa, the $900 to Tennessee and the calf to Texas. Mr. Battles declares after a tour of the southwest that "never has the opportunity for good, purebred Aberdeen Angus cattle been so promising." Congdon and Battles again will show two herds of breeding cattle around the fair circuits of the northwest and east. They will also, for the first time, fit some steers to show farmers and stockmen the finishing qualities of the breed.

### What's the Use?

What's the use of growling about it? You don't like a growling puppy.

# HELP WIN THE WAR

Add to the food production of your country—thereby doing your patriotic duty and at the same time making for yourself a legitimate profit.

Cut-over lands in the upper Columbia river valley offer a wonderful opportunity at this time.

Excellent railroad facilities; good roads; schools; an abundant market right at home; and every advantage that could be desired. Unexcelled for diversified farming or for stock.

We can sell you tracts of any size you wish at extremely low prices and on terms that any industrious man can meet.

Write for descriptive booklet and full information.

# THE SAMSON TRACTOR

12 Horsepower Draw Bar. 25 Horsepower Belt

## What Constitutes a Successful Farm Tractor?

Isn't the ability to operate successfully and economically under the peculiar condition under which it must work, after all, the real test?

Fritz Benz of Toppenish has replaced 16 horses with his Samson.

Clarence Young of Chehalis plows at a cost of 25 cents an acre for oil and gas.

Gus Johnson of Mt. Vernon plows with two 16-inch bottoms at a less cost and with greater speed than he could with teams.

Grant Clarence of Goldendale finds his Samson lowest in price of work done, and better adapted for his work than any other tractor.

Guy Hudson of Port Stanley uses his Samson to pull a road grader for the county, taking the place of eight horses.

These are only a few examples of the ability of the Samson Tractor to operate successfully under different conditions in the Pacific Northwest.

SAMSON TRACTORS are operating successfully on the sandy farms of Eastern Washington, the hills of Walla Walla county, on the reservation and irrigated land of Yakima county, down in Klickitat county, near the Columbia River, in orchards of Chelan county, in gumbo soil of Lewis county, peat land of Skagit, marshes on Lopez Island, and under almost every conceivable condition to be met in Washington, Oregon, Idaho, or California.

***Samson owners are carrying the Great Northwest through to a glorious victory over waste, inefficiency and shortage of Labor.***

***Owners everywhere, and not one record of dissatisfaction.***

Write for literature today. It won't obligate you a bit, and we know you will be interested.

# Ask The Washington Farmer Any Question You Like

The Washington Farmer's free information bureau is a unique public service institution of the widest scope.

Summed up in a phrase, the object is to tell you, without charge, "whatever you want to know."

You are urged to consider the possibilities of this service in regard to your own problems—personal, household or business.

There is no limit to the number of times you can call on the bureau for service.

There is no charge of any kind, and all inquiries are held strictly confidential.

The sole requirement is that you enclose a 3-cent stamp for return postage on your query.

The special pamphlets and bulletins that are advertised from time to time require only a 2-cent stamp for return postage because they are sent unsealed.

The maintenance of this bureau, having all the great resources of the federal government to draw upon, for the free use of its readers is only another expression of The Washington Farmer's conception of rendering real public service to its patrons.

You have only to try this service once and you will depend upon it thereafter.

Here are a few samples of questions and answers:

**Where should I ship trench candles?**
Answer—The Red Cross officials state that they are not shipping any more trench candles to France, as they have not proved satisfactory.

**Are women accepted as rural mail carriers?**
Answer—Yes, the postoffice has just made this ruling as a war emergency measure. The first examination will be given on April 27.

**How many members of congress are foreign born?**
Answer—Ten, as follows: Julius Kahn, Germany; Adolph J. Sabath, Austria; Niels Juul, Denmark; P. P. Campbell, Nova Scotia; Knute Nelson, Norway; S. H. Durkker, Holland; Meyer London, Russia; Joseph McLaughlin, Ireland; George F. O'Shaunessy, Ireland, and Edward Voight, Germany.

**What is the best way to send money to France?**
Answer—The postoffice department says that the best way to send money to soldiers abroad is to purchase a domestic money order and have the postmaster make it out to the United States Army Postal Service, American Expeditionary Forces.

Do not address your letter to Spokane. Send your question to

# College Boys Take Dairy Show Prizes

The efficiency of the dairy department of the Washington State college in training students in the science of dairying was demonstrated at the recent dairy products show at Yakima, when students representing the state college teams won seven out of 13 prizes offered for proficiency in judging dairy cattle and butter. The winnings included three out of four first prizes offered for teamwork, two of the three first prizes for individual judging and $75 out of $150 offered in cash prizes. Three teams competed in the judging, that of the Oregon Agricultural college, the University of Idaho and Washington State college.

Professor M. O. Maughan was coach of the team which won first in judging dairy cattle. The team was composed of R. W. McKenna, C. A. Phillips and H. M. Wivell.

G. M. Hinman of the state college was high man in individual judging. Mr. Hinman scored 477 out of a possible 500 points, leading the second highest man by 42 points.

In the butter-judging contest a team composed of George Steele, Fred Burmaster and William Wieck, coached by Professor G. D. Turnbow, won first prize, Mr. Burmaster also winning the prize as high man in the individual butter judging. The following is a list of the prizes won by the teams representing the state college:

**Team Prizes.**

First prize, banner—Dairy cattle judging team.
First prize, banner—Short-course judging team.
First prize, cup—Highest combined score of collegiate and short course butter-judging teams.

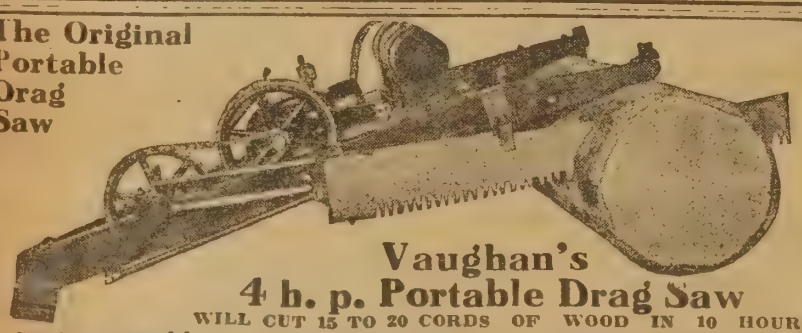
**Individual Prizes.**

First prize, $25—G. M. Hinman, collegiate butter judging.
First prize, $25—Fred Burmaster, short-course butter judging.
Second prize, $15—H. M. Wivell, dairy cattle judging.
Third prize, $10—R. W. McKenna, dairy cattle judging.

## Tacoma Poultry Association.

At the twenty-ninth annual meeting of the Tacoma Poultry association, held recently, the following officers were elected: Henry A. Durr, president; John White, vice president; Charles B. Staples, treasurer; Harry H. Collier, secretary. Directors, Fred A. Johnson, Charles B. Staples, John White, Sam F. Hawkins, A. H. Miller, E. R. Ninman, J. H. Erlanger, A. Hartley and H. A. Durr. The meeting adopted the dates for the annual shows that have been used for the last 10 years, the full week that follows the Christmas holidays. The dates will be December 31, 1918, to January 4, 1919.

## New County Agents



T. L. Kennard began his duties as county agent for Whitman county March 13, with headquarters at Colfax. Mr. Kennard has been superintendent of the University of Minnesota northwest experiment station at Crookston for the last three years. For three years prior to this he was professor of agronomy at the University of Idaho.

G. S. Ray, professor of agronomy at the University of Idaho, has been appointed county agent for Adams county, where he has begun his work. Ray is a mature man and has had valuable experience in dry farming in Wyoming and Colorado. He is a graduate of the College of Agriculture, University of Colorado.

William Meikle has recently been appointed county agent of Chelan county. Mr. Meikle has had extensive experience in practical horticulture in the Chelan district. He is a graduate of the State college of Washington, 1912, where he completed the course in the science of horticulture.

NASH

QUICK AND ECONOMICAL TRANSPORTATION

# Nash Trucks Save Your Time

Moving loads about the farm, or between farm and town, in the busy fruit season, Nash trucks save your time.

Equipped with M & S automatic locking differentials and internal gear drive rear axles, they also have many other mechanical features which enable them to speed up your hauling and reduce its costs.

Because of the automatic locking differential, the Nash truck's drivin g wheels cannot spin. This saves fuel, saves tires and allows the Nash truck to get through where other trucks without this important feature cannot go.

The unusually strong internal gear drive axle is not only much lighter and simpler than others but delivers more power to the wheels, especially at low engine speeds.

Our transportation expert will be glad to tell you which Nash truck will best serve your purpose.

# N-O-W!

America calls for two billion more dollars in the Third Liberty Loan. With three billion practically assured, the cry comes from across the sea for more men, more money. Our allies are at bay before the terrible onslaught of the Hun!

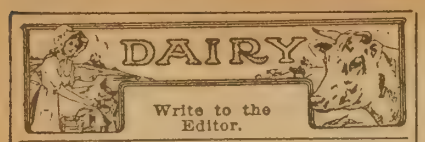
Washington has done splendidly, but Washington must do more. Washington must not let her own record in the Second Liberty Loan stand—the Third MUST BE GREATER.

Germany's foes need help as never before. Dollars NOW will DO the work that hundreds of dollars might FAIL to do later. Washington's response has been wonderful—but a new goal has been set—five instead of three billions. WE MUST NOT FAIL!

This comes right home to YOU—you who are reading this page now. It means that the money you have put into Liberty Bonds must be only a starter, if you are to hold this freedom that means more to us Americans than life itself. If you have bought a $50 bond in this drive, go down in your pocket for another, and yet another. If you have bought a thousand $50 bonds, you still have not done enough.

If you have bought no Liberty Bonds—and have two hands that will earn you the money to pay for them—then something's the matter with your patriotism, with your Americanism.

This drive is only beginning. America wants twenty million citizens to be holders of Third Liberty Bonds. That is 300,000 for Washington.



Where do YOU stand?

**WASHINGTON LIBERTY LOAN COMMITTEE**

J. A. Swalwell, Chairman. Central Building, Seattle.

# Buy a Liberty Bond TODAY

This page gladly contributed to the Third Liberty Loan cause by Col. Roland H. Hartley, Everett, Wash.

A. B. NYSTROM, Editorial Contributor

# Calf Feeding

1. Feed three times daily the first week.

2. Keep the calf a little hungry rather than to overfeed.

3. Be regular in time and manner of feeding.

4. Make changes in the ration very slowly.

5. Absolute cleanliness as to pails and quarters is a necessity.

6. Allow the calf plenty of exercise out of doors and access to dry, warm quarters.

7. Keep the calf growing constantly. A. B. N.

## RAISING CALVES

### Some Substitutes for Milk.

There is really no good substitute for milk to be obtained at any price. This fact has recently been proven by scientists, though practical feeders have thought so for years. But supplementary feeds can be found that will cut the cost of raising calves materially. Aside from the patent calf meals on the market the following home mixed feeds can be fed to advantage if used by a careful feeder:

**Mixture Number 1.**

Low grade flour .....16 2-3 pounds
Whole flaxseed meal ...33 2-3 pounds
Linseed oil meal .....50 pounds

Directions: Take 2 1-2 pounds of the mixture as a daily allowance for each calf. Scald with boiling water. Afterward add more water so as to make two gallons. Add a little sugar and salt before feeding.

Begin to add a little of this mixture to the whole milk when calf is two weeks old; gradually decrease the milk and increase the substitute until complete change is made. This should take from 10 days to two weeks. Weak calves must have a little of the milk for two or three weeks longer.

**Mixture Number 2.**

22 pounds ground oat flakes.
10 pounds flaxseed meal.
6 pounds flour middlings.
11 pounds fine corn meal.
1 1-2 pounds blood meal flour.
1-2-pound salt.

Directions—Make a gruel by adding three and one-half to four ounces of the mixture to each quart of water. The meal is first stirred with a little cold water to get out the lumps and to convert it into a paste. A quart of boiling or very hot water is then added and the mixture thoroughly stirred and allowed to stand until luke warm, in which condition it should be fed. Begin to feed at two to three weeks of age, making the change very gradually, as with mixture No. 1.

It takes milk to make strong, healthy calves, but very good results can be obtained by substituting a part of the milk with one of the above mixtures. A. B. N.

# Milking

## Some Points to Be Remembered

By L. T. HALL.

Here are some points to remember in handling milk cows: If you want a gentle cow to milk, never let her suckle her calf. This prohibition has two advantages: First that the cow is not apt to learn to kick, and second that the calf will not afterward have to be weaned. Be gentle with a cow always, but especially just after calving when the udder is apt to be tender.

Watering the cow just before milking will tend to make her let down her milk. Warm water is better for this purpose then cold. Also, before beginning to milk, give the cow her feed, then wash and massage the udder. Do not let your head touch the cow lightly, as this will cause switching. Milk high up on the teat, as the end are always tender. Keep your finger nails trimmed, unless you wear rubber gloves or merely strip.

Now as to feed: Barley causes an increase in the milk flow, but not in its richness. Corn, mangles and oil meal (the last to be fed but a tablespoon to each cow) go to form cream. In addition to these feeds, the cow needs roughage, such as hay and alfalfa. Kale has a tendency to flavor the milk unpleasantly, and acorns and pumpkins to dry up the milk flow. A little salt should be fed each day.

A cow will milk sooner if not bred too soon after calving.

Above all, feed plenty and see that the cow gets all the water she needs, warm if possible in cold weather.

## COWS FOR FARM.

### Kind That Requires No Coddling.

R. M. McKoy of Cheney, Wash., says that no "fancy" cows need apply for admission to his farm. Mr. McCoy thinks the somewhat-better-than-average cow which the somewhat-better-than-average farmer usually manages to secure is after all the best for his purpose, as she requires no coddling.

Mr. McKoy is very sure, also, that the man who studies cattle rather than the individual members of his herd is making a serious mistake.

"In my orchard back east," he comments, "I used to know what every individual tree needed, what its peculiarities were, and what it could be depended upon to do. Cows have got to be handled in the same way. We've got to know them as individuals, not as a herd.

For his own use, Mr. McKoy favors the dual purpose Durham, as he feels that farming built around animals of this type has more adaptability than straight milk or beef farming.

## One Quart of Milk.

Dr. Rosenaw of Harvard university says that the actual food value of one quart of milk is equal to three quarters pound of beef, two pounds of chicken, eight eggs, or two pounds of codfish. Each of these costs more, to say nothing of the time, labor and fuel required in preparation. A glass of milk costs about 2 3-4 cents in Corvallis today. The food value of that glass of milk is equal to two large eggs, or a large serving of lean meat, or two moderate sized potatoes, or five tablespoons of cooked cereal, or two tablespoons of cooked rice, or two slices of bread. In other words, a meal consisting of one glass of milk and two slices of bread gives you as much food value as you would get out of four eggs.

# IF COWS COULD TALK

"Good morning, Mrs. Fawncoat. I hear that all the cows in the county are joining the 'Win-the-War' Club."

"Yes, Mrs. Starface; Secretary of Agriculture Houston says we must increase the production of butter-fat, and we cows have all promised to do our 'bit.'"

"There's one thing I want to say right now," spoke up Mrs. Black. "The farmers have got to back us up in this movement. I'm with the rest of you, heart and soul, but what chance have I got?"

"Why, Mrs. Black, what's the matter? You have a fine warm barn and plenty to eat and drink."

"Yes, I know; but what can I do as long as they use that old cream separator on the place? It never was any good, anyway, and now it wastes so much cream I'm just plain discouraged."

"Well, you're not so badly off as some cows, where they haven't any cream separator at all."

"I don't know about that. There's a lot of cream separators in this county that are only 'excuses'—not much better than none at all. I tell you, Mrs. Fawncoat, with butter at present prices and the people at Washington begging every one to save fat, it's almost a crime to waste butter-fat the way some of these farmers do."

"That's one thing I'm thankful for," said Mrs. Fawncoat, "there's no cream wasted on this farm. We have a De Laval Cream Separator and everybody knows that the De Laval is the closest skimming machine."

"Well," said Mrs. Starface, "we never used a De Laval on our place until last fall and supposed one separator was about as good as another; but, honest, the De Laval is the first cream separator we've ever had that gave us cows a square deal."

P.S. Of course your cows can't talk—but if they could you'd never have a moment's peace until you got a De Laval Cream Separator.
Remember that a De Laval may be bought for cash, or on such liberal terms as to save its own cost. See the local De Laval agent, or if you don't know him, write to the nearest De Laval office as below.

## Flush Out the Cow After Calving

Thorough irrigation of the uterus and vaginal tract with a reliable antiseptic, once or twice after a cow drops her calf, will give you the greatest insurance you can have against Barrenness, Abortion, Retained After-Birth, etc.

B-K is more effective than lysol, carbolic acid, Lugol's solution and oily coal-tar disinfectants, which all make the uterus more acid, and do not clean. B-K heals the uterus and vagina by cleaning and removing the slime and acid. It kills the germs because it is much more powerful. The application of B-K as a douche is simplicity itself.

If your dealer does not have B-K—send us his name.

## Profiteering

### Hoover Penalizes Swift & Co.

Will H. Hays, the new chairman of the republican national committee, declared in recent public addresses in the Pacific northwest that "there is too much profiteering in this country and not enough volunteering."

Food Administrator Hoover evidently agrees with Mr. Hays, for he is after the profiteers with a sharp stick. In a single day he penalized 21 bakeries in New York city, closing them outright for three days, and on the same day he penalized Swift & Co., the big packers, for even buying eggs from a profiteering dealer. His findings in the latter case are as follows:

"There is no evidence in the case to establish that Swift & Co. themselves profiteered, but while they may not themselves have profiteered they bought 12 carloads of storage eggs from a profiteer at a price which they knew gave the seller an unreasonable profit, and with full knowledge that the food administration had ruled that the profit, and therefore the price, was unreasonable. By making the purchase they assisted the seller to profiteer.

"They evidently thought that the responsibility was upon the party who made the excessive charge, and not upon the party who paid it; but in as clear a case as this we shall not hesitate to penalize both parties.

"We, therefore, approve the findings of the federal food board of New York, and order Swift & Co. to suspend all dealings in eggs in New York city for the 30-day period beginning midnight, April 10, 1918, with such exceptions only as the federal food board may deem necessary in the interest of the public.

"They are further ordered to apply to the purchase of Liberty bonds of the present issue a sum equal to the margin between the price paid for the eggs and their average selling price without allowance for expense, and to turn over the Liberty bonds to the New York chapter of the American Red Cross, furnishing to the federal food board the chapter's receipt for the same, accompanied by the usual certificate that this contribution is not to affect in any way their future contributions to patriotic or charitable purposes."

## Spokane Interstate Fair

The 25th anniversary week of the Spokane Interstate Fair and Live Stock Show will open on Labor day, Monday, September 2, 1918, and close on Saturday night, September 7. The fair is putting forth every effort to cooperate with the United States government war aims in every way. The boys' and girls' club work will occupy a most prominent place on the program for fair week. The main building will be devoted entirely to the automobile show, while the woman's department, which has occupied the balcony of the main building for many years, will be installed in new quarters in the large hall at the north end of the grandstand. The premium list has just been issued and can be obtained by addressing the secretary of the Spokane Interstate Fair, Spokane, Wash.

### Enjoys Bee-Keeping Articles.

To the Editor: I wish to congratulate you "firstly" and the readers of the Farmer "secondly" upon your completing arrangements with George W. York of Sandpoint, Idaho, for a series of articles on beekeeping from his pen. I have been personally acquainted with Mr. York for a number of years and can assure your readers that his articles will be practical, pointed and profitable to those who accept and practice the advice in them cotnained. His experience as an apiarist, as well as having been editor and publisher of the American Bee Journal for a number of years, particularly fits him to write this series. E. W. PEASE.
Cove, Ore.

### More Wheat in Japan.

Japan is now making efforts to increase her wheat acreage greatly; also to build ships for carrying Japanese and Australian wheat in the Pacific trade.

**Cheerfulness Under Fire.**

# Cull Potatoes

## Cook Them and Feed to the Pigs

By E. L. POTTER.

We have often discussed the feeding of cull potatoes, but feel it desirable to again mention the matter since there are large quantities of potatoes in the northwest which must be used within the next few weeks, or they will rot. Grains of all kinds are very scarce and high priced just now, and potatoes may, to a certain extent, take their place.

Potatoes could entirely replace corn or wheat or barley were it not for the fact that fattening animals can not eat enough of them to make good gains. For exampe the amount of water needed by a fattening pig weighing from 100 to 200 pounds is about 12 pounds a day. Sixteen pounds of potatoes contain 12 pounds of water and four pounds of dry matter. This four pounds of dry matter lacks about three pounds of being enough as the pig will need about seven pounds. The deficiency must, therefore, be made up with grain since the pig can not consume enough potatoes to meet his needs. Breeding stock, however, do not have to be fed so heavily and may not need grain in addition to the potatoes.

On account of their very low protein content potatoes must be supplemented with some protein feed such as skim milk, butter milk, tankage, oil meal, or alfalfa pasture. The value of such supplements is very great with the grain and is much more imperative with potatoes.

Potatoes require cooking to give their best results, and in that way differ from all other common feeds since other feeds have their digestibility lowered by cooking. Potatoes not only have a higher nutritive value when cooked, but are more palatible and may be fed in larger amounts without scouring. Experimental tests show that six pounds of raw potatoes are equal to one pound of grain, while four pounds of cooked potatoes are equal to one pound of grain. Cooked potatoes may be fed at the rate of five or six pounds of potatoes to one pound of grain to fattening pigs, while with raw potatoes not over two or three pounds should be fed with one pound of grain.

Steaming is generally considered the best method of cooking, although this is not well proven. If boiled in water just as little water as possible should be used. Some feeders say that the water in which potatoes are cooked should never be fed, but should be poured off. This water, however, contains a little nutrient value and it has been used extensively without bad results. It would therefore seem poor economy to waste it. Where no steaming facilities are available potatoes may be cooked in a scalding vat, in a kettle over an open fire, or if in not too large amounts in any large vessel on the kitchen stove. If only a very few are available it may be better to use them only in small amounts and to feed them raw.

Grain or mill feed may be mixed with the cooked potatoes, but the grain should not be cooked as cooking lessens its digestibility.

## CONCENTRATE MEALS

### Comparison of Different Kinds.

To the Editor: Please tell me something about concentrate meals. How do they compare? Any information will be appreciated.—G. B.

There are several concentrates offered in the form of meal, such as soy bean meal, cottonseed meal, lineed oil meal and cocoanut meal. The first of these is not plentiful on this market. The second is produced in the south, but has been sold and used to some extent in the northwest. Linseed oil meal has been manufactured in the northwest and is very common. Cocoanut meal, formerly marketed in San Francisco, is now available in the northwest.

Of the three which are marketed in the northwest, the following may be said: Cottonseed meal is the highest in protein; however, some animals do not like it and it must be fed cautiously. Linseed oil meal has great value, which is well known to all experienced livestock men. It is a concentrate of much worth, having a high protein content. It has a laxative effect also, which most concentrates do not possess. Cows relish it with other feeds. Cocoanut meal, which is the ground meat of the cocoanuts after the oil has been extracted, is favorably reported wherever it is used as a dairy feed. No reports have been made to us on other stock so far. It is fairly high in protein and has the advantage of being relished by animals. It has been used for a number of years near San Francisco, and reports there were to the effect that it was a good dairy feed, producing butter of great firmness. It is also reported that this latter concentrate is about the only one on the local market at present.

The following table may be of interest, although it must be said that even correct analyses do not tell the whole story, as the highest protein feed may not bring the greatest results if stock does not eat it with a relish:

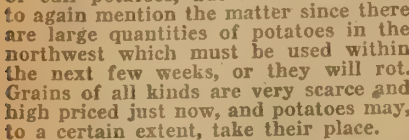
| | Crude Protein | Carbohydrates | Fat |
|---|---|---|---|
| Cottonseed meal | 37.6% | 39.9% | 8.2% |
| Linseed oil meal | 33.9% | 44.1% | 7.5% |
| Cocoanut meal | 20.9% | 56.5% | 8.1% |

These percentages are taken from Henry's Feeds and Feeding.

Prices vary so that quotations are of no value. Inquire of local dealers.

—H. H. B.

### Horse Needs to Be Hardened.



"A good many people don't seem to realize that a horse needs to be hardened before you start him into full work in the spring," said W. L. Sheard, of Dayton, Ore. "Right now my horses can't do a full day's work without being pretty stiff and sore, so I break them in gradually, and after a while they will be fit and hard and can do twice as much. I also think we can economize on feeding somewhat without doing any harm to the animals. When I come in from the field I give hay first and let them chew on it for, say an hour; then I feed them oats and I feed less. I think I get more benefit from the oats in this way. The horses can get all the nutriment from the grain and there is less waste, so with a smaller measure I get the same returns."

### Argentine Meat-Packing Plant.

Some months ago a group of Patagonian capitalists sought and obtained a concession from the Argentine government to establish a packing plant in Rio Grande, in the territory of Tierra del Fuego, the southernmost district of the republic. The plant was to furnish a market for the stock of the sheep and cattle owners of that district, and to stimplate the growth of the industry there. The company organized, brought in the necessary machinery, and commenced at once on the construction of the plant itself. On February 20 operations were begun with the killing of 10,000 animals.

### Girl Mail Carrier.

Billings, Mont. has its first girl mail carrier. Miss Genevieve Olson, 18 years old, has been assigned to rural free delivery route No. 3, which is 30 miles long. Miss Olson has a horse and buggy, as well as automobile.

# Veterinary

Dr. S. B. Nelson

**Liver Trouble in Ewe**—I have just lost a valuable registered Shropshire ewe six years old. She began to lose flesh about two weeks ago, eating less and less and finally quit eating entirely. When I opened her there was a quantity of fluid the color of urine in her surrounding the intestines. Her liver was three times the normal size and full of little yellow lumps. The gall bladder was three times too large. Otherwise I saw no signs of disease. What was her disease and is it contagious? D. S.
Gales Creek, Ore.

The ewe died without doubt from the liver trouble with which she was affected. As to what the specific disease was this could not be determined without a bacteriological or pathological examination. If possible I suggest that you send a specimen of the liver to the veterinary department of either or both the Oregon Agricultural college or the State College of Washington, who would be glad to be of service to you if they can.

**Pigs Suffering From Worms**—I have 17 pigs from three to four months old. There are four among them that are stunted, anyway they are not one-half of what the rest are in height or weight. Their hair stands straight from them, although they are round and fat. Can you give me a remedy for it? E. T.
Siletz, Ore.

It is quite possible that the little pigs may be suffering from worms. I suggest that they be placed in a pen by themselves, starved for a meal, and then each one given about three to four grains of santonin with three grains of calomel. This may be well mixed with feed and the pigs turned in and allowed to drink it. The next day give each one about an ounce of castor oil in the swill in the same way. Then try to give them a little extra feed such as half a pound of grain for every 25 pounds of body weight per pig.

**Collie Has Mange.**—I have a fine Scotch collie pup that is about eight months old and is a fine stock dog, but has the mange so bad it keeps him busy scratching. He has sores all over his body. I have tried different remedies, but nothing has cured him. Could you give me a remedy that would cure him?—J. C. V., Frances, Wash.

Mange is a general term for several parasitic diseases affecting dogs. One of them is a fistular form and is a very difficult one to treat, I am sure. The best suggestion that I can give you is to send your dog to the veterinarian hospital of the State College of Washington and let them treat the animal for you, provided that you have not a veterinarian any nearer than that you can employ. Write to Dr. E. N. Wegner, veterinary department, State College of Washington, and he can give you details.

**Pimples on Udder**—I have a young cow that has been fresh for about eight weeks and about two weeks ago I noticed a large pimple or boil on her udder and since that time more have appeared until now they are all around between the teats and some are coming on the teats. They first are large pimples and hard, then they keep getting larger. I have been putting carbolated vaseline on boils after milking and also am giving one teaspoonful of sulphur in her feed twice a day. She is getting plenty of rye hay at night and bran and shorts at milk time. What is the best thing I could do to relieve her of the trouble?—M. D. M., Almira, Wash.

Although I am not quite clear as to what you mean by large pimples or boils, yet your general description rather fits in with cowpox affecting the cow's udder. I recommend the washing of the udder with a 2 per cent solution of lysol before and after each milking. Then apply to the pimples a small quantity of benzoated oxide ointment after each milking. To aid in reestablishing the circulation around the pimples it might be well to give the cow one and one-half pounds of epsom salts in about three to four quarts of water.

**Pigs Were Dead.**—I had a sow farrow last night, having six live pigs, and then six dead ones. It appears the dead ones were matured, yet had been dead some little time. The sow has had plenty of hay and mangles, runs at large and had plenty of exercise all winter. She is an old sow and in good condition when bred. On March 5th I started to feed potatoes which I bought of sortings from a spud buyer. Some were rotten and some got frozen the night I brought them home, but were put in the cellar. Can you tell me what the trouble is?—L. C. B., Rigby, Idaho.

No, I can not tell you what the trouble was. The feeding of the potatoes, depending on the quantity, might have had something to do with death of half the litter.

**Medicine Burned Horses**—Last spring I purchased a certain manufactured application for the prevention of gnats and mosquitoes and put it on my team according to directions. It burned the horses so bad that I could not do anything with them for close on to two months. They were so badly swollen that it was almost impossible to get them to water and back. It affected them between the front legs and one horse on the hind legs. They are not healed entirely yet. The sores don't seem to stay healed. They heal a bit and then break open. The horses are stiffened considerably from the effects. What would you advise me to do? H. S.
Spirit Lake, Idaho.

Apply a small quantity of the ointment of oxide of mercury to the part morning and evening.

**Cow Has Night Sweats**—I have a milk cow that has night sweats. She is giving milk and holding up in good shape. She stands on a barn floor every night in a warm barn. I feed her alfalfa hay, shorts and bran. What can I do for her? E. J.
Moscow, Idaho.

There must be some specific cause for the cow having peculiar night sweats constantly. The night sweats are symptoms, or the result of disease. I suggest that you consult one of your local veterinarians, and he will probably find out what the trouble is and give you advice to remedy it.

POLICE DEPARTMENT LIKES THE ASKE.

We are "tickled to death" with the Aske Regulator; it's worth its weight in gold to all Ford owners.—Joseph A. Lee, Police Department, Hall of Justice, San Francisco, Cal.

This is but one of the many testimonials received.

*Why*

Every Ford Owner Wants
The Aske Automatic Voltage Regulator

*Because*

It Gives
Bright Lights at All Speeds

The "ASKE" $5.00

The only patented device on the market guaranteed to continue the operation of one light without increased voltage should one light burn out.

"The Aske" is a safety necessity—for on rough roads at slow speed you can have bright lights.

For regulator and tail light diagram. With dimmer, $6.

Play safe—"Ask for an Aske."

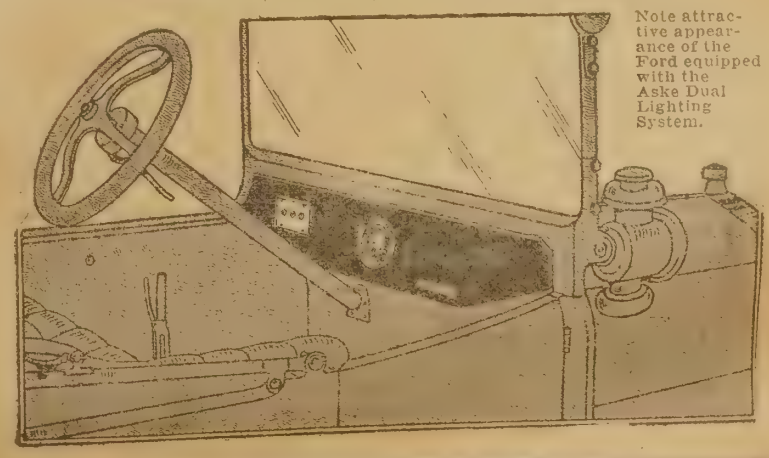
**Get Your "Aske" Now—Play Safe.**

ASKE INSTRUMENT BOARD

The Aske Instrument Board is highly finished in black enamel—complete with flush type dustproof clock, dimmer and push and pull switches, which are standard with the higher priced cars, and wired with the best lighting cable cut to lengths for installation; also rear lamp adapter for converting oil lamp into electric.

Aske Dual Lighting System adds beauty, utility and distinction to your car, decreases steering wheel vibration, eliminates all lighting and starting trouble and gives a wonderfully efficient system.

ELECTRIFY AND BEAUTIFY YOUR FORD



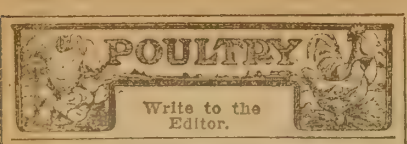
Your Ford equipped with the Aske Instrument Board and Regulator has all the lighting conveniences of higher priced cars. The added beauty and convenience make the Aske Lighting Units worth many times its price to any Ford owner.

ASK THE MAN WHO KNOWS THE ASKE LIGHTING UNITS.

THE ASKE LIGHTING UNITS are sold at most dealers—or will be sent direct to you upon receipt of price and dealer's name.

Write for our descriptive booklet.

Instrument board, complete with regulator ..... $18.00
Instrument board, complete without regulator ..... $13.00
Instrument board, complete without regulator and clock..... $10.00
Flush type clock ..... $3.50
Instrument board, without equipment ..... $1.25



Note attractive appearance of the Ford equipped with the Aske Dual Lighting System.

**Aske Regulator Co.**

**DULUTH, - - Minn.**

NOTE—The Aske Regulator can only be used on 1915 and later model Ford cars, commencing with factory number 566155, unless car is equipped with 1915 or later model magneto, which can be secured from any Ford dealer at small cost.

JAMES DRYDEN,
Editorial Contributor.

## Poultry House Needs

The first essential of the poultry house is that it is sufficient to protect the fowls against rain, snow, wind and cold. The cold is not so much a handicap to the hen as are the rain, snow and wind, but it is poor policy to allow the poultry to be chilled, either old or young. Especially is this true when cold winds blow. When a hen is using most of her vital energy to overcome the cold occasioned by poor housing in bad weather she has insufficient energy left with which to produce eggs or meat. This is a very simple explanation of the falling off in egg production with the coming of a cold snap.

But there is such a thing as housing poultry too well. One of the vital essentials to a poultry house is plenty of fresh air. As one writer on poultry matters has appropriately said, what the hen really needs is a sleeping porch house. It has been estimated that a hen required double the amount of oxygen per pound of weight that a horse or a man requires, and this explains in part the absolute necessity of plenty of fresh air.

## Potatoes for Poultry

With potatoes at $1 a hundred pounds and corn at $4, according to chemical composition they would have the following relative values: Four dollars will buy in corn 10.5 pounds of protein and 69.6 pounds carbohydrates. Four dollars will buy in potatoes 8.4 pounds protein and 69.2 pounds carbohydrates. Corn has a slight advantage at those prices.

I have heard that potatoes could not be sold in some sections, and then the small potatoes are hardly marketable, while for feeding purposes they are as valuable as large potatoes. Under those conditions a liberal use should be made of potatoes for poultry feed.

Potatoes are, of course, too bulky to make of them an exclusive diet, but the amount of grain might be materially reduced by feeding potatoes.

They should be boiled and mixed with bran and shorts. A little linseed oil meal or cocoanut oil meal may be added to advantage, the potatoes constituting the bulk of the mash. Give the hens a feed of this in the evening, the last feed of the day, all they will eat. During the day give them a light feed of whole grain in the morning and another about noon, just enough to keep them busy scratching it out of the straw litter, and not so much that they will not be ready for a good feed of the potato mash in the evening. The mash when mixed may constitute two-thirds of the total weight of feed for the day. Keep skim milk or buttermilk before the fowls all the time and no water. If milk is not available, keep a hopper of meat scrap or fish scrap before them all the time, and give water.

There is no reason why potatoes should not be fed liberally if fed in proper combination with other feeds.

J. D.

## Provide Some Shade

Any one who has watched the poultry flock on a hot summer day will remember having seen them lounging about in the shade with their wings raised and their mouths open, doing their best to keep cool. This is not merely a matter of pleasure with them, but an essential to their wellbeing. Hot, dry weather is detrimental to the interest of the poultryman and the successful raiser is the one who provides against the vicissitude of summer as much as possible by supplying shade and plenty of cool water for his flock.

Most poultrymen and many farmers who keep a few chickens are compelled to confine them to small quarters and unless special care is taken these quarters soon become poor places for them. It is natural for the hen to scratch, and if the ground of her pen becomes so hard that she can not scratch or that there is nothing to scratch for she must content herself with the unnatural condition of idleness. Dust, straw or soft ground should always be available to the poultry flock.

### Chickens Die.

To the Editor: Could you tell me what is wrong with my flock of chickens? I had 50 hens and two roosters, Rhode Island Reds, and they were doing well until about a week ago when they started dying. They would sit on the roost with their heads down and seemed to have no control of their necks; would linger for a day or two. Have been feeding oats once a day and wheat and some chopped feed.—Mrs. B. A., Ashton, Idaho.

It would be impossible to say from this description what the trouble was. The little information that is given might indicate poisoning from eating putrid meat of some kind. J. D.

### Chicks Get Sore Feet.

To the Editor: I am a subscriber to your paper and would be glad if you could tell me what is the matter with some of my incubator chickens. As soon as they come out they are all strong and lively, but some of them get sore feet and legs. They swell and are inflamed. What is the cause of it? MRS. T. C.

Big Lake, Wash.

If this correspondent will tell us her method of brooding and feeding the chicks we may be able to suggest a remedy. The trouble may be toe picking. If this is the case the toes will usually be bleeding, as it is the taste of blood that induces the picking. This vice is caused by lack of animal food and not enough exercise. J. D.

### Eggs for Hatching.

**By C. A. Muths, Salem, Ore.**

The eggs intended for hatching ought to be cared for so that they will not dry out, and kept cool. We pack our eggs in cardboard boxes that hold from two to four dozen eggs; each box is labeled with the date when laid and number of eggs it contains; then the lid is tied down, the boxes are set in a cool place and are turned once a day. In this way it is but a few minutes' time to turn 1000 eggs. The writer has had 16 years' experience in the poultry business with incubators and brooders and found that a good many make "evaporators" instead of hatchers of their incubators.

### Insure Green Feed.

There are two advantages to allowing poultry, especially the young growing birds, to have free range. They get exercise and get much food material that they otherwise would be unable to secure. Especially is this latter true in regard to green feeds, which are highly desirable for the development of the chicken. Wherever it is possible a patch of alfalfa, vetch or clover should be provided for the flock to run to, but if they must be kept in small quarters it is even more vital that green feed be regularly supplied to them.

# Tractors Are Fighting in France

"One acre out of every four in France now lies idle from sheer lack of man and animal power to plow, seed and harvest crops upon it," says Henry Morgenthau Jr., in an article dealing with the tractor expedition that he has led to the country to aid in re-establishing agriculture. "French crop production in 1917 was more than one-third less than the year before the war. All able-bodied Frenchmen up to 50 years of age are fighting and though the women, children and old men have made heroic efforts to maintain the agriculture of the country on a normal basis, the burden has exceeded their strength and endurance."

Hence, the expedition of 1500 Americans tractors and plows with experts to put them into operation. It is believed that these machines will not only greatly increase the 1918 harvest, but will be an inspiration to the French people similar to that furnished by the presence of American soldiers on the battle front.

Henry Morgenthau Jr.

"The tractors will operate mainly in the battle-scarred portion of northern France which has been retaken from the Germans," says Mr. Morgenthau. There property lines have been largely obliterated. The fields are consequently large and the batteries of tractors will be able to work most effectively. Thus in a few months foods crops, especially wheat and potatoes, will be growing in French soil plowed by American tractors—soil that a few months ago was the 'no man's land' between the great battle lines.

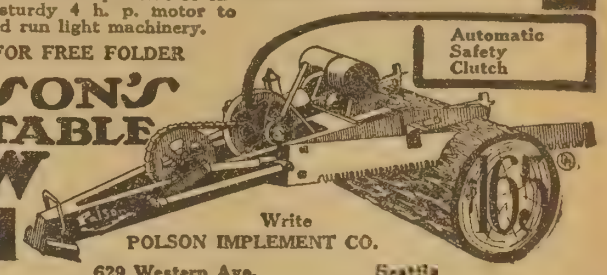
"The tractors and plows in this expedition are purchased by the French high commission with money loaned to them by the treasury department, and the expense of the mechanics who accompany them is being met by adding a lump sum to the purchase price of the tractors. Judging from past experience these outfits will plow about half a million acres for wheat, potatoes andsugar beets this spring, and a million acres for fall planting of wheat.

"In addition to the beneficial effect the machines will have on the morale of the French people, the land plowed by the tractors in 1918 is expected to produce 1,500,000 tons of sugar beets and potatoes and 450,000 tons of wheat; and this increased production in France, amounting to nearly 2,000,000 tons of food, will obviate the sending of about 400 large shiploads from America through the perilous submarine zone."

**Dependable!**

Here is a portable drag saw that you can depend upon.

Will do the work of 20 men sawing cord-wood shingle bolts, clearing land and cut from 15 to 30 cords of 4-foot wood per day.



Built especially strong for heavy duty work and backed by one of the oldest implement houses in the West.

Equipped with Safety Automatic Clutch so you can start saw independent of engine and use sturdy 4 h. p. motor to pump water and run light machinery.

You make no mistake when you buy the Polson.

*"The Car of No Regrets"*

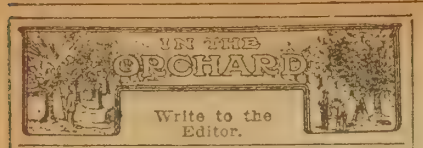
# KING "8"

## The Car-Owning Farmer Serves the Nation Best

HE conserves time and energy to devote to his farm by putting the automobile to work. It does the "going to town", keeping the horses in the fields. It can be driven by women and children with safety, saving time for the men. Driving it hard does no harm, it's always fresh for the next job. And if it's a King it needs little attention or repair.

This year it is a duty to buy more carefully than ever before. For reasons of economy and assured performance you should select a pioneer car of matured mechanical design and moderate up-keep, built by a reliable and long-established Company. Investigate the KING!—and because of limited "war-year" output and freight embargoes, *order early.*

This sixty horse-power King is now in its third year of world-wide service, following a smaller "Eight" and a successful "Four". The chassis is designed throughout for utmost simplicity and surplus strength. Comparative light weight for a car of this power and size is the big factor in its low cost of maintenance. The King has long body room because of compact engine, and its 120 inch wheelbase gives a short turning radius, which together with its fine taper roller bearings and easily reached and operated levers, make it remarkably simple to handle. Women especially appreciate its easy driving qualities. Built low it holds to the ground at high speed. Long cantilever springs and deep, correctly tilted upholstery banish riding fatigue.



The car shown above is the seven-passenger Touring model. FOURSOME—is the King 4-passenger sport model and considered by many the handsomest of its type. A 7-passenger Sedan, richly finished, is the popular closed model.

# Small Fruits

## Need Attention When Spraying

Those in the spraying campaign should not overlook the shrubs and small fruit canes or bushes. These are often badly infested with scale insects, San Jose, in particular. The currant bush is one of the worst of all for infestation, and should be thoroughly sprayed, where scale is found on it. People who have orchards, with small fruits connected with them should, therefore, watch for the scale on the latter, as well as on the fruit trees. The facility with which some of the small fruits and shrubs attract the scale, and the liability to overlook the pest on such places have led many commercial orchardists to discourage their planting near the fruit trees. But if they have been, or are to be planted, as already stated, they should not be overlooked in the spraying campaign. A. E. G.

### English Walnuts Near Spokane.

A subscriber inquires: "Can English walnuts be successfully cultivated in the vicinity of Spokane? How should they be cultivated, and how soon after planting would they come into bearing?"

I am reasonably certain that English walnuts can be grown successfully in the vicinity of Spokane. In our Yakima orchard we have four English walnut trees 22 years of age, and conditions here are not very different than they are in Spokane. I believe that the hardier varieties, such as the Franquette, will succeed in either climate.

I would plant the nuts late in the fall or early in the spring, let them grow one year, then bud them without transplanting. Plant three or four nuts in a place and select the strongest.

The walnut tree is a heavy feeder, and needs a deep, rich soil. If it is planted where there is subirrigation and a gravel base, all the better.

The trees ought to bear profitably in 10 years. G. L.

### How to Combat the Root Maggot.

Professor W. T. Ham, specialist in entomology, connected with the United States department of agriculture, and A. B. Nystrom, county agriculturist of Lewis county, Washington, have been holding a series of meetings in the county to further food production. Illustrated lectures on insect pests and methods of control have been given. The root maggot, which infests radishes, turnips, cabbage, kale and similar plants, is one of the worst pests of this order. Ways of combatting it have been told, and in addition Professor Nystrom issues a bulletin in which he says:

"One of the most effective ways to fight the maggot which does so much damage to cabbages, cauliflower, radish, turnip and other similar vegetables, as shown by tests carried on in Oregon, is to sprinkle in the hole prepared for the young plant or along the shallow trench for seed, either tobacco dust, a commercial preparation, or, second best, a mixture of white hellebore, 1 part and air-slaked lime 5 parts, according to directions we have from W. T. Ham, insect specialist, State College of Washington. He states further that it is often advisable to renew the treatment during the early growth period by sprinkling some of the material about the plants once a week or so and working it into the soil with a hoe." H. A.

# Garden Plan

## Reasons Behind the Arrangement

The plan shown on the next page may be used exactly or as a suggestion. It has, however, the following features to recommend it. The tall growing plants are on the west side, so as not to shade the lower growing ones; winter roots remaining in the ground are in outside row; rows run lengthwise making quicker and easier cultivation and the legumes (peas and beans, nitrogen gatherers) are interspersed throughout the garden to benefit soil.

Tomatoes, cabbage and cauliflower should be started under glass about the middle of February. If you haven't a hotbed and do not care to bother with house grown plants, buy a few; three dozen tomato plants; two dozen early cabbage, and one dozen cauliflower will be enough. The cabbage, cauliflower and Brussels sprouts for later use can be grown in a seed bed out doors and transplanted in May of June.

Carrots are slow to germinate so we give them a nurse crop of radishes, planting one or two seed every five or six inches. These mark the row so you can cultivate and break the soil so the more delicate plants can get through. They are soon used, when the carrots have all the room. The same plan can be followed with parsnips. Peas are planted in double rows, about eight inches apart, with three feet between the double rows.

Late planting of turnips has never proved successful with me,

There are some worthwhile vegetables not very well known. New Zealand spinach should be raised by every family caring for "greens" as it will furnish a supply until frost. There is a kale offered by some seed houses called Spring Kale, that supplies excellent early "greens" and furnishes an abundance of food for poultry through the summer. Mustard is sometimes scoffed at, but it has many uses. The first leaves make a fine salad, later they are appetizing when cooked and you can as well raise your own seed for pickles as to buy it. Swiss chard is not as common as it should be. It tastes much like beets and is a "cut and come again plant. The white stalks can be cooked like asparagus and the leaves separate or both together. It is excellent anyway. While an annual, on the Coast it lives through the winter. Brussels sprouts are as easily grown as cabbage, more hardy and furnish a nice change from the usual things. On the Coast they can be left out through the winter. Another very

Founded 1842 CASE Famous The World Over

No Tractors Like Case

NONE have the same experience behind them. Case built its first oil burning tractor 26 years ago, and Case has been building power-farming machinery for 76 years.

We have a plant covering 140 acres and we employ over 4,000 skilled mechanics. We have branches throughout the United States and Canada.

Case Kerosene Tractors are offered as tried and proven machines. It is not necessary to do any experimenting with them. They have already been subjected to belt and traction tests at our factory—far more exhaustive than demanded by the average user. This is your assurance that when you put your Case Tractor to work in your fields you will not be disappointed. For performance, materials and workmanship Case Kerosene Tractors rank first. We make them complete in our own shops. We stand back of them just as we have made good our guarantee on other Case machinery since 1842.

Case Kerosene Tractors come in 4 sizes: 9-18, 10-20, 12-25 and 20-40. So there is a size for every farm. Case also continues to make its famous Steam Tractors in 8 sizes.

Send for our latest illustrated catalog, designating whether you are interested in Kerosene Tractors or Steam Tractors or other power farming machinery.

160 ACRE FARMS IN WESTERN CANADA FREE

convenient vegetable is celeriac, which has edible turnip shaped roots with the flavor of celery, which can be stewed or used in soups for seasoning. Chives live on when once planted and add a mild onion flavor to salads.

There are some garden pests that will cause a lot of trouble unless controlled, probably the root maggot is one of the worst, distroying among other things, cabbages and cauliflower; quite a successful check for them is a Carbolic acid emulsion made by dissolving one-half pound of hard soap in two quarts of boiling water; then adding one cup crude carbolic acid. One part of this is added to 35 parts of water. Pour about four tablespoonfuls of this solution around each plant every 10 days until the last of May. Black Leaf Forty used according to directions causes the annihilation of green lice or aphis. Cabbage worms are usually plentiful, but may be killed by sprinkling plants with water at a temperature of 130 without injuring the plants. There are cutworms sometimes, but a band of tarred paper around the plant when setting it out will save its life. Tobacco dust is effective against the flea beetle. These are about the worst pests we have to content with and are not so bad after all when once you have been acquainted with the potato beetle and the tomato worm of the east.

Caring for the garden produce so that it shall last until the gardening season is here again is not the least important part. Most farm homes have cold cellars, where vegetables can be stored in boxes of earth. Lacking these, outdoor cellars can be made by digging an excavation about two feet in depth and dimensions according to needs. Boards keep the sides in place. Make a gable roof with the center resting on a ridge pole held by posts four to five feet high. When severe weather comes, hay or straw are thrown over the roof. A door should be provided at one end. Celery, cabbage, Brussels sprouts, as well as hardy vegetables may be stored here and will keep in fine condition.

Parsnips, salsify and Scotch kale may be left in the ground until needed. Turnips, rutabagas, carrots and beets should have the tops cut off and be stored in pits, outdoor cellar or house cellar before freezing weather comes. If stored in the house cellar, place in boxes of soil or sand. Cabbages may be placed head down in a trench one foot deep and covered with six inches of straw, or they may be placed in the outdoor cellar, standing them upright. Onions like cool, dry air best. Place on slatted shelves or trays in a cold, airy room. Potatoes can be stored in a dry, cold cellar or pit. Pumpkin and squash keep best in dry atmosphere.

Beans can be canned or dried as snap beans and canned or dried as shell beans. Peas may be canned and the surplus dried for soups. Spinach and other greens may be canned or dried. Beets canned when very small are more satisfactory than stored ones. Corn may be canned or dried. Tomatoes may be canned plain or in soup, catsup, or chilli sauce and may also be used green for making pickling. Eggplant, cauliflower, turnips, summer squash, carrots and cabbage may all be satisfactorily canned as well as combinations of vegetables for soups. One should not forget to make a goodly supply of sauer kraut, which can be canned through the winter as jars are emptied.

Nearly every housewife knows how to can vegetables successfully, but a recipe may be a help to some just starting. To can beans, string and wash. Cut or not. Cover with boiling water, add one teaspoonful of salt and boil 20 minutes. Drain and pack into jars. Fill jars with cold water, adjust tops loosely, stand in a boiler, the bottom of which is protected by a rack. Surround the jars partly with cold water, cover the boiler and boil one hour. Adjust rubbers after dipping in boiling water, screw down lid, cover and boil 30 minutes.

To dry pumpkin and winter squash; pare, cut into thin strips, then into pieces. Spread on boards and dry in sun or warm oven. To cook—soak over night in cold water.

Northwestern Mutual Fire Association of Seattle Washington, U.S.A.

# Thrift

# FIRE INSURANCE

**WHEN THRIFT is the call of the Nation—when Thrift may win the war—why not apply the THRIFT principle to fire insurance?**

**Why pay more for fire insurance than it actually costs? Why pay a profit to the stockholder of some company, when through the Northwestern Mutual Fire Association you can pay that profit—and more—to yourself?**

**This principle is so perfectly attuned to the new spirit of our national life as to evoke immediate response from property owners of every class who are not now enjoying the benefits of insurance in the Northwestern Mutual and allied mutual companies.**

**When you take out a fire insurance policy in the Northwestern Mutual you are one of the owners of the company, and receive your share of the profits, in the form of CASH DIVIDENDS.**

**This means that you and all the other policyholders—almost fifty thousand—have a direct incentive for reducing the number of fires. For the fewer the fires the greater the profits returned to you. We are so organized as to help you reduce fire danger to a minimum.**

**Not only do you receive the ordinary "underwriting" profits, such as a stock company would make for its stockholders, but you increase these greatly by reducing fires—by conserving property.**

**Last year, for instance, policyholders in the Northwestern Mutual in the State of Washington suffered a fire loss of only 16 per cent, while the policyholders in the next nine companies—stock companies—average a loss of 32 per cent. In other words, Northwestern-protected property is twice as safe—stands only half the chance of burning down!**

**Again, you save money in the economical administration of our MUTUAL office, for its costs us only about half as much to "do business" as the average insurance company. That is due to careful development of business efficiency along modern, progressive lines.**

**Is it any wonder the Northwestern Mutual's dividends and other savings so far have exceeded $2,500,000.00? Total profits to policyholders doing business through the Northwestern Mutual office, in our company, and in allied mutuals, exceeded $900,000.00 for 1917 alone.**

**Guaranteed by our great reserves, the Northwestern Mutual writes absolutely non-assessable fire insurance. Every policy is stamped "NON-ASSESSABLE."**

Get into the Northwestern Mutual for your next policy—home, barn, garage, automobile, property of any kind. Put the thrift money into your own pocket—or better yet—into Liberty Bonds or Thrift Stamps. Write or phone us NOW the date of the expiration of your present policies.

# Price of Oats Tempts Farmers

## Some Would Sell Dairy Cows in Order to Grow Money Crop, But All Are Intensely Patriotic

MOUNT VERNON, Skagit County, Wash., April 4.—There is very little or no disloyalty in evidence here. If there is any coolness it is kept exceedingly quiet. Most of our people seem to feel that it is up to us to produce every bit of food that is possible. We sometimes hear arguments pro and con as to government efficiency or inefficiency, but most of us agree that it would be hard to get a set of men who could handle the job better. I am of the opinion that in years to come we will look back and be proud of the part our country had in the great world war. The only grain grown to any great extent here is oats. The spring season has been very favorable so far. Much plowing has been done and some are beginning to seed. Weather conditions at present are very favorable. The price of oats is tempting some farmers to sell their cows and raise oats. There are lots of potatoes here and very little demand. When they can be sold they bring about $14 a ton.

C. S. PHILIPS.

### Labor the Big Problem.

RITZVILLE, Adams County, Wash., April 10.—Labor continues short, but other powers on the farm are in abundance. We have more work animals than we need, and in the market the horse is a bad actor, especially the unbroke stock. Tractors are being used and it looks as if they will take the place of the horse. We have plenty of machinery to operate our farms. Farmers are buying what they need. The trouble is we don't repair enough old machinery, partly due to lack of time. We will have more meat animals to put on the market than last year. The pasture condition don't look promising in this community, because we had no flood waters to fill the pot holes and everybody is short of pasture. The natural pasture is about the only kind we have here. Spring started out early and fine and seeding is finished, with plenty of moisture, and if the June rains do not fail we are sure of a good crop. Where are we going to get our help during haying and harvesting?

JACOB HARDER.

### Machinery Question Is Puzzle.

COLVILLE, Stevens County, Wash., March 30.—An observer of farm conditions can not fail to be impressed with the efforts of farmers to adjust themselves to the changing necessities of the times. This is not so apparent in the matter of labor in this section as it is regarding farm equipment and management. There will be some labor shortage, or at least there is the fear of it, and the tendency is to get prepared against such a calamity. I find farmers investigating the tractor idea with a vew to getting into the front line as soon as it appears necessary. They are not yet sure that the tractor is fully demonstrated and they are disinclined to do much experimenting on their own account, but when the real thing in tractors has arrived it will find a warm welcome. A few will be used in this section this year for the first time, but they will necessarily be of the smaller types, since extensive grain farming is not carried on. A great many horses are still demanded, as logging and ore hauling require many teams throughout the year and particularly during the winter, when tractors can not operate. Many of these are farm teams which are shifted as may be needed, according to the season. A large amount of poles and lumber comes to the railroad by tractor and a considerable cut in transportation expense is claimed.

It is interesting to note the attitude of farmers toward new machinery. An implement dealer in this county seat tells me that farmers are undoubtedly trying to tide over the era of high prices by repairing up the old machines and extending their period of usefulness. He says that they come in and look over the new stock, examine the improvements, ask the prices and then shake their heads and go home to drag out the old implement and look it over again. Some of them find it necessary to replace parts of the old outfit, generally in the line of plows and harrows, but there will be few harvest tools bought and practically no new fangled implements will be considered. I talked with a practical blacksmith and machinist regarding repair work and he declared that few farmers were bringing in their tools for refitting and replacement and were altogether inclined to buy too much new stuff. Possibly putting these two reports together we might conclude that the farmers were neither buying or repairing, but simply taking a chance on getting through without doing anything more than they had to. There are many public sales and it is interesting to note some of the reasons given by the proprietors. Sometimes it is old age and the lack of suitable help, but more often it is stated as a desire to change the system of farming. There is an undoubted disposition to throw live stock on the market at the present high prices, but most of this still remains in the community, merely changing hands.

E. E. ELLIOTT.

### Frost Catches Early Fruit.

GIG HARBOR, Pierce County, Wash., April 6.—Like many other sections of the northwest, it must be admitted that we have hereabouts a considerable sprinkling of people who do not seem to be in harmony with the government of the United States in its participation in the great world's struggle. As this is not a wheat producing regions—does not in fact produce any crop in a large way that the government is calling for most strenuously—this mental attitude of some of our people will hardly effect the agricultural output from this section of the state. The season is opening up hopefully with good average prospects for such crops as are grown here. Some of the earlier blossoming fruits are probably injured by the sharp frosts of these early April days. Seedings of grains and grasses are coming on finely. The supply of stored moisture in the ground is uncommonly large. Milch cows in much demand and are bringing high prices.

W. D. BOYNTON.

### Set Aside Money for Farmers.

The state council of defense in Maine has set aside $250,000 to be loaned to farmers.

Plant With These Drills

DRILL-PLANTED fields produce greater yields. Remember that at planting time this year, when every bushel added to your harvest field counts.

The use of **Empire Jr., Hoosier, or Kentucky Drills** means not only more grain per acre, but better prices. Drill-planting improves the quality of the grain, for when seed is properly planted, at even depth, and covered as it should be, it comes up all at the same time, grows uniformly, and ripens evenly. Such grain grades high and brings good prices.

The drill that will do the best work for you is in one of these lines. It is handled by some local dealer not far from your farm where you can see it, or you can find out all about it by writing us for drill catalogues. There are drills for planting every kind of grass or grain, with or without fertilizer, in every kind of soil.

The dealer, or the catalogue, will tell you all about feeds, furrow openers, bearings, attachments, etc. All we can tell you here is that you will find just the drill for your work in the **Empire Jr., Hoosier, or Kentucky lines**, and that without any trouble or expense on your part beyond the writing of a letter or post card. Why not write it now, before you forget?

# FLORA FLIRT IN THE MAYPOLE DANCE

On a bright and sunny day,
Flora Flirt is queen of May.

The May pole's ready on the green,
To start the dancing all are keen.

Flora sees a dandy chap,
Who to her takes off his cap.

Her head is turned, she's making eyes
She never heeds the warning cries.

A trailing ribbon her feet ensnare,
She trips and falls, shrieks rend the air.

Flora lands upon the green,
In sadder plight she's never been.
*The Moral*—When you're flirting, first make sure
That your footing is secure.

# Allies Stand Firm

## *Great Generalship Is Seen in Battle*

Two weeks ago the strategic railroad center, Amiens, on the western battle front was the object of the gigantic German drive. With the invaders only some 10 miles away the British defense stiffened and checked the movement for the time being, saving the railroad that connected the northern part of the allied lines with Paris and the southern part of the line. Then there was a lull in the battle for a few days, followed by the most sanguinary attack of the war farther north, which resulted in considerable gains in that section by the Germans. The object in their mind at that time was the destruction of the British army in so far as possible, and the capture of the railroads and channel ports over and through which the supplies for the British army were brought. Again the British stiffened their defense, the French came to their aid and the Germans were again halted. Now the indications are that another attack is to be launched by the Germans in the Amiens region, and it is freely predicted that the present week or the next 10 days or two weeks will witness the slaughter of thousands of soldiers on both sides along the Amiens front.

Throughout the past week the situation along the battle front was such as to keep the entire world in a state of nervous tension. The efforts of the Germans destroyed any possible doubt that their aim has been and is yet to destroy the British army. While they have continued to keep a strong force distributed along the entire western front, they have made no great effort to break through or disturb the allied lines except in the north, where the lines were defended by the British. Early in the week an attack second to none during the spring drive was launched against about a 30-mile front at a point about the same distance from the North sea and some 25 to 30 miles east of the English channel, directly across from Dover, England. Unprecedented fighting was experienced when the German hordes undertook the drive against Bailleul and neighboring points, which were strategic positions owing to the location of the railroads serving the British armies. About the middle of the week they were successful in driving the British out of some of these points, greatly jeopardizing that part of the British army farther to the north. The move apparently was intended to effect exactly this result, namely, the compelling all British at the extreme north end of the line in the vicinity of Ypres to withdraw because of lack of supplies and munitions over the jeopardized railway.

The British defense stiffened, however, at this time, and during the remainder of the week the Germans not only were unable to make any noteworthy advance, but were repulsed in some instances and driven out of certain strategic positions that they had captured.

The hand of General Foch, who is in supreme command of the allied force during the spring drive, is seen in the movement northward of a considerable number of French troops, although how many was not made public. They have been moved northward to a position such as to greatly strengthen and support the wearied British armies where the latter have been bearing the brunt of the tremendous attack against them. Late in the week came the announcement also that Italian troops in some numbers were moving north, possibly to take the place of French that had been moved to back up the British lines.

While the strength of the German army during the present drive has undoubtedly been superior to that of the allies, it is wrong to assume that the retreat of the British has been due solely to their being overpowered. It is perfectly clear that the allied war leaders have coolly and skilfully planned to wear out the superior German forces by a slow retreat, during which the utmost possible destruction of German armies and munitions would be effected. There are still no figures available to the public to indicate the extent of the German losses or those of the allies, but it is reasonable to assume the attacking army, which has rushed its troops into the fray in great masses, has suffered much heavier losses than has the defending army. Reports seem to indicate that the Germans have used many more of their reserve forces than have the allies.

Undoubtedly, the present situation, or that which has existed for the last month, is the most critical in the history of the war. What the actual ideas back of the German move may be are wholly problematical, but it seems from the best information that can be gathered that conditions at home, most likely due to food shortage, the destruction of all civil business enterprises and the terrible destruction of home life have caused the war leaders to decide upon one tremendous and supreme effort to force the allied nations to accept peace terms. Another consideration that has undoubtedly affected the German plans greatly is that of the increasing number of American troops on the battle front. Information is wholly lacking as to the number of Americans now in Europe or to be placed in Europe this spring and summer, but if it were only half a million men that would be available to go into the heat of the fray it would mean that the allied armies, so far as actual man power is concerned, would be made thereby as strong as when the Germans began their present drive, as the losses of the allies during this drive can hardly approximate this number. Whether there are half a million Americans, only half that number, or two or three times that number in Europe or en route, is information that can not, for obvious reasons, be learned.

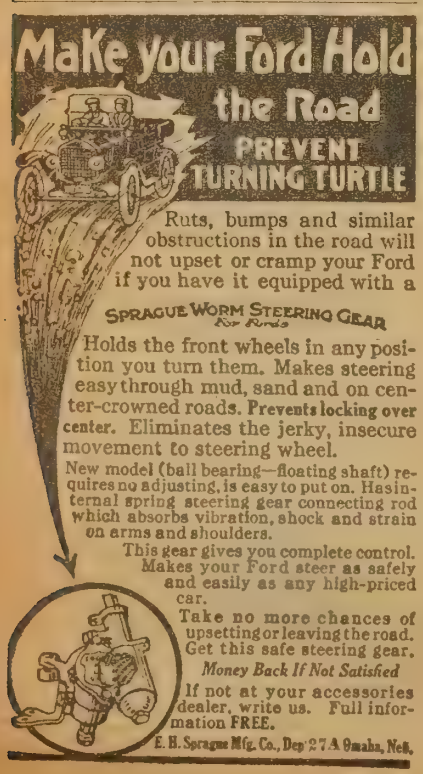
Though at no time underestimating the gravity of the present situation the leaders of the allies have expressed supreme confidence that Germany will not be able to win the present drive to such degree as to greatly jeopardize the allied cause.

### Austria in Trouble.

Last week Premier Czernin of Austria resigned as a result of charges made against certain Austrian officials that they had made peace overtures to France. It is stated that the political situation in Austria at the present time is extremely delicate and capable of almost any possibilities. Considerable discontent is reported. One seemingly official report says that the socialist party in that country has set aside May 1 as a day for meetings throughout the country in the interest of peace.

### Curtail Nonessentials.

The federal government has taken action through the fuel administration that has for its purpose the curtailment of all building operations that are not strictly essential to the conduct of the war. The regulations issued curtail the manufacture of a large number of building materials, some of them as much as 50 per cent.



### Secretary Baker Home.

As quietly as he went away two or three weeks ago Secretary of War Baker has returned to this country. While in Europe he conferred with most of the allied war leaders and visited many parts of the battle front. He expresses pleasure at the condition and activities of the American troops in France and predicts the ultimate success of the allied armies.

### Traitor Pays Penalty.

Bolo Pasha, convicted by a French court martial of treason to his country, paid the death penalty last week before a French firing squad in that country. He was convicted of having accepted German money for the purpose of spreading German propaganda in America. His arrest took place several months ago in this country.

Make your Ford Hold the Road
PREVENT TURNING TURTLE

Ruts, bumps and similar obstructions in the road will not upset or cramp your Ford if you have it equipped with a

SPRAGUE WORM STEERING GEAR
For Fords

Holds the front wheels in any position you turn them. Makes steering easy through mud, sand and on center-crowned roads. Prevents locking over center. Eliminates the jerky, insecure movement to steering wheel.

New model (ball bearing—floating shaft) requires no adjusting, is easy to put on. Has internal spring steering gear connecting rod which absorbs vibration, shock and strain on arms and shoulders.

This gear gives you complete control. Makes your Ford steer as safely and easily as any high-priced car.

Take no more chances of upsetting or leaving the road. Get this safe steering gear.

# *Western Electric*
# POWER and LIGHT

*The Automatic Regulator is an exclusive feature of Western Electric power and light outfits. It is a distinctly new feature—a decided step in advance.*

This Automatic Regulator overcomes the two weak points common to most plants:

1. It takes the place of the complicated switchboard and makes the starting or stopping of the engine a mere touch of the finger. No complex meters to puzzle over.

2. It automatically regulates the charging of the batteries—always the most sensitive part of every lighting system—so as to materially increase their life.

With this outfit, anyone with an engine—gasoline, kerosene or steam—can make his own electric power and light right on the premises, and use his engine for any other purpose desired.

There is a Western Electric Power and Light outfit that is just suited to your needs. Find out about it now, and learn all the advantages of this Automatic Regulator.

# Win the War by Preparing the Land, Sowing the Seeds and Producing Bigger Crops

**Work in Joint Effort the Soil of the U. S. and Canada—Cooperative Farming in Man Power Necessary to Win the Battle for Liberty.**

The Food Controllers of United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat can be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rest the burden of supply.

**Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist.**

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operations.

**Canada's Wheat Production Last Year Was 225,000,000 Bushels; the Demand From Canada Alone, for 1918, is 400,000,000 Bushels.**

To secure this she must have assistance. She has the land, but needs the men. The Government of the United States wants every man who can effectively help to do farm work this year. It wants the land in the United States developed first, of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there. Apply to our Employment service, and we will tell where you can best serve the combined interests.

**Western Canada's help will be required not later than May 5. Wages to competent help, $50 a month and up, board and lodging.**

Those who respond to this appeal will get a warm welcome, good wages, good board, and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had, apply to

**U. S. Employment Service, Dept. of Labor**
Seattle, Tacoma, Bellingham or Yakima, Wash.

# Requisition Wheat

## Farmers Must Sell Grain at Once

Under an order by the state food administrator, Charles Hebberd, any wheat held on the farms of Washington after May 15 will be requisitioned by the government. This is being done at the request of the national food administration. The following order has been sent by Administrator Hebberd to all county food administrators in the state:

"The latter part of March a call was issued to the farmers of Washington in pursuance of the request of Herbert Hoover, United States food administrator, that they bring to market by May 15 all wheat in their possession except their necessary reserves for seed.

"Most of the surplus wheat on the farms has already gone to market. There are, however, considerable quantities in some localities still retained on the farms. In some cases holders of this wheat have been influenced by pro-German motives and in some instances by the erroneous expectation of receiving a higher price. The higher price established for 1918 wheat in the Pacific northwest district, or any price that might be established hereafter by congressional act, is for 1918 crop only. There is no way, therefore, that any grower can benefit by holding his grain after May 15, and in case of such hoarding it can only be presumed that the hoarder is influenced by improper motives.

"The food administration, therefore, calls upon all grain producers, as a patriotic service, that they bring to market by May 15 all surplus wheat. If the local miller is unable to buy all of the wheat that is offered it should be marketed in the other customary trade channels through which it will reach the food administration grain corporation.

"The county food administrators in the several counties are asked to secure at once all possible data as to surplus stocks of grain remaining on the farms in their respective counties and to report to the federal food administrator of the state on May 15 each case where surplus grain is still held on farms, specifying name and address of owner and approximate quantities held.

"After May 15 surplus stocks hoarded from unpatriotic motives will be requisitioned under executive order, as provided in section 10 of the federal food act. Mr. Hoover, as United States food administrator, has given the federal food administrator of the state special power of attorney to requisition and take possession of such wheat.

"In view of the need for wheat for the use of the army and navy and for other public uses connected with the common defense no one has a moral or legal right to hoard wheat, and power to requisition all wheat for that purpose is expressly conferred by the food act. It is hoped that recourse to requisitioning will be necessary in but few cases. However, if there are in the state any slackers who, from pro-German or other unpatriotic purposes, refuse to comply with the present request to bring all surplus wheat to market by May 15, prompt action to requisition such surplus will be taken by the federal food administration of the state."

# What $50 Bond Will Do

Protect 1000 soldiers from smallpox and 666 from typhoid. It will assure safety of 139 wounded soldiers from lockjaw, the germs of which swarm in Belgian soil.

Will render painless 400 operations or supply two miles of bandages—enough to bandage 555 wounds.

Will care for 160 injuries in the way of "first-aid packets."

Will furnish adhesive plaster and surgical gauze enough for thousands of wounded men.

## RETURN FLOUR

### It Will Help Allies to Win the War

Food administrators of Washington, Idaho and Oregon continue to impress upon the people of the northwest the necessity of returning to dealers any surplus amounts of wheat flour that they may possess. Under the plan that has been worked out the flour so returned will be resold in the community in which it is returned and flour that it saves from the milling centers will be shipped direct from these milling centers to Europe and the soldiers. This not only saves cost of shipment, but makes possible the shipping of flour to the soldiers much more rapidly. The following statement signed by the food administrators of the three northwest states and by representatives of the grain department indicates the exact object of the movement:

"Mr. Hoover has wired all federal food administrators that the excess stocks of flour held by public eating places, bakers, dealers and consumers may be voluntarily surrendered for the use of the army and navy and the allies.

"This practical method of handling such returned flour will be through the local merchant, who is hereby requested to receive all such flour and pay the holding consumer the actual cost of same, and then redistribute it without any additional charge to the ultimate consumer. Where merchants accumulate more than their 30 days' supply and all hotels, bakers, etc., that have an excess amount that can not be disposed of locally, they should immediately communicate with M. H. Houser, grain commissioner of the food administration, Board of Trade building, Portland, and he will arrange for the transportation to the seaboard. All flour returned to the merchant that is resold to the consumer should be reported to Mr. Houser in order that an equal amount may be released for shipment to the allies.

"The whole object of the above arrangement is to provide a channel through which all excess quantities of flour may reach the army and navy or the allied armies as a voluntary offering of the people of this country.

"(Signed) Charles Hebberd, food administrator for Washington, Spokane; R. F. Bicknell, food administrator for Idaho, Boise; W. B. Ayer, food administrator for Oregon, Portland; M. H. Houser, grain commissioner, Portland; J. W. Ganong, milling commissioner, Portland."

## House-Mover Uses "Tank."

James Hargrave has found new use for Tacoma's caterpillar tractor. He has rented it to haul his house away from the atrillery range at Camp Lewis. Every time a shell whizzed in his direction Hargrave had stage fight. Finally he believed it was up to him to move, but he objected to leaving his house. Then he hit upon the idea of renting the caterpillar tractor to haul his house a distance of three miles. He offered $50 a day for its use and the offer will be accepted.

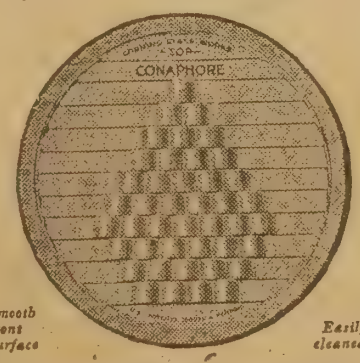
Kills all glare—Legal everywhere

*Gives you 500 ft. range*



BOTH these cars are equipped with Noviol (yellow-tint) Conaphores—*legal everywhere.* The photograph shows them as they meet at a dangerous turn on a dark country road.

The instant a driver sees the yellow-tint Noviol lights he knows that they will not blind him—and feels perfectly safe. The soft mellow light is easy on his eyes and helps him to see past the oncoming car.

**Kills all glare.** The Conaphore uses all the light, but patented corrugations control it within legal limits. Height of beam is not more than 42 inches from the road.

**Range 500 feet.** Corrugations throw a shaft of strong driving light 500 feet ahead of the car.

**Ample side light.** Cylinders fan strong rays out over the roadside. Light spreads 25 feet at each side of the car 75 feet ahead.

Manufactured by the World's Largest Makers of Technical Glass

CONAPHORE

Range 500 feet—No Glare—Pierces Fog and Dust

**Pierces fog and dust.** This wonderful exclusive feature of Noviol Conaphores (yellow tint) is patented.

Equip your car with Conaphores. They safeguard you, and make for the safety of others. Legal everywhere. Dimming unnecessary. Made in both Noviol and clear glass.

Easy to install. Sizes to fit all cars. Order from your dealer—if he has not received his supply, write us.

Retail Price List (Per Pair)

| SIZES | Noviol Glass | Clear Glass |
|---|---|---|
| 5 to 6⅞ inches inclusive | $2.40 | $1.60 |
| 7 to 8⅛ inches inclusive | 3.50 | 2.50 |
| 8⅜ to 10 inches inclusive | 4.50 | 3.00 |

# KATE AND KARL SATISFY THEIR HUNGER

# MUGGSY BUYS A SNAKE AND WINS A DOLLAR

# Study Your Likes and Dislikes; Photograph Things You Like

By PAUL E. TRIEM.

ARTICLE III.

After you have bought your camera and have become reasonably familiar with it the real test of photography lies before you. What are you going to photograph? What will make a good picture?

The answer to these questions depends somewhat upon your mental makeup. What are you most interested in? Live stock? Then photograph cows, horses, hogs or chickens. Are you a lover of the beautiful in nature? Then try landscapes or flower photographs. Study your real likes and dislikes first of all, for you will never do good work on anything which you do not really like.

Let us suppose that you are interested in horses and cattle, and want to be able to photograph these farm animals well. The first thing to decide upon is your background. The more simple you can make this the better your picture will be. For light colored animals, Holsteins, with much white on them, for instance, this background should be dark, the side of a red building, preferably free from doors and windows, will be just right. Dark-colored animals, including roans, reds and bays, should, if possible, be photographed against a light colored background. Either light or dark subjects can be photographed with the sky for a background, where it is possible to line them up against it.

After you have decided upon your background get your camera ready. Set it up on a tripod if possible. If you are using a "kodak," or other type having a view finder, set your diaphragm at 16 and your distance indicator at 25 feet. Have a fresh film in place and your shutter set for bulb exposures, unless a one second exposure is provided by the shutter itself.

Now, you are ready for your subject, which should be led to the position you have chosen, between camera and background. The man who leads or "handles" an animal which is being photographed must have plenty of tact and patience, for time will be required to get the subject just where you want it. Look into your view finder and be sure the subject is well placed, not too near any of the margins of the picture, and that the image is large enough.

You are now ready for the critical moment—exposure. With the bulb or release in our hand, look the animal over carefully to be sure that it is standing in a good position, well balanced on all four feet, both ears forward at the same angle, tail in typical position. Now, after some slight movement on your subject's part and just as it settles into a resting posture, press your bulb or release. If you have an automatic exposure of one second, that is all. If you are using a bulb exposure, hold the shutter open while you count three, deliberately, then let it close.

You will soon discover, if you have never known it before, that one second is a long time. Probably you will spoil a few films before you get the knack of reading an animal's mind and knowing when it is going to stand still. This is one of the biggest tricks in animal photography and is worth learning.

Nothing has been said about posing farm animals. The position in which a horse or a cow is photographed depends upon the points you are trying to emphasize. Study the farm magazines and breeders' journals for good poses, then apply all that you know about the typical trails of the breed, and you will have no trouble with this matter.

Getting a satisfactory photograph of a house or barn is a much easier matter than photographing farm animals. Remember that every building has a favorable side, from which it should be photographed. Usually it is best to set your camera to one side or the other of the front. Get the foundation of the building fairly close to the base of your picture, so as to eliminate as much uninteresting foreground as possible. Be sure that the camera is level. Make your exposure when the sun is behind or at one side of the camera, rather than directly in front. Stop the lens down to 16 and give one second exposure. It may be well to add in this place that the method by which your films are developed or the light conditions under which you work may require less exposure than I am recommending. During the summer months, one-half second is often sufficient for light colored objects, with the lens at 16. If you find that your films, when developed, are too "dense"—that is, too black and opaque to the light, either decrease your exposure, or, preferably, decrease the size of your diaphragm opening by one number.

The mistake you will probably make in trying to photograph a pleasing landscape will lie in the direction of including too much. A little experiment and observation will show you that you must choose bits or fragments, rather than broad effects. This means that you must work fairly close to your subject. Also, remember that color effects will be lost in your photograph, and that all you will be able to retain is variations of light effect—shadows, highlight and half-tones—and "lines." Lines, in photography, are formed by trees, the horizon, buildings, and the margins of bodies of water, etc. You must have lines in your picture, but they must be simple and harmonious. Here again experiment and observation will teach you more than many books on composition. Study your subject before you photograph it, try to select the most favorable viewpoint, and then study your finished print. In this way you will learn as much by your failures as by your successes.

## British Price of Margarine.

The food ministry announces the retail price of margarine at 11 pence (22 cents) per pound on sale to persons purchasing between 28 and 224 pounds weekly for consumption and not for sale. Other sales by retail, 1 shilling (24 cents) per pound plus 1-2 pence per pound on delivery made to premises.

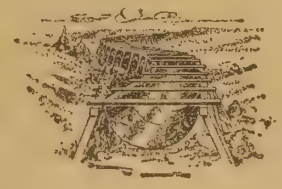
STEPHENS *Salient Six*

AHEAD OF STYLE TREND

Motor car fashions have changed rapidly during the last few years. The style carriage of one season has become passé the next. The wise motor car buyer, therefore, examines his prospective purchase carefully from two points of view. He asks himself not only "Is it in style now?" but also "Will it be in style a year from now?"

The Stephens Salient Six answers these questions to his absolute satisfaction. Its lines are not only the style of today but of the future as well. Stephens body design has been carried to a point where it is incapable of radical alteration or, indeed, of material refinement. Its style is standard, like that of celebrated forms of architecture that have come down through the ages, unchanged in any material degree.

Permit us to show you this remarkable motor car—to explain the many other desirable features of its construction, too numerous to be included here.



*We shall appreciate the opportunity of a demonstration.*

## THROUGH MY OPEN WINDOW—*By Joe L. Ashlock*

I WAS grieved to learn that Lester Steele had been killed in an automobile accident. His married sister was in the auto with him, and was badly shaken up. So were the others.

His married sister! When last I saw his married sister she was sprawling on the floor with a nursing bottle in her mouth—or no, it wasn't! She had tugged the nipple loose from the bottle, and the milk had splashed over her face and in her eyes and ears and hair. She had a good deal for so young a baby. But none of the milk was getting in her mouth where it was needed. "Married sister's" mother shook her good, and told her that if she didn't quit pulling that nipple off she'd spank her good, too!

The paper said that Lester was a mail-carriers when he lost his life. When last I saw him his nose was all freckles, three teeth were missing in front, and he was mostly arms, legs, eyes, questions and racket. He wanted to know where I was going. To college, I said. Where was college? What was it? What did it look like? What was it made of? How long would I stay? Would anybody else be there? What was I going for, anyway? Would he ever go—or what?

I have had Lester in mind ever since then. Just the day before I read that he had been killed I had thought of writing and asking him if he was ready to come to college.

Too late! I didn't realize that time was going so rapidly. Time has a habit of stealing upon us, though; and baby girls become married sisters and get silver in their hair before we are aware that our yesterdays have slipped back two or three decades.

In this steady march of time there is something that uncoils the kinks of our unruly souls when we stop to think about it. Time moves just so fast, and no faster. But it keeps on going—never runs out of gas, or blows up a tire. We humans divide our personal allotments of time into the year-spaces required by our earthly home for each of its migratory flights around the sun. If our earth rolled along its circular path a bit faster than now, time would move faster, too, would it not? Or would it? What about that, anyhow?

We're pretty sure, from what I hear, that time, as now organized, is traveling right smart, and has been at it quite a spell. Time makes married sisters of baby girls, and young men of freckled boys in a way that is elusive, stealthy and tricky. He is a foxy old boy, is this Father Time of ours, and his scythe is whetted always—or was, till the war began. I heard the other day that on account of the kaiser, Father Time had traded his scythe for a wide-gage, power-driven mower.

Thinking of the last time I saw Lester Steele makes my mind turn back its pages to the place where I saw him first. Cal Steele and Lester's mother-to-be had arrived in our western bunchgrass country from somewhere east. A baby arrived presently, and those certainly were snowy, cold days for the stork to be a-storking. But he storked away, and the baby was named Lester.

When I looked at Lester he was red-faced, baldheaded and squirming. He was born in a one-room, pine board shanty out there in the bunchgrass. When his mother was up and about she kept him warm in a cradle Cal had made of a pine box. A wonderful cradle it was, for Cal was handy with a jackknife and tools in general. He used the jackknife and all his tools in making Lester's cradle of pine.

It was a winter of deep snow and cruel winds that searched out cracks in the house of pine boards and fought to reach the cradle with its icy breath. But Lester's mother knew the tricks of the winter wind. She kept the cradle near the sheet-iron stove, and often the stove was roaring and red with the sagebrush she had piled within it.

Toward spring when the storm king had gone north to the Klondyke country, the sagebrush Cal hauled in from the bunchgrass had many sage ticks in it. The ticks were warmed in the pile of cut sagebrush behind the stove. They liked to bite Lester because he was young and tender, I suppose. But the baby's mother watched the ticks as sharply as she had watched the north wind, and very few of them found their way to the cradle.

My mind skipped some pages just now—20 years of them to the time not so very long ago when somebody else's married sister I know went to Philadelphia and said goodby to her husband of four months: Captain Billy Blank, off to France with General Pershing and the first American regiment to start for foreign soil.

Father Time is prompting me from the back of life's stage over which I am wandering. A while before Captain Billy Blank left Philadelphia he and his bride were in New York. They were walking about one evening, avoiding any discussion of certain uncertainties which attend the life of a soldier in France. It was futile. Each knew the other's unspoken thoughts, and they may as well have talked aloud.

**THERE is sadness in the pages of the Book of life that lies open by the window as memory drifts by, sweet as the breath of spring, and turns the pages. A while ago I was wandering on life's stage with Father Time, who is everywhere all the time, prompting me from behind the scenery. Now it is an open window with memories adrift, and the breeze turning my pages every which way. What next!**

In the Metropolitan Museum they presently stood before the looming gray skeleton of a dinosaur. The bony head of the thing seems to grin at you.

"See that old philosopher," said Captain Billy. "He's been dead a million years, and is still grinning; so why worry about France—and the other things?"

Good philosophy thought this married sister I know. So down at Philadelphia a few weeks later she smiled and didn't tell Captain Billy Blank of the baby she knew about—thought it would make his goodby harder. She hasn't told him yet, but is going to, after while, when she can send a penciled outline of the baby's hand along with the news.

A while back this mother-to-be sent her captain over the sea a new photograph of herself. He wrote back by and by, and said that when he went over the top the photo would be right over his heart. I hope he doesn't go over till he gets the pencil picture of the baby's hand. Somehow, I have a queer notion that the hand of the babe will help its mother keep away the German bullets. Every night, every hour, she prays that her captain-lover may come back from the trenches, safe and sound, to her and the baby; and that will help the picture, and the baby's hand, too, if it gets there in time.

I remember once when Cal Steele left home to be gone only a few days, his young wife prayed nightly and hourly that he might come back, safe and sound, to her and Lester. Cal laughed at her prayers and her fears when he came back. Why was she that way, anyhow! Were all women that way?

I think they are when they love their husbands and their babies. At least I know that Captain Billy Blank's wife is that way. She didn't laugh at all at what he meant for a joke. Referring to her picture over his heart, he said that when he went over the top she might get shot. I wish he hadn't said that, even thought it was only a soldier's way of joking. His wife, I am afraid, is not quite as good a soldier as he—at least, she does not enjoy jokes of the soldier kind.

Cal laughed, and cracked a joke about what his mother-wife could do some day when she really was a widow. Well, she became a widow a decade or so afterwards. Father Time and his scythe came along and Cal was in the way. I'm not forgetting that the old executioner now is at large in France, with his scythe rubbished to make way for more up-to-date harvesting machinery. The prayers, the photograph and the pencil picture of baby's hand will have plenty to do if they bring Captain Billy Blank home sound and happy. But I believe they will.

If they don't? —well, the baby will never see its father, and the father will never see his baby. The big, gray skeleton is still grinning: dead a million years, and still grinning. So why worry?

My windows are open. My book of Life is spread out before me, and the breeze is slipping the pages every which way. Lester Steele, Captain Billy Blank, the big, gray skeleton looming out of the prehistoric past and still grinning, and the baby—I wonder, will it be a boy or a girl!

The breeze is mixing my pages all up, and here I am in a new place in my Book of Life. I am at the old Hartline graveyard where Lester Steele now lies. Captain Billy Blank, when he and I were little boys together, lacked just one dollar of being able to help pay for that graveyard. There is quite a bit on this page of my Book of Life, but I think I'll tell about it anyway.

There were no graveyards in the early days of the bunchgrass west. He who died by the trail was buried by it, and the wagon train passed on.

But the time came when the wagons ceased to move forward. Farms and homes dotted the bunchgrass, and became thicker as time went on. Finally the time arrived when the neighborhood needed a graveyard. No one was dead—indeed no one was sick; but we all needed a graveyard just the same.

A tract of land was selected on Joe Mires' place, just a little way from our pine-board town. Some money must be raised to pay for the land. Various ways of getting the money were suggested, and finally we concluded to have a basket supper at which the baskets would be auctioned to the highest bidder.

The women trimmed baskets with lace and tissue paper, filled the baskets with many good things to eat, and the sale was held on a winter's evening in the school house. No one knew whose basket he was buying till he had vanquished all rival bidders, and with the basket in his secure possession lifted the lid and read the name on the slip of paper inside. (Continued on page twenty-six.)

# TELL THE NEIGHBORS
## ABOUT THEIR STATE FARM PAPER

It Deals With Home Interests.

Gives Due Attention to Farm Animals.

Has Helpful Articles on the Garden.

Prints Many Facts About Fruit.

## RATES FOR THE WASHINGTON FARMER

**25c** FOR ONE YEAR
**50c** FOR THREE YEARS
**$1** FOR FIVE YEARS

Very likely there are a number of your neighbors who are not yet acquainted with their state farm paper. If so, you will be doing them and us a good turn by telling them that the "Farmer" not only deals interestingly with all phases of farming activity but that it is full of information and entertainment for every member of the family.

Then, we would like to have everyone understand our "direct-to-the-consumer plan for handling subscriptions. As our readers know our plan was ultimately to do away with the subscription agent and to secure new and renewal subscriptions by dealing with our readers direct. Already thousands of farm families have taken advantage of the big saving which our offer makes possible.

Much of this success is due to the efforts of our friends. They have aided us by telling their neighbors about our offer and by passing along copies of the paper to those they feel will be interested in a high grade family publication. If you are a supporter of the cooperative principle, we hope you will help us make the new subscription plan an even greater success. When convenient drop a word regarding it in your neighbor's hearing, or better still, pass along some of our many interesting issues when you are through reading them. We will appreciate this assistance very much and we feel sure that if your neighbor does not know about his state farm paper he will be glad to make its acquaintance. Your cooperation helps eliminate the middleman, with all the attendant expenses of the subscription agency system. The reader gets the benefit of every dollar saved, as you will note from the schedule of prices above.

YOUR REMITTANCE MAY BE IN ANY FORM MOST CONVENIENT—SILVER, STAMPS, PERSONAL CHECK, POSTAL MONEY ORDER, EXPRESS MONEY ORDER OR BANK DRAFT.

April 25

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

**Enclosed is $..... for ..... years subscription.** In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# Through My Open Window

(Continued from page twenty-four.)

Much fun they had auctioning those baskets. The auctioneer pretended to smell chicken in one basket, pie in another, cake in another, and so on till he had run through the list of bunchgrass table delicacies; and then he proclaimed the great "heft" of the baskets, and smelled chicken, pie, cake and other things all over again. He urged everybody to bid lively, and they did. The bunchgrass folk did not have much money—but they were paying for their own graveyards. So they spent money like kings, and fairly made the old schoolhouse shake with the sounds of their merriment. They spent all they had. A few baskets went up to $8 or $10. None went for less than a dollar.

I wore on this occasion my first suit of store clothes—long pants, coat-and-vest, and a lovely sky-blue tie. In my brand new pocket was a dollar and twenty cents, which I had been six months in accumulating for the next Fourth of July. But graveyards come before Fourth of Julys.

When the baskets soared to eight and ten dollars, I could have wept. No supper for me, in spite of my brand new suit of clothes!

A small, not very well decorated basket finally appeared. The auctioneer had been smelling chicken, pie and cake all evening, and had told how heavy the baskets were so often that we ceased to laugh at his sallies of wit. He didn't know exactly what to say about this small, plain basket. In fact, it was not a basket. It was only a pasteboard shoe-box so thinly decorated with tissue paper that you could read about the shoes shrough the tissue.

I thought no one would pay $8 for such a basket. With a quake in my voice I bid "fifty cents," supposing that some one would immediately say, "five dollars." But no one did. Presently another little boy piped up, "fifty-five cents." I came back with 60 cents and he to 65.

Thus we fought each other, nickel at a time. Finally I reached my limit—a dollar twenty! He promptly came back with a dollar twenty-five. He had me!

Everybody looked at me and smiled, supposing that I would come on with another nickel. But I didn't. Instead, I scrooched down in my seat and tried to get out of sight.

Right there, the day was saved for me. Something hard, round, and heavy was pressed into my hand. Startled, I look at it, and beheld a dollar. To this day I do not know who gave me the dollar, although I have always suspected one of our bachelor neighbors who sat in the seat behind me. "Bid up," came to my ears in a whisper; but I was looking at the shoe-box basket which was about to be "knocked down" to my rival, and did not turn to see who whispered.

"Two twenty," I fairly whooped.

It was the other boy's turn to scrooch—and no one slipped him a dollar; so I got the shoe-box.

The baskets that came after that were large, fat affairs decorated with lace, tissue paper, ribbons, dotted muslin and even beads. My rival didn't have the nerve to bid fifty cents, or even a dollar twenty-five on any of these large, fat baskets, which fairly bulged with fruit, both fresh and preserved. In the excitement, no one noticed his silence but me. At first I gloated over his downfall; but as the bidding went merrily on and he scrooched lower and lower in his seat with merely a wan, sidewise smile now and then, which no one noticed, I began to be sorry for him. Finally, the last basket sold for six dollars. My late rival caught my glance of sympathy and tried to smile. He wes a good sport, even if poor in purse.

Well, I was agreeably surprised when I looked inside my shoe-box. It was a large shoe-box, for one thing. For another, no space inside it had been wasted. There were large, fat pieces of chocolate cake, four nicely browned breasts of young chicken, sweet cucumber pickles, sandwiches of snowy bread well buttered, goosberry and pumpkin pie in large pieces, a couple of nice ripe bananas, two oranges, and some candy in sticks stripped like a barber pole! How would you like to break into such a shoe-box?

The girl who had filled this shoe-box was young, but she was the prettiest little girl in all our bunchgrass country-side. Her mother was said to be the best cook in our bunchgrass country, and this pretty little girl "took after her mother," the people said. An old bachelor neighbor of ours was wont to say that "that little girl will sure make some good man a wife some day," and, as you shall see presently, she has.

So I was lucky in the purchase of a basket. The other little boy was doubly unlucky.

She and I found a seat somewhere. She began to spread the things out on my lap and her own. But my appetite was gone.

"I guess—I guess Billy Blank didn't get a basket," I ventured. "I—I feel like a pig eating all that."

"I should think you would," she replied brightly. "Why don't you ask him to eat with us?"

I was on my feet in an instant.

But Billy Blank was not yet a captain in the American army; nor had he yet stood before the looming, gray skeleton in the Metropolitan museum and remarked to his wife of six months, she who was destined to make a good man a wife some day, that the thing, though dead a million years was still grinning. Billy Blank then was only a little boy and was sad and forlorn, and in response to my invitation refused to come out of the dark corner where he had hid, to dine with me and the girl whose basket he had been unable to buy.

"People would see me — and then they'd all laugh," he said sadly. I persisted, but he was obdurate.

"They'd all laugh at me," he said.

I went back to Nellie and reported.

"Why can't we go over where he is?" she wanted to know.

We could and did. Billy, poor youngster, was so bruised in soul that it was hard to revive him; but we did—that is, she did. She insisted that he make the first selection of the pie, the cake, the chicken, the fruit, the sandwiches, and the candy that was striped red like a barber pole. By and by she made him smile.

You'll have to guess the rest, for I haven't time to tell it. Billy Blank is a boy no longer. He is a captain of marines in France. Nellie is a little girl no longer, but she is a good cook just as the bunchgrass folk said she would be, seeing that she took after her mother so much. Captain Billy wrote home the other day and said that the American supply system was thus far a marvel—but that just the same he'd like to break into one of Nellie's shoe-boxes again.

I believe in prayer, and I believe prayers are answered. Just the same, I think Captain Billy's chances to occupy space in the graveyard we paid for at the basket social are not nearly so good as mine. If Father Time had just hung to his scythe a bit longer and left the mower alone it might have been different—yes, the whole world would have been different.

For a long time after Billy and Nellie and I ate supper from the shoe-box, which I had bought for two dollars and twenty-five cents, the new graveyard remained empty. "Who will be first?" everybody wondered.

Maybe you bought a new Bible, once. There in the family record you wrote such dates of marriages and births as you had for the new pages. When you came to that sinister looking page headed, "Deaths," you halted. "Who will be first?" you wondered; and closed your new Bible with a sigh, perhaps.

This is how we passed our new graveyard during the several years it remained untenanted on the corner of Joe Mires' farm.

We always guessed that the first would be Old Lady Higgins. Gracious, she was old. I doubt if she knew how old she was, and know we didn't. All she knew of American history was what she remembered, and it seems to me that she remembered clear back to the Declaration of Independence and Bunker Hill. She remembered all the presidents clear back to Andrew Jackson, but skipped from there to George Washington, so I judged that from Washington to Jackson she must have been pretty young. Her own father "crossed the Delaware" with Washington, and was at the siege of Yorktown. She surely was old, and we had a right to guess that she would be the first to raise a mound of new earth in our graveyard.

But she wasn't. It was the strongest, healthiest, happiest man in our bunchgrass country—Dave Reeves, the storekeeper, who at the basket social had bid higher than any one else. He got Old Lady Higgins' basket, which was plain as an old shoe, had not a stitch of decoration on it, and was filled mainly with old-fashioned corn pone, fried fat bacon, potatoes boiled with their jackets on, and some dried apples stewed with sweetening of "black strap" molasses.

After Dave Reeves, Old Lady Higgins next, of course! Everybody said so as they left the graveyard. Wrong again!

Old Man Beale, who spent his lonely winters trying to invent a new kind of wagon wheel, was out on a mid-spring day cutting bunchgrass hay. Homeward bound, he had a runaway, and a wheel ran over him. He died in three days.

Old Lady Higgins next! Not so. Dick Gilbert, young, full of promise, fell in the new well he was digging. Frank Jones, his hired man, looked down into the well, which was 60 feet deep, and saw Dick lying there. He called down—no reply. Dick was dead.

Frank went to the house, where Dick's wife was busy cooking dinner, and told her what had happened. Holding her in a grip of steel he made her promise and swear on her honor and her Bible that she would not go to look in the well while he rode four miles to get the nearest neighbor to help get Dick out of the well. She promised and kept her promise. When Frank returned, there she sat on the doorstep, stony-faced and gray, with her weeping children huddled about her.

So the new graveyard was filled with those who died young and those who died old, all gathering beneath its bunchgrass sod. But never Old Lady Higgins! By my holiest word, she kept above its dust and clods till the place was getting crowded, and people were saying that they needed a bigger graveyard, and would have to hold another basket supper.

I started with Lester Steele, but it just happened that way. He, I think, was laid to rest in the new part of the graveyard. His father is in a graveyard somewhere else.

Look up and smile! Looming from the prehistoric past is the great gray skeleton; dead a million years and still grinning. Why worry!

## Tractors in Columbia County.

News comes from Dayton that since the introduction of the crawler type of tractor two years ago 15 have been put into general use in Columbia county. The plow, the disk, the harrow, in fact every farm implement, is being operated with the tractor, even to the combined harvester. Other uses to which the crawler has been adapted include dragging the roads, hauling grain and other farm products to market, pulling stumps and moving houses. Those using the engines in Columbia county include Courtney Brothers, Mrs. J. J. Rose, George Price, Homer Price, Ray Cyrus, Theodore Grote, Ernest Hopkins, Berton Delany, Robert E. Lee, Frank J. Thompson, William Weller, Mrs. C. A. E. Duncan, J. L. Duman, Smith Gwinn and Roy Ream.

## Practice Fox Farming.

Owing to the excellent market for furs, fox farming in Alaska is becoming more prominent as an industry though it continues to be something of a fad with those who follow it. The islands along the southeastern Alaska coast are the seats of the fox farms. It costs money to go into the fox raising business, however, as an ordinary fox costs from $50 to $250. The valuo of fur, however, makes the industry not only interesting, but profitable wnere it can be conducted successfully.

# PRIZES! Farm War Service Flags are Offered

Get one of our farm service flags, showing a big star to represent your farm and smaller stars for each member of your family who is helping produce food. This is the big, new idea in service flags. It is distinct from the war service flag; as it applies exclusively to the farm. Described as "appropriate" and "attractive" by the department of agriculture. In sending your order state the number in your family who are aiding in food production and we will supply the correct number of stars without extra charge.

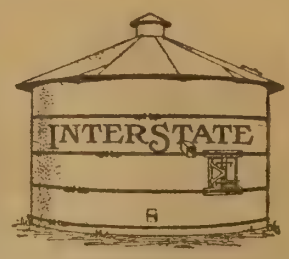
**Offer No. 1.**

***Paper Pennant***

A pennant, 9x22 inches, printed on heavy enamel paper in full colors, will be postpaid to any one securing and sending in ONE NEW subscription to this paper. (One year 25c, three years 50c.)

**Offer No. 2.**

***Bunting Pennant***



A pennant, 9x22 inches, made of cotton bunting (just the thing for the auto, front porch or the flag pole), will be mailed postpaid to any one sending us THREE SUBSCRIPTIONS TO THIS PAPER. Secure three of your neighbors under our special bargain rates and receive a bunting "Farm Service War Flag."

## New Carnegie Library at Hermiston

The Hermiston (Oregon) public library, shown above, has just been completed. The building was erected with Carnegie funds and the site was donated by J. H. Raley of Pendleton. It is of Spanish and Italian architecture.

The building contains a main library room 24x50, a lecture room 24x26 and a committee room 12x14, with modern equipment.

Mrs. M. E. Benedict has been appointed librarian and is now in charge of the library, which is to be maintained by the city of Hermiston. The library board that obtained the funds and constructed the building is as follows: Mrs. J. T. Hinkle, chairman; Mrs. C. E. Butler, secretary; H. M. Straw, E. P. Dodd, Mrs. F. A. Phelps and Father Butler. The board was assisted by Miss Sabra L. Nason of Pendleton, county librarian.

## Oliver Twist Hoover

—Dallas News.

# Shall We Hang German Spies?

Ex-President Taft declared in a speech in Oklahoma the other day that "spies should be courtmartialed, lined up and their citizenship ended by bullets." Most people will heartily subscribe to that, for we know that Germany has its spies everywhere, and their job is to make it easier for the kaiser's armies to kill American soldiers in France.

We have now been at war with Germany for a year, but has any one authentic information that a single spy has been shot? Some of them have been put in internment camps, where they are supplied with good food, comfortable beds and medical care, all at the expense of the people of the United States.

It is difficult to fix the blame for this lenient way of dealing with dangerous enemies of the United States. One reason is the inadequacy of our policies and laws. For example, congress has not yet declared war on Bulgaria and Turkey, though those countries are allies of Germany. Their subjects in this country are therefore technically friendly aliens and the government must deal with them as such.

Several months ago the United States department of justice told congress that legislation was needed for more vigorous prosecution and punishment of male spies, and after much delay a law was passed relating to German and Austrian male spies. But at that time the administration asked that the new laws should not apply to female spies, though the fact is well known that the kaiser employs women spies in large numbers.

Later the department of justice, realizing that a mistake had been made, asked that the law be amended to apply to women, but the bill is still pending, and even if a woman spy were caught she could not be given severe punishment.

Last January the administration asked congress to give it sufficient law to punish pro-Germans who interfere with the sale of Liberty bonds. The third bond drive came on and congress had not passed the needed legislation.

Most people imagine that if a man puts bombs on American transports carrying American boys to Europe and he is caught that, of course, he can be shot at sunrise or hanged or electricuted. But the fact is he can not get more than about 18 months in jail and a $2000 fine. Herr von Rintelen, master German agent, was caught in such a conspiracy, but the only statute on which he could be prosecuted was interference in interstate commerce. The bills asking for severe penalties have not been acted upon.

Most people imagine that when there are big fires and destruction of American property in munition plants and war factories, swift and condign punishment can be meted out to offenders. But there is no federal law to punish arson or the bombing of American ships by the hiding of explosives aboard, and the destruction of government property can be carried on without fear of serious consequences to the offenders. For this congress is to blame.

When the government itself is so slow in dealing with war problems can it be wondered at that so many people have not yet awakened to the fact that this country is really at war? The remark is often heard: "The country will wake up when our soldiers get into hard fighting and the people scan long lists of killed and wounded." But why wait for that frightful sacrifice of American blood? Why not emphasize the fact that we are at war by hanging several hundred German spies, casting out several disloyal congressmen and dealing generally in vigor and resolution with the traitors of all degrees who are helping the kaiser and playing false with Uncle Sam?

## Financial Difficulties.

I don't know why, but to be frank,
I'm always flustered in a bank.
I always wish the check I' brought
Had larger figures on its face,
The kind of check a fellow ought
To bring to such a busy place.
The atmosphere is charged with awe.
A check for seven-fifty! Pshaw!

I reach the wicket in my turn,
Hand in the check, and then I learn
That I've forgotten to indorse.
I take the blamed thing to a shelf
And write my name. Some blots, of course.
Then back in line I place myself
And hum a little tune—or try
To show how self-possessed am I.

Again the wicket faces me.
My fingers fumble helplessly.
I drop a coin. The line is stopped
While I go hunting on the floor
And find it is a cent I've dropped.
I turn and hurry to the door
And reach the street, a nervous wreck,
Still clinging to that blasted check.
—Walter G. Doty in New York Times.

## Why We Must Eat Less Wheat

Bread comes first. Bread means wheat. The people of the allies, eating war bread darker and heavier than any we are asked to adopt, must have enough to make the raised loaf. They are eating corn and barley and rye; that they may have bread we must send them 75,000,000 bushels of wheat.

To create that supply, we must cut down our own use of wheat by one-third. To sustain them against famine, to protect the armies from disaster, loyal Americans are eating victory bread.

## Sidelights

**New Word to Her.**

Ellen was a strong, fine looking young Irishwoman and thought herself possessed of more than average ability. Taking advantage of the scarcity of labor of all sorts she decided to accept a position as clerk in one of the local stores.

One morning she was called before the manager to explain why she was performing a certain part of the duties assigned to her in a careless manner.

"Miss Finnegan," said the manager, "for the last two weeks your work has been very perfunctory. We can not—"

"Mr. Miller," interrupted the young woman, "I've been working here four months now, and although I've tried my best, that's the first bit of praise I have received since I've been here."—Harper's Magazine.

**What Puzzled Her.**

When the car left the terminus a very stout lady, clad in muslin was hanging on to a strap for dear life.

A very small soldier, who was wedged in on the seat, struggled to his feet and in quite the Old-World manner offered his seat to the ample lady.

Smilingly she thanked him and then, looking rather bewildered, said: "Thanks so much! But where did you get up from?"—Tit-Bits.

**Most Useful Part.**

Teacher—(at object lesson)—So now, children, you know how a knife is made. I want you, Marjorie, to tell me which is the most important part of a knife.

Marjorie—Er—er—er——

Teacher—Well I'll help you. What part of his knife does your father use the most?

Marjorie—The corkscrew.—Pearson's.

**The Correct Adjective.**

"Don't cuff the little fellow, madam," remonstrated a passerby. "Surely he has done nothing very bad, a sweet child like that."

"Sweet child is right," said the wrathful woman. "'E's been an' swallowed our sugar ticket."

**Molasses from Barbados.**

There were 753,170 gallons of molasses, valued at $257,585, invoiced at the American consulate at Barbados, British West Indies, for the United States during 1917, compared with 1,522,427 gallons, valued at $305,746, for 1916.

**Combination Job.**

Briggs—Did the doctor build you up as he said he would?

Griggs—Yes, and judging from his bill he charged me both as a physician and a first-class constructor.

**Must Be Housecleaning.**

Marporie came in with some pussy willows. "Oh, mamma," she cried, "just see those cunning little muffs the kitties have hung out to air."

**His Method.**

Farm Visitor—How do you find out if a fowl is tender enough for roasting?

Farmer—I axe her, miss.

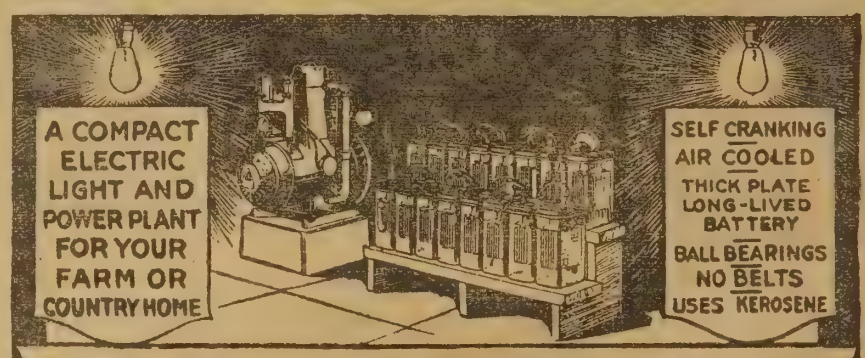
The Mighty Arm of a Giant

No lesser force could crank a big tractor motor fast enough to deliver a starting spark as intense as that delivered by a

TRADE K-W MARK High Tension MAGNETO

Equipped With a K-W Impulse Starter.

No matter how slowly you turn your tractor motor over—even if you use a crowbar—the shaft or rotor of the magneto (held back until the firing point of the engine is reached) is driven forward at a high rate of speed by this powerful impulse starter. This produces a hot, intense starting spark even when the motor is stone cold. It absolutely prevents back firing while cranking even if the spark control is fully advanced. It *guarantees* an immediate start and entirely eliminates troublesome self starters, coils and batteries.



Write for a list of K-W equipped Tractors

The K-W Impulse Starter, found *only* on K-W Magnetos, was the *first* impulse starter. It has stood the test of time. It is a fit team mate for K-W Magnetos whose efficiency and reliability has led 40 manufacturers to adopt them as standard equipment of 83 models of tractors.

A K-W Magneto assures a positive start—without fussing. Its reliability keeps your tractor going. Its efficiency cuts fuel cost to the bone. Insist that your new tractor be K-W equipped.

## The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana, Now the State of Missouri.

By LEWIS B. MILLER.

Copyright, 1914, 1915, by Lewis B. Miller.

**Synopsis of Preceding Chapters.**

In September, 1811, two young men who lived near St. Louis, Ben Armstrong and Jodo Henderson, taking with them their two dogs and donkey Spunky, started on an all-winter's hunt in what was at that time unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination — a salt spring close to the river Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their saltmaking and hunting. After exciting experiences with a buffalo herd and with a bear in a cave, they find their first fresh sign of Indians — moccasin tracks in the snow. And then, in the dead of night, a scouting party visited them preparatory to an attack. The attack followed soon, and would have resulted in the capture of the boys by the savages had not a violent earthquake frightened them away. It was only a short time, however, till they were in the hands of the savages, led away capive. They remained captive for some time, narrowly escaping being burned at the stake by their enemies. Ben was saved by Watermelon, a big, fat squaw, who claimed him as her husband.

### CHAPTER XIII.

**Paddling the Unpathed Waters.**

When at last the Indian village had become quiet, Ben emerged from the wigwam with a water-gourd in his hand. He walked noislessly, but made no attempt to hide. If any of the Osages should see him, they would doubtless believe that he was going to the river for water. He wore his blanket, and besides the gourd, which was carried openly, he was carrying their provision-bag and his rifle under the blanket. The hair-lariat was also wrapped around his waist.

After Ben had been gone several minutes, Jodo emerged from their wigwam. His rifle was concealed under his blanket; but the roll of buffalo-robes and blankets had been left behind. That he would return for as soon as he could make sure that the way was clear. But he soon came upon an Indian, a squaw, scarcely distinguishable in the dim light. She turned to look at Jodo. Whether she suspected anything he could not tell; but she passed on and out of sight, while he kept on toward the river.

Down the bank he made his way, and found the canoe. Ben had been lying concealed in it, but he rose up when Jodo's figure appeared. While stooping at the water's edge, Jodo whispered about the suspecious squaw. For they knew that every Indian seemed to be keeping an eye on them.

"I've got to go back for our bedding," he whispered, if there's anybody near our lodge, I shall have to wait till the way is clear. Any Osage would give an alarm if he saw me coming toward the river with that roll of things."

"That's right. We must get those things to the river without being seen. You step in here, and crouch down out of sight. I'd better go back for the roll. I won't start with it till the way seems clear."

So Ben stepped ashore, and Jodo concealed himself in the canoe. Ben, leaving his gun, walked boldly back to their lodge. On approaching the lodge he thought he detected an Indian near it. If so, the Osage dodged off into the darkness as the white man appeared. Going inside, Ben found the roll of bedding and lay down against it, in the dark. He thought it safer to wait a few minutes.

And it was well that he waited. Before he had been there long, the door-hide moved aside enough to let in some cold air, and Ben felt rather than saw that dark eyes were trying to peer inside. He kept still for a few moments, then had the presence of mind to say: "Jodo, are you asleep?"

The door-hide soon dropped into place, and the listener thought he could detect the softest of footfalls gliding away from the wigwam. Still he lay motionless, waiting and listening. Finally he sprang up, went outside and walked entirely around the wigwam. Seeing and hearing nobody, he got the roll and started toward the river with it.

He had to pass near two wigwams, and this time he was careful to step so noislessly as not to be heard. He reached the river-bank without seeing any body.

"I was beginning to think you'd been discovered," Jodo whispered, as Ben drew the canoe up against the frozen bank and laid the roll in it. Then he untied the hide-rope that held the canoe, and himself stepped in.

Both now crouched as low as they could. After pointing the canoe in the right direction, Ben put his paddle against the bank and gave a push, which sent the light craft 30 yards out into the stream. Then he began to paddle noislessly, and kept paddling till they were almost against the far bank. Now Jodo took up the other paddle and began to help.

Slowly, cautiously they kept paddling up stream, till the village had been left behind. After that they were less careful, and moved faster. Soon the canoe was cutting through the water fully as fast as was safe in the dark.

At first the air felt chilly, and the escaping captives were inclined to shiver, even under their blankets. But using the paddles soon warmed them up. Hour after hour they paddled on, partly to get as far from the Osage village as they could, and partly because it wouldl be well-nigh impossible to pick out a good hiding-place till daylight came.

"Where can we hide—what kind of a place can we hide in?" Jodo wanted to know, when at last the long winter night was wearing to its end, and the east was growing a little lighter.

"We shall know the right hiding-place when we find it. As we must stay there a few days, of course we want it as comfortable a place as possible. No chance for a fire in the daytime; and the only place we can be half-way comfortable without fire this weather is in a cave."

"Plenty of caves in this country. We ought not to have much trouble finding one."

"I'm hoping we can find one without tramping about much, and making too plain a trail in the snow."

"If there was some cave we could get into from the water, I'd prefer that."

"So would I, Jodo. And it's possible that we can find such a cave. For that we ought to paddle up some creek."

They kept their paddles going. As soon as there was light enough, they began to watch the river-banks for the mouths of creeks. After passing by several smaller streams, they came to one that looked large enough to be navigable by their canoe. So they paddled into it.

At first the banks were of earth, and not very high. But after crossing a narrow valley, the fugitives came to where the creek had cut its way through solid rock. Here, as they paddled slowly along, they began to look for some kind of an opening.

And they soon found what they were looking for. For a distance of 50 yards or more the stream had cut far back under a cliff; and at one point there was an opening which led still farther back, till lost in darkness. The shelving cliff here was scarcely a yard above the water, and the cave was of about the same height. They paddled under to the water's edge, then tried to peer back into the dark hole.

"Not the most inviting place in the world," was Jodo's opinion of it.

"No. But it looks safe to me. Our canoe pulled up here will be out of sight except to somebody in another canoe. And we can crawl to our hiding-place without leaving any sign visible from without."

"Yes. Guess we can't find a safer hole."

"Believe I'll crawl in and see, or rather feel, what kind of a place it is."

"Getting out of the canoe, Ben crawled on into the darkness. He soon disappeared, and for a few minutes his companion neither saw nor heard him. At length he came crawling out.

"Did you go to the back end?"

"No. But I made my way in so far that the place felt almost warm. It's not much nicer than it looks. Still, it would be habitable for a few days, I've no doubt.

"What's wrong with it?"

"Damp. Every time this creek gets up, the water backs into that cave. The back-water hasn't been in there since last spring, maybe; but a cave dries out slowly. If we'd brought only our blankets, I'd say look farther. But with two buffalo-robes under our blankets, I think we can defy the damp."

So Jodo got out, and after drawing their canoe well up on dry ground, they made it fast to a piece of rock with its buffalo-hide rope. Then they took out everything and began to crawl into the cave, pushing the things before them. When they had made their way so far in that the cold outside seemed not to follow them they stopped and spread down their bedding. The rock-roof was still so low that they could barely sit upright.

"Now for some breakfast, and after that a good, long sleep!" said Jodo. "That is if it will be safe for us both togo to sleep at once."

"For the present I think it will be safe enough. The Osages didn't miss us till daylight, I guess—may not have missed us yet, for that matter. And even if they could come straight to our hiding-place, it would take them several hours to get here, whether by land or water. But I don't believe they'll come this way at all. In fact, I'm well-nigh sure they won't till they've scoured all the lower country for us."

"And about the time they quit hunting for us down there and go to looking up this way, we'll shift our hiding-place to the lower country."

"That's our plan, Jodo, unless some hitch occurs in carrying it out."

After a hearty breakfast of jerked venison and parched corn, the two had soon stretched themselves on their buffalo-robes, covered themselves with their blankets, and gone to sleep. It was late in the day when they awoke.

Now they crawled down to the edge of the stream, to get a drink and fill their water-gourd, and also to find out about the weather. To their relief, the air was still raw.

"I don't think there's much danger of a thaw tonight, Jodo. But we've got to be on our guard. If that snow should start to melt, it wouldn't be long till this creek would be high enough to send the water up to where our things are. It won't do for us to sleep too long or too soundly."

"Well, there's no great danger, I guess, Ben. The roaring of the creek would be apt to wake us. And even it it didn't the water would get to us and stir us out before the mouth of the cave would be closed up."

"Yes, but not before the creek would be two feet deep along here. Then we'd have to crawl all the way to our canoe through ice-water."

"Which would feel too chilly to be funny."

They soon crawled back to their things and went to eating their supper. While they were eating, the bright spot that was the mouth of the cave began to fade, and kept fading till scarcely visible. After supper the two lay and talked for a good while. But finally they fell asleep; and they slept most of the time till the light spot had grown bright again.

By this time both had rested from their night of hard paddling. Accustomed to an active life, they soon began to grow restless. If the rock-roof had been high enough for them to stand upright and walk about, they could have had some relief. But the only way to exert themselves now was by crawling around over the half-muddy ground on hands and knees or all-fours. And the darkness and dampness of the cave were also having a marked effect on the spirits of the two hiding there.

After breakfast they talked of getting into their canoe and taking a row down the creek to the river. But there was some danger that their pursuers might be in the vicinity by this time. Of, if not that, it was altogether possible that some of the Osage hunters might be hunting up here. So there was nothing for them to do but spend anotherday in their damp dungeon.

But by noon they were debating the prudence of getting out; and by night they had fully made up their minds to go down the river under cover of the approaching darkness. The sky seemed to be clear, but there would be no moon, and they hoped to drift by the Osage village without being discovered.

Their supper was eaten before the bright spot had begun to fade. And they carried all their things down and loaded them into the canoe while there was still some light in the cave. But they waited till the light was very dim before they pushed out from under the cliff and glided away down the creek.

"It feels nice to have a paddle to stretch your muscles with," Jodo little more than whispered, as they were making their way along the narrow, winding, rock-walled stream.

"It certainly does seem nice. I feel like I could paddle a hundred miles tonight without growing tired."

"Well, the farther we paddle the better it will be for us, I'd say."

The western sky was still bright with the trail of the setting sun when the canoe arrived at where the creek met the Osage. So, as a matter of prudence, the canoemen waited there till the night was as dark as it was likely to become. Then they made straight for mid-river, and from there went paddling on down stream. This was a better night for finding their way than the night when they had come up, but by no means as good for hiding. All the time, as they kept their canoe moving, they were painfully conscious that they could probably be seen by anybody on either bank. Hungry for exercise after their confinement, they paddled swiftly, but at the same time were careful to make very little noise. They wanted to get by the Osage village and as far down the river as possible before daylight drove them to seek a hiding-place.

Having the current as a helper now, they could, of course, travel much faster than they had traveled while coming up. Consequently they were not surprised when, even before midnight, they began to hear dogs barking ahead, and knew that they were approaching the Indian village.

When at last they could dimly make out wigwams on the south bank, they found themselves growing anxious. After paddling well over toward the north bank, they laid their paddles aside, and both threw themselves down so that the canoe would conceal them. So lying, they waited in anxious suspense while the slow current—it was sluggish near the bank—

(Continued on the following page.)

In the dead of night they make their escape.

.....BY.....
LEWIS B. MILLER

(Continued from the preceding page.)

carried them along by the village. Both lay in such a position that they could peep over the side of the canoe.

At first they could make out nobody. But a dog in the village began to bark, and soon a dozen dogs were strung along the bank, barking noisily toward the drifting canoe. Whether they merely saw the canoe in motion, or both saw and scented its occupants, could only be guessed. Soon several Indians, attracted by the noise the dogs were making, could be seen standing on the bank. Fortunately the stream was wide here; and they were looking down upon the water, and would be less likely to see the canoe than if they had been on a level with it.

Slow, frightfully slow, the movement of the canoe seemed to its impatient occupants. But at length the few hundred yards of village had been passed, and the clamor of the wolf-dogs was being left behind. Now the white fugitives were beginning to breathe freely again, and were thinking of sitting up to go to paddling, when they began to hear paddles somewhere. At first they believed the noise to be up stream, and that Osage canoemen were coming in pursuit of them. But soon they could make out that the paddling was down stream. Now they surmised that Indians who had been down the river for some purpose were returning late to their village. Probably they were a party who had gone in pursuit of the escaping captives.

Had the canoemen and the drifting canoe met, there is little room to doubt that the Osages would have noticed the canoe and would have stopped it. But fortunately the Indians were paddling along near the south bank, while the canoe with white occupants was still drifting along near the north bank.

At length the two parties passed each other. Not till their canoe had drifted a mile or so farther, and no more Indians had been seen or heard, did the fugitives dare to sit up and use their paddles again. Now they took the middle of the stream and paddled swiftly, steadily.

Sometimes, though, lest other Indians might be coming up the river, they ceased paddling and sat still for a few minutes to listen. But they met nobody else, and were miles below the village when the cold light of dawn began to paint the east.

"Soon be time for us to hunt another hiding-place." Ben was gazing toward the lofty cliffs which here made the river-bank on the south.

"What kind of a place shall we look for this time? Another cave?"

"I can't think of any better. And I don't know of a better place to find a cave than in some creek. Keep a 'watch-out' for one."

At length they came to the mouth of a creek that looked promising, and they paddled into it. But before going a hundred yards the canoe was aground. So they had to return to the river and try again.

By this time they were feeling a little anxious. The sun was coming up, and there was no telling how many Osages might be along the river, scouring the country high and low for the escaped captives. The two kept themselves as close to the south bank as possible, and made themselves as inconspicuous as possible.

At length they came to another creek, and lost no time in turning aside and hiding themselves in it.

From the start this stream had high, upright, limestone cliffs for banks. They were hopeful of finding a cave similar to the one they had concealed themselves in before, but drier.

For half a mile or more they paddled up its windings, sometimes noticing ice along the banks where the water was still. They watched each rock-wall for a cave, and were not long in discovering one. It was not on a level with the water, this cave, but was about 12 feet up, in the rock face of the cliff. Though it was not large, there was room for a man to stand erect in its mouth.

"There's no place here to hide our canoe, Ben."

"No. But the country is so mountainous on both sides that I'm doubtful if any Indians will happen along here. If they come at all, it will be up the creek, in their canoes, as we've come. And if they come that way, they'll discover our canoe anyhow, no matter how well we conceal it. So I believe we shall be fully as safe up there as in any place we could find, even if we hunted all day."

"But can we get up there?"

"I think so, Jodo. Yonder's a leaning tree on top of the cliff. I can tie a stone in the end of the hair-lariat and toss it over that big limb. The rope is long enough to double down."

"All right, then. I'm ready to try it. But we must tie our canoe to something."

"Here's a crevice in the rock. We can wedge the rope in there with a stick. We shall have to go back to where we can pick up a stone, and we'll fetch a stick of the right size."

Soon they had found both a stone and a stick, and were back under the cave again. Now Ben stood up, and after several throws succeeded in tossing the weighted end of the hair-lariat over a limb, 30 feet above. When the weighted end had dropped down within reach, he tied the two ends together. Now, grasping the double rope, he went up the face of the cliff.

"What kind of a place do you find?" inquired Jodo, when the climber was standing in the mouth of the cave.

"Wait a minute and I'll tell you."

Ben disappeared for a little while, then stood in the mouth of the cave again.

"We can't find a better place to hide in," he reported. "I followed it back to the warm part, but couldn't make out the other end. And every inch of it is as dry as dust. We can walk or run here as much as we please; and we ought to be comfortable enough as long as we care to stay. I'm of the opinion we'd better hide here for several days. As to that, though, we can decide later. Now make a loop in the rope and put our guns in it, and I'll draw them up, and our other things."

Jodo complied, and soon everything except Jodo and the canoe was up in the cave.

"Now, Jodo, I think you'd better paddle back to where you can pick up a few sticks, and send them up. We might want to start a little fire sometime. Plenty of leaves have blown in here, but there's no wood."

Jodo paddled down stream again. But he had soon returned and was sending up a little armful of dry wood, and also the paddles, in a noose of the hair rope. Then he made the canoe fast, and himself went up, with his feet against the cliff, and climbing hand over hand.

"But how can we get down from here?" he demanded, when safe in the cave's mouth. Ben was untying the ends of the lariat, so as to pull it from over the limb.

"Oh, never fear. We'll manage that part all right," Ben assured him, while drawing in the rope and coiling it.

A little later the two were sitting back in the twilight part of the cave, eating their breakfas. And not long after breakfast they were lying in their buffalo-robes and blankets, sleeping the sound sleep of weariness.

(To be continued in the next issue.)

## War Work.

What art thou doing, sister of mine?
What is thy work for this country of thine?
Knitting and sewing,
Freely bestowing
Largess and laughter
Though grief come after?
See that thou give them all of thine heart,
Thankful and glad to be doing thy part,
Sister of mine!
What art thou doing, brother of mine,
Since thou art spared from the firing line?
Toiling and saving,
Poverty braving,
Gallantly living,
Ceaselessly giving?
Though never bullet be aimed at thine heart,
Still art thou acting a soldierly part,
Brother of mine!
What are thou doing, free land of mine?
What is thy task for these children of thine?
Keeping them pure,
Strong to endure,
Teachihng them right,
Yielding them might,
Holding them close to the pulse of thine heart,
Bearing them, nursing them—blest be thy part,
Free land of mine!

—Nora Archibald in Good Housekeeping.

### Soldier's Allowance.

The French soldier is paid $20 a year; the German, $38 a year, the British, $89 a year, and the American soldier gets $30 a month, or $360 a year.

### Merely Skimmed the Subject.

"Edith is engaged."

"Did she tell you all about it?"

"Mercy, no! I only spent the afternoon with her."—Boston Transcript.

# There are Two Kinds of Real Americans

**One kind of an American shoulders a gun. The other kind backs him to the limit with his dollars.**

Between them the War Department and the Treasury Department have a list of real Americans. If you can't get into uniform under a gun, write your name on the Treasury Department's roster of Americans by buying a Third Liberty Bond.

# Your Country Calls You

as a real American to back the Army and Navy.

Uncle Sam wants $3,000,000,000. Liberty Bonds pay a substantial interest on your savings. **Any bank will help you buy a Liberty Bond, or buy from the local Liberty Loan organization.**

# Raise White Flowers

By LISSIE C. FARMER.

There are many occasions when white flowers are singularly suitable for decorations. There are births and christenings and other baby events, graduations, weddings and funerals, and the country dweller who usually has more room for flowers can easily have a few varieties of white bloomers stretching over the whole season so that she will be able to furnish blossoms for any of the occasions when white is especially in demand.

Sweet peas are easily grown everywhere and can be had in pure white as well as the numerous colors in which they flaunt themselves. The white vine, however, must be planted by itself for if it is planted beside any of the bright colored peas, it is apt to mix with them and take on their colors.

White can be had in nearly all the bulb growing plants as tulips, hyacinths, narcissus, etc., and from them we may have very early blooms, while other flowering plants are getting ready to bloom. In larger flowers, there are pure white roses and dahlias, columbines and peonies, Sweet alyssum in the pure white makes a very prettty border for beds, is a good bloomer and works easily into small wreaths and bouquets.

Then there are the "everlasting" flowers that grow wild in most of our northwest. They are a species of the common old-fashioned straw flowers, and it is well worth one's while to gather some of the seed and plant it in the yard. The little, round roselike flowers last for weeks, and are very dainty and pretty and especially suitable for funeral wreaths. Feverfew is another pretty and easily grown small flower in white, which can be started from seed, but is a perennial. There is white larkspur, candytuft, and balsam or lady's slipper—all easily grown. Asparagus is one of the prettiest greeneries to go with all kinds of white flowers, quite as dainty and pretty as anything that can be had at the florist's.

## EGG BREADS.

### Make Good Spring Breakfasts.

Eggs and milk are plentiful and now is the time to make egg breads. The milk and eggs that go into muffins and cakes are not lost; you get it all back in the bread. There is more food in cornmeal muffins than in wheat biscuit and less meat can be served with such breads.

Below are recipes for seven egg breads.

**Cornmeal Waffles.**

Half cup corn meal, half cup flour, one tablespoon melted butter, half teaspoon soda, one cup boiled rice, two eggs well beaten, one teaspoon salt, one cup sour milk.

Sift together the flour, soda and salt; add the other ingredients and beat thoroughly; have irons hot and well greased.

**Corn-Rice Muffins.**

One cup corn meal, one cup boiled rice, one cup milk, two eggs, one tablespoon fat, one teaspoon salt, two teaspoons baking powder.

Mix corn meal, rice, milk and shortening together; beat five minutes; then add well-beaten eggs, beat two minutes, then add the baking powder. Bake in hot greased muffin tins or in shallow pan. Boiled hominy may be used in the above recipe instead of rice.

**Buckwheat Muffins.**

One cup milk, one tablespoon fat, one tablespoon syrup, one egg, one teaspoon salt, four teaspoons baking powder, one cup wheat flour, seven-eighths cup buckwheat flour.

Sift dry materials together. Add to the cup of milk and melted fat, syrup and beaten egg. Combine these two mixtures stirring lightly, without beating. Bake about 30 minutes in a moderately hot oven.

**Spoon Bread.**

One cup white cornmeal.
One and one-half cups boiling water.
One cup sweet milk.
One teaspoon salt.
Two teaspoons baking powder.
Two eggs.

Sift meal into a bowl. See that the water is boiling vigorously. Pour over the meal, stirring at the same time. When lukewarm, add the sweet milk, the well beaten egg yolk and beat thoroughly. Add the baking powder and last fold in the stiffly beaten whites. Pour into a hot, well greased baking dish and bake in a moderately hot oven 30 minutes. Serve from the baking dish, with a spoon.

**Rice Crumpets.**

One and one-half cups milk.
One tablespoon fat.
Three eggs.
One teaspoon salt.
Two teaspoons baking powder.
One cup boiled rice.
One cup cornmeal.
One-half cup flour.

Combine as for muffins. Cook on hot greased griddle, eat with syrup.

**Barley Muffins.**

One cup milk.
One tablespoon fat.
One tablespoon syrup.
One egg.
One teaspoon salt.
Four teaspoons baking powder.
One cup wheat flour.
One and one-half cups barley flour.

Follow directions for making buckwheat muffins.

**Oatmeal Muffins.**

One cup milk.
One tablespoon fat.
Two tablespoons syrup.
One egg.
One teaspoon salt.
Four teaspoons baking powder.
One-half cup wheat flour.
One and one-fourth cups oatmeal.

Sift the salt, baking powder and the flour together, mix in the oatmeal. Add to the cup of milk, the melted fat, syrup and beaten egg. Combine these two mixtures stirring lightly without beating. Bake about 30 minutes in a moderately hot oven. Use granulated oatmeal or put rolled oats through food chopper.

# Conservation Pies

War long ago uncovered the sacred American pie, now the bottom crust as known to our mothers has disappeared, and the latest offering of "Yankee ingenuity" is rice pie crust. Rice has a natural affinity for the things that usually constitute pie fillings, and this new camouflage from the first camoufleur—woman—is good for the duration of the war.

**Rice Pie Crust.**

Line a greased pie pan with cold boiled rice, bringing the rice well over the edge of the pan and shaping it with a spoon dipped in milk. Bake the crust in a moderate oven until it is slightly brown. Use the crust like any pastry for a one-crust pie.

**Sour Milk Pie.**

One cup buttermilk or thick clabbered milk.
Two tablespoons cornstarch, mixed with four tablespoons cold water.
Three-quarters cup maple syrup.
Two egg yolks, beaten.
One lemon, juice and grated rind.
One tablespoon melted butter.

Heat the milk in a double boiler. When it is warm, add the cornstarch mixed with cold water. Cook the mixture until it is thick, and add the other ingredients. Cook the mixture until it is clear. Turn it into a baked pie crust made with rice, cover it with meringue, and bake it in a slow oven for 25 minutes.

**Meringue.**

Whites of two eggs.
One-fourth teaspoon vanilla.
Four tablespoons maple syrup.

Beat the egg whites until they are stiff, add the syrup gradually, and then the vanilla.

**Cottage Cheese Pie.**

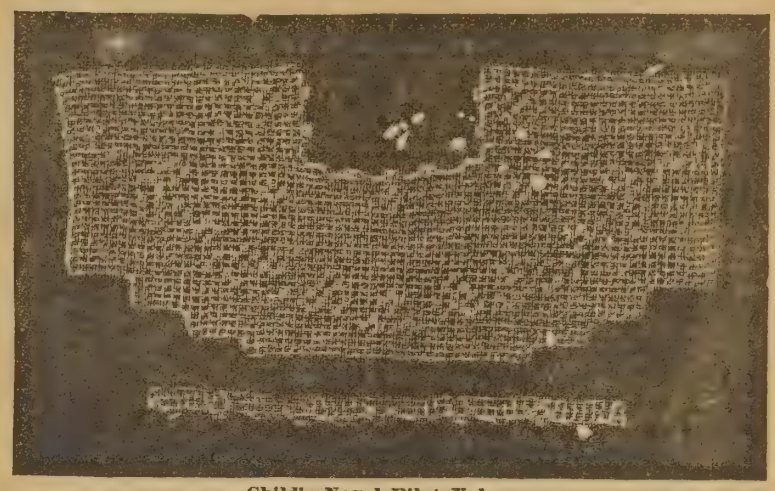
One cup cottage cheese.
One-half cup maple syrup.
Two-thirds cup milk.
Yolk of two eggs, beaten.
Two tablespoons melted butter.
Salt.
One-half teaspoon vanilla.

Mix the ingredients in the order given. Bake the pie in one crust made of rice. Cool it slightly, cover it with meringue, and brown it in a slow oven.

**Cake Without Sugar.**

Following is an excellent, sugarless cake recipe:

1-4 cup butter, oleomargarine or other fat.
2 cups corn syrup.
2 eggs.
3 cups flour.
1 1-2 tablespoons baking powder.
1-4 teaspoon salt.
1 cup milk.



Cream the shortening, add the syrup and the egg, and mix well. Add the milk. Sift the baking powder and flour together; add it slowly to the mixture and beat. Bake in a moderate over as a loaf or layer cake or small drop cakes. One-fourth cup of raisins added to the batter gives more flavor and sweetness.

**Cottage Cheese Real Food.**

The trouble about cottage cheese, according to officials of the department of agriculture, has been that housewives somehow have got the impression that it is merely a relish or the material for a salad, and not what it is—a real staple food.

# Crochet and Tatting Designs

By WINIFRED WORTH.

**Child's Novel Filet Yoke.**

Here's the new design promised in our last instalment. You simply can't make too many yokes for the children.

Use 1 ball No. 60 Cordonnet. If you use a finer sized cotton the yoke will be smaller; if a coarser size, the yoke will be larger.

25 mesh. Follow pattern to 7th row, add 4 mesh.

At the end of 13th row add 2 mesh. Continue following pattern until opposite side is reached, then leave off 2 mesh and so on to end of design.

Finish off lower edge with dc.

For neck, 10 dc., 4 t. Continue around neck, being careful not to pull the corners.

Edge 48 mesh.

1st Row—1 block, 7 mesh, 1 block, 7 mesh, repeat until you have 7 blocks.

**2d Row**—Ch. 3 blocks over block. 5 m., 1 b., 1 m., 1 b., 5 m., repeat to end, turn.

**3d Row**— 1 b., dc. in 3 m., ch. 5, sk. 1 m., dc in 2 m., and 1 b., 1 b. dc over b. and 2 m., ch. 5, repeat to end.

Instalment number 52 features a very chic and dainty Maltese Lace Collar.

## Knitted Goods to Soldiers.

The following shows the number of knitted artciles distributed by the Red Cross to the soldiers and sailors in the various cantonments and camps in the United States during the month of January, 1918:

Sweaters 470,962; mufflers, 133,526; wristlets, 177,536; helmets, 103,751; socks, 282,979.

**Use Your Brains.**

How to save your share of that 100,000,000 bushels of wheat is mostly a matter of ingenuity. When you get in a tight place use your head—substitute brains—but above all do the job.

## Stuffed Prunes and Dates.

The following are delicious substitutes for candy:

Soak the prunes overnight, dry, and stuff with chopped nuts, raisins or apricots. Wash the dates, dry them, and stuff the same as prunes. These and the Parisian sweets are good to eat and good for you.

**Parisian Sweets.**

Use equal quantities of figs, dates and nuts. The nuts may be omitted and prunes or raisins added. Put through a food chopper. Mix well and roll in a little powdered sugar or grated cocoanut.

# Superior Player Pianos

We handle the products of the famous Aeolian Co., the largest Piano manufacturers in the world, makers of the famous Pianola, the Stroud, Steck, Wheelock and Weber Pianos and the wonderful Aeolian Pipe Organ.

We offer as our lowest priced player the **Aeolian Player Piano,** which contains most of the features of the Pianola—it is a beautiful instrument, sweet toned, plays all the 88 note music. It will give much pleasure and render long and efficient service. Price $480.

Then we offer the **Pianola** line. The Pianola is distinguished from all other player instruments because of its many exclusive and wonderful features—the Metrostyle, the Themodist, the Automatic Sustaining Pedal, etc., etc. The Pianola line begins with the Aeolian Pianola at $585; then the prices range upward according to the Piano model—whether in the Stroud, Steck, Weber or Steinway.

The climax of the Player line is the Duo-Art—which is first a "straight" piano; secondly a player piano playing any roll, the motor being operated electrically enabling the player to devote his entire attention to the expression devices; and thirdly—with the special Duo-Art rolls, reproducing the actual playing of the world's greatest artists—Bauer, Gabrilovitch, Grainger, Saint-Saens and scores of others. (We cordially invite you to hear this marvelous instrument.)

We will arrange convenient payment terms on any Player instrument.

**We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.**

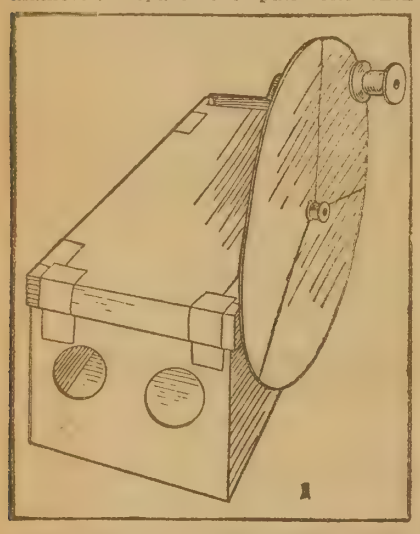
*We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, Etc.*

**Sherman, Clay & Co.**

Sixth and Morrison Streets, Portland.
Third Avenue at Pine Street, Seattle.
928-30 Broadway, Tacoma.
308-10 Sprague Avenue, Spokane.

Stores also at San Francisco, Oakland, Sacramento, Stockton, Fresno, San Jose, Santa Rosa, Vallejo.

# Handicraft For Boys



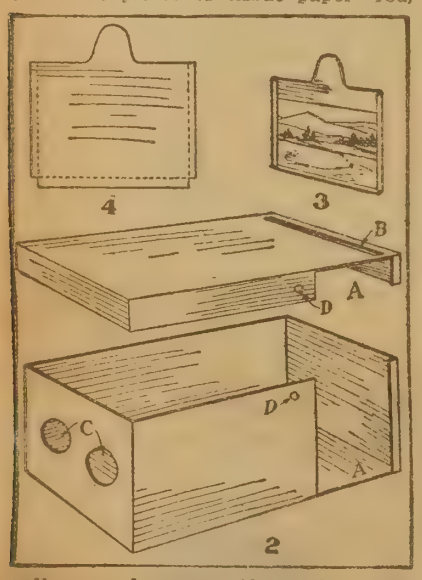
By A. Neely Hall

(Copyright by A. Neely Hall.)

## A Postcard Colorscope.

With the home-made colorscope shown in Fig. 1 you can make uncolored picture cards appear colored, and colored cards in colors other than those in which they have been printed.

A shoe box forms the colorscope case, and Fig. 2 shows how the box and its cover should be prepared. Cut the opening A in one side of the box, near one end, making it about three inches wide by the full depth of the box. Then from the rim of the cover cut a piece of corresponding width, in the right position to come directly over the opening in the side of the box. Across the top of the cover, at the same end of the cover that opening A has been cut through, cut a slot about one-quarter inch wide (B, Fig. 2). Leave about one-quarter inch between this slot and the box end, and the same distance between the ends of the slot and the side edges of the cover. In the end of the box opposite to that on which you have been working cut a pair of holes about one and one-quarter inches in diameter. Space the pair one inch

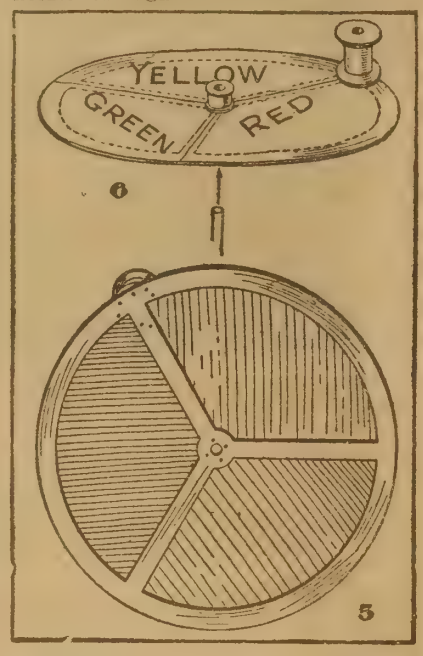


apart. With the cutting done, fasten the cover to the box with paper strips.

## Postcard Holder.

Figures 3 and 4 show how to make the holder for the picture postcards that are to be viewed. The dotted lines in Fig. 4 shows where to bend over the edges to form grooves for the pictures to slide into.

The color screen, shown in detail in Figs. 5 and 6, is of a cardboard disk about 12 inches in diameter. Three openings of an equal size should be cut in this disk, with straps left between them just wide enough to hold the center in place, and a rim around them wide enough to be rigid (Fig. 5). Get three pieces of tissue paper—red,



yellow and green, if possible, and paste them over the openings in the disk as shown in Fig. 6. Then punch a one-quarter-inch hole through the center of the disk and fasten a small silk-thread spool over the hole for a hub. To the outer edge of the rim fasten a common thread spool for a handle.

For mounting the disk upon the box you need a stick shaft, and a hole must be punched through each side of the box, in the position shown at D (Fig. 2), for this shaft to run through. The spool hub should fit snugly upon the shaft, so disk and shaft will turn together. Make the shaft long enough to extend through the box.

## To Operate the Colorscope.

To opertae the colorscope, slip a postcard into the holder and drop the holder through the slot in the box

cover; then stand beside a window, with the side of the box on which the disk is mounted turned toward the light; look through the pair of hole in the end of the box, and turn the disk handle so as to allow the light to pass through each of the three pieces of colored tissue paper. The light passing through the yellow tissue paper will produce a sunlight effect, that passing through red will produce a sunset effect and that passing through the green an effect of moonlight.

# See Box Shortage

## Manufacturers Issue Statement

The fruit box manufacturers of the northwest declare that there will be a shortage of 10,000,000 fruit boxes for the northwest this season unless orders are placed at once at prices that will keep the lumber suitable for their construction at home, instead of allowing it to be shipped east for other purposes. The following is a telegraphic report sent out from Portland, Ore., following the meeting of manufacturers there last week:

The supply of boxes for fruit growers and shippers of the Pacific northwest will fall short of the demand during the coming season by approximately 10,000,000 boxes unless orders are placed soon at prices which will compete with present quotations in the east of lumber formerly devoted to box making, according to representatives of the box manufacturers in the Inland Empire, the west coast and California, who met April 9 in Portland. It was asserted that 22,000,000 containers are used normally each year by the fruit growers of Oregon and Washington.

Contracts have been placed for 25 per cent of the fruit boxes needed, according to the estimate of the box manufacturers. Stocks of boxes on hand in the mills were estimated at more than 60 per cent below normal for this period of the year. Stocks of pine logs on hand or in sight in the logging operations are placed at approximately 50 per cent of normal and spruce logs available are fully 66 per cent below normal.

### Cost Less Than Salmon Boxes.

The increase in fruit box prices is proportionately less than the increase in the price on containers for the salmon canneries, according to a statement given out by the box makers after their meeting. Apple boxes which sold two years ago for 10 and 11 cents will be 18 and 18½ cents this year, whereas the containers used for canned salmon, which cost 10½ and 11 cents two years ago, were supplied this spring for 21 cents.

In explanation of the scarcity of available material for boxes the manufacturers pointed out, in a statement, that No. 4 pine boards, pine box stock and No. 2 and No. 3 shop pine lumber is now selling in the east and middle west at $22 to $27 and the lower grades of spruce are bringing $18 to $20 there. These prices are all f. o. b. in the Pacific northwest.

Available box material, both sawed and in the log, was canvassed by the men at the meeting. The government's commandeering of fir timbers for shipbuilding has taken off the market the common and fir dimension stock, which is being replaced in the eastern and middle western market by spruce.

In an informal discussion of current prices which followed the meeting several of the larger box makers declared that they have orders booked which will occupy their plants until November or December and that they are off the market entirely so far as new box orders are concerned.

"These statements are actual facts and not intended merely to 'bull the market,'" said Henry Shanker, president of the Kootenai Box company, of Spirit Lake, Idaho, who presided over the meeting. "Not only is the available supply less and our costs of material and labor higher, but prices in the east are higher and material which in former times has gone into boxes in the northwest is going to the east. The users of fruit containers will have to compete with the eastern market."

## Market Wheat Before May 15.

Our daily bread and the daily bread of millions across the seas depends on the marketing of wheat. In order to maintain a continuous shipment of wheat to the allies, farmers in the middle and southern states are urged by the U. S. food administration to market what is left of their wheat, after seed requirements are satisfied, by May 1. Those in the extreme northern states will be urged to market by May 15.

# Federal Reserve Bank Will Help Farmer to Buy a Tractor

The decision of the federal reserve board at Washington, D. C., authorizing the 12 federal reserve banks to rediscount notes secured by farm tractors, is a distinct aid to American agriculture, and particularly western farming.

It means this: That when a farmer goes to his banker and asks for a loan to buy a tractor he need not be put off with the assertion that "money is very scarce now." This order, if faithfully carried out, will make money abundant for this very purpose.

Suppose that a public-spirited banker, who wants to help his community, desires to lend money to any number of successful farmers who may want it to buy tractors. Uncle Sam will help him. Uncle Sam simply says to him: "Very well, go ahead and supply those farmers with the needed credit; take their notes, with the tractors as security; send those notes to me at any of my 12 federal reserve banks or branches, and I will rediscount them." That is, the government will reimburse that banker with another loan and his cash reserves will not be depleted.

When the borrowing farmer pays his note to the local banker, the local banker in turn repays the government; the money flows back to the federal reserve bank.

In accordance with this decision instructions have been issued by the federal reserve board to the federal reserve banks authorizing them to rediscount tractor paper presented by any member bank, provided it has maturity not exceeding six months and the tractors are purchased for agricultural purposes. The United States department of agriculture explains that this action of the federal reserve board means that notes given for the purchase of farm tractors will be treated in the same manner as other agricultural paper, thus making it easier for farmers to obtain tractors where needed.

**One and One-half Pound Wheat.**

The housekeeper who can not take wheat wholly from the menu is requested to cut each member of her family to at least as little as one and one-half pounds per week. How she shall do this and how much greater reduction she can make is left entirely to the individual. The food administration believes that the imperative necessity for this measure will be well understood and that its request will receive ready response from the intelligent class.

**Good Plumbing a Necessity.**

Plumbing is becoming a necessity in both city and country homes, not only for comfort and convenience, but even more for health and cleanliness. It also provides for the proper disposal of the wastes of the household which should by no means be neglected.

**FIVE DOLLARS IN THRIFT STAMPS**

The farm women's contest letters telling of the best articles written from one's own experience of the advantages of an automobile, a farm lighting system, a farm water system, from the standpoint of the farm home, are beginning to arrive. A first prize of $3 and a second prize of $2 are offered. The contest will close May 1, and those wishing to enter should mail the articles at once to The Editor of The Washington Farmer, Spokane, Wash.

## Sugar for Canning

The food administration is making every endeavor to see that the country is provided with a supply of household sugar on the basis of three pounds of sugar for each person per month. Do not consume more. Saving from this supply enough for use during the approaching canning season is not regarded as hoarding.

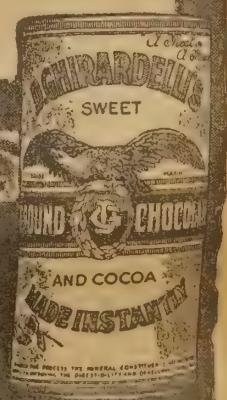
It is also the intention of the food administration to supplement the three-pound per month allotment during the canning season with an additional amount that will be ample for necessary canning operations The full utilization of all methods which will save sugar is, however, strongly advised. Such methods include putting up fruits in their natural juices, the use of syrups, drying and the storage of fruits and vegetables in pits and cellars.

**It's Nothing to Brag About.**

If you are wiser and keener than other folks, you should be thankful, not proud. You didn't make yourself.

It takes the fuss out of breakfast

THANKS to Ghirardelli's—breakfast-making is not the job it used to be. There's no fuss—no muss—no time lost.



If a chocolate pot does not happen to be handy—you use an ordinary stew-pan. It takes but a minute or two. And then—you have the most delicious of all food-beverages steaming hot, ready to serve.

An ideal blend of ideal foods—cocoa and pure sugar—Ghirardelli's supplies the maximum nutriment at minimum cost. Always keep a can on hand.

*In ½ lb., 1 lb. and 3 lb. cans; a tablespoonful—one cent's worth—makes a cup.*

D. GHIRARDELLI CO.
Since 1852 San Francisco

Ghirardelli's Ground Chocolate

Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.

**A Bay in Front of the House.**

Dear Aunt Nellie: I am well and hope the cousins are. A few days ago I got well from the measles. I like to go to school. There are 10 boys and four girls. At school we play Flying Dutchman, Lame Fox, Pump Pull, Pull You Away, Steel Sticks, Black Man, Sheep Pole Down, Tag. I live on a hill. In winter when there is snow we coast down over the hill. In summer I swim. There is a bay in front of the house. I like to swim. I am going to learn to dive. I pick wild berries and last year I picked 35 cents worth of blackberries. We have a strawberry patch. I like chickens and am going to keep garden. On the beach we build sand houses. I like the country best. I like to lie in the hot sand in the summer after swimming a while. It warms pou up. My birthday is on June 15. I like the fractions. They aren't hard. I like all the studies. My teacher's name is Miss Cooke. She is good. I like her. I joined the junior Red Cross. Every one in the school joined it. I have a cat. Her name is Baby Queen.—Ellen Johnson, Ilwaco, Wash.

**Boys in France Glad to Get Things.**

Dear Aunt Nellie: I will write another letter to the Children's Corner and hope it will not be the last one. We have 17 little lambs and 22 old sheep and one stray one came to our place, which makes 23 in all. We have four calves and one of them is a pet calf. Two of my friends told me to write and so I am. My sister Elsie and I have a horse. Elsie's horse is very pretty with a large star in his forehead and two white feet and his name is Tony. My horse is a gray one and her name is Dolly. We ride them to school. We have three miles to go to school. We are starting to work for the Red Cross making napkins, tray cloths and hospital mops. It takes 25 cents to join. I joined and almost every one in our school joined. How many of the cousins joined the Red Cross? I think it would be nice if every one joined because the poor soldier boys back in France would be glad to get things from the other people whom they might never see again. I have one cousin in France and don't know how many more. He wrote in the Goldendale Sentinel that they arrived in France all right. I own a war saving stamp worth $4.12 and I think it would be nice if every one had one.—Marie Ganguin, R. F. D. 3, Box 37, Goldendale, Wash.

**New Riddles for the Cousins.**

Dear Aunt Nellie: I belong to the Red Cross. The girls at school have made a quilt, and so have the boys made one. We are starting another now. Our teacher's name is Miss Verna Merkey. She has taught two terms. I have to walk a mile and a half to school. I am going to have a war garden this summer. I have $1 worth of seeds. There are 17 pupils going to our school. I am in the fifth grade. I will give some riddles: Way down in a dark dungeon there is a bright light, all saddled, all bridled, all ready for a flight. I've told you three times and you don't know it tonight. (2) A goose flew upon a barn and how does he get down? He doesn't jump or fly down. (3) I have a little sister; they call her pretty Peep. She wades in the water deep, deep, deep, and climbs the mountain high, high, high. Poor little thing she has but one eye. (4) Upon a hill there is a mill, by the mill there is a walk and on the walk there is a key. What city? (5) White as snow and snow it wasn't; green as grass and grass it isn't; red as blood and blood it isn't; black as ink and ink is not. What is that? I will write again and give you the answer to the riddles. Have I a twin? If so I would like to hear from him or her. My birthday is June 4.—Ida Shaw, age 11, Govan, Wash.

**Gladys Is Making a Sweater.**

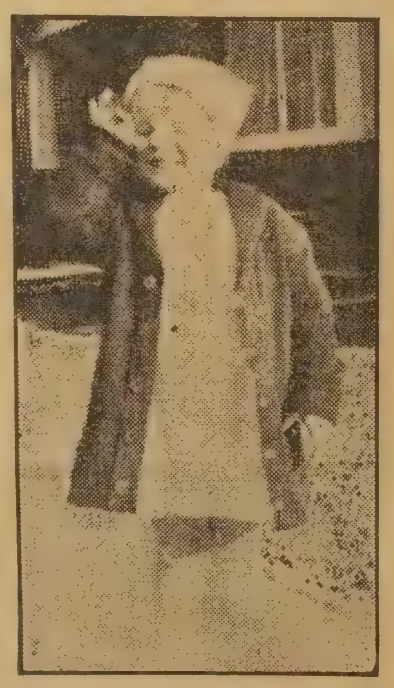
Dear Aunt Nellie: I am 12 years of age. My birthday is September 27. I read Bertha Millenaar's letter. I am her twin. I am going to write to her soon. We have a farm of 20 acres. I joined the Junior Red Cross and I am knitting on a sweater. My home at present is among the rhododendron at the old mill town, Port Discovery, where my father is working on the state road. I will write again. I would like for the cousins to write to me.—Gladys Norman, Port Discovery, Wash.

**Like Other Brothers She Knows.**

Dear Aunt Nellie: This is my first attempt to write to the Children's Corner and my letters would have been coming long ago had I only known just where to send them. I thought the letters were fine last week and the Corner seems to be growing. May I be a cousin? I am so glad that Sallie Garry is well again and I wish that she would write another letter, for I think her letters are so good. I am 12 years old and will be 13 November 14. If I have a twin I wish she would write to me. We have nine little lambs that we are raising on the bottle and we are going to get some more. Aunt Nellie, I wish you would write more letters because I think they are so nice. I thought Elva Green's letter was fine and her brother must be like some other brothers that I know. I live on an 1100-acre farm three and one-half miles from town. They are making a new road near our house and they are grading it with an engine, but it is not working today. Well, dear cousins, I must close now, with the hope that my letter does not meet Mr. Wastepaper Basket in its travels. —Frankie Baldwin, P. O. Box 214, Lacrosse, Wash.

**Play They Are Gipsies.**

Dear Aunt Nellie: I enjoy reading the letters in the Farmer very much. I am 12 years old and in the seventh grade. I will be 13 August 6. I have a dark complexion and dark brown hair. Have I a twin? If so, I wish they would write to me. I have a brown and white spotted pony. Her name is Funny. My aunt and I ride her to school. My aunt's name is Helen Krieger. We have 15 horses, seven cows and one pig with six little pigs. I have a bantam rooster. I did have a hen but she died. I have one sister and no brothers. Her name is Theon. She is seven years old. We have two dogs. Their names are Joe and Santa Claus. We live in the country. I do not like to live in town. I can knit, crochet, tat and embroider. There are two teachers here at my school. My teacher's name is Mr. Babb. On Saturday and Sunday my aunt, sister and I ride horseback and we sometimes play we are gipsies. May I become a cousin?—Gazel Elizabeth Rosenkranz, St. John, Wash.



**School Painted Blue and White.**

Dear Aunt Nellie: I live on a 960-acre farm. We have 32 horses, nine head of cattle, counting the litle calf, five cats and one dog. Her name is Topsy. I am in the fifth grade. I was 11 March 26. I have brown hair and blue eyes. I have two brothers. The youngest is Aaron. He is in the second grade. He is seven years old. His birthday is July 28. Valmore was 13 March 17. There are 11 pupils in my school. There will soon be 14. Our teacher's name is Miss Larsen. I go to a country school, district No. 60, Pleasant Ridge school. The color of the school is blue and white. My cousin is writing too. We go to the some school. I will tell you what I got in spelling examination. I made 96 per cent. I have a new pony. His name is Billy. My papa is going to break him for mama. He isn't broke to lead yet. I live one-half mile from school. I am learning how to knit.—Veletta Royalene McMurry, Bickelton, Wash.

**Hilma Writes About Sunshine.**

Dear Aunt Nellie: It is a long time since I wrote last. This is my fifth letter to the Corner. I like all the letters fine. I hope all the cousins are well and happy. I like Easter very much. My brother's birthday was March 20. He was seven years old. He is in the first grade at school. It has been raining very hard today. Laurie and Grace Looney and Hope Bolender were going to come to see me this afternoon and Grace was going to stay all night, but it rained so hard they didn't come. My subject this time will be sunshine. The sunshine makes everything grow. It dries up the wet ground after it stops raining. In the summer the sun rises in the east very early in the morning. It sets very late in the evening. The earth would be dark always if it were not for the sun. The sun is very bright and you can not look at it. When I try to look at it tears come into my eyes. My birthday is August 8. I am 11 years old. I haven't found a twin yet. I hope I shall find one some day. I am in the fifth grade. My teacher's name is Miss Foxwell. There are 20 pupils in my class. My sister is nine years old. —Hilma Anderson, R. R. 3, box 191, Olympia, Wash.

## A Little Patriot

"With Liberty Bonds and Justice for all" is the way the Allegiance to the Flag is ended when little Miss Beth Fitchen says it. She is the daughter of Mr. and Mrs. G. H. Fitchen, Butte, Mont., and although only three years old, has Liberty bonds and Thrift stamps all her own.

**Wants Two Pages for Our Corner.**

Dear Aunt Nellie: I have not written to you for a long time, so thought I would. Can I still be a cousin? I have two brothers in the war. Their names are Ora and Elmer. I wish we could have two pages for our Corner. I read the letters and like them very much. I am 10 years old and my birthday is November 24, 1918. I am in the fourth grade. I have dark hair and dark eyes. I have a dark complexion. I have joined the Red Cross and am helping piece quilts. My dolls' names are Flora, Bertha, Mabel, Minerva, Dorotha, Alice, Bessie and Carol. Carol was a Christmas doll. My cousin sent it to me. My teacher's name is Miss Lang. Miss Cook did tecah, too, but she quit, and so Miss Lang finished.—Effie Luddington, route 1, Baird, Wash. (Yes, you are still a cousin, Effie, and we are glad to hear from you again. Do not wait so long next time. Aunt Nellie.)

**Uncle Has Sailed in War Zone.**

Dear Aunt Nellie: I have been reading the Corner letters for some time. My father takes the Farmer and likes it very much. I live about two miles from our school. I like my teacher and school very much. Our school has joined the Junior Red Cross and I am knitting a sweater. My sister is going to knit a pair of socks. I have one uncle in the navy and one in the veterinary corps. The one in the navy has been down to Montevidio, S. A., and over to the war zone. He is on the U. S. S. South Dakota. I am in the seventh grade at school. My sister is in the sixth and my brother is in the first. I would like to have any of the cousins write to me. I am 13 years old and have dark eyes and dark, curly hair. I like to live on the island very much.—Lois Muzzall, R. F. D. 1, Oak Harbor, Wash.

**Thelma Has Three Playmates.**

Dear Aunt Nellie: I am a little girl 6 years old. I have a pair of twin sisters, Edna and Edith. I have a brother 12 years old and in the seventh grade. I am in the second grade and my sisters are in the fifth. I have two kittens and a bird named Dick. I like to go to school. We have 11 head of horses, 60 hens, two roosters and six pigs. We are just beginning to get lots of eggs. I will be glad when it comes nice weather so I can go to Sunday school and church. In the winter we can't run the car and I love to go to Sunday school better than anything else. We have four cows and two calves. I have five dolls and a cradle and old Santa Claus brought me lots of nice things. I have three playmates. Their names are Shirley, Edna and Frances. I live five miles from town. —Thelma Peterson, Box 2036, Pomeroy, Wash.

**Chickens Are Happy When Fed.**

Dear Aunt Nellie: I live on a 240-acre farm. I enjoy farm life very much. We have about 200 chickens. I enjoy feeding them. They seem so happy when I come with the feed. We have nine horses. We have two that my sister and I ride. We often go riding and enjoy it very much. I have three sisters and one brother. Their names are Elma, Inez, Nora and Lester. I am going to Kirby school. My teacher's name is Miss Adams. I like her very much. I am in the sixth grade. I am 13 years old May 11. My best friend is writing to you, too. Her name is Hattie Malone. I enjoy reading the children's letters of the Corner.—Edna Requa, Pomeroy, Wash.

**Papa Makes Big Snow Man.**

Dear Aunt Nellie: I am 7 years old. I have two sisters. I go to school and I am in the first grade. I have to go three miles. We have one horse, a cow, and 15 chickens. I like to play in the snow. Every time it is snowy papa makes a big snowman. This is my first letter.—Ludvig Peterson, Route 3, Box 18 A, Olympia, Wash.

**A Little Boy in the First Grade.**

Dear Aunt Nellie: This is my first letter to the Children's Corner and I like to read the letters and hope the Corner will grow. I am a little boy in the first grade and my teacher's name is Miss Corbette. I am 8 years old.—Orris May, Dixie, Wash.

**Cornelia Is a First Grader.**

Dear Aunt Nellie: I have blue eyes and brown hair. I am six years old and in the first grade. Have I a twin? If so let them write. My teacher's name is Miss De Valois. There are six in the first grade, three in the second grade, nine in the third grade and seven in the fourth grade.—Cornelia Muyskens, R. R. 1, Lynden, Wash.

**Busy Doing Her Best.**

Dear Aunt Nellie: I enjoy reading the letters very much. I saw a letter in the Farmer written by Elva Green. She was an old friend of mine and was a schoolmate when she used to live up in northern Idaho. She described her brother all right, only she didn't tell what a good boy he was, never causing his mother any trouble or worry as some boys do. I have two sisters, but no brother. My birthday is January 13 and I am 12 years old. I am in the sixth grade. How many are working for the Red Cross? I joined last winter and have sewed some and also helped to get some other people to join. I am going to try to raise a garden next summer. I think we all ought to do our bit to help Uncle Sam in these times.—Leona Decker, R. 1, Rockford, Wash.

**Knitting for Belgian Children.**

Dear Aunt Nellie: I am 9 years old and in the third grade. I will be 10 July 29. I have a birddog and his name is Bruce. My brother has a horse and his name is Prince. I had two little bantams. The roster died. I have one brother and his name is Gareld. He is 12 years old and in the sixth grade. I have two miles to walk. We are knitting squares for the Belgian children. Have I a twin? If so I wish she would write to me.—Vera Baker, Box 191, Thorp, Wash.

**Republic School Has Twelve Rooms.**

Dear Aunt Nellie: I have been reading the Children's Corner and I am anxious to write, too. I am 9 years old. My birthday was February 25. Have I a twin? I have three brothers and no sisters. I have three miles to go to school. I live on a 160-acre ranch. I like to see my letter in print. There are 12 rooms in the Republic school. There are about 26 scholars in my room. My teacher's name is Miss Brown.—Helen Barry, Republic, Wash.

**Edna's Birthday Comes in June.**

Dear Aunt Nellie: I am in the third grade. I like to go to school. There are five girls in our room. I am in the little room. I have two sisters. One's name is Elna and my other sister is Elsa. I have just been washing my glass and my spoon. I am eight years old. My birthday is June 7. There are 10 boys in the little room. There are 21 children in the big room. My sister has two chicks. I got so much for Christmas. I am so glad that we have no school Thursday and Friday.—Edna Mattson, R. F. D. 5, Box 32, Mt. Vernon, Wash.

**Chehalis River Runs Nearby.**

Dear Aunt Nellie: In reading the letters of The Farmer I saw a letter from my cousin, Hazel Jane Webster, and thought I would write, too. I am 12 years old and am in the sixth grade. My oldest sister, Mabel, is nearly 14 years old and in the eighth grade. Vera, my smallest sister is three years old. My brother, Gerald, is five years old. The school is about two and three-fourths miles from here. I go to school every day and walk about three-fourths of a mile and go the rest of the way on the auto school stage. We

## Coat Lapel Button

for securing two subscription orders to the Washington Farmer

Spokane, Wash.

have just moved on our 65-acre farm. There is about 35 acres cleared and 30 to be cleared. Papa has about 10 acres plowed and is plowing now. We have one pig, two cows, Bess and Rose, two horses, Queen and Prince, one dog, Fido, one cat and 12 chickens. I like the place fine for the Chehalis river runs along the west end of it.—Oliver Curtis, R. F. D. 1, Box 172 B, Centralia, Wash.

**Jessie's Aunt Is Coming to Visit.**

Dear Aunt Nellie: My grandpa lives across the road from us. We had six rabbits, but pretty near all of them have been killed. I am 9 years old now, but I will be 10 years old October 30. We have a little calf named Daisy. We live on a 160-acre farm. I enjoy reading the letters. We have about 26 chickens. Have I a twin? If I had I would like to hear from her. We have an Edison phonograph and 50 records for Christmas. I hope I will see my letter in print. We are having our roads graveled now. Most all the farmers have cars. All my aunts and uncles live in Chicago. I have an aunt who is coming to visit us next summer. I hope all the cousins are well. Washington's birthday I was in a play. We had lots of fun, too. We live about two blocks from a depot. It is named Midvale. My brother has a bicycle. He will be 13 years old October 5. On Valentine's day I got about five valentines. I have two brothers and one sister. My big brother is named Gene. May is my sister. She is 5 years old. Ray, my brother, is 7 years old.—Jessie Duffy, Midvale, Wash.

**Every Pupil Joined the Red Cross.**

Dear Aunt Nellie: As I have been reading the letters the cousins have written I thought I would like to join the Corner and make it larger. I enjoy reading the letters very much. I am 12 years old and in the sixth grade. My birthday is June 6. I have light hair and blue eyes. If I have a twin I would like to correspond with her. I have two sisters and one brother. My sisters' names are Mary and Anna. My brother's is Eber. Mary is going to Reardan high school. She is in the 10th grade. Anna has passed the eighth grade. Her average was 91. I don't think Eber will go to the war because he is just 18 years old. He may, though, if it lasts long enough. I am a member of the Junior Red Cross. All the pupils in our school joined the Red Cross, too. We are going to learn how to knit. We have had two teachers at Little Falls school this term. I like my new teacher very much. Her name is Miss Natalie Mosso.—Margaret Dunning, Star Route, Reardan, Wash.

**All "Costellos" at Her School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old and in the fifth grade. There are five in our school. Two are my cousins. The other two are my sister and brother. My teacher's name is Miss Mary Hewitt. We are all Costellos that go to school. I have three sisters and one brother and his name is Joseph. My sisters' names are Helen, Marian and Genevieve. Genevieve is the baby and she is very cute. She will be 2 years old the first of June. My birthday was January 17 and I got a little pin cushion doll and Genevieve liked it very much. So I put it on top of the piano away from her. One day I was in the parlor where the piano was and she came in just as I went out and when I came in again she had crawled on top of the stool and then on top of the keys after the pin cushion. Then I called mother in to see her.—Marguerite Costello, Sprague, Wash.

**Reads the Letters Most Every Time**

Dear Aunt Nellie: May I join the Children's Corner? I will be 9 years old April 14. Have I a twin? If so I want her to write to me. I go to school and I am in the third grade. I haven't gone but once. This is my second term. We have two kittens and three little calves. Their names are Whiteface and Pansy. The other one hasn't got any name yet. I have one sister and two brothers. Their names are Ross and Ivan. My sister's name is Lois. Papa takes the Farmer. I read the letters most every time. I will send some riddles. If a pound of butter costs 20 cents how much will a ton of coal make? Why is a colt like an egg? If a hog and a half costs a hollar and a half, how much will 10 hogs cost? You can pile everything up in the house and I can take my shoes and stockings off and jump over them.—Freda Evelyn West, Dot, Wash.

**Glad to See the Corner Grow.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I am very glad to see the Corner growing larger. I am 12 years old. My birthday is October 3. Have I a twin? If so I would like to hear from her. It has been raining here today. All the snow is gone. The roads are very muddy. We were going to have a program and some speakers from Spokane were coming out to our schoolhouse, but they got mired in the mud and could not come. We had already started, but one of our neighbors told us, so we came back. I can crochet and tat. I am going to learn to knit for the Red Cross. I am 4 feet 11 inches tall. I have light hair and blue eyes. I am in the sixth grade at school. I hope to see my letter in print.—Eva Fern McKenzie, route 1, box 55, Deer Park, Wash.

**Marjorie Can Knit a Bit.**

Dear Aunt Nellie: I can knit a little bit and I am 10 years old. I have brown hair and brown eyes. My birthday is on April 12. Have I a twin? If I have I wish they would write to me. I have one sister and two brothers. My sister's name is Erma. She is 6 years old and in the second grade. My brothers' names are Gilbert and Albert. I live a mile and a half from school. I am in the sixth grade. My teacher's name is Miss B. Stocks. May I join the Corner?—Marjorie Johnson, Vancouver, Wash.

**A New Piano for Christmas.**

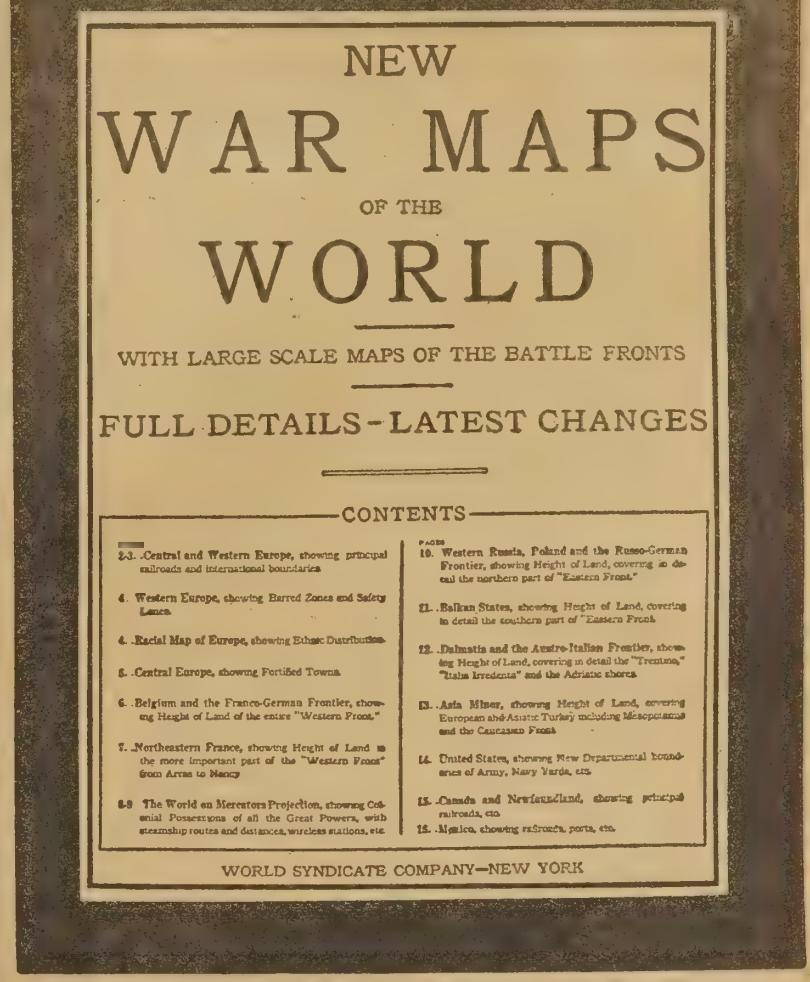
Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I am glad to see that the Corner is growing. I will be 11 years old March 29. Have I a twin? If so I would like to hear from her. We got a piano for Christmas and we were very glad to get it. My sister and I are taking lessons. I can tat and crochet both and like to do both. I am 4 feet 6 inches tall. I have dark brown hair and blue eyes. I am in the fifth grade.—Dortha May McKenzie, route 1, box 55, Deer Park, Wash.

## Advertising and the Public

"From the standpoint of the public, one of the great things about advertising is that it prompts the manufacturer to keep faith, whatever the cost.

LINKED TOGETHER

"It insures that the manufacturer, having committed himself definitely to the goods and their individual merits, will go the limit, in whatever emergency may arise, to keep the quality up to the usual standard."—The Trade Barometer.



The above statement is especially true with implements and merchandise which are advertised in your state farm paper. Not only does the manufacturer stand back of the statements which you find in our advertising, but we make assurance of fair-dealing doubly sure by standing back of the manufacturer.

# News for Breeders

## Big Dispersal Sale.

The Glen Tana dairy farms of near Spokane have announcerd the gale of approximately 250 head of purebred and high grade Jerseys and Holsteins. The sale will occur at the Spokane Interstate fairgrounds on June 5 and 6. The animals listed for sale include some with excellent records for milk and butter production. Many of them are in the class that test 5 per cent butter fat. One of the animals that will be offered, Eminents Jimps Owl, promises to go over 16,000 pounds of high testing milk during the year beginning May 14 last. Up to April 1 she had produced 15,399 pounds. She is a four-year-old.

## Eleven Pigs to a Litter.

An average of 11 pigs to a litter were farrowed by six pure bred Poland China sows recently belonging to W. F. Howard, one of the leading pure bred Poland China hog breeders of Canyon county, Idaho, who resides near Caldwell.

## Shorthorn Transfers.

T. N. Harding, secretary of the American Shorthorn Breeders' association, reports that the receipts for pedigrees and transfgers for the last three months are 25 per cent greater than for a corresponding period a year ago.

## SHEEP

### SHEEP

ELBERT M. CHANDLER, Burbank, Wash.

## POULTRY

### TRAP-NESTED BARRED ROCKS

All hen-hatched and hen-raised. Every hen trap-nested. First pen has, I believe, for past two years highest Barred Rock av. egg record in the world. All other pens practically same blood lines.
Pen 1, 12 hens, av. over 240 eggs, crossed to yearling cock, parents av. 260 eggs, $5 setting of 15. Pen 2, 25 yearling hens, av. over 200, crossed to 2 sons of No. 44, 708 eggs in 3 yrs., $5 setting of 15. Pen 3, about 20 hens and pullets, with reserve cocks and cockerels, same breeding $3.50 per 15. A few cocks and cockerels from $5 up. IRVINE P. GARDNER.

Riddle, Ore.

### Rhode Island Reds and Whites

Both combs. Stock for sale. Eggs, $6 and $3 per 100. Mammoth Toulouse geese and Mammoth Bronze turkeys. Eggs for sale. Write for mating list. No baby chicks. If you want quality and egg production, as well as vitality, get some of our stock and eggs. HIGHLAND FRUIT AND POULTRY RANCH, J. Nonnenmacher, R. F. D. 3, Yakima, Wash.

### BABY CHICKS

Rhode Island Reds, White Leghorns, $15 per 100; $12.50 per 100. All chicks now sold to May 15. If you want chicks this season, order now.

MAPLEBROOK POULTRY FARM
Southworth, Wash., Box 3.

### EGGS HALF PRICE

For the balance of the season I will sell my exhibition Barred Rock eggs for half price, viz., 1st pens. $1.50 for 15; choice pens, $1 per 15.

J. E. HORTON.
2408 Altamont Blvd., Spokane.

WHITE ORPINGTON HISTORY MADE
by my pen in all-northwest laying contest, Montana state show. Won 1st place in 1st contest for December. Have two Dec. winners tied for 1st place in second contest. One pullet repeats with 29 eggs in Jan. Some winter layers. Won every first, two sweepstakes and state cup at Montana state show. Why not the best? Send for mating list.
MRS. W. T. THOMPSON, Bozeman, Mont.

WINNING STOCK.
Barred Rocks, S. C. White Leghorns and S. C. Black Minorcas. Stock and eggs from exhibition and laying strains.
WILBER CLAYTON, Payette, Idaho, R. 1.

PARKS BRED-TO-LAY BARRED ROCKS.
My pen, 5 Barred Rocks, at Pullman laying contest laid in Nov. 88, Dec. 100, Jan. 104 eggs. Eggs from this winter-laying strain, $1.50 15; $8 per 100.
F. J. WIRTNER, Mica, Wn., R. 1.

S. C. RHODE ISLAND REDS.
Eggs for hatching from heavy winter laying stock; $1.50 per 15, $7 per 100. Young Flemish Giant hares.
W. T. WILSON, R. 3, Weiser, Idaho.

### White, Buff and Blue Orpingtons

(Capt. De Bathe Strain.)

Speckled Sussex and Anconas. All single comb. Aldrich strain Orpingtons, Sheppard Anconas. My birds took first prizes at all leading shows of Pacific Coast. Prices for stock, eggs and chicks reasonable. All from best laying birds. Finest lot of cockerels I've ever raised. A few White Holland and bronze turkey toms for sale.
IRA N. DELINE, Olympia, Wash.

AT INTERSTATE FAIR GROUNDS, SPOKANE, JUNE 5 AND 6.

### Registered Stock Sale June 5
### Grade Jerseys and Holsteins June 6

Among some of the cows that will be offered are:

Eminents Jimps Owl, daughter of Princess Jimps Eminent; Class AA; producing 359.15 fat, 8492.1 milk; 2 yrs. 11 mos.

First reentry. (Test started May 14, 1917, and up to April 1 has given 15,399.05 lbs. milk, which will easily go 4¼% and is giving 39 to 40 lbs. milk now, April 10.) How is this for a 4-year-old?

King Milan's Mabel, sired by King Milan, Class AA; record 426.73 fat, 8124.3 milk; 6 yrs. 10 mos.

First reentry, Class AA; record 577.61 fat, 11,154.5 milk; 8 years.

(Just finished 3d test with 10.043 lbs. milk.)

Golden Maid's Clarabelle, sire Imperial Golden Maid's Prince, Class AA; produced 434.59 fat, 8573.1 milk; 5 yrs. 7 mos.

First reentry, Class AA; produced 467.54 fat, 9252.2 milk; 6 yrs. 10 mos.

Bonny Berry, sire Bonny Golden Fox, Class AA; 368.99 fat, 8388.7 milk; 4 yrs. 4 mos.

Reentry, Class AA; 457.03 fat, 9652.2 milk; 5 yrs. 3 mos.

(Now on test 3d time. Has given in 5 mos. 7504 lbs. milk. Will go easy 4½%.)

We have many Jersey heifers and bulls from Register of Merit dams like above that will enable you to form an idea of the quality of stock offered in this sale.

KEEP THE DATE AND PLACE IN MIND. Write for Catalogue.

### T. S. Griffith, Prop.
### Glen Tana Stock Farm

# Second Annual SHORTHORN SALE

In this sale of Shorthorns at Lewiston, Idaho, on Wednesday, May 1st, 1918, there will be sold 21 young bulls of breeding age, and 13 cows and heifers heavy in calf and with calf at foot. They are sired by our first prize and champion herd bulls, Prince Booth 377105, Cloverleaf Pride 2D 506682, a son of Maxwalton Pride and a grandson of Avondale; and Types Model 429408, a son of Cumberland Type, 36 times grand champion in that many shows. In this offering buyers will have the opportunity of securing individuals that are regarded as among the best of the breed. Therefore those wanting top specimens, either in bulls or females, should be attracted to this sale, which will be held at the NORTHWEST LIVESTOCK SHOW AND FAIR GROUNDS, at Lewiston, Idaho. The catalogue will be of value to every prospective buyer. Write for it now.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, April 22.—Corn developed considerable strength today, largely as a result of increasing belief that receipts would fall off to a material extent from now on. The market closed firm at $1.27@1.27⅛ for May and $1.47⅛ to $1.47¼ for July, with the finish as a whole ranging from a shade off to 1⅞ net advance. Oats closed unchanged to ⅞c higher and provisions down 15c to 25c.

Renewal of talk about prospective diminished arrivals led to free covering by shorts in corn, chiefly during the last half of the session. In the early part of the day the market was unsettled and bears had the advantage a good share of the time, owing to the fact that, contrary to expectations, receipts were fairly liberal and that the weather here had turned fine.

Fresh demand from the seaboard gave strength to oats. Excellent crop conditions, though, made the July delivery incline to drag.

Provisions sagged owing to packers unloading and to a drop in the value of hogs.

**White Lead**—Strictly pure white lead in oil, ton lots, 11¾c lb; 50-lb lots, 12½c lb.

## Western Crop Prospects.

The following is a digest by states of the crop conditions as indicated by recent official bulletins and surveys:

Oregon—Cold, cloudy weather during the week past has retarded development. Rains in some localities delayed operations, but was beneficial to grains and forage crops generally. Winter grains appear thrifty though somewhat delayed by the cold weather. Considerable spring grain seeding has been under way. Damage to fruit crops because of frost is serious in some localities, but less serious in general than anticipated. Warmer weather is following the cold wave with beneficial results.

Washington—Deficient sunshine, cool weather and frosty nights during the later part of the week were unfavorable for rapid growth. Winter and spring wheat both need rain. Spring wheat seeding will be mostly finished in another week. Winter rye and barley are reported fine. Seeding of oats continues slowly.

Idaho—Fall-sown grains are in excellent condition and were benefited by good rains, but growth was somewhat retarded by cold weather. In the early districts seeding is well along, and early-sown wheat and barley are growing nicely, but in most localities preparation for seeding is the principal activity.

California—Wheat, barley and oats have a good color and they are growing rapidly. Some barley is beginning to head. Meadows and alfalfa are excellent. First cutting of alfalfa begun. Corn planting is now general.

Nevada—Weather was favorable except it was too cold Saturday and Sunday. Wheat seeding is practically finished except in the higher elevations, and barley and rye are being sown. At lower elevations ranchers are striving for increased production of barley, wheat and oats.

Utah—Generally favorable week with good rains, but crop growth has been rather slow except winter wheat and alfalfa, which are improving. Planting of spring grains is in progress.

Arizona—The general crop outlook is unusually favorable, except in the southeastern portion, where there has not been sufficient rain. Alfalfa cutting continues, crop fair. In the northern counties seeding of wheat and oats and planting of corn continues.

## Seattle Market.

**BUYING PRICES.**

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

Veal—Fancy light, 13@19c lb.; heavy, 10@17c lb.

Hides—Salted, 14c lb.; flint-dry hides, 29c lb.; salt kip, 16c lb.; green hides, 11c lb.; green calf, 23c lb.; dry calf (under 6 pounds), 29c lb.; bulls and dry salts, 4c lb. less; green bulls, 9c lb. Clean, long wool, western Washington flint dry pelts, 39c per lb.; heavy to clean eastern Washington flint dry pelts, 30@35c lb.

**SELLING PRICES.**

Feed—Scratch, $80 per ton; all grain chop, $77 per ton; oats, $74 per ton; rolled oats, $76 per ton; bran, $34 per ton; shorts, $33.50 per ton; whole corn, $78 per ton; cracked corn, $80 per ton; alfalfa meal, $36; rolled barley, $85 per ton; Milo maize, $75 per ton.

Hay—Eastern Washington timothy, $36@37 per ton; alfalfa, double compressed, $40@41 per ton; alfalfa, $29 per ton; Puget sound, $27@28 per ton; straw, $15 per ton.

Butter—Washington creamery extras, cubes, 42c lb.; do bricks, 43c lb.

Eggs—Fresh ranch, 40c dozen.

Potatoes—Puget sound, $17@20 per ton; eastern Washington, $27 per ton.

Asparagus—Local, 15c lb.

## Seattle Wheat.

SEATTLE, April 20.—With a perceptible increase in the car supply for the week, millers have been shipping wheat into the Minneapolis territory, M. H. Houser, agent of the Grain Corporation, it is announced, has no modifications in his orders to ship Washington wheat east to relieve the strain upon millers engaged on the April allotment of flour purchases for the government.

Seattle jobbers in Montana and Dakota hard wheat flour have been advised that for the next quarter they will be unable to ship more than 15 per cent, due to the shortage, or an average of 45 per cent of last year's allotment for the six months. This has a direct bearing on the Washington soft wheat supply, as flour stocks which have tended to accumulate here must come out into the bakery trade to furnish the wheat flour with substitutes. Bakers have not been buying soft wheat flour, claiming that it is so short of gluten that a satisfactory loaf can not be produced in combination with substitutes. Nevertheless, this is a condition which they will be forced to meet early in the summer, it is believed. There is no millfeed and prices are firm. Millers have cleaned up the surplus that was produced on the winter government grind.

## Butter and Eggs.

PORTLAND, Ore., April 22.—Butter—Prints extras, 42@43c; cubes, extras, 37½c; prime firsts, 37c; dairy, 29c. Butter fat, Portland delivery, No. 1 sour cream, 41c.

SAN FRANCISCO, April 22.—Butter—Extras, 41@42½c. Eggs—Fresh extra, 40½c; extra firsts, 40c; firsts, 38½c; fresh extra pullets, 39c; firsts, pullets, 37c. Cheese—Young Americas, 27½c.

CHICAGO, April 22.—Butter—Steady; creamery, 34@42c. Eggs—Higher; receipts, 31,230 cases; firsts, 33@34½c; ordinary firsts, 32@33c; at mark, cases included, 32@33c.

## Winter Wheat

### Pacific Slope Conditions High

If the U. S. department of agriculture is well advised, the outlook for a generous wheat crop next harvest is cheering. The department forecasts a winter wheat yield of 560,000,000 bushels and the prediction was unofficially made at Washington that if the spring wheat crop maintained the same ratio the next harvest would furnish sufficient wheat to take care of the needs of this country and the allies next year.

The department's forecast is based on its reports up to April 1. These indicate a present condition of winter wheat of 78.6 per cent of normal, against 63.4 per cent on April 1, 1917.

Assuming that the spring wheat crop will yield the same ratio of increase as the winter wheat crop, and that these conditions will hold through to harvest, there will be a total crop of about 850,000,000 bushels, or an increase of about 200,000,000 bushels over last year, when the entire wheat crop was estimated at 651,000,000.

In addition, there is an increase of 26,000,000 bushels in the prospective rye crop, or a total prospective increase over last year of about 225,000,000 bushels of bread grains.

There is also hope of an increase of 100,000,000 bushels of wheat over last year in Great Britain and France, and also an increase in Canada.

As will be noted from the following table, winter wheat conditions are high in the states of the Pacific slope.

| | Condition April 1, 1918. | Av. 10-yr. 1917 | Dec. 1, 1917 | Price. April 1, 1918 | 1917 |
|---|---|---|---|---|---|
| Montana | 94 | 93 | 89 | $1.96 | $1.61 |
| Idaho | 97 | 90 | 85 | 1.91 | 1.55 |
| Washington | 93 | 79 | 92 | 73 | 1.96 | 1.55 |
| Oregon | 97 | 84 | 95 | 90 | 1.90 | 1.54 |
| California | 93 | 83 | 88 | 90 | 2.09 | 1.65 |
